"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 27.]

SATURDAY, SEPTEMBER 28, 1850.

[PRICE 2d.]

THE DOOM OF ENGLISH WILLS.

THERE are few things in this beautiful country of England, more picturesque to the eye, and agreeable to the fancy, than an old Cathedral town. Seen in the distance, rising from among corn-fields, pastures, orchards, gardens, woods, the river, the bridge, the roofs of ancient houses, and haply the ruins of a castle or abbey, the venerable Cathedral spires, opposed for many hundred years to the winter wind and summer sun, tower, like a solemn historical presence, above the city, conveying to the rudest mind associations of interest with the dusky Past. On a nearer approach, this interest is heightened. Within the building, by the long perspectives of pillars and arches; by the earthy smell, preaching more eloquently than deans and chapters, of the common doom; by the praying figures of knights and ladies on the tombs, with little headless generations of sons and daughters kneeling around them; by the stained-glass windows, softening and mellowing the light; by the oaken carvings of the stalls, where the shorn monks told their beads; by the battered effigies of archbishops and bishops, found built up in the walls, when all the world had been unconscious, for centuries, of their blunt stone noses; by the mouldering chapter-room; the crypt, with its barred loopholes, letting in long gleams of slanting light from the Cloisters where the dead lie, and where the ivy, bred among the broken arches, twines about their graves; by the sound of the bells, high up in the massive tower; by the universal gravity, mystery, decay, and silence. Without, by the old environing Cathedral-close, with its red-brick houses and staid gardens; by the same stained glass, so dark on that side though so bright within; by the pavement of half-obliterated tombstones; by the long echoes of the visitors' footsteps; by the wicket gate, that seems to shut the moving world out of that retirement; by the grave rooks and jackdaws that have built their nests in steeple crevices, where the after-hum of the chimes reminds them, perhaps, of the wind among the boughs of lofty trees; by the ancient scraps of palace and gateway; by the ivy again, that has grown to be so thick and strong; by the oak, famous in all that part, which has struck its

mighty root through the Bishop's wall; by the Cathedral organ, whose sound fills all that space, and all the space it opens in the charmed imagination.

THERE may be flaws in this whole, if it be examined, too closely. It may not be improved by the contemplation of the shivering choristers on a winter morning, huddling on their gowns as they drowsily go to scamper through their work; by the drawling voice, without a heart, that drearily pursues the dull routine; by the avaricious functionary who lays aside the silver mace to take the silver pieces, and who races through the Show as if he were the hero of a sporting wager. Some uncomfortable doubts may, under special circumstances, obtrude themselves, of the practical Christianity of the head of some particular Foundation. He may be a brawler, or a proud man, or a sleek, or an artful. He may be usually silent, in the House of Lords when a Christian minister should speak, and may make a point of speaking when he should be silent. He may even be oblivious of the truth; a stickler by the letter, not the spirit, for his own purposes; a pettifogger in the supreme court of God's high law, as there are pettifoggers in the lower courts administering the laws of mortal man. Disturbing recollections may arise, of a few isolated cases here and there, where country curates with small incomes and large families, poor gentlemen and scholars, are condemned to work, like blind horses in a mill, while others who do not work get their rightful pay; or of the inconsistency and indecorum of the Church being made a Robe and Candlestick question, while so many shining lights are hidden under bushels, and so many black-cloth coats are threadbare. The question may present itself, by remote chance, whether some shovel-hats be not made too much on the model of the banker's shovel, in which the gold is gathered on the count, and too little in remembrance of the kind of shovel that renders ashes unto ashes, and dust to dust. But, on the whole, the spectator will probably be content to say, as the time was, and this old Cathedral saw that these things were infinitely worse; that it will be better; I will do all honour to the good that is in them, (which is much) and I will do what in me lies for the speedier amendment of the bad." . . .

In this conclusion, we think the visitor of the old Cathedral would be right. But, it is important to bring to the knowledge of all visitors of old Cathedrals in England, and of all who stay at home too, the most gigantic and least known abuse, attaching to those establishments. It is one which affects, not only the history and learning of the country, and that powerfully, but the legal rights and titles of all classes—of every man, woman, and child, rich and poor, great and small, born into this English portion of this breathing world.

For the purpose of the object on which we now enter, we have consulted a great mass of documents, and have had recourse to the personal experience of a gentleman who has made this kind of research his business. In every statement we make, we shall speak by the card, that equivocation may not undo us. The proof of every assertion, is ready to our hand.

The public have lately heard some trifling facts relative to Doctors' Commons, through the medium of a young gentleman who was articulated, by his aunt, to a proctor there. Our readers may possibly be prepared to hear that the Registry of the Diocese of Canterbury, in which are deposited all the wills proved in that large, rich, and populous district, is a job so enormous as to be almost incredible. That the Registrars, with deputies, and deputies' deputies, are sinecurists of from sixteen to seventeen thousand pounds, to seven or eight thousand pounds, a-year; that the wills are not even kept secure from fire; that the real working men are miserably paid out of the rich plunder of the public; that the whole system is one of greed, corruption, and absurdity, from beginning to end. It is not, however, with the Registry of Canterbury that our business lies at present, but with the Registries and Peculiars of other dioceses, which are attached to the old Cathedrals throughout Great Britain, and of which our readers may be by no means prepared to hear what we shall have to tell.

Let us begin by setting forth from London on a little supposititious excursion—say with Mr. William Wallace, of the Middle Temple and the Royal Society of Antiquaries.

Mr. William Wallace, for the purpose of a literary pursuit in which he is engaged, intending the gratification of a taste he has for the study of old manners and old families, is determined, at his own proper cost and charge, to search the registers in some Cathedral towns, for wills and records. Having heard whispers of corruption in these departments, and difficulty of search, Mr. Wallace arms himself with letters from the Bishops of those places. Putting money in his purse besides, he goes down, pretty confidently.

Mr. William Wallace arrives at Cathedral number one; and, after being extremely affected, despite a heavy shower of rain, by the contemplation of the building, inquires for

the Registrar. He is shown a very handsome house in the Cathedral-close—a house very superior to the Bishop's—wherein the Registrar resides. For, the Registrar keeps a first-rate roof over his own head, though he keeps his deeds in a dilapidated Gate-house; at which he takes toll to the amount of seven thousand a-year; and where, as at other toll-houses, “no trust” is the rule; for he exacts his fees beforehand.

Mr. William Wallace now learns that, locally, the Registrar is a person of almost inordinate power; besides his seven thousand-pound-per-annum place, he is Chapter Clerk, Town Clerk, Clerk to the Magistrates—a Proctor, moreover, in boundless practice. He lives in great state; he keeps horses, carriages, dogs, and a yacht; he is—could he be anything else?—a staunch tory; he generally proposes the tory members for the county, and has been known to pay the entire electioneering expenses of a favourite tory candidate. Mr. Wallace, although fortified with a letter bearing the mitred seal of the Bishop of the diocese, feels that he is about to come in contact with a great power; an awful something that is not to be trifled with; one of the noblest institutions of our land, who is a very Miller of Dee, and accountable to nobody.

With a due sense of the importance of this outside buttress of the Church, Mr. Wallace presents himself with the Bishop's letter. The Registrar storms, and takes it extremely ill. He appears to confound Mr. Wallace with his own foot-boy. He says the Bishop has no power to interfere with him, and he won't endure it. He says the Bishop don't know what harm may come of showing wills. He can't make out, what people want to see wills for. He grudgingly concedes some obstructed search, on the usual terms; namely, two guineas per day for all the days a clerk—not fond of any sort of fatigue—may choose to take in making any particular search. “But perhaps you will allow me to look at the indexes?” asks Mr. Wallace. “That's of no use,” is the reply, “for a great many of the years are missing; and in those we have got, a great many wills are not entered. We often have to spend two months in finding a will.” Our friend then performs a little mental arithmetic:—two months—or, even say fifty days—means one hundred guineas, to ferret out one will. Complete indexes would only occasion ten minutes' search, equal to one day, or, according to the Registrar's tariff, two guineas. Mr. Wallace then draws the inevitable conclusion, that bad indexes partly occasion the inordinate income of the Registrar, whose manifest interest it is to keep them as imperfect as possible. One little trait of the very early volumes (the earliest wills are dated A.D. 1180,) is as quaint, as it is productive to the Registrar: the names of the testators are arranged—alphabetically, it is true—but under the Christian instead of the Surnames. Imagine

the number of days, or couples of guineas, that would drop into the Registrar's coffers, for picking out one particular John Smith from the thousands of "Johns," under the letter "J!" Since the year 1800, the index is better: indeed it is almost as available as the old catalogues of the British Museum, though not quite so perfect.

All this was despair to Mr. William Wallace, who modestly hinted that his archaeological necessities pressed him to ask admission to the actual depository of the wills. The Registrar was petrified with astonishment. His figure expanded with a burst of indignation, which presently exploded in the interrogative interjection, "What?" that went off, like the sharp crack of a rifle.

What? Exhibit, to any living soul, the dilapidative neglect, the hideous disorder, the wilful destruction of documents, involving the transfer of the property, personal and landed, of seven counties; and which he, the Registrar, obtains seven thousand pounds per annum for preserving carefully, and arranging diligently! Why, only last year the Archaeological Institute of Great Britain, itself, was peremptorily refused admission; and was it likely that the Registrar would allow Mr. William Wallace—the friend of a mere Bishop—to be turned loose, to browse at will upon the waste the Registrar and his predecessors had committed and permitted!

But what will not an enthusiastic antiquary dare, in his loved pursuit? Mr. Wallace was bold enough to hint that a Bishop had perhaps some power in his diocese—even over a Registrar. This appeared in a degree to lull the tempest; and after all storms there is a calm. The Registrar reflected. There was nothing very formidable in the applicant's appearance; he had not the hungry look of a leech or pedigree hunter—a foolish young fellow, perhaps, with a twist about old manners and customs; and, in short, he *may* take a look at the repositories.

Up a narrow stair, under the guidance of a grumpy clerk, our persevering Middle Templar wends. In a long room, over the arches of the gateway, he sees parallel rows of shelves laden with wills: not tied up in bundles, not docketed, not protected in any way from dust or spiders by the flimsiest covering. Only the modern wills are bound up; but—not to encroach upon the Registrar's hard earnings—the backings of the bindings are composed of such original wills as were written on parchment. These are regularly cut up—that is, wilfully destroyed—for bookbinding purposes!

Mr. Wallace sees, at a glance, that he may as well try to find a lost shell on a sea-shore, or a needle in a haystack, as attempt to discover what he is desirous of picking out of this documentary chaos. He looks round in mute grief; his archaic heart is heavy; he understands, exactly, how Rienzi felt amidst the Ruins of Rome, or the daughters of

Jerusalem when they wept. Wherever he turns his eyes, he sees black, barbarous Ruin. In one corner, he observes decayed boxes filled with rotten wills; in another, stands a basket, containing several lumps of mediæval mortar, and a few brick-bats of the early pointed style—the edges, possibly, of some hole in the wall too large for even poor seven thousand a-year to shirk the stopping of. Despite the hints of the clerk that his time is valuable, Mr. Wallace is contemplating these relics with the eager gaze of an F.S.A., when he descries, hanging over the edge of the basket, something like an ancient seal. He scrutinises it intensely—there is a document attached to it. He rescues it from the rubbish.

"What can this be?" asks Mr. Wallace with glistening eye.

"Oh!" answers the clerk, with listless indifference, "nothing of any consequence, I'm sure."

By this time, Mr. Wallace has found out that this "nothing of any consequence," is a Charter of King William the Conqueror; the identical instrument by which the *Seignior of Dorchester* was transferred to *Lincoln*—that's all! The broken seal is not of "much consequence" either. Oh, no!

Now it happens that there is only one impression of the great seal of the Great Norman extant, and that is in the British Museum, broken in half; this, being a counterpart, supplies the entire seal! Such is the priceless historical relic found in the year 1850, by chance, in a lime-basket, in the very place where it ought to have been as zealously preserved as if it had been the jewel of a diadem!

But, other treasures—equally of "no consequence," and about to be carried off by bricklayers' labourers, to where rubbish may be shot—are dug out by Mr. William Wallace:—Item a bundle of pardons from King John to certain barons and bishops; Item a Confession of the Protestant Faith made on his death-bed by Archbishop Toby Matthew, hitherto supposed by his biographers to have died a Catholic; Item, a contemporary poem on the Battle of Bosworth. The Registrar's clerk is of opinion, when these are shown to him, that "they ain't worth much," but growlingly saves them, on remonstrance, and bundles them into his desk; where we trust they still remain; and whence we hope they may be rescued by the proper authorities.

As Mr. Wallace follows his surly guide up the stairs of the Gate-house, the rain patters sharply against the casements, and a heavy, damp odour emerges from the upper story. Under a broken roof, and a ceiling long unplastered in huge patches by time and rain, in the top room, lie—or, more correctly, rot—the wills of the Archdeaconry of *Blowes*; a "Peculiar" of the diocese. The papers lying on the stairs are merely worm-eaten, spider-webs, dusty, ill-arranged; but, compared with those which Mr. Wallace now sees—and smells—

are in fastidious glass-case order. After dodging the rain-drops which filter through the ceiling, down among the solemn injunctions of the dead, Mr. Wallace is able to examine one or two bundles. Mildew and rot are so omnipotent in this damp depository, that the shelves have, in some places, broken and crumbled away. A moment's comparison between the relative powers of wood and paper, in resisting water, will give a vivid idea of the condition of the wills in this Archidiaconal shower-bath. The corners of most of the piles are as thoroughly rounded off, as if a populous colony of water rats (the ordinary species could not have existed there) had been dining off them since the days of King Stephen. Others are testamentary agglomerations, soddened into pulp,—totally illegible and inseparable; having been converted by age, much rain, and inordinate neglect, into *post-mortem papier maché*.

All these, are original wills: no such copies of them—which Registrars are enjoined to provide—having been made by the predecessors of the present pluralist. In order that the durability of parchment should be of no avail in arresting the most complete destruction within the scope of possibility, it is the sheep-skin testaments of this collection that are regularly shredded to bind up the modern wills ranged in books below.

The very sight of this place, shows the futility of anything like research. Mr. Wallace examines a few of the documents, only to see their extreme historical as well as local importance; turns away; and descends the stairs.

"Thus, then," says Mr. William Wallace solemnly, as he takes a parting look at the ancient Gate-house, "are documents, involving the personal and real property of Seven English Counties, allowed to crumble to destruction; thus, is ruin brought on families by needless litigation; thus, do Registrars roll in carriages, and Proctors grow rich; thus, are the historical records of the great English nation doomed—by an officer whom the nation pays the income of a prince to be their conservator—to rottenness, mildew, and dust."

Mr. Wallace having added nothing to the object of his pursuits and inquiries, in the Registry of this Cathedral number one, departed at once for Cathedral number two. How he fared there, the reader shall soon learn.

GENTLE WORDS.

Use gentle words, for who can tell
The blessings they impart!
How oft they fall (as manna fell)
On some nigh-fainting heart!

In lonely wilds by light-wing'd birds
Bare seeds have oft been sown;
And hope has sprung from gentle words,
Where only griefs had grown.

ZOOLOGICAL SESSIONS. (EXCLUSIVE.)

A PRODIGIOUS number of complaints and other noises at unseasonable hours, from that large class of our fellow-creatures of the earth so erroneously called "dumb" animals, having seriously disturbed the habitual good order and peaceful content of the Zoological Gardens in the Regent's Park, during the last week or two, the Secretary, Mr. Mitchell, considered it necessary to institute a close inquiry into the cause. He was not long in discovering this. Some of the "dumb" creatures did not at all mince the matter with him, but spoke out boldly at once.

The complaints and disturbances took the usual form of growls, roars, bellowings, barkings, chatterings, gruntings, gnashes, squeaks, hootings, hisses, yells, screams and squawks; but each and all of them had direct reference to the same special cause of grievance. The nature and tendency of this having been ascertained, Mr. Mitchell, not being able to remedy the alleged evil, saw no alternative but to convene an extraordinary meeting of the Members of the Council to a Special Court of Sessions to be held in the Gardens, with a view to giving a full and dispassionate hearing to the causes of dissatisfaction and complaint from the different plaintiffs inhabiting the Gardens, or those deputed to appear professionally in their behoof.

The day being fixed, and eight o'clock in the morning named as the hour most suitable, because no visitors are admitted till nine, the Members of the Council duly repaired to the Zoological Gardens, and entering the marquee erected for the occasion, in the enclosure of the Elephant's house, took their seats in regular form. Lord Bumbleby had already arrived, and was unanimously voted into the chair, in virtue of his position as a man of science, no less than in deference to his great legal knowledge and experience. Professor Owen, by the express wish, it was understood, of His Royal Highness Prince Albert, attended to take notes for certain learned societies in Paris and Berlin. We also observed Mr. Justice Broderip of Westminster, author of "Zoological Researches," in company with Mr. Yarrell, and close to them Mr. Thomas Bell, on the part of the Royal Society, and Mr. John Edward Grey, head naturalist of the historical department of the British Museum. The editors of all the chief journals of natural history soon after entered, together with Mr. Edwin Landseer, and several other artists of eminence, among whom were Doyle and Wolf, as matter of course. In company with these we also noticed Mr. Van Voorst, and Messrs. Reeve, Benham, and Reeve, who all took their seats with very grave countenances. We should not forget to mention that Mr. Poot, the great pigeon-fancier, was present, evidently in a somewhat perplexed state of mind in con-

sequence of the eighteen-penny veal-and-ham pie he had brought in the little side pocket of his green riding-coat, for luncheon, causing a very ungraceful protuberance in his outline on one side. We must by no means omit to record that this list was brightened and completed by the arrival of a number of ladies of high rank, in elegant morning dresses; among whom we noticed the Dowager Duchess of Flusterwing, with her two charming nieces, the Ladies Dovelies; also the Countess of Powterscourt, and Lady Forester, who supported on her arm the graceful figure of the Marchioness of Paroquet, whose husband was recently scalped in a skirmish with the Chocktaw Mackaws.

Lord Bumbleby now opened the proceedings by requesting the ladies who had just entered, to settle themselves as quickly and commodiously as possible, because he expected his learned friend, the Chevalier Bunsen, would shortly arrive. His Lordship then called upon the Secretary, Mr. Mitchell, to bring forward the different plaintiffs in succession.

The first personage who presented himself, was the Elephant. The Secretary informed the Court that this preference had been shown, not only in courtesy to the Elephant, on whose domains they were now encroaching, but also for his eminent sagacity, and the general urbanity of his manners to all who associated with him. The two head keepers had assured him that the Lion was too magnanimous to feel any offence at it.

The Elephant advanced with his usual cautious steps, his eyes being alternately cast on the ground immediately before his broad toes, and then taking a quiet look at the faces of the company assembled. He now slowly raised his trunk over their heads, and made his grand *saluam*.

It was not, he said, without considerable reluctance that he came forward to make a complaint of anybody in the Gardens—especially of one so eminent for amiability and originality of character, as the personage concerning whom these complaints had arisen. If he had been obliged to report his own keeper for inattention, or want of respect, it would have cost him much pain; but no words could describe his discomfort at finding himself obliged to appear in that Court as leading spokesman of a serious complaint brought against one of his fellow-creatures. He did not mean any offence to any learned or meritorious gentleman present, and of course not to any lady; but it would be mere affectation in him to disguise the fact that he regarded his fellow-captives in those Gardens as of more consequence in the scale of creation than any of those who held dominion over them, or who came to see them. They were obviously in that position by virtue of their superior qualities, which made them objects of intense interest to the less-endowed race of mankind.

Lord Bumbleby. I cannot allow these introductory reflections to proceed. For my own part, I totally dissent from them, as no doubt do all the present Members of Council.

The Elephant apologised if he had said anything discourteous. It was not his intention. Some people might think that the superior size and strength of other people were of less importance than their own deficiencies in those respects. But whatever might be the nature of the complaint now about to be made, it would not so much involve disagreeable comparisons between the noble captives in the Gardens and their Council, keepers, and visitors, as an exposure of erroneous estimates formed of one particular creature, and of undue favours shown him, to the injury or neglect of many more deserving such, or, at least, no less attention.

Lord Bumbleby. You really must not be so prolix. Come at once to the question. What is the cause of the disturbance and disorder that has of late been among you. Of whom, or of what do you complain?

All ears and eyes were now turned towards the Elephant, who, dropping his trunk, and placing his legs—the right fore-leg in advance of the left, and the right hind-leg in advance of the left—commenced a sawing to and fro of his body; presenting the appearance of some colossal toy, the body of which was moved forwards and backwards by means of a bit of very simple machinery, while his legs remained fixed to the board he stood upon. He continued to do this for several minutes.

Lord Bumbleby. How much longer are we to wait for a reply?

To this question the Elephant made no rejoinder, but shifted his legs, placing those in advance which had previously been behind, and then resumed his sawing motion.

Lord Bumbleby. Is this all the answer you intend to give the Court? Can anybody translate this oriental performance?

An extremely small, thin, squeaky voice, which seemed to come from a group of animals collected round the open entrance to the marquee, was now heard:—

"It seems, my Lord," said the little voice, "that the Elephant cannot make up his mind as to the reply he should give. It is too difficult and full of ups and downs, and high-ways and by-ways. But I can skip over all these, and tell you at once that the cause of our complaints is from the favouritism shown to the fat water-pig!—that's what we are all making mouths at!"

After much looking about, the little voice that had uttered this was discovered to proceed from a very tiny russet-green Marmozet Monkey, with little brown tufts of ears standing out from each side of his head, and with very bright quick eyes, having a delicate tint of clear hazel in them, and of great intelligence, though displaying a considerable degree of nervous alarm in addressing the Court. He was seated on the top of the left

shoulder of the blue-nosed Baboon, while speaking, but as he uttered the last words he sprang up to the middle of the back of the Giraffe, for greater safety.

Lord Bumbleby (addressing the Elephant). You have heard what your little friend has said. Has he fairly stated the object of your complaint?

The Elephant begged to assure his Lordship and the Court, that for his own part he had no especial cause of grievance. He had mainly come forward on the present occasion at the earnest request of a number of respected animals. As for himself, what with cakes and ale, and other presents, and a considerable share of liberty and attention, he had no reasonable ground for dissatisfaction, and he should always look down upon a Hippopotamus.

Lord Bumbleby (addressing the group of Animals). Let me distinctly ask for a decided and definite reply. Has the Marmozet rightly and truly stated the purpose of your complaint—one and all?

Numerous Voices of various kinds. He has!—he has!—he has!

Lord Bumbleby. Then let me beg that some one among you, less cautious, and guarded, and less prudent and circumlocutious than the Elephant, will do me the favour to walk forth, and state the whole substance of the matter.

At these words the Lion strode majestically into the middle of the Court, and after several heavy swings of his tail, as he looked with a very grave forest-lord countenance on all around, addressed his Lordship and the Council, in a deep voice.

He said that to his own mind, as a Lion, the whole complaint was undignified and ridiculous; but as a denizen of the Gardens, and one of the oldest of its nobles, he felt bound to espouse the common cause, and enter his protest against the gross favouritism that had been displayed towards the Hippopotamus. At first, a little of this was all very well—in fact, it was expected, with a new-comer of more than ordinary pretensions. But things had been carried much too far. The Hippopotamus had become a fashionable furor. As to the animal himself, he had nothing to say against him; the question was one of a broad public kind. Was it right towards all the other inhabitants of the Gardens, many of them possessing points and qualities worthy of the highest interest and estimation, that an almost exclusive devotion should be shown to this one individual? He the Lion blamed no one in especial—but everybody, as the injury was committed by everybody. He had felt so irritated at it—not on his own account, for he was generally half asleep all day, but as a public insult—that he had taken to scratch his back, as he thought of it, till he had torn nearly all the hair off one side, and caused the worthy Secretary great distress at this injury to his personal appearance. He concluded by expressing his opinion that the ridiculous adula-

tion of public levees, held by the Hippopotamus in his divan, should forthwith cease; and a general apology by the Council and visitors, at large, be made to all the other animals.

Before his Lordship had time to reply, and before the Lion had retired to join the group of animals, a large, black, nobby, pugnacious, turned-up snout was thrust forward, and the morose, insolent face, and rough wire-haired body that owned it, sprang into the centre of the Court. Need we say this was the Hyæna?

Why, he asked, were the Gardens, and all London, to be incessantly occupied in thinking of, talking about, and crowding to see a swimming swine? And why?—because he had the impudence to pretend to have some likeness to a horse! As to his swimming,—any pig can swim. What was this Hippopotamus, in reality, but a very large pig,—differing only in being able to dive to the bottom of a bath, in being enormously expensive in his diet, and in being of no sort of ornament or utility. Look at this diet!—was it not infamous in its enormity of cow's milk and Tafilat dates (for he wouldn't eat the little dry yellow Barbary ones), and in porridge made with the finest maize meal, and with American homony on Sundays. Look at the diet that he, the Hyæna, was given! Fire his mane-bristles! if he generally had anything but great red-and-blue bones—bones, too, in many cases, which the Lion and the Tiger had refused,—but given to him, merely because the keeper knew that he had a lower jaw capable of smashing bones which the Lion would not, and the Tiger could not break! Was he, the Hyæna, to endure this? Shrieks and fang-wranglers! Never! Split the tip of his nose with a hatchet, if he would suffer it any longer! No!—no!—no! But would he still tear at it through his bars?—would he?—would he?—would he? ha! ha! ha! would he? Yes! yes! yes! Flay off his skin with rakes and tongs, he would still ha! ha! hoo! shriek and yell his execrations, and tear at—

Here five keepers suddenly ran forward, and with great difficulty muzzled the frantic speaker, and dragged him out of Court, by the mane and tail, and one hind leg. It was well they did, as all the ladies and most of the gentlemen had risen from their seats, and were just preparing to make a precipitate retreat. The Duchess of Flusterwing had her splendid tippet quite discomposed, and Mr. Poot's veal-and-ham pie had a narrow escape of being smashed in his pocket.

Lord Bumbleby. If we are to have any more of such shameful behaviour as this, I shall vacate my seat. Mr. Broderip is more used to deal with these obstreperous characters in the performance of his magisterial duties in Westminster—perhaps he will be so good as take the chair.

Mr. Broderip expressed his readiness to do this. He considered it his duty, not merely on the score of his magisterial avocations, but of his labours in natural history, and the

interest he took in it. Mr. Mitchell, however, having assured his Lordship that nothing of the sort would occur again, the noble chairman nodded his head in token of his consent to remain in his place.

With a light, tripping, and inaudible step, the Fox now came forward by a sidelong movement. With a most diffident air, his eyes turned meekly to the ground, he addressed his Lordship in a smooth and subdued voice.

Far was it from his intention, he said, an obscure and humble individual like him, to arrogate to himself the least right to complain of any attention bestowed on any other creature in the Gardens. No—that was not his character, any more than it would have been his place. He knew himself better. He did not venture to present himself on the present occasion for himself, or indeed of his own accord, so much as in courtesy to another who, though not being exactly an invalid, was still under circumstances of great difficulty as to locomotion, and had therefore besought him, with several glum tears in his eyes, to undertake this office. He appeared, therefore, as the solicitor of the Great Tortoise, who had fully instructed him as to the line of argument he should pursue.

Lord Bumbleby (addressing Mr. Mitchell). If the Tortoise is not incapacitated by illness from appearing in court, his solicitor ought still to have brought a certificate from his medical attendant as to any other bodily cause that prevented his walking here.

A strange Voice. Pfloo! pfloo!

Lord Bumbleby. Who dares to say pooh, pooh!

It was discovered that the voice had proceeded from the Seal, who had been brought there reclining on a fishmonger's tray, supported by two Monkeys, whose eyes were seriously bent on the ground. They had pinched the Seal.

Lord Bumbleby (to the Seal). You are in liquor!

Mr. Mitchell explained that it was the distance only that prevented the Tortoise from appearing in person, because at his rate of travelling it would occupy him at least twenty-four hours to come from his enclosure to the Elephant's court-yard where they now were. His Lordship, considering this satisfactory, nodded to the Fox to proceed.

The Fox, bowing his nose to the ground, thanked his Lordship for his politeness. To the question, then, of extraordinary favours lavished upon the individual called the Hippopotamus, he, the Fox, on the part of his client the Tortoise, begged most respectfully to say that the preference was as unjust as it was notorious. Why was it unjust? Might he be allowed to say that, in the first place, on the grounds of that reverence due to age, his client had far greater claims. The age of the individual known as the Hippopotamus was scarcely above one twelvemonth, while that

of his client amounted to no less than one hundred and seventy-nine years. He was, consequently, not only the Oldest Inhabitant of the Gardens, but in all England—probably in all Europe. The ages of both parties were authentically known. His client came from Gallapagos, on the west coast of South America, close to the equator, bringing his documents with him. He also lived at the Cape some small matter of seventy or eighty years. These things were all on record, attested by respected authority, in fact, by the heads of the different families with whom he boarded in succession as the old ones died off. As for the age of the person commonly called the Hippopotamus, it was laughably easy to attest that. He was a mere mushroom—a brown toadstool.

Lord Bumbleby. Why do you persist in alluding to him as the individual "called" the Hippopotamus? He is a Hippopotamus! He is not a toadstool.

The Fox begged ten thousand pardons; he had heard this point much contested in the Gardens among his friends and companions, who had arrived at the conclusion that the beast known as the Hippopotamus, was, in truth, a young Abyssinian pig, of the amphibious variety; but if his learned Lordship, whose universal mind might be designated not only as amphibious, but as equally mundane, aerial, and igneous, had settled the question for ever, he, the Fox, an obscure and humble solicitor, was sure he should not exceed the limits of his instructions by saying, on the part of his client, that he bowed to his Lordship's decision, and admitted, before the present imposing assembly, that the pig was a horse. (*Loud laughter.*)

Lord Bumbleby. An Irish bull, you mean. Don't be impertinent, Sir.

The Fox begged ten hundred thousand pardons. There was, however, another question on which he had a few words to offer. A thing, whether alive or dead, was valued in England, by no means so much for itself, and its intrinsic merits (if any) as for its scarcity, and the money it cost to obtain it. Suppose nature had reversed the order of things with himself and the Hippopotamus, so that, while there were a countless number of water-pigs—he begged ten hundred thousand million pardons! he meant Hippopotami—there should at the same time be only one Fox in all England? What a Fox that would be! His ears, how acute and pointed to a hair! His nose, how fine and infallible! His eyes, how bright with keen and secret intelligence? His mouth, how formed for all the loves and graces to hover round! His physiognomy, how matchless in the sharpness of its angle; with what a development of cranium above! His brush, how flowing and gracious! His step, how light and elegant! His speed, how fleet—his long-winded endurance, how wonderful! His courage, when surrounded, how astonishing!

His fertility of resources, his art and finesse, how inimitable! His natural odour, how exceeding all the gales of Araby the Blest!

Lord Bumbleby. That's very true.

The Fox thought it his duty, then, both to his respected client, and to himself, to draw this parallel, as it would place before the wise and consistent British public the picture of themselves crowding and trampling over each other, after waiting half an hour *outside* a closed door—in order to obtain admission to an inner room, where they might behold—a Fox!

[*The Fox here made a profound bow to the Court.*]

Lord Bumbleby. But you are forgetting your respected client.

The Fox begged to remind the noble and learned Lord, that all he had said of himself was merely in illustration of his client's case. It must be evident to everybody that the inference he would draw was this: if such would be the fact of estimation, in an imaginary case of rarity, such as his own, how much more ought it to obtain when there was an actual rarity in the case, such as his client! A Tortoise of such a size—weighing five or six hundredweight—and of the age of one hundred and seventy-nine years, was surely as great a rarity as the young Abyssinian water-pig, whom, in deference to his Lordship, he was ready to call the Hippopotamus.

With these words the Fox bowed all round, and retired behind Mr. Poot, who chanced to be seated near the side to which he had so gracefully bowed himself.

Professor Owen here rose, and requested his Lordship's permission to offer an observation. He would be one of the last to interrupt so important and interesting a discussion; all he wished was that a right understanding should exist in the minds of the complainants with respect to their young associate, who was the innocent cause of the recent disturbance in the Gardens. He would remind his quadrupedal friends—in short his friends of any number of legs—that the Hippopotamus had not presumptuously put himself forward, or employed any means, open or sinister, for obtaining public favour. Of him, as of some other illustrious personages, it might be truly said that he had not "sought for honours," but that "honours had been thrust upon him."

A gruff Voice. By whom?

Lord Bumbleby. Let the speaker come forward.

The Black Bear, from the Bear's-pit, now advanced on his hind-legs, and standing in that bolt-upright attitude in which he excels all other bears, remained steadily in this position, to the great applause of the Court.

Lord Bumbleby. Order! Mr. Mitchell, be so good as to repress this unseemly demonstration. (*To the Bear.*) You asked by whom had honours been thrust upon the Hippopotamus?

The Bear said, that, if particular examples were desired, he considered Lord Bumbleby himself, and Professor Owen, had done this. The Professor had led the way by his learned account of the swimming swine; and his Lordship had paid him a friendly visit the very first morning after he arrived. Even in his Lordship's last remark the feeling of favouritism was manifested.

Lord Bumbleby. How do you show this?

The Bear said it was obvious. When he, the Bear, "appeared"—as astronomers say of a planet, and as actors say of themselves—when he "appeared," and the Court greeted him with a round of applause, his Lordship instantly suppressed it as an unseemly demonstration! Why was it unseemly? Simply because he was a Bear, and not a water-pig. This bad feeling towards the species he objected to, on the part of his friends in the Pit, and no less of his next door neighbour the Polar Bear, as an injustice on the one side (*giving his left side a scraping scratch with one paw*), and an indignity—he did not care if he called it by a stronger term—an exasperation, on the other.

[*The Bear here administered a good scrape to his other side; dropped on all-fours; and retired with an angry look behind him.*]

Professor Owen said he could not allow the accusation of the last speaker to pass without a word of reply. He had paid no attention to the Hippopotamus that he was not ready to pay to any other new-comer of importance. As to leading the way to public admiration, it was his duty to lead the way in scientific description;—but as to the amount of interest and admiration, that was entirely a matter of public taste. He had bestowed the same pains on many other creatures. And always should do so. He had no favourites. He beheld them all with equal eye, as creatures of the same wonderful round of living things that constantly appear on the earth's surface. He even took the same interest in them when dead, as when living. He had once nearly lost his life in dissecting a celebrated Elephant. Only a few months ago, when the elder Rhinoceros died, he attended regularly for a fortnight at his dissection in an open shed in a windy season, standing in mud and crimson slush, several hours daily. If his elaborate account of this did not excite the same interest as what he had said of the Hippopotamus, it was simply because the latter was more suited to the public taste. It was not the Professor's fault. He endeavoured to lead that taste on all subjects of natural history. If the public followed, he rejoiced; if not, he had learnt to be patient. He had never pandered to a bad or idle taste of the public, or he might have made himself excessively popular. Only a short time ago the public were mad to have a sea-serpent; but he had refused to help them to one, and had directly opposed himself to the popular feeling. He

thought he should find it his duty to do this again, if the scales, as large as cheese-plates, which the last sea-serpent had rubbed off in scratching himself against an Irish light-house the other day, were forwarded to him for examination—as he hourly expected.

The Isabella Bear came forward at this juncture, with clasped hands, and a moaning voice. She endeavoured in a confused way, wringing her hands continually, and being in a state of great emotion, to complain of her difference of diet compared with that of the Hippopotamus. Nor was this all; for, whereas all the other animals in her vicinity were fed at six o'clock, she did not get her rice and water till eight, and the cruelty of this proceeding aggravated her sense of the unprecedented luxuries heaped upon the Pig of Pigs. What else she said could not be heard distinctly; and she was led staggering out of court by the Polar Bear, who said he was ashamed of such weakness.

Lord Bumbleby (taking out his watch). The Court has been sitting a long while. This is rather a sharp morning. Mr. Mitchell, is it nearly feeding time? (*A laugh.*)

A little bustle occurring in the Court, it was found on inquiry to proceed from Mr. Poot, who had had his pocket picked of his veal-and-ham pie. He had no idea who could have stolen it from him.

It being now intimated to Lord Bumblebee that several other animals were desirous of addressing the Court, his Lordship suggested that they should depute some one from among the number to represent the rest, with a view to shortening the time, as he wanted some refreshment.

After a little conference and discussion among the group of animals, they unanimously elected the Jack Daw; who accordingly hopped and bowed himself forward, and perching on the Secretary's table, close beside his inkstand, with a grave look and a bright round eye, proceeded to address the Court.

Accustomed as he was to public speaking, he felt himself very unworthy of the honour conferred upon him by this selection. He would, however, fulfil the onerous and delicate duty it imposed upon him in the best way his very humble abilities enabled him to do. *Jark! jark!* He must apologise for his voice, as he had a cold. Now, the great question before them seemed to him to rest upon three facts:—there was the Hippopotamack fact; there was the merit and scarcity of many other creatures; and there was the public taste. As to the Hippopotamack fact,—the expense lavished upon him, the pampering of his vanity, and the attention bestowed upon him by all classes, were matters of notoriety. But the merit or scarcity of other creatures, how was this overlooked? *Jark!* It was abominable—*jark!* Not to mention those who had already so ably represented their own cases, how many others were injured! Look at the Giraffes, for instance—creatures

who were so very tall and so very amiable. All the world admired them. Yet, there they were all day long, stretching out their necks over the wooden barrier and gazing with a large melancholy in their enquiring eyes, down into the enclosure of the pampered pig—their faces displaying an equal degree of sadness at their own neglect, and of curiosity to discover what it was that people found to admire in the lounging weight that perambulated the inclosure! Take two other examples. There was the Tortoise, and his solicitor, the Fox. For his own part, he, the Jack Daw, had no sympathy with the Tortoise,—notwithstanding his great scarcity,—because, not content with this undoubted fact, he had recently sought to make tortoises a degree more scarce by endeavouring to murder, by pressure into the earth, the other smaller Tortoise which was in the same inclosure, so that the keepers had been obliged to take the latter away, and place him with the Armadilloes. But for his friend the Fox, though he, the Daw, did not exactly pretend to infer that the Fox was a very scarce animal, yet how various were the merits that entitled him to consideration;—what intellect and presence of mind—what eloquence, and what a fund of anecdote, he possessed! But nobody who came to the Gardens ever inquired after his health, or cared for his existence. Rare birds for beauty, or scarcity, or ugliness, or stupidity, or wisdom, or for general knowledge, and the “gift of the” *jark!*—the “gift of the” *jark!*—“gift of the” *jark!*—“of the gab,” were all treated with the same neglect. Look at the Flamingo!—had any other creature on earth such ugly, long, thin, pink legs, with a bass voice that seemed enough to shake him clean off his legs every time he spoke? There was the Indian Owl! Was there ever so fine a pair of deep red eyes in any creature's head—except on a locomotive steam-engine at night? No—he was a matchless bird for eyes. Then, there was the Barred Owl, in the next cage, whom he, the Daw, felt persuaded had seen better days—in fact, he was sure, from the pensive air of his head and wig, that he was a deposed Lord Chancellor—all his hopes had been blighted.

Lord Bumbleby. Nothing offensive intended in this last example, I suppose?

The Jack Daw assured the noble and learned Lord, that he had intended no allusion to any other owl. He spoke only of the Barred Owl. There was yet a third owl of a most wonderful expression, and deserving marked attention. He was called the Eagle Owl; but he ought—saving his Lordship's presence—to be called the Devil's Owl, for if ever a pair of eyes denoted the arch-enemy—

Lord Bumbleby. I cannot permit this comparison to be made. It is out of order.

The Daw bowed so low as to strike his bill upon the table, while his long black coat-tails rose up in a way to express the highest degree of respect. He gave the noble and

learned Lord his word of honour that he would never again allude to that owl, although he must be permitted to say, *jark!*—to say, *kark—jark!*—but that's neither here, nor there. He would beg leave to substitute another creature equally meritorious and remarkable for his ugliness—he referred to the Canadian Lynx. That was an animal who ought to excite a great deal of attention at this time, from the striking resemblance he bore to a friend of Baron Rothschild's—namely Marshal Haynau, whose health was drank the other day in treble X, by Messrs. Barclay's draymen.

Lord Bumbleby. I insist upon it, that no more of these—

The Jack Daw hastened to anticipate his Lordship's commands—and was dumb, so far as the long-mustachioed Lynx—Haynau he meant to say—was concerned. Of the Otters he would be silent: the constant exhibition of their talents always collected an admiring crowd. The same might be said of the Monkeys, whose cries—which he must say were exactly like the drawing of a number of small and very obstinate corks—never failed to attract spectators to their performances. But of the more modest, yet equally original, merits of the American Tapir, whose nose is a thick fore-finger (and the same curious characteristic may be noted in the Rhinoceros); of the amiable pair of Porcupines; and of the King Vulture, who is said to have come from Paraguay, but who, in reality, belongs to the Kingdom of Pantomime—he could hold forth from this time till to-morrow morning. He understood the look of the noble and learned Lord, and would not do so. He would conclude by reminding them of one ominous fact. The youngest of the Giraffes, being quite unable to endure the melancholy sight of the continual favouritism—money lavished—and all sorts of luxuries anxiously provided for the Hippopotamack—had recently departed for Antwerp, with a solemn vow never to return. Let the Council and Mr. Mitchell look well to it! let them be warned in time, lest other choice creatures took an opportunity of effecting their, *jark—jark!*—and leaving this ungrateful country for ever—*jark!*

Mrs. Mitchell. I crave permission, my Lord, to say one word. I will confine myself to the remarks made of the creatures last mentioned. This explanation will go to prove that neither in expense, nor in attention, has any such exclusive favour been shown to the Hippopotamus as the various speakers would have you believe. Take the example last given. For a long time the Gardens possessed no specimen of the Giraffe. After many vain attempts to procure one, we made the following public offer. The Society would give one thousand pounds to anybody who would bring to the Gardens the first Giraffe, alive and well; eight hundred pounds for the second; six hundred pounds for the third; five hundred pounds for the fourth, and for as many

more as could be procured. A Frenchman undertook the enterprise. He went over to Africa with a party, and, after great efforts and privations, succeeded in obtaining six. Two died on the way home; but he brought four to us, and we paid him the several sums we had promised. As to the care and attention we bestow on them, it is quite as much as we devote to the Hippopotamus. (*Great applause—with some murmurs from the group of Animals.*)

Professor Owen craved the indulgence of the Court for a minute longer. He had already declared that his attentions were at the service of any animal of distinguished merits. The Giraffes had last been spoken of. A Giraffe had died at the Gardens some years ago, from a bad cold, and sore throat of long standing. He, the Professor, had been most anxious to add to the Museum of the College of Surgeons a specimen of the spinal marrow of a Giraffe. To obtain this he was engaged in its dissection several days in an open shed, in the depth of winter. He succeeded in obtaining the whole length of the spinal cord. He had a glass tube of eight or ten feet blown on purpose to hold it, and a wooden foot made to sustain the glass tube—which might now be seen at the Royal College of Surgeons by any of the company present. The same attention he was ready to display to any of the group of animals there present! (*Great sensation.*) And he could assure them that their spinal cords and skeletons (*Increased sensation, and sudden movement*) would be preserved in the Museum with every due regard to their merits.

With a roar and a yell, and chatterings, and screams, and strange cries, away galloped, and scrambled, and ran, and flew, all the creatures!—creating by the suddenness and confusion of their flight, a panic among all the assembled company—every one of whom ran he knew not whither! The Duchess of Flusterwing made straight for the Lion's den; the noble and learned Lord, in his flight, embraced the neck of the Rhinoceros by mistake for somebody else. Mr. Yarrell ran direct towards the canal, and jumped in; Mr. Doyle dashed into one of the boundary hedges; and Mr. Poot scouring away at random, pitched head foremost into the enclosure of the Tortoise, and on "sitting up" to collect his senses, saw the Fox eating the remains of a veal-and-ham pie, with some vegetable marrows given him on "account" of fees due to him by the Tortoise.

THE SUBSCRIPTION LIST.

It has been declared, with truth, that public charity accomplishes more in this country than in any other in the world. The inference to be deduced from this fact must be carefully drawn. Many influences swell the amount of "charitable donations;" and it is by arriving at something like an estimate

of the pure charity, to be generally traced in a subscription list, that we measure the extent of public Heart-benevolence. Let us take up a list at random. Here is a subscription in aid of a Hospital. The first name we find is that of—

Miss Letitia Latterday, of Latterborough Hall. . £10.

Doubtless this lady is sincerely desirous that the hospital thus patronised should be a couple of beds the better of her contribution; yet the conspicuous advertisement of Miss Latterday's name and euphonious address at full length, betrays an anxiety that her benevolent desires, together with the fact of her being the possessor of Latterborough Hall, should be extensively known to the public at large. The next lines on the list are:—

John Pampas, Esq. £5.
Mrs. John Pampas 5.

If Mr. Pampas be solely anxious to extend the usefulness of the hospital, why did he not subscribe at once without dragging in his wife? Is he pleased to see his name prominently repeated in the list; or has Mrs. Pampas insisted upon seeing herself in print? We suspect that the Pampases look upon the matter rather as a bit of cheap distinction, than as a real goodness performed by them. Mr. Pampas, we are told, was very particular about having his name properly spelt.

This expedient for spreading a small amount of charity over a large surface of publicity is more strikingly exemplified by the next entries:—

The Right Honourable Lady Bittern . . . 10s. 6d.
The Honourable Blanche Bittern . . . 7 6
The Honourable Fanny Bittern . . . 5 0
The Honourable Alicia Bittern . . . 2 6
The Honourable Gemina Bittern . . . 2 6
The Honourable Chas. de Brandenburg Bittern. 2 6

Lady Bittern is an economist. No one knows better than her ladyship how to lay out thirty shillings in charity with profit to the reputation of her numerous family. What a miracle of precocious munificence is exhibited to those who happen to know that Charles de Brandenburg Bittern has not yet arrived at the dignity of being short-coated!

The next name worthy of note is that of our friend—

Johnson Tomlinson, Esq., of Topperton Hall. . £25.

We happened to be present when this subscription was solicited. Tomlinson, an exemplary share-broker, had recently bought "the place" advertised above. The first question he asked the begging secretary was—not as to the object of the fund in course of formation; how it would be applied; what amount of suffering it would mitigate; how many new patients would be relieved—but, "Who have you got?" The secretary unfolded his list; "Well, Sir," he began, "we have the Lord Lieutenant (fifty guineas), the High Sheriff (fifty pounds), Lord Bramble,

one hundred and five pounds. You see, Sir?" continued the wily solicitor, knowing his man, and remembering his initial, "We do not make up our list *alphabetically*, but according to amounts."

"Hum!" considered Tomlinson, melting to the cause when he remembered how completely out of sight the "T's" were stuck in former advertisements; "How much has Sir Skinner Flint put down?"

"Twenty pounds, Sir."

"Very well; put down twenty-five opposite to my name. You see," was Tomlinson's aside speech to us, "one must do the thing a little handsome as a new comer into this aristocratic part of the country, or one gets looked on freezingly by these people: I may say, blown upon."

It is a sorry inference, then—but, alas, a true one—that Tomlinson's money was not put forth to fend off suffering from the sick poor, but as a golden shield for himself against the cold shoulder of the rich.

"Sir," said the secretary, when he called on the chief proprietor of the *Whited Sepulchre Chronicle*. "We spend twelve hundred a year in newspaper advertising; besides two hundred per annum in printing circulars. You could not have a better medium for making your excellent publication extensively known to the public. Let me say five." But as the person appealed to, knew that the notification would be repeated in just as many impressions for less money, we find it stand thus:

Proprietors of the *Whited Sepulchre Chronicle* £2 2s.

Could the price and day of publication have appeared, the donor candidly owned he would have been glad to give the five.

Glancing the eye over other parts of the subscription list, we do not find it wholly a record of pomps and vanities. There are a few scarcely perceptible entries almost overshadowed by the big letters of the great subscribers. They are simple initials set against small sums; the smallest, however, is greater than either of Lady Bittern's family offerings. "A Friend" occurs more than once, and ten shillings is bestowed by "an Old Patient." Such contributions speak true charity out of the fulness of genuine gratitude.

Our former instances are, we reluctantly own, not overcharged demonstrations of what goes by the name of charity, in a great many cases. A new ward is to be built in a hospital. Experience proves that to demonstrate the necessity and utility of such an addition, is but a secondary necessity. The promoters know, that to succeed, they must get the undertaking graced with the names and patronage of half a dozen peers, a sprinkling of the House of Commons, and a judicious selection from wealthy neighbours. The list is published, and subscriptions flow in. Why do they flow in? Because the undistinguished rich—the mob of gentlemen who pay with ease—have, too often, a morbid desire to find

their names ranged alongside those of "Good" Dukes, Peers, and M.P's.

The truth is, deep, sympathising, effectual benevolence does not often find its way into the subscription list at all. Neither does it go about in mysterious melodramatic disguise, on purpose to be found out and be all the more blazoned; but, with unostentatious earnestness, gives its intellect and its time, as well as its money, to the needy and suffering. It discriminates, inquires, and affords judicious help rather than unqualified alms; which though it may bless the giver, seldom blesses the receiver; unless in cases of utter helplessness.

Meek Charity never thrusts her hand into her purse with the bouncing let-me-know-what-I-have-to-pay-and-have-done-with-it, profusion of a rich "subscriber." She is a great economist; for had she millions, she could not cover and heal all the sores of poverty that cover the land. She knows that unwise profusion to one case is gross injustice to many others that must be consequently neglected.

It may be argued, that whatever be the motives of the advertisers, for their seeming charity, the result is good. They give their money and that is usefully applied.

As a general rule, we doubt this. The regular charities, of which routine advertisements are constantly appearing in the Spring, are, many of them, gigantic jobs; operating less for the excellent objects pretended in them than for the payment of large salaries to their officers and managers. Most of the subscribed capital goes to build magnificent palaces for a few children, who are supposed to be born in hovels; to pay the bills of treasurers, who manage to get elected as such because they are printers, or contractors for articles used in the institution, and enormously overcharged. The purest we believe to be medical charities; but some of these are full of abuses—abuses often occasioned by their very affluence, and which they have attained by means of a clever and constant working of THE SUBSCRIPTION LIST.

THE EMIGRANT'S BIRD.

"The vessels carry out houses and every necessary requisite for domestic comfort on landing; and, singular as it may seem, every variety of English singing-bird, which, on landing, the colonists will release, in order that they may propagate."

To distant lands across the sea
I go, a happier lot to seek,
And tho' not one will mourn for me,
The tears are welling down my cheek!
For wife and children sleep beneath
The shadow of an aged yew,
And I but seem to be awaiting death
In bidding all a loved adieu!

This house, tho' only wood and stone,
Has language in each time-worn wall;
For, as I turn and would be gone,
Loved spirit-voices on me call!

I linger in the deepening gloom,
Half hoping with the dead to meet;
To hear in some now vacant room
The music of my children's feet.

I cannot leave all home behind,
My heart—my heart would surely break!
Therefore, sweet birds, tho' now confined,
'Tis love that doth thy prison make:
When waves around us cease to foam,
Your captor's hand shall set you free;
And you shall sing to me of home,
In the far land across the sea.

THE WARLOWS OF WELLAND; OR, THE MODERN FRODIGAL.

MANY travellers know the "Rutland Arms" at Bakewell, in the Peak of Derbyshire. It is a fine large inn, belonging to his Grace of Rutland, standing in an airy little Market-Place of that clean-looking little town, and commanding from its windows pleasant peeps of the green hills and the great Wickop Woods, which shut out the view of Chatsworth, the Palace of the Peak, which lies behind them. Many travellers who used to traverse this road from the south to Manchester, in the days of long coaches and long wintry drives, know well the "Rutland Arms," and will recall the sound of the guard's bugle, as they whirled up to the door, amid a throng of grooms, waiters, and village idlers, the ladder already taken from its stand by the wall, and placed by the officious Boots in towering position, ready, at the instant of the coach stopping, to clap it under your feet, and facilitate your descent. Many travellers will recall one feature of that accommodating inn, which, uniting aristocratic with commercial entertainment, has two doors; one lordly and large in front, to which all carriages of nobility, preclacy, and gentility naturally draw up; and one at the end, to which all gigs, coaches, mails, and still less dignified conveyances, as naturally are driven. Our travellers will as vividly remember the passage which received them at this entrance, and the room to the left, the Travellers' Room, into which they were ushered. To that corner room, having windows to the Market-Place in front, and one small peeping window at the side, commanding the turn of the north road, and the interesting arrivals at the secondary entrance, we now introduce our readers.

Here sat a solitary gentleman. He was a man apparently of five-and-thirty; tall, considerably handsome; a face of the oval character, nose a little aquiline, hair dark, eyebrows dark and strong, and a light, clear, self-possessed look, that showed plainly enough that he was a man of active mind, and well to do in the world. You would have thought, from his gentlemanly air, and by no means commercial manner, that he would have found his way in at the great front door, and into one of the private rooms; but he

came over night by the mail, and, on being asked, on entering the house, by the waiter, to what sort of room he would be shown, answered, carelessly and abruptly, "anywhere."

Here he was, seated in the back left-hand corner of the room, a large screen between himself and the door, and before him a table spread with a goodly breakfast apparatus—coffee, eggs, fresh broiled trout from the neighbouring Weye, and a large round of corned beef, as a *dernier resort*.

It was a morning as desperately and delugingly rainy as any that showery region can send down. In the phrase of the country, it *siled* down, or run, as if through a sieve. Straight down streamed the plenteous element, thick, incessant, and looking as if it would hold on the whole day through. It thundered on the roof, beat a sonorous tune on porches and projections of door and window, splashed in torrents on window-sills, and streaming panes, and rushed along the streets in rivers. The hills were hidden, the very fowls driven to roost—and not a soul was to be seen out of doors.

Presently there was a sound of hurrying wheels, a spring-cart came up to the side door, with two men in it, in thick great coats, and with sacks over their shoulders; one huge umbrella held over their heads, and they and their horse yet looking three parts drowned. They lost no time in pitching their umbrella to the ostler, who issued from the passage, descending and rushing into the inn. In the next moment the two countrymen, divested of their sacks and great coats, were ushered into this room, the waiter, making a sort of apology, because there was a fire there—it was in the middle of July. The two men, who appeared Peak farmers, with hard hands which they rubbed at the fire, and tanned and weather-bent complexions, ordered breakfast—of coffee and broiled ham—which speedily made its appearance, on a table placed directly in front of the before solitary stranger, between the side look-out window and the front one.

They looked, and were soon perceived by our stranger, to be father and son. The old man, of apparently upwards of sixty, was a middle-sized man, of no Herculean mould, but well knit together, and with a face thin and wrinkled as with a life-long acquaintance with care and struggle. His complexion was more like brown leather than anything else, and his hair, which was thin and grizzled, was combed backward from his face, and hung in masses about his ears. The son was much taller than the father, a stooping figure, with flaxen hair, a large nose, light blue eyes, and altogether a very gawky look.

The old man seemed to eat with little appetite, and to be sunk into himself, as if he was oppressed by some heavy trouble. Yet he every now and then roused himself, cast an anxious look at his son, and said, "Joe, lad, thou eats nothing."

"No, fayther," was the constant reply; "I towd you I shoulnd't. This reens enough to tak anybody's appetite—and these t'other things," casting a glance at the stranger.

The stranger had, indeed, his eyes fixed curiously upon the two, for he had been watching the consumptive tendency of the son; not in any cough or hectic flush, or peculiar paleness, for he had a positively sunburnt complexion of his own, but by the extraordinary power he possessed of tossing down coffee and ham, with enormous pieces of toast and butter. Under his operations, a large dish of broiled ham rapidly disappeared, and the contents of the coffee-pot were in as active demand. Yet the old man, ever and anon, looked up from his reverie, and repeated his paternal observation:—

"Joe, lad, thou eats nothing!"

"No, fayther," was still the reply; "I towd you I shoulnd't. It's this reens, and these t'other things"—again glancing at the stranger.

Presently the broiled ham had totally vanished—there had been enough for six ordinary men. And while the son was in the act of holding the coffee-pot upside down, and draining the last drop from it, the old man once more repeated his anxious admonition:—"Joe, lad, thou eats nothing!"—and the reply was still, "No, fayther, I towd you I shoulnd't. It's this reens, and these t'other things."

This was accompanied by another glance at the stranger, who began to feel himself very much in the way, but was no little relieved by the son rising with his plate in his hand, and coming across the room, saying "You've a prime round of beef there, Sir; might I trouble you for some?"

"By all means," said the stranger, and carved off a slice of thickness and diameter proportioned to what appeared to him the appetite of this native of the Peak. This speedily disappeared; and as the son threw down the knife and fork, the sound once more roused the old man, who added, with an air of increased anxiety, "Joe, lad, thou eats nothing."

"No, fayther," for the last time responded the son. "I towd you I shoulnd't. It's this reens, and this t'other matter;—but I'm home, and so let's go."

The father and son arose and went out. The stranger who had witnessed this extraordinary scene, but without betraying any amusement at it, arose, too, the moment they closed the door after them, and, advancing to the window, gazed fixedly into the street. Presently the father and son, in their great coats, and with their huge drab umbrellas hoisted over them, were seen proceeding down the market-place in the midst of the still pouring rain, and the stranger's eyes followed them intently till they disappeared in the winding of the street. He still stood for some time, as if in deep thought, and then

turning, rung the bell, ordered the breakfast-things from his table, and producing a writing-case, sat down to write letters. He continued writing, pausing at intervals, and looking steadily before him as in deep thought, for about an hour, when the door opened, and the Peak farmer and his son again entered. They were in their wet and steaming great coats. The old man appeared pale and agitated; bade the son see that the horse was put in the cart, rung the bell, and asked what he had to pay. Having discharged his bill, he continued to pace the room, as if unconscious of the stranger, who had suspended his writing, and was gazing earnestly at him. The old man frequently paused, shook his head despairingly, and muttered to himself, "Hard man!—no fellow feeling!—all over! all over!" With a suppressed groan, he again continued his pacing to and fro.

The stranger arose, approached the old man, and said, with a peculiarly sympathising tone,

"Excuse me, Sir, but you seem to have some heavy trouble on your mind; I should be glad if it were anything that were in my power to alleviate."

The old man stopped suddenly—looked sternly at the stranger—seemed to recollect himself, and said rather sharply, as if feeling an unauthorised freedom—"Sir!"

"I beg pardon," said the stranger. "I am aware that it must seem strange in me to address you thus; but I cannot but perceive that something distresses you, and it might possibly happen that I might be of use to you."

The old man looked at him for some time in silence, and then said—

"I forgot any one was here; but you can be of no manner of use to me. I thank you."

"I am truly sorry for it; pray excuse my freedom," said the stranger with a slight flush; "but I am an American, and we are more accustomed to ask and communicate matters than is consistent with English reserve. I beg you will pardon me."

"You are an American?" asked the old man, looking at him. "You are quite a stranger here?"

"Quite so, Sir," replied the stranger, with some little embarrassment. "I was once in this country before, but many years ago."

The old man still looked at him, was silent awhile, and then said—"You cannot help me, Sir; but I thank you all the same, and heartily. You seem really a very feeling man, and so I don't mind opening my mind to you—I am a ruined man, Sir."

"I was sure you were in very deep trouble, Sir," replied the stranger. "I will not seek to peer into your affairs; but I deeply feel for you, and would say that many troubles are not so deep as they seem. I would hope yours are not."

"Sir," replied the old man—the tears starting into his eyes—"I tell you I am a ruined man. I am heavily behind with my rent,—

all my stock will not suffice to pay it; and this morning we have been to entreat the steward to be lenient,—but he will not hear us; he vows to sell us up next week."

"That is hard," said the stranger. "But you are hale,—your son is young; you can begin the world anew."

"Begin the world anew!" exclaimed the old man, with a distracted air. "Where?—how?—when? No, no! Sir,—there is no beginning anew in this country. Those days are past. That time is past with me. And as for my son: Oh, God! Oh, God! what shall become of him, for he has a wife and family, and knows nothing but about a farm."

"And there are farms still," said the stranger.

"Yes; but at what rentals?—and, then, where is the capital?"

The old man grew deadly pale, and groaned.

"In this country," said the stranger, after a deep silence, "I believe these things are hard, but in mine they are not so. Go there, worthy old man; go there, and a new life yet may open to you."

The stranger took the old man's hand tenderly; who, on feeling the stranger's grasp, suddenly, convulsively, caught the hand in both his own, and shedding plentiful tears, exclaimed, "God bless you, Sir; God bless you for your kindness! Ah! such kindness is banished from this country, but I feel that it lives in yours—but there!—no, no!—there I shall never go. There are no means."

"The means required," said the stranger, tears, too, glittering in his eyes, "are very small. Your friends would, no doubt—"

"No, no!" interrupted him the old man, deeply agitated; "there are no friends—not here."

"Then why should I not be a friend, so far?" said the stranger. "I have means—I know the country. I have somehow conceived a deep interest in your misfortunes."

"You!" said the old man, as if bewildered with astonishment; "you!—but come along with us, Sir. Your words, your kindness, comfort me; at least you can counsel with us—and I feel it does me good."

"I will go with all my heart," said the stranger. "You cannot live far from here. I will hence to Manchester, and I can, doubtless, make it in my way."

"Exactly in the way!" said the old man, in a tone of deep pleasure, and of much more cheerfulness, "at least, not out of it to signify—though not in the great highway. We can find you plenty of room, if you do not disdain our humble vehicle."

"I have heavy luggage," replied the stranger, ringing the bell. "I will have a post-chaise, and you shall go in it with me. It will suit you better this wet day."

"Oh no! I cannot think of it, Sir," said the farmer. "I fear no rain. I am used to it, and I am neither sugar nor salt. I shall not melt."

The old man's son approached simultaneously with the waiter, to say that the cart was ready. The stranger ordered a post-chaise to accompany the farmer, at which the son stood with an open-mouthed astonished stare, which would have excited the laughter of most people, but did not move a muscle of the stranger's grave and kindly face.

"This good gentleman will go with us," said the old man.

"Oh, thank you, Sir!" said the son, taking off his hat and making a low bow, "you are heartily welcome; but it's a poor place, Sir."

"Never mind that," said the old man. "Let us be off and tell Millicent to get some dinner for the gentleman."

But the stranger insisted that the old man should stay and accompany him in the chaise, and so the son walked off to prepare for their coming. Soon the stranger's trunks were placed on the top of the chaise, and the old man said he drove off.

Their way was for some time along the great highroad; then they turned off to the left, and continued their course up a valley till they ascended a very stony road, which wound far over the swell of the hill, and then approached a large grey stone house, backed by a wood that screened it from the north and east. Far around, lay an immense view, chiefly of green, naked, and undulating fields, intersected by stone walls. No other house was near; and villages lying at several miles distant, naked and grey on the uplands, were the only evidences of human life.

The house was large enough for a gentleman's abode, but there were no neatly kept walks; no carefully cultivated shrubberies; no garden lying in exquisite richness around it. There was no use made of the barns and offices. There were no servants about. A troop of little children who were in the field in front, ran into the house and disappeared.

On entering the house, the stranger observed that its ample rooms were very naked and filled only by a visible presence of stern indigence. The woodwork was unpainted. The stone floors were worn, and merely sanded. The room into which he was conducted, and where the table was already laid for dinner, differed only in having the uncarpeted floor marked in figures of alternating ochre and pipe-clay, and was furnished with a meagre amount of humblest chairs and heavy oak tables, a little shelf of books and almanacs, and a yellow-faced clock. A shabby and tired-looking maid-servant was all the domesticities seen within or without.

Joe, the simple-looking son, received them, and the only object which seemed to give a cheering impression to the stranger, was Joe's wife, who presented herself with a deep courtesy. The guest was surprised to see in her a very comely, fresh-coloured, and modestly sensible woman, who received him with a kindly cordiality and native grace, which

made him wonder how such a woman could have allied herself to such a man. There were four or five children about her, all evidently washed and put into their best for his arrival, and who were pictures of health and shyness.

Mrs. Warilow took off the old man's great coat with an affectionate attention, and drew his plain elbow chair with a cushion covered with a large-patterned check on its rush bottom, towards the fire; for there was a fire, and that quite acceptable in this cold region after the heavy rain. Dinner was then hastily brought in; Mrs. Warilow apologising for its simplicity, from the short notice she had received, and she might have added from the painful news which Joe brought with him; for it was very evident, though she had sought to efface the trace of it, by copious washing, that she had been weeping.

The old man was obviously oppressed by the ill result of his morning's journey to the steward, and the position of his affairs. His daughter-in-law cast occasional looks of affectionate anxiety at him, and endeavoured to help him in such a manner as to induce him to eat; but appetite he had little. Joe played his part as valiantly as in the morning; and the old man occasionally rousing from his reverie, again renewed the observation of the breakfast-table.

"Joe, lad, thou eats nothing;" adding too now, "Milly, my dear, thou eats nothing. You eat nothing, Sir. None of you have any appetite, and I have none myself. God help me!"

An ordinary stranger would scarcely have resisted a smile—none appeared on the face of the guest.

After dinner they drew to the fire, which consisted of large lumps of coal burning under a huge beamed chimney. There a little table was set with spirits and home-made wine, and the old man and Joe lit their pipes, inviting the stranger to join them, which he did with right good will. There was little conversation, however; Joe soon said that he must go over the lands to see that the cattle was all right; he did more, and even slept in his chair, and the stranger proposed to Mrs. Warilow a walk in the garden, where the afternoon sun was now shining warmly. In his drive hither in the chaise, he had learned the exact position of the old farmer. He was, as he had observed, so heavily in arrear of rent, that his whole stock would not discharge it. When they had seated themselves in the old arbour, he communicated his proposal to her father-in-law to remove to America; observing, that he had conceived so great a sympathy for him, that he would readily advance him the means of conveying over the whole family.

Mrs. Warilow was naturally much surprised at the disclosure. Such an offer from a casual stranger, when all friends and family connections had turned a deaf ear to all soli-

tations for aid, was something so improbable that she could not realise it. "How can you, Sir, a stranger to us, volunteer so large a sum, which we may never be in a position to repay?"

The stranger assured her that the sum was by no means large. That to him it was of little consequence, and that such was the scope for industry and agricultural skill in America, that in a few years they could readily refund the money. Here, from what the old gentleman had told him of the new augmented rate of rental, there was no chance of recovering a condition of ease and comfort.

Mrs. Warilow seemed to think deeply on the new idea presented to her, and then said, "Surely God had sent Mr. Vandeleur (so the stranger had given his name), for their deliverance. Oh, Sir!" added she, "what shall we not owe you if by your means we can ever arrive at freedom from the wretched trouble that now weighs us down. And oh! if my poor father should ever, in that country, meet again his lost son!"

"He has lost a son?" said the stranger, in a tone of deep feeling.

"Ah, it is a sad thing, Sir," continued Mrs. Warilow, "but it is that which preys on father's mind. He thinks he did wrong in it, and he believes that the blessing of Heaven has deserted him ever since. Sure enough, nothing has prospered with him, and yet he feels that if the young man lives he has not been blameless. He had not felt and forgiven as a son should. But he cannot be living—no, he cannot for all these years have born resentment, and sent no part of his love or his fortune to his family. It is not in the heart of a child to do that, except in a very evil nature, and such was not that of this son."

"Pray go on," said the stranger, "you interest me deeply."

"This thing occurred twenty years ago. Mr. Warilow had two sons. The eldest, Samuel, was a fine active youth, but always with a turn for travel and adventure, which was very trying to his father's mind, who would have his sons settle down in this their native neighbourhood, and pursue farming as their ancestors had always done. But his eldest son wished to go to sea, or to America. He read a vast deal about that country of winter nights, and was always talking of the fine life that might be led there. This was very annoying to his father, and made him very angry, the more so that Joseph, the younger son, was a weakly lad, and had something left upon him by a severe fever, as a boy, that seemed to weaken his limbs and his mind. People thought he would be an idiot, and his father thought that his eldest brother should stay and take care of him, for it was believed that he would never be able to take care of himself. But this did not seem to weigh with Samuel. Youths full of life and spirit don't sufficiently consider such things. And then it was thought that Samuel imagined

that his father cared nothing for him, and cared only for the poor weakly son. He might be a little jealous of this, and that feeling once getting into people, makes them see things different to what they otherwise would, and do things that else they would not.

"True enough, the father was always particularly wrapped up in Joseph. He seemed to feel that he needed especial care, and he appeared to watch over him and never have him out of his mind, and he does so to this day. You have no doubt remarked, Sir, that my husband is peculiar. He never got over that attack in his boyhood, and he afterwards grew very rapidly, and it was thought he would have gone off in a consumption. It is generally believed that he is not quite sharp in all things. I speak freely to you, Sir, and as long habit, and knowing before I married Joseph what was thought of him, only could enable me to speak to one who feels so kindly towards us. But it is not so—Joseph is more simple in appearance than in reality. No, Sir, he has a deal of sense, and he has a very good heart; and it was because I perceived this that I was willing to marry him, and to be a true help to him, and, Sir, though we have been very unfortunate, I have never repented it, and I never shall."

The stranger took Mrs. Warilow's hand, pressed it fervently, and said, "I honour you, Madam—deeply, truly—pray go on. The eldest son left, you say."

"Oh yes, Sir! Their mother died when the boys were about fifteen and seventeen. Samuel had always been strongly attached to his mother, and that, no doubt, kept him at home; but after that he was more restless than ever, and begged the father to give him money to carry himself to America. The father refused. They grew mutually angry; and one day, when they had had high words, the father thought Samuel was disrespectful, and struck him. The young man had a proud spirit. That was more than he could bear. He did not utter a word in reply, but turning, walked out of the house, and from that hour has never once been heard of.

"His father was very angry with him, and for many years never spoke of him but with great bitterness and resentment, calling him an unnatural and ungrateful son. But of late years he has softened very much, and I can see that it preys on his mind, and as things have gone against him, he has come to think that it is a judgment on him for his hardness and unreasonableness in not letting the poor boy try his fortune as he so yearned to do."

"Since I have been in the family, I have led him by degrees to talk on this subject, and have endeavoured to comfort him, telling him he had meant well, and since, he had seen the thing in a different light. Ah, Sir! how differently we see things when our heat of mind is gone over, and the old home heart

begins to stir in us again. But, since he has done this, and repented of it, God cannot continue his anger, and so that cannot be the cause of his misfortunes. No, Sir, I don't think that—but things have altered very much of late years in this country. The farms up in this Peak country used to be let very low, very low indeed; and now they have been three several times valued and raised since I can remember. People cannot live on them now, they really cannot. Then the old gentleman, as farming grew bad, speculated in lead mines, and that was much worse; he did not understand it, and was sorely imposed on, and lost a power of money; oh! so much that it is a misery to think of. Then, as troubles, they say, fly like crows in companies, there came a very wet summer, and all the corn was spoiled. That put a finish to father's hopes. He was obliged to quit the old farm where the Warlows had been for ages, and that hurt him cruelly—it is like shifting old trees, shifting old people is—they never take to the new soil.

"But as Joseph was extremely knowing in cattle, father took this farm—it's a great grazing farm, sir, seven hundred acres, and we feeden cattle. You would not believe it, Sir, but we have only one man on this farm besides Joseph and father."

"It is very solitary," said the stranger.

"Ah, Sir, very, but that we don't mind—but it is a great burden, it does not pay. Well, but as to the lost son. I came to perceive how sorely this sat on father's mind, by noticing that whenever I used to read in the old Bible, on the shelf in the house-place, there, that it opened of itself at the Prodigal Son. A thought struck me, and so I watched, and I saw that whenever the old gentleman read in it on Sundays, he was always looking there. It was some time before I ventured to speak about it; but, one day when father was wondering what could have been Samuel's fate, I said, 'Perhaps, father, he will still come home like the Prodigal Son in the Scripture, and if he does we'll kill the fatted calf for him, and no one will rejoice in it more truly than Joseph will.'"

"When I had said it, I wished I had not said it—for father seemed struck as with a stake. He went as pale as death, and I thought he would fall down in a fit; but, at last, he burst into a torrent of tears, and, stretching out his arms, said,—'And if he does come he'll find a father's arms open to receive him.'"

"Ah, Sir! it was hard work to comfort him again. I thought he would never have got over it again; but, after that, he began at times to speak of Samuel to me of himself, and we've had a deal of talk together about him. Sometimes father thinks he is dead, and sometimes he thinks he is not; and, true enough, of late years, there have come flying rumours from America, from people who have gone out there, who have said they have seen

him there—and that he was a very great gentleman—they were sure it was him. But then there was always something uncertain in the account, and, above all, father said he never could believe that Samuel was a great gentleman, and yet never could forgive an angry blow, and write home through all these years. These things, Sir, pull the old man down, and, what with his other troubles, make me tremble to look forward."

Mrs. Warlow stopped, for she was surprised to hear a deep suppressed sob from the stranger; and, turning, she saw him sitting with his handkerchief before his face. Strange ideas shot across her mind. But at this moment the old farmer, having finished his after-dinner nap, was coming out to seek them. Mr. Vandeleur rose, wiped some tears from his face, and thanked Mrs. Warlow for her communication. "You cannot imagine," he said, with much feeling, "how deeply you have touched me. You cannot believe how much what you have said resembles incidents in my own life. Depend upon it, Madam, your brother will turn up. I feel strongly incited to help in it. We will have a search after him, if it be from the St. Lawrence to the Red River. If he lives, he will be found; and I feel a persuasion that he will be."

They now met the old man, and all walked into the house. After tea, there was much talk of America. Mr. Vandeleur related many things in his own history. He drew such pictures of American life, and farming, and hunting in the woods; of the growth of new families, and the prosperous abundance in which the people lived; that all were extremely interested in his account. Joe sat devouring the story with wonder, luxuriating especially in the idea of those immense herds of cattle in the prairies; and the old man even declared that there he should like to go and lay his bones. "Perhaps," added he, "there I should, some day, find again my Sam. But no, he must be dead, or he would have written. Many die in the swamps and from fever, don't they, Sir?"

"Oh! many, many," said Mr. Vandeleur, "and yet there are often as miraculous recoveries. For many years I was a Government Surveyor. It was my business to survey new tracts for sale. I was the solitary pioneer of the population; with a single man to carry my chain, and to assist me in cutting a path through the dense woods. I lived in the woods for years, for months seeing no soul but a few wandering Indians. Sometimes we were in peril from jealous and savage squatters; sometimes were compelled to flee before the monster grisly bear. I have a strange fascinating feeling now of those days, and of our living for weeks in the great caves in the White Mountains, since become the resort of summer tourists, with the glorious 'Notch' glittering opposite, far above us, and above the ancient woods. These were days of real hardship, and we often saw

sights of sad sorrow. Families making their way to distant and wild localities, plundered by the inhuman squatters, or by the Indians, and others seized by the still more merciless swamp fever, perishing without help, and often all alone in the wilderness.

"Ah! I remember now one case—it is nearly twenty years ago, but I never can forget it. It was a young, thin man—he could scarcely be twenty. He had been left by his party in the last stage of fever. They had raised a slight booth of green bushes over him, and placed a pumpkin-shell of water by his side, and a broken tea-cup to help himself with; but he was too weak, and was fast sinking there all alone in that vast wilderness. The paleness of death appeared in his sunken features, the feebleness of death in his wasted limbs. He was a youth who, like many others, had left his friends in Europe, and now longed to let them know his end. He summoned his failing powers to give me a sacred message. He mentioned the place whence he last came."

"Where was it?" exclaimed the old man, in a tone of wild excitement. "Where—what was it? It must be my Sam!"

"No, that could not be," said the stranger, startled by the old man's emotion; "it was not this place—it was—I remember it—it was another name—Well—Well—Welland was the place."

The old man gave a cry, and would have fallen from his chair, but the stranger sprang forward and caught him in his arms. There was a moment's silence, broken only by a deep groan from the old man, and a low murmur from his lips—"Yes! I knew it—he is dead!"

"No, no! he is not dead!" cried the stranger—"he lives; he recovered!"

"Where is he then?—Where is my Sam?—let me know!"—cried the old man, recovering and standing wildly up—"I must see him! I must to him!"

"Father!—father!—it is Sam!"—cried his son Joe—"I know him!—I know him!—this is he!"

"Where?—who?" exclaimed the father, looking round bewildered.

"Here!" said the stranger, kneeling before the old man, and clasping his hand, and bathing it with tears. "Here, father, is your lost and unworthy son. Father!—I return like the Prodigal Son. 'I have sinned before Heaven and in thy sight, make me as one of thy hired servants.'"

The old man clasped his son in his arms, and they wept in silence.

But Joe was impatient to embrace his recovered brother, and he gave him a hug as vigorous as one of those grizzly bears that Sam had mentioned. "Ah! Sam!"—he said—"how I have wanted thee, but I always saw thee a slim chap, such as thou went away—and now thou art twice as big, and twice as old, and yet I knew thee by thy eyes."

The two brothers cordially embraced, and the returned wanderer also embraced his comely sister affectionately, and said, "You had nearly found me out in the garden."

"Ah, what a startle you gave me!" she replied, wiping away her tears, "but this is so unexpected, so heavenly." She ran off, and returning with the whole troop of her children, said, "There, there is your dear, lost uncle!"

The uncle caught them up, one after another, and kissed them rapturously.

"Do you know," said the mother, laying her hand on the head of the eldest boy, a fine, rosy-looking fellow, "what name this has? It is Samuel Warlow! We did not forget the one that was away."

"He will find another Samuel in America," said his uncle, again snatching him up, "and a Joe, and a Thomas, the grandfather's name. My blessed mother there lives again in a lovely blue-eyed girl; and should God send me another daughter, there shall be a Millicent, too!"

Meantime the old man stood gazing insatiably on his son. "Ah, Sam!" said he, as his son again turned, and took his hand, "I was very hard to thee, and yet thou hast been hard to us too. Thou art married, too, and, with all our names grafted on new stems, thou never wrote to us. It was not well."

"No, father, it was not well. I acknowledge my fault—my great fault; but let me justify myself. I never forgot you; but for many years I was a wanderer, and an unsuccessful man. My pride would not let me send under these circumstances to those who had always said that I should come to beggary and shame. Excuse me, that I mention these hard words. My pride was always great; and those words haunted me."

"But at length, when Providence had blessed me greatly, I could endure it no longer. I determined to come and seek forgiveness and reconciliation; and, God be praised! I have found both. We will away home together, father. I have wealth beyond all my wants and wishes; my greatest joy will be to bestow some of it on you. My early profession of a surveyor gave me great opportunities of perceiving where the tide of population would direct itself, and property consequently rise rapidly in value. I therefore purchased vast tracts for small sums, which are now thickly peopled, and my possessions are immense. I am a member of Congress. The next day, the two brothers drove over to Bakewell, where Joe had the satisfaction to see the whole arrears paid down to the astonished steward, on condition that he gave an instant release from the farm; and Joe ordered, at the auctioneer's, large posters to be placarded in all the towns and villages of the Peak, and advertisements to be inserted in all the principal papers of the Midland Counties, of the sale of his stock that day fortnight."

We have only to record that it sold well, and that the Warilows of Welland, and more recently of Scarthin Farm, are now flourishing on another and more pleasant Welland on the Hudson. There is a certain tall, town-like house which the traveller sees high on a hill amongst the woods, on the left bank of the river, as the steamer approaches the Katakil Mountains. There live the Warilows, and, far back on the rich slopes that lie behind the mountains, and in richer meadows, surrounded by forests and other hills, rove the flocks and herds of Joe; and there comes Squire Sam, when the Session at Washington is over, and, surrounded by sons and nephews, ranges the old woods, and shoots the hill-turkey and the roe. There is another comely and somewhat matronly lady sitting with the comely and sunny-spirited Millicent, the happy mistress of the new Welland; and a little Millicent tumbles on the carpet at their feet. The Warilows of Welland all bless the Prodigal Son, who, unlike the one of old, came back rich to an indigent father, and made the old man's heart grow young again with joy.

GENIUS AND LIBERTY.

Nothing has been so deservedly dear to the best part of the human race as liberty; nothing has been so longed for, fought for, praised. And yet few things have been so much misunderstood or abused, or have so often been made a cloak for unworthy designs. "O, Liberty!—how many crimes have been done in thy name!" was the mournful exclamation of the beautiful and gifted Madame Roland, as she mounted the steps to the guillotine; and never did the free and freedom-loving Englishman regard his favourite goddess so steadfastly as during the recent convulsions in Europe.

The connection between liberty and genius is neither forced nor imaginary. It is no mere figure of the rhetorician, giving glitter to his sentence at the expense of truth. Sunshine is not more needful to the flower than liberty is to the growth of genius. Without it the intellectual powers never reach their full development—never put forth that flower of the mind which we call Genius.

All history proves that liberty in a nation—the spirit of nationality—is essential to the development of genius; that genius never springs up but where there exists pride of country and the self-respect of the freeman; and that, where existing, it never survives their extinction. Let us transport ourselves back two thousand years, and take a picture from the annals of Greece. Let us shadow forth, however faintly, that divine excellence in art which has immortalised the country of Homer and Phidias, and inquire whence it came and how it disappeared.

Serene beneath a cloudless heaven, golden in the light of a mellow sunset, we behold Athens, radiant with temples and statues,

smiling from the summit of her Acropolis upon the glittering waters of the Bay of Salamis, and lifting into her calm bright skies a thousand shapes of dazzling marble. On that temple-crowned summit, within the noble walls of the Pantheon, Aspasia and the great and high of Athens are gazing in admiration on the matchless statue of Minerva, just placed on its pedestal; while hard by stands Phidias, surveying calmly, thoughtfully, his newly completed master-piece, the Temple of the Virgins, the world-renowned Parthenon.—It is the golden age of Sculpture and Architecture.

Yonder the lively, impressive Athenians are pouring at mid-day from the open portals of the Theatre, with heart and soul still vibrating to the wonderful tragedies of *Æschylus* and *Sophocles*—the earliest which the world ever saw, and still uneclipsed in their stern colossal grandeur. As the crowd spread themselves over the public square, they are arrested by the ever-welcome sight of a master-piece of *Xeuxis*. A picture of a boy and grapes is suspended there for public criticism. So admirable is the limner's skill—thus runs the legend—that the passing birds stoop to peck at the glowing fruit. But beside it hangs a rival effort of painting—and the citizens must decide to which the prize of merit is to be awarded. The crowd gaze curiously upon a drapery which seems to hide it from view. They wonder what loom could produce so soft a texture; colours of such glowing harmony. "Withdraw now your curtain!" exclaims *Xeuxis*, proud of the tribute which the wanderers of the air have rendered to his genius, and no longer able to control his curiosity. *Parrhasius*, his rival, smiles triumphantly:—"Xeuxis deceives birds; I deceive *Xeuxis*!" That drapery was the picture!—It is the heyday of Painting.

A crowd in the Agora! The varying robes bespeak the mingling of noble and artisan alike; and that assembly is swaying to and fro with tempestuous impulses—shouting for the supremacy of Athens, demanding the gauntlet of mortal combat to be flung in the teeth of all Greece, and longing, as with the fiery vehemence of youth, to add the sword of Mars to the olive-bough of presiding *Athené*. But lo, how that surging crowd is stilling!—Mark, how the clang of voices subsides! *Pericles* is mounting the rostrum. Beautiful in form, fiery and comprehensive in intellect—ever self-possessed, as if the calm of the passionless gods were in his breast—supreme in wielding the hearts of men to all lofty purposes—in that hour of a people's frenzy,

"He called across the tumult,
And it fell!"

His audience said it thundered and lightened, as they listened to that rolling flashing eloquence.—It is the triumph of Oratory.

But the genius of Greece is rising in beauty

everywhere, on land and sea—the blue *Ægean*, gemmed with the “sparkling *Cyclades*,” bearing, like floating flower-baskets, the Isles of Greece on its calm surface. On the lovely bay-indentured shores of *Ionis*, where the vines are trailing in festoons from tree to tree, lighting the emerald woods with their purple clusters, sits merry *Anacreon*, singing of love and wine in undying strains. Light-hearted old man, sing on!—until, in luckless hour, the choking grape-stone end at once thy lays, thy loves, and thy life! The lofty strains of *Alcæus* and *Simonides* make the *Ægean* shores to re-echo their undying hatred of tyrannic power; while, on her Lesbian isle, hapless *Sappho*, weary of a fame that cannot bring her love, leaps from the cliffs of *Leucas* into the sea; but lives for ever in her country’s memory as the Tenth Muse.

Whence came the efflorescence of Grecian genius, in the age of *Pericles*? The Persians had recently been defeated: a handful of Greeks had overthrown the proud chivalry of *Asia*; the thunderbolts of *Marathon* and *Platæa* had hurled the invading myriads from the Hellenic shores. A shout of exultation and joy arose over the length and breadth of the Grecian land. They were free!—they were a nation! In a single generation Grecian genius reached its zenith; but in another century it was over—its lustre was past, its light dying. *Philip* of *Macedon* first struck down Hellenic liberty on the field of *Chæroneia*; and blow after blow followed, levelling the old Greek pride, crushing the life out of the nation’s heart; till at length the haughty Roman strode in, and laid his mailed grasp on all. Such were the antecedents of the heyday of Grecian genius—such were concomitants of its decline.

Foreign conquest has in all ages been the great extinguisher of national genius. Let us imagine a case near home. Suppose an enemy were suddenly to surprise us. With the first sound of the enemy’s cannon, Genius would forsake her studies. She could not see the ideal through the smoke of the foe’s batteries. In that hour of rational degradation she would hear alone the voice of Patriotism; but sharing in its fall, would languish, if not utterly expire. Architecture would cease to adorn a land no longer our own; the sculptor would break his chisel, rather than immortalise the forms of his tyrants; Poetry, shorn of her many-coloured beams, would survive only in elegy, or in degrading effusions in honour of the victorious invaders. Pride would be crushed from the nation’s heart.

The noble spirit of independence, which is the accompaniment of all real genius, would find a place no more in the bosom of slaves. The old heroic recollections of the nation, the heritage of centuries of glory, would be swept at once away. The deeds of our ancestors would no longer thrill like a trumpet-call to the heart of the nation, stirring us to

emulate their exploits. Present subjugation, present degradation, would sweep in like an obscuring cloud, and hide from us the inspiring vision of the Past. Take from man his dignity, his self-respect, and you dry up the fountains from which genius flows. Excellence is blasted, though mediocrity may remain. A slave may do his task—may sweat his hour in the gangs of the planter or in the ranks of the despot; but look not there for genius—that is the divine offspring of Freedom alone.

Had not the disaster of *Moscow* broken the wing of Gallic ambition—had the conquest of *Napoleon* been handed down unimpaired to his successors, we would have had too ample corroboration of this in our own day. Democracy in modern Europe has so strengthened the vitality of nations, that they live through a thousand perils that would have crushed the old empires of the world; and it is to this vitality, and the almost superhuman vigour with which these nations resist or fling off the fetters of conquest, that the progress of civilisation has been unbroken among us since the days of *Charlemagne*. It was conquest that smothered civilisation in the old universal empires; it was conquest that successively terminated in each a long career of improvement. The triumphant processions of Victory are always closed with the wan and broken shade of Genius. The grave which closes over Liberty also hides Genius from the upper earth.

Pride of country—national egotism—was far stronger in old times than even now. The early nations of the world grew up alone—without intercommunication—without borrowing anything from their neighbours: each worked out for itself its own civilisation. And each accordingly esteemed itself the light of the world, and all other barbarians. Each hated and despised the other; and to be conquered by the stranger—to see their own glories, their own pride, dashed into the dust, and a people whom they had despised, lording it in their palaces, utterly broke the nation’s heart.

Nineveh—whose mighty ruins, after the lapse of three thousand years, are astonishing earth’s sages—built no more after the rival standards of *Babylon* were planted on her walls; and *Babylon* the Great, which has left its name as a byword of opulence and splendour, dates its decay from the bloody nocturnal entry of *Cyrus* and his Persians. From the day when the battle of *Arbela* struck the diadem from the brow of the second *Darius*, and the war-cry of the Greeks rang through the streets of *Persepolis*, art and genius forsook the land of *Zoroaster*, the royal cities of *Persia* began to crumble. Although stately with edifices, second in beauty only to those of Greece, thenceforth no hand was put forth to uphold their splendour; their environs once made fertile by irrigating streams, grew parched and flinty deserts; and

their very sites slipped from the world's memory. Not long ago, a traveller among the barren and waterless mountains of Persia came unexpectedly on a magnificent ruin standing silent and solitary on a deserted plain, with polished stone and broken columns strewn the soil all around. It was the Tchelimnar, the Hall of Pillars, built by the Genii, said the Arabs, amid the lone deserts of Merdusht. But history told another tale; and research made plain to the world that there stood the long-lost ruins of royal Persopolis, the city of the Great King—that there stood all its palaces that had survived the frenzied torches of Alexander, and the wasting decay of Time.

Look at the wondrous Valley of the Nile; and after the desolation of two thousand years, what do we yet see? A land of ruins! A mass of monuments, reared by Genius for eternity; but enduring in their pride and completeness only while liberty lasted. The quarries of Silsili teem with sculptors—numerous and busy as swarming bees—carving out gigantic monoliths:—Sphinxes, Memnons, and propylæ—from the solid rock. They retire for the night to resume their labour to-morrow; but over that morrow bursts the insatiable Persian. Art, Genius, the whole nation is suddenly petrified, as if by enchantment. To-day you—the steam-boat traveller—stand in those quarries, and believe that the morrow of two thousand years ago still survives. You see the marks of the very tools with which Genius wrought; you behold her works in various stages; here a rough-hewn Apis, there a finished Memnon, only awaiting the one last blow to detach it from its parent rock. The very tracks of the wheels which had come to transport the statue to Edfon or to Thebes are visible. When Cambyses, flushed with victory, stabbed with his own hand the living sacred bull Apis, and commanded the bones of the Pharaohs to be beaten with rods, he struck to the heart the Genius of the Nile. She could no longer make her land and her gods glorious with architecture; for her deities were proscribed, and her land was the stranger's. The heart of the nation suddenly ceased to beat. Liberty was never resuscitated; therefore, Genius had expired for ever.

Even Rome, the iron mistress of the world,—the latest and greatest of the universal monarchies, and which seemed to unite in one the vitality and power of all her predecessors,—even her haughty sons drooped on the fall of the Capitol, on the capture of the Eternal City, on the uncrowning of the Seven-Hilled Queen by the barbarians of the North. Two thousand marble statues, and palaces not less beautiful than countless, stood in her streets,—on that dread night, when the Gothic trumpet rang through the slumbering city, her sons started from their effeminate couches only to find themselves slaves. That was the last hour of the old Roman Art. No more statues were chiselled, no more pa-

latial edifices built. The Goth ruled in the Capitol, and Genius forsook her old shrines.

As foreign thralldom extinguishes genius in a country, social slavery smothers genius in the individual, and where there is no breath, there can be no aspirations. The system of caste—which divides a people into sections and different ranks, sternly restricting each to station and pursuit—has at some period or other existed more or less stringently in all parts of the world. In the early dawn of civilisation, such a system, viewed in regard to Art alone, was indeed advantageous. Printing was then unknown, and letters were a mystery. The interchange of ideas and news, which now permeates every corner of society, had then no existence. No one knew what was going on except in his immediate neighbourhood. In such circumstances, the system of caste was the most likely to obviate the impediments to the preservation and propagation of knowledge in the arts: for the discoveries made by the fathers were thus transmitted directly to their children; and the spread of improvements was comparatively easy among a class, all of whose members were bound together by community of station and employment. But when knowledge is easy of communication, the system becomes pernicious. Knowledge is the life-blood of Genius, and must, when it can, be spread and circulated. When confined to caste of station, Genius droops for the want of it. Genius is aspiring, but caste chains it immovably to one station. Genius is impulse, action; it cannot move in fetters. Pent up within the walls of conventional rank, Genius collapses,—her inspirations can only be drawn from the atmospheres of boundless liberty.

Conquest and tyranny must ever be short-lived. A free state always, in the end, lives down a despotism. The latter derives talent from one class only, while in the former it leaps up from all. Even when Liberty is born in blood and nursed on carnage, she is the foster child of Genius. The extraordinary development of talent by France during her first Revolution, has no parallel among the then despotic powers of the Continent. Though the strife was horrible and sanguinary, it summoned every man in France to exertion; while the path to the guillotine was trodden smooth by victims, it threw open the road to honour, and thousands entered. The man who raised himself from subaltern of artillery to the Imperial throne; who beheld the half of Europe beneath the shadow of his sceptre; who wedded the daughter of the Cæsars, and raised around his throne a martial galaxy unparalleled in the world's history—was the offspring of Liberty; of gory Liberty; such Liberty as makes Genius shine forth with preternatural lustre—but only develops it in a few at the expense of the happiness of the many.

Happily, here in England, she sheds her

influence unrestrained and untarnished. She chokes not genius with caste. Our aristocracy is even invigorated from the ranks of the commons. Scores of titled families die out in a century, and their place is filled up with the worthiest of the nation. Be a man the son of a coal-merchant, like Eldon and Stowell—or of a cotton-spinner, like Peel—the path to wealth and fame is ever open to him. A tradesman's son may die on the woolstack. A clerk may rise, like Clive, to be a Governor-General. The fourth son of a country parson, like Nelson, may find a tomb among the great ones in Westminster Abbey. Turn to our Senate; consider its annals for the last sixty years, and say if France, with her triple Revolution, can present a parallel to the genius there developed—if France, stirred to the very dregs by frantic struggles after liberty, can equal the steady glories of a nation inured to freedom.

One word more, and we have done—one word to the student who may peruse these pages—to the young aspirant, who sees life as yet only through the bright colouring of youth, or in the unreal guise which it wears to the recluse.

There is a self-imposed thralldom more fatal to genius than the blight of external oppression; beneath the allurements of passion there lurks a worse than Egyptian bondage. No man ever excelled without the exercise of much self-denial. "To live like a hermit, and work like a horse,"* is the surest of all roads to fame, and has been the uninviting path trodden by most of those who have risen to permanent renown. True liberty, the liberty which genius demands, consists as much in exemption from the slavery within as from the slavery without. Let the young aspirant ever remember, that whatever elevates man's nature, whatever lifts him above the trammels of earth, and places him nearer heaven, proportionally elevates his genius; and, on the contrary, that every passion immoderately indulged is a fetter placed on his intellect; that every loitering in the mazes of unwholesome pleasure, if redeemable at all, must one day be redeemed at too dear a price. "The Present and the Future are rivals," said Sir Joshua Reynolds to his pupils, "and whoever pays court to the one, must resign the other."

ATLANTIC WAVES.

ONE brisk March morning, in the year 1848, the brave Steam-Ship, *Hibernia*, rolled about in the most intoxicated fashion on the broad Atlantic, in north latitude fifty-one, and west longitude thirty-eight, fifty—the wind blowing a hard gale from the west-south-west. To most of the passengers the grandeur of the waters was a mockery, the fine bearing of the ship only a delusion and a snare. Everything was made tight on deck; if any

passenger had left a toothpick on one of the seats, he would assuredly have found it lashed to a near railing. Rope was coiled about every imaginable item; and water dripped from every spar of the gallant vessel. Now it seemed as though she were travelling along through a brilliant gallery, flanked on either side by glittering walls of water; now she climbed one of the crested walls, and an abyss, dark and terrible as the famous Maelstrom, which can't be found anywhere, yawned to receive her. The snorts of the engine seemed to defy the angry waters; and occasionally when a monster wave coiled about the ship, and thundered against her, she staggered for a moment, only to renew the battle with fresh energy.

The cooks and stewards went placidly through their several daily avocations on board this rolling, fighting, shaking craft. If they had been Belgravian servants, or club-house waiters, they could not have performed their duties with more profound unconcern. Their coolness appeared nothing less than heroic to the poor tumbled heaps of clothes with human beings inside, who were scattered about the cabins below. An unhappy wight who had never before been five miles from Boston, was anxiously inquiring of the chief steward the precise time in the course of that evening that the vessel might be expected to founder; while another steward, with provoking pertinacity, was asking how many would dine in the saloon at six, with the same business-like unconcern, as if the ship were gliding along on glass. So tremendous was the tossing; so extreme the apparent uncertainty of any event except a watery terminus to all expectation, that this sort of coolness appeared almost wicked.

Then there was a monster in British form actually on deck—not braving, it was said, but tempting the storm to sweep him into eternity. He astonished even the ship's officers. The cook did not hesitate to venture a strong opinion against the sanity of a man who might, if he chose, be snugly ensconced in the cabin out of harm's way, but who *would* remain upon deck, in momentary danger of being blown overboard. The cook's theory was not ill supported by the subject of it; for he was continually placing himself in all manner of odd places and grotesque postures. Sometimes he scrambled up on the cuddy-roof; then he rolled down again on the saloon-deck; now he got himself blown up on the paddle-box; that was not high enough for him, for when the vessel sunk into a trough of the sea, he stood on tip-toe, trying to look over the nearest wave. A consultation was held in the cuddy, and a resolution was unanimously passed that the amateur of wind and water (which burst over him every minute) was either an escaped lunatic or—a College Professor.

It was resolved *nem. con.* that he was the

* Lord Eldon's words, applied to himself.

latter; and from that moment nobody was surprised at anything he might choose to do, even while the *Hibernia* was labouring in what the mate was pleased to call the most "lively" manner. The Professor, however, to the disgust of the sufferers below, who thought it was enough to feel the height of the waves, without going to the trouble of measuring them, pursued his observations in the face of the contempt of the official concave above mentioned. He took up his position on the cuddy-roof, which was exactly twenty-three feet three inches above the ship's line of flotation, and there watched the mighty mountains that sported with the brave vessel. He was anxious to ascertain the height of these majestic waves, but he found that the crests rose so far above the horizon from the point where he was standing, that it was utterly impossible, without gaining a greater height for observation, that he could arrive at any just estimate on the subject. His observations from the cuddy-roof proved, however, beyond a doubt, that the majority of these rolling masses of water attained a height of considerably more than twenty-four feet, measuring from the trough of the sea to the crests of the waves. But the Professor was not satisfied with this negative proof; and in the pursuit of his interesting inquiry, did not feel inclined to be baffled. It is impossible to know what the secret thoughts of the men at the wheel were, when the valiant observer announced his intention of making the best of his way from the cuddy-roof to the larboard paddle-box. Now he was to be seen tumbling about with the motion of the ship; at one moment clinging to a chain-box; at the next, throwing himself into the arms of the second mate. Now he is buried in spray, and a few minutes afterwards his spare form is seen clinging to the rails which connect the paddle-boxes.

Despite the storm without, a calm mathematical process is going on within the mind of that ardent observer. The Professor knew he was standing at a height of twenty-four feet nine inches above the flotation mark of the ship; and allowing five feet six inches as the height of his eye, he found the elevation he had obtained to be altogether thirty feet three inches. He now waited till the vessel subsided fairly for a few minutes into the trough of the sea in an even and upright position, while the nearest approaching wave had its maximum altitude. Here he found also, that at least one-half part of the wave intercepted by a considerable elevation his view of the horizon. He declared that he frequently observed long ranges extending one hundred yards on one or both sides of the ship—the sea then coming right aft—which rose so high above the visible horizon, as to form an angle estimated at two to three degrees when the distance of the wave's crest was about a hundred yards off. This distance would add about thirteen feet to the level of

the eye. This immense elevation occurred about every sixth wave. Now and then, when the course of a gigantic wave was impertinently interfered with by another liquid giant, and they thundered together, their breaking crests would shoot upward at least ten or fifteen feet higher—about half the height of the monument—and then pour down a mighty flood upon the poor Professor in revenge for his attempt to measure their majesties. No quantity of salt water, however, could wash him from his post, till he had satisfactorily proved, by accurate observation, that the average wave which passed the vessel was fully equal to the height of his eye—or thirty feet three inches—and that the mean highest waves, not including the fighting or broken waves, were about forty-three feet above the level of the hollow occupied at the moment by the ship.

Satisfied at length of the truth of his observations, the Professor, half-pickled by the salt water, and looking, it must be confessed, very cold and miserable, descended to the cabin. Throughout dinner-time a conversation was kept up between the Professor and the Captain—the latter appearing to be about the only individual on board who took any interest whatever in these scientific proceedings. The ladies, one and all, vowed that the Professor was a monster, only doing "all this stuff" in mockery of their sufferings. Towards night the wind increased to a hurricane; the ship trembled like a frightened child before the terrible combat of the elements. Night, with her pall, closed in the scene:—it was a wild and solemn time. Towards morning the wind abated. For thirty hours a violent north west gale had swept over the heaving bosom of the broad Atlantic.

This reflection hastened the dressing and breakfasting operations of the Professor, who tumbled up on deck at about ten o'clock in the morning. The storm had been subdued for several hours, and there was a visible decrease in the height of the waves. He took up his old position on the cuddy-roof, and soon observed, that, even then, when the sea was comparatively quiet, ten waves overtook the vessel in succession, which all rose above the apparent horizon; consequently they must have been more than twenty-three feet—probably about twenty-six feet—from ridge to hollow. From the larboard paddle-box, to which the Professor once more scrambled, he observed that occasionally four or five waves in succession rose above the visible horizon—hence they must have been more than thirty feet waves. He also observed that the waves no longer ran in long ridges, but presented more the form of cones of moderate elongation.

Having so far satisfied himself as to the height of Atlantic waves in a gale of wind (the Professor's estimate must not be taken as the measurement of the highest known waves, but simply as that of a rough Atlantic

sea), he directed his attention to minuter and more difficult observations. He determined to measure the period of time occupied by the regular waves in overtaking the ship, their width from crest to crest, and the rate of their travelling. The first point to be known was the speed of the ship; this he ascertained to be nine knots. His next object was to note her course in reference to the direction of the waves. He found that the true course of the vessel was east, and that the waves came from the west-north-west, so that they passed under the vessel at a considerable angle. The length of the ship was stated to be two hundred and twenty feet. Provided with this information the Professor renewed his observations. He proceeded to count the seconds the crest of a wave took to travel from stern to stem of the vessel; these he ascertained to be six. He then counted the time which intervened between the moment when one crest touched the stern of the vessel, and the next touched it, and he found the average interval to be sixteen seconds and a fraction. These results gave him at once the width between crest and crest. As the crest travelled two hundred and twenty feet (or the length of the vessel) in six seconds, and sixteen seconds elapsed before the next crest touched the stern, it was clear that the wave was nearly three times the length of the vessel; to write accurately, there was a distance of six hundred and five feet from crest to crest.

The Professor did not forget that the oblique course of the ship elongated her line over the waves; this elongation he estimated at forty-five feet, reducing the probable average distance between crest and crest to five hundred and fifty-nine feet.

Being quite satisfied with the result of this experiment, the hardy Professor, still balancing himself on his giddy height, to the wonder and amusement of the sailors, found that the calculations he had already made did not give him the actual velocity of the waves. A wave-crest certainly passed from stern to stem in six seconds, but then the ship was travelling in the same direction, at the rate of nine geographical miles per hour, or 15·2 feet per second; this rate the Professor added to the former measure, which gave 790·5 feet for the actual distance traversed by the wave in 16·5 seconds, being at the rate of 32·67 English miles per hour. This computation was afterwards compared with calculations made from totally different data by Mr. Scott Russell, and found to be quite correct.

When the Professor scrambled for the last paddle-box of the Hibernia. He had also made some observations on the forms of waves. When the wind blows steadily from one point they are generally regular; but when it is rough and gusty, and shifts from point to point, the sea is broken up, and the waves take a more conical shape,

and assume fantastical crests. While the sea ran high, the Professor observed now and then a ridge of waves extending from about a quarter to a third of a mile in length, forming, as it were, a rampart of water. This ridge was sometimes straight, and sometimes bent as of a crescent form, with the central mass of water higher than the rest, and not unfrequently with two or three semi-elliptical mounds in diminishing series on either side of the highest peak.

When the wind had subsided, a few of the bolder passengers crawled upon deck in the oddest imaginable costumes. They had not much to encounter, for about a third part of the greater undulations averaged only twenty-four feet, from crest to hollow, in height. These higher waves could be seen and selected from the pigmy waves about them, at the distance of a quarter of a mile from the ship.

The Professor had been very unpopular on board while the stormy weather lasted, and the ladies had vowed that he was a sarcastic creature, who *would* have his little joke on the gravest calamities of life; but as the waves decreased in bulk, and the wind lulled, and the sun shone, and the men took off their oil-skin coats, and the cabin-windows were opened, the frowns of the fair voyagers wore off. Perfect goodwill was general before the ship sighted Liverpool; and even the cook, as he prepared the last dinner for the passengers, was heard to declare (in confidence to one of the stokers) that, after all, there might be something worth knowing in the Professor's observations.

When the Professor landed at Liverpool, he would, on no account, suffer the carpet-bag, containing his calculations, to be taken out of his sight. Several inquisitive persons, however, made the best use of their own eyes, to ascertain the name of the extraordinary observer, and found it to be legibly inscribed with the well-known name of Scoresby.

That his investigations may be the more readily impressed on the reader's mind, we conclude with a summary of them. It would seem from Dr. Scoresby's intrepid investigations, that the highest waves of the Atlantic average in

Altitude	43 feet
Mean Distance between each Wave	569 "
Width from Crest to Crest	600 "
Interval of Time between each Wave	16 seconds
Velocity of each Wave per hour	32½ miles

THE DOOM OF ENGLISH WILLS. CATHEDRAL NUMBER TWO.

MR. WILLIAM WALLACE, having taken some repose in the bosom of his family, and having recruited his nervous system, impaired for the moment by the formidable demonstrations made in unimpeachable Ecclesiastical Registry number one, resolved on making a visit to unimpeachable Ecclesiastical Registry number two; upheld by the consideration that, although an Ecclesiastical Registry is a fine institution, for which any Englishman would willingly die; and without which he could, in no patriotic acceptance worth mentioning, be an Englishman at all; still, that the last wills and testaments of Englishmen are not exactly waste-paper, and that their depositaries ought, perhaps, to be kept as dry—say as skittle grounds, which are a cheaper luxury than Registries, with the further advantage that no man need frequent them unless he likes; whereas, to Registries he *must* go.

The literary object which Mr. Wallace had in view, in this second expedition, beckoned him to the North of England. "Indeed," said Mr. Wallace, pausing. "Possibly, to the second city of England; an Archbishopric; giving one of the princes of the blood his title; enjoying the dignity of a Lord Mayor of its own; an ancient and notable place; renowned for its antiquities; famous for its Cathedral; possessing walls, four gates, six posterns, a castle, an assembly-room, and a Mansion House; this is surely the place for an unimpeachable Registry!"

With his mind much encouraged, and his expectations highly raised, Mr. Wallace embraced his family, and departed for the North by Railway. He arrived at the venerable city of his purpose, at ten minutes past three P.M., according to Greenwich, or at three-ten, according to Bradshaw.

Our traveller's first proceeding, was, to take a walk round the walls, and gratify his fancy with a bird's-eye-view of the unimpeachable Registry. He could hardly hit upon the roof of that important building. There was a building in a severe style of architecture—but it was the jail. There was another that looked commodious—but it was the mansion house. There were others that looked comfortable—but they were private residences. There

appeared to be nothing in the way of Registry, answering to the famous monkish legend in a certain Chapter-House:

As shines the rose above all common flowers,
So above common piles this building towers.

Yet such a building must be somewhere! Mr. Wallace went into the town and bought a Guide-book, to find out where.

The four gates were in the Guide-book—all right—the six posterns were there, the assembly room was there, the jail was there, the mansion house was there—but no Registry. "This is extraordinary," said Mr. Wallace. "An unimpeachable Registry there indubitably must be!"

He walked through the quiet narrow streets, with their gabled houses, craning their necks across the road to pry into one another's affairs; and he saw the churches where the people were married; and the habitations where the doctors lived, who were knocked up when the people were born; and he accidentally passed the residence of Mrs. Pitcher, who likewise officiated on those occasions; and he remarked an infinity of shops where every commodity of life was sold. He saw the offices of the lawyers who made the people's wills, the banks where the people kept their money, the shops of the undertakers who made the people's coffins, the churchyards where the people were buried, but *not* the Registry where the people's wills were taken care of. "Very extraordinary!" said Mr. Wallace. "In the great city of a great ecclesiastical see, where all kinds of moving reverses and disasters have been occurring for many centuries; where the Romans were, where the Danes were, where the Normans were; where fire and sword and pillage and massacre were, again and again; where Ulphus the son of Toralfus hung up his drinking-horn of elephant's-tooth at the altar, and, by that token filled with wine, bestowed his fruitful lands upon the church; where all manner of old tradition and usage, piety, and superstition, were, and a great deal of modern wealth is, a very interesting and an unimpeachable Registry there must be somewhere!"

In search of this great public edifice, the indefatigable Mr. Wallace prowled through the city. He discovered many mansions.

He satisfied himself about the archbishop, the dean, the precentor, the chancellor, the sub-dean, the four archdeacons, the twenty-eight prebendaries, the sub-chantor, the five priest-vicars, the seven lay-clerks, the six choristers, the four vergers, and the other officers and servants of the little staff attached to the cathedral; but he *could not* satisfy himself about the Registry.

The uneasiness of Mr. Wallace's mind increasing with the growth of his suspicion that there must surely be a flaw in the old adage, and that where there was a will (and a great many wills) there was no way at all, he betook himself to the Cathedral-close. Passing down an uncommonly pure, clean, tidy little street, where the houses looked like a tasteful sort of missionary-subscription-boxes, into which subscribers of a larger growth were expected to drop their money down the chimneys, he came by a turnstile, into that haven of rest, and looked about him.

"Do you know where the Registry is?" he asked a farmer-looking man.

"The wa'at!" said he.

"The Registry; where they keep the wills?"

"A' dinnot know for shower," said the farmer, looking round. "Ding! If I shooldn't wondther if *that* war it!"

Mr. Wallace concealed his disparaging appreciation of the farmer's judgment, when he pointed with his ash-stick to a kind of shed—such as is usually called a lean-to—squeezing itself, as if it were (with very good reason) ashamed, into the south-west corner of the cross, which the ground-plan of the cathedral forms, and sticking to it like a dirty little pimple. But, what was his dismay, on going thither to inquire, to discover that this actually was the unimpeachable Registry; and that a confined den within, which would have made an indifferent chandler's shop, with a pestilent little chimney in it, filling it with smoke like a Lapland hut, was the "Searching Office."

Mr. Wallace was soon taught that seven thousand pounds per annum is, after all, but a poor pittance for the Registrar of a simple bishoprick, when calculated by the ecclesiastical rule of three; for the registry of Cathedral number two, produces to its fortunate patentee twenty thousand per annum; about ten thousand a year for the Registrar who does nothing, and the like amount for his Deputy who helps him.

The portentous personage to whom Mr. Wallace was accredited, received him in state in this small office surrounded by a Surrogate (apparently retained on purpose to cross-examine Mr. Wallace) and the clerks. Mr. Wallace mentioned that he believed the Archbishop had written to the Deputy Registrar to afford him every facility in consulting the documents under his charge. The Deputy Registrar owned that the Archbishop had done so, but declared that the Archbishop had no jurisdiction whatever over him; and,

claiming as he did, complete immunity from, and irresponsibility to, all human control, he begged to say that his Grace the Archbishop, in presuming to write to the high-authorities of that unimpeachable Registry on such a subject, had taken a very great liberty. Mr. William Wallace inquired if that was to be the answer he was expected to convey to the Archbishop? bowed, and was about to retire, when the awful Deputy recalled him. What did he want to search for? Mr. Wallace repeated that his object was wholly literary and archaeological. The chief clerk who here came in as a reinforcement, was so good as to intimate that he "didn't believe a word of it." Whereupon a strong opinion was added that Mr. Wallace wanted surreptitiously to obtain pedigrees, and to consult wills. A powerful battery of cross-questionings was then opened by the heavier authorities, aided by a few shots from the light-bob, or skirmishing party—the clerk. But had Mr. William Wallace been his great ancestor, he could not have held his position against such odds more firmly. At length the preliminaries of a treaty were proposed by the enemy, the terms of which were that Mr. Wallace should be allowed to consult any records dated before the year one thousand four hundred! This was demurred to as utterly useless. Negotiations were then resumed, and the authorities liberally threw in another century, out of the fullness of a respect for the Archbishop, which they had refrained from condescending to express;—Mr. Wallace might consult documents up to the year fifteen hundred.

With this munificent concession, Mr. Wallace was obliged to be satisfied, and proceeded to venture on another stipulation:—

The researches which he had proposed to himself at this Cathedral number two, were elaborate and complicated; they would require such facilities as had been asked on his behalf by the Archbishop. Could he have access to the documents themselves?

The effect which this simple request produced in the office, was prodigious! A small schoolboy who should, at dinner, ask for a piece of the master's apple-pie; or a drummer on parade, who should solicit from his captain a loan of five shillings, could not produce a more sublime degree of indignant astonishment, than that which glared through the smoke from the faces of the deputy-registrar, the surrogate, the chief clerk, and all the junior clerks, then and there assembled. The effect produced amounted to temporary petrification; the principals neither spoke nor moved; the subordinates left off writing and poking the fire. So, superlative was the audacity of the request, that it paralysed the pendulum of that small, rusty, dusty, smoky old ecclesiastical clock, and stopped the works!

Refusal in words was not vouchsafed to Mr. William Wallace; neither did he need that condescension. The silent but expressive pantomime was enough. As the Eastern suspect

receives his doom by the speechless gesture of the judge's hand across his own neck ; so Mr. William Wallace fully understood that access to the record depositories of the province appertaining to Cathedral number two, was nearly equivalent to getting into a freemason's lodge after it has been "tiled," or to obtaining admission to St. Paul's Cathedral without twopence.

He therefore waved as perfectly impossible that item of the treaty. For the public, however, the evidence of that gentleman is hardly necessary to bring them acquainted with the manner in which the trust imposed on the Registrar and his Deputy is performed ; for while the Deputy Registrar and Mr. William Wallace are settling their differences over the next clause of their treaty, we shall dip into the reports of the Ecclesiastical Commission issued in 1832, to show what the state of things was at that time ; and to any one who can prove that those venerable documents have been by any means rescued from decay since that year, the public will doubtless be much obliged. At page one hundred and seventy of the report, Mr. Edward Protheroe, M.P., states, on oath, that in the instance of every Court he had visited the records suffered more or less from damp and the accumulation of dust and dirt. Then, speaking of the Registry of this same Cathedral number two, he declares its documents to have been in a scandalous state. "I found them," he continues, "perfectly to accord with the description I had received from various literary and antiquarian characters who had occasion to make searches in the office ; and I beg leave to remark that the place must have been always totally inadequate as a place of deposit for the records, both as to space and security." Some of the writings he found in two small cells, "in a state of the most disgraceful filth ;" others in "two apertures in the thick walls, scarcely to be called windows ; and the only accommodation for these records are loose wooden shelves, upon which the wills are arranged in bundles, tied up with common strings, and without any covering to them ; exposed to the effect of the damp of the weather and the necessary accumulation of dirt." To these unprotected wills the Deputy Registrar was perhaps wise in his generation to deny access ; for Mr. Protheroe says in addition that, "if it was the object of any person to purloin a will, such a thing might be accomplished." Perfectly and safely accessible copies might be made, at "an expense quite trifling." What ! Mr. Protheroe, would you rob these poor Registrars of a shilling of their hard earnings, just to save landed and other property, of some millions value, from litigation and fraud ? Would you discount their twenty thousand a year by even a fraction per cent ?

At page three hundred and thirty-nine, the Deputy Registrar himself is recorded to

have owned that the place of custody for wills is a room not fire-proof, which everybody knew ; but that it was free from damp, which was not in accordance with Mr. Protheroe's evidence. It is "storm-covered" with lead, is twenty-two feet long, and twenty-one feet wide (about the size of an ordinary parlour !), made less capacious by being divided into four aisles, each seventeen feet long, and five feet wide. "There is one room for searching and examining Wills ; but it is not very commodious." Yet, in 1830, it has no greater accommodation than it had in 1832, when, perhaps, it was not so full of smoke as Mr. William Wallace found it. No part of the building is smoke-proof any more than fire-proof.

The clause of the treaty, offensive and defensive, which was being negotiated all this while, between the Deputy Registrar and his visitor, was drawn up by the former in these concise words, "How long do you want to be here !"

That, Mr. Wallace replied, would depend upon the facilities afforded him, the condition of the calendars and indexes, and the assistance he might be allowed to call in. After much battling, the conference ended by Mr. William Wallace, and a friend who accompanied him, being allowed to set to work upon the calendars of such wills as had been deposited before the year 1500.

The two antiquaries would have commenced their researches immediately ; only, on examining their dress, they found it in such a state of filth from the smoke with which the office had been filled during the arrangements of this important compact, that they were obliged to return to the hotel to change their linen. The prospect of spending a week in such a place was not altogether agreeable. Mr. Wallace did not enjoy the notion of being smoke-dried ; and of returning to the Middle Temple a sort of animated ham. A sojourn in the place was not to be thought of without terror ; yet the poor clerks endured their smoking fate with fortitude. Use was to them a second nature ; and every man connected with these Registries must be completely inured to dust. But the man of the Middle Temple was a kind of knight-errant in the matter of rescuing ancient documents from their tombs of filth ; and not to be daunted. He and his friend opened the campaign directly in the face of the enemy's fire— which, so great was their ardour, they only wished would become a little more brisk and less smoky.

That day and the next day they bored on with patience and perseverance through every obstacle. When they found in the calendar a reference to what they wanted, every possible obstacle was thrown in their way. The required document was either lost, or had been stolen, or had strayed. Nor was there the slightest reason to doubt that this was true. It was well known to the

searchers that one class of documents at least had been actually made away with by a former Deputy Registrar. Dr. Thelwall, of Newcastle, wrote in the *Gentleman's Magazine* for 1819, page four hundred and ninety:—

"It is a fact well known that, by a Canon of James the First, the clergyman of every parish was required to send a copy of the Register annually to the Bishop of the Diocese. The most shameful negligence is attributable to the person (the Deputy Registrar) in whose keeping they have been placed. Indeed I have some reason to suppose this, as I lately saw in the possession of a friend, a great number of extracts from the Register of a certain parish in this neighbourhood, and, on questioning him as to the way in which he became possessed of them, I was informed they were given to him by his cheesemonger, and that they were copies forwarded by the clergyman of the parish to the proper officer in a bordering diocese, and had been allowed through the negligence of their keeper to obtain the distinguished honour of wrapping up cheese and bacon."

This mode of "preserving" such documents is accounted for by Sir William Betham, Ulster King at Arms, in his evidence before the Committee of 1832:—he had occasion to search at Cathedral number two, and went for the express purpose of searching manuscripts of Parish Registers. He found them lying unarranged and unconsultable in the office. He asked the reason, and was answered that the Act of Parliament which ordered this class of Records to be sent to the Bishop's Registry gave no direction about—(was there ever such a piece of parliamentary treason against even the lay children of Mother Church!)—fees.

The sale of Records, for waste paper, was the mode adopted to revenge the meanness of the legislature, in not providing the underpaid Registrars with remuneration for this addition to their duties. Was it possible to keep life and soul together upon the ten or fifteen thousands sterling per annum which these two poor fellows were then obliged to starve upon? Certainly not! Therefore, to eke out a wretched existence, they found themselves driven to sell the property of the public, if not for the necessities, for the luxuries, of life. They had, perhaps, managed to keep their families, by a rigid, pinching economy in bread—dry bread; but to butter it; to indulge themselves with the proper diet of even Church mice, they were obliged to dispose of paper—worth, perhaps, thousands and thousands of pounds to the parties whose names were inscribed on it—at a few pence per pound, to the cheesemonger.

From this doom of some of the parochial records of the province, Mr. William Wallace inferred the degree of care and exactitude with which the wills were kept. Previous knowledge had prepared him for it; but he was not prepared to find that *the whole* of

another and most important class of records, up to a comparatively late date, had been abstracted, in the lamp, from the Registry of this Cathedral number two. The case was this:—

In the course of his investigations, it was necessary for him to refer to a "marriage allegation,"—that is, a copy of the statement made by a bridegroom previous to converting himself, by the help of the Bishop's license, into a husband. He then learnt that most of such documents are the "private property" of one of the clerks, who kept them in his own private house; that he had bought them of a deceased member of the Herald's College, and that for each search into them he charged according to a sliding scale, arranged according to the station of the applicant, the maximum of which was five pounds for the simple search, and five pounds more if what the party wanted were found. The English of this is, that the present custodian of these papers purchased of a dead Herald what did not belong to him; and what there could have been no difficulty whatever in restoring to the true owner; (because no one could have known better than the purchaser that they were public property); and that their proper place was not his private house, but the provincial Registry. The produce of this abstraction is an illegal income better possibly than the legal gains of an Admiral or a Government Commissioner; double that of a physician in good practice, or of a philanthropist in easy circumstances,—and treble that of our best dramatist, or our best poet. This manifest abuse is so perfectly established and recognised, that the fortunate possessor of these documentary mines of wealth delivers his little bills for fees on regular printed forms.

Besides these hindrances, which could not be helped, a certain number of wilful obstructions were thrown in the way of our inquiring friends, because they had been desired by the Archbishop to be placed on the fee free-list. They were watched by the entire office; for it became Argus for the occasion. Remarks of a satirical character were discharged point-blank from behind the desks, whenever a good opening occurred. The non-paying searchers were "in the way"—(this was true, so unfit is the apartment for public accommodation); "what people got they ought to pay for, as other people did." Spies slid silently out from behind the ramparts, or desks, to look over their shoulders, and to see that they did not purloin any information posterior to the fifteenth century.

Mr. William Wallace stood all this manfully; but his ally was obliged to retire at the expiration of the second day. Mr. William Wallace at length found he could not advance the objects of his inquiries any more efficiently at this Cathedral number two, than he had advanced them at Cathedral number one; so, at the end of a week, he beat a dignified retreat with all the honours of war.

He then turned his face towards the unimpeachable Registry of Cathedral number three, hoping for better success.

THE IRISH "STATIONERS."

"If you wear a handkerchief tied on your head, you'll be able to pass everywhere without question."

I declining, however, to adopt this counterfeit presentment of a pilgrim, my companion resumed, "You will at least be careful not to show any disrespect, nor pry too much into what you may see going on around you?"

I assured him, that to insult my neighbours in their conscientious observances, was what I should be sorry to do, and, furthermore, promised to restrain my curiosity within moderate bounds; whereupon we made arrangements to visit together that celebrated place of Roman Catholic pilgrimage existing on an island in Lough Derg, County Donegal, Ireland; to which as many as fifteen thousand people are said to have repaired to do penance in a season (extending from the first of June to the fifteenth of August in each year), though it is calculated that the numbers of pilgrims, during the season of 1850, is not likely to exceed six thousand.

After a drive of about two hours' duration, chiefly along the shore of Lough Erne, whose wide sweeps of still water, broken by woody promontories, with cliffs wearing their velvety summer green, and streaked with changeable sunlights in the background, opened and closed upon us successively as we pursued the winding road; we turned northwards, and, passing through the village of Pettigo, entered upon a bleaker region, where the road became gradually worse, the huts poorer and less frequent, the patches of oats more scraggy and unfenced, and the land boggy and browner; until at last the view on every side presented nothing but dark stony hills, with marsh at their feet, and rough heather on their sides, among which lay here and there a very few miserable cottages, scarcely distinguishable from the weather-beaten rocks and crooked clumps of turf which were scattered about these cheerless uplands.

Leaving our jaunting-car at a hovel by the road-side, we proceeded on foot towards the Holy-Lake, which was about a mile distant.

We had previously passed many pilgrims going to, and returning from, it, and now soon fell into company and conversation with three women, each barefoot and carrying the usual staff in her hand and small bundle on her shoulders. They had walked about sixty miles, performing on their way part of the required penance, as is permitted in certain cases. Those who do thus are said to "bring their fast in with them." These pilgrims, however, had made but a short journey in comparison with others; some of whom reached the Lough from the remotest south-

ern corners of Ireland, others (but these of course not on foot,) from various parts of England and Scotland, and some even from America. It was by no means an unusual thing, I was assured, that a person should cross the broad Atlantic for the single purpose of "making the stations" here. In most of such instances, and indeed in many of the others, the pilgrimage is undertaken in discharge of vows made during sickness. Of the remainder, the majority are voluntary penitents; the number of those on whom the penance is enjoined by their priests being, it is said, very small.

The Lough soon unfolded itself to our sight; an irregular sheet of water that seemed about two miles across, surrounded by a waving circle of wild brown hills. Several green islands were strewn on its surface; but a small fleet of whitewashed houses, jumbled together "stem and stern," which appeared to float on the water about half-a-mile from the shore where we stood, soon monopolised our attention. These edifices are, in reality, built upon the Station Island, almost hiding it from view (its dimensions being probably no more than one hundred yards by forty), and comprise two Chapels, the Prior's house, and five lodging-houses. At the end of the pilgrimage-season the island is altogether deserted.

On the small scrap of ground unbuilt upon near the centre of the Island rose a solitary tree; and round this, and across by the wall of one of the houses, and disappearing behind its gable, we could see a constant succession of figures moving in Indian file.

After satisfying our first curiosity with this prospect, and learning that it would probably be a considerable time before the appearance of a boat to ferry us across, we joined (with some consciousness of an un-pilgrim-like exterior) a party of pilgrims who were lolling on the grass beside a boat-quay of rude stones, and not far from a building resembling a coach-house, inscribed "Pilgrim Lodge," which had a third of its length inside cut off by a wooden partition, and a slit in this with "Tickets" written above. Not without qualms in concealing my character of a heretic, though determined not to assume that of a true believer, even so far as it might have been accomplished by taking off my gloves and brushing my hat the wrong way (this suggested itself to me, I confess), I reclined among the way-worn and anxious company.

Two wrinkled old women, who had made the pilgrimage many times before, conversed earnestly about the picture of the Virgin at Rimini, said to have lately become endowed with motion; repeatedly ejaculating their praises and thanks in reference to the miracle; though as to whether its direct object was the cursing of Protestants or the blessing of Catholics, they were unable to form a conclusion. A stout, middle-aged woman, with a Louth brogue, who sighed

frequently, confessed that she felt "greatly through other, surely," at the thought of what might be before her on the Island, it being her first visit; upon which she received encouragement from the rest, and information as to how she ought to proceed. An *indulgence* is promised to those who guide others; and from this, added to the natural disposition of the people, it results that information is most readily given to the newcomers by those who have been already initiated.

But now the attention of the old women who conversed about the Picture was riveted by the startling statement of a man at my side, that he believed the end of the world to be at hand. Being anxiously requested to give his reasons for holding this opinion, he expounded—and really it was hard to avoid being impressed by the simple eloquence and the gravity of conviction with which he spoke—the prophecies of plagues to fall on the beasts, and on the fishes of the sea, and on the fruits of the earth, and on mankind, as now in course of fulfilment; to which the women responded by murmuring short prayers, and uplifting their hands and eyes. Then some one reminded the rest how the ferry-boat has been twice lost, with its cargo of pilgrims, and how it is to be lost the third time; and next, the question arose, whether those so drowned are entitled to any special "benefit" in the future state from the nature of their death; upon which opinions seemed to differ. A considerable time wore on in talk of this kind, mingled with some interchanges of confidence on more personal affairs, in which I remarked, as I often have amongst the Irish peasantry, a high average of delicacy of manner, both in asking and answering questions.

I may mention, that, hearing one person alluded to as "a Stationer from Strabane," I laboured for some time under the mistake that he was one who, when at home, sold paper, quills, and so on, till it suddenly flashed upon me that "Stationer" was the technical name for a Pilgrim.

An old bugle sounded from Pilgrim Lodge not having succeeded in calling to us the attention of those on the Island, the conversation at least in the knot of Stationers with which I consorted, gradually dropped, and I was left to muse in silence over the many strange facts and traditions connected with the lake, whose clear water was rippling over little pebbles up to the grass on which we lay, while its hills were now cheered with sunshine and the breadths of shadow thrown on them by a circle of great white clouds ranged at their backs. Fionn-lough, the Fair Lake, was its name, say the old legends, until baptised Lough Derg, the Red Lake, in the blood of a monster who inhabited it, slain by Saint Patrick. Whether the island "Purgatory" was established in the fifth century by the saint himself, or in the ninth, or the

twelfth, its origin runs back far enough into the night of time to be invested with all the mystery of those strange indefinite years of the past; and it was curious to picture to oneself the arrival on the shore of that wild and remote little lake, five hundred years ago, of Malatesta, Knight of Hungary, and Nicholas de Beccario of Ferrara, with a safe conduct to St. Patrick's Purgatory from King Edward the Third; or, forty years later, of Raymond, Viscount de Perilleux, Knight of Rhodes, with a train of twenty men and thirty horses, bearing a like protection from King Richard the Second; these names standing prominent out of many successions and generations of pilgrims. Sliding in fancy down to later times, the tender story about Carolan the Harper rises in the memory. Carolan's stations completed, the boat in which he sits has reached this quay on the mainland, where a crowd of new pilgrims wait its arrival, as we are now waiting. All are eager to assist the blind old man in landing; a woman's hand touches his; and Carolan, suddenly pausing, exclaims, in a tone of surprise mingled with deep feeling, "That is the hand of Bridget Cruise!" He was not wrong; it was the hand of his first love, who had inspired his finest song when his heart was warm and his genius in its prime; though he had been a stranger to the touch of it for many a long year.

By this time a concourse of between thirty and forty pilgrims have arrived at the shore; some of them, to my comfort, well-dressed. All the women, rich and poor, are barefoot, but not all the men; for it is not absolutely necessary to take off the shoes until the duties of the penance be commenced. At last the boat, a large clumsy one, with an awning over the stern-sheets, quits the Island and slowly nears the quay; the delay having been caused by its absence on a trip to the Saint's Island,* distant about a quarter of a mile from Station Island. It comes alongside; and the passengers, chiefly women, disembark and exchange greetings and blessings with those who are about to take their places. The latter obtain tickets, price sixpence-halfpenny, from the Lessee of the island, a short stout jovial man, wearing a glazed hat, who attends on every trip, and has a good-humoured word for everybody; the boat gets gradually filled with passengers; the rowers place themselves two or three to each of the heavy oars; the rope is cast off, and we crawl away from the shore, impelled with short splashing strokes, and steered by the Lessee himself, seated beneath the awning among the "decent" minority of the company, who pay a shilling each for this distinguished position on board.

At the Island quay many of both sexes are waiting to receive the new arrivals. We dis-

* Saint's Island was the original site of the Purgatory, but was found to be too accessible from the shore. It contains the ruins of an abbey, and some fertile of hay. The pilgrims visit it occasionally.

embark as quickly as may be, and pass up at once along the lane formed by houses from the water's edge, which opens into a small, irregular space of craggy ground, with a chapel (the principal one) at its extremity; and this space is alive with people pursuing one another barefoot along a course, marked out by rough stones, which leads them in regular succession round a series of little circles, called *Saints' Beds*. Each is absorbed by his or her own set of beads; though not so much so as to hinder here and there some peripatetic of delicate feet from making an effort to pick and choose among the sharp-cornered stones which beset the journey; while those who have gone shoeless all their lives, have clearly the advantage, and step along carelessly over rough and smooth; nor is more or less suffering in this respect, said to make any difference in the merit of the station; though some, I believe, think otherwise. What adds to the peculiarity of the scene is, that the head-dresses of the men consist of tightly-tied handkerchiefs of various colours, with a sprinkling of woollen night-caps.

The circuit is performed in the following manner:—Starting from the broken stem of an ancient stone cross, about four feet high, and carved with a spiral embellishment, each Stationer goes seven times round the chapel, repeating a *deicide* each time; after the seventh, he stands with his back against a cross cut into one of the stones of the chapel, and stretching out his arms, declares his renunciation of the World, the Flesh, and the Devil. His next movement is to the furthest *Bed*, consisting of a circle of perhaps nine feet in diameter almost surrounded by an uneven grey wall about three feet high, an opening in which gives access to the interior, where stands a time and lip-worn cross of stone; and here he goes round outside the wall three times, saying three *Paters* and *Aves*; kneels and says three more; rises and walks round inside the wall three times, saying three *Paters* and *Aves*, kneels and says three more, and then kisses the central cross. After this he passes to the next *Bed*, where the same formula is observed; thence to another; and thence to a fourth; after which comes the "Big Bed," resembling two of the others placed side by side, over which spread the leaves of a dwarf sycamore, almost the only bit of vegetation on the island. This bed must be encircled nine times without, and six times within. The next stage is to the water's edge on the eastern shore, where ten *Paters* and *Aves* are repeated standing, and as many kneeling. The practice of wading into the lake, which existed not long ago, has been forbidden, as well as that of carrying stones away as memorials. This latter prohibition, by the way, may have arisen out of no unreasonable fear that the island, being small, and composed chiefly of stones, would, by degrees, be completely carried off by the pilgrims. From the shore the Stationer pro-

ceeds to a rock on a rising ground, and there repeats two more *Paters* and *Aves* standing, and two kneeling; after which, returning to the twisted cross whence he first set out, he kisses it, and repairs to the western shore to wash his feet; so finishing one *Station*, during which one full Rosary has been repeated. A Stationer who is experienced in his duties, makes his tongue and feet move so harmoniously together, that each prayer comes in at precisely the proper part of the journey, without either hurry or delay. A *Station* ended, the pilgrim is at liberty for a time, in some instances spent in meditation or grave discourse; in others, in chat, smoking, and idleness.

After looking as closely as we might, without seeming too curious at the never-ending, still-beginning procession round the Chapel and the Beds, we entered one of the lodging-houses, where we were comfortably served with tea and bread and butter. We might have had meat too, for the asking; all things being lawful before the commencement or after the termination of one's penance, except intoxicating drinks; the tasting of which within three miles of the Lake is strictly prohibited.

While enjoying our cup of tea (though the beverage has, I fancy, a smack of the peculiar water which forms its diluent,) we may try to get a definite notion of a pilgrim's routine from first to last. It is, we find, usually as follows:—Say that he enters the Island on Monday evening; he secures a lodging consistent with his means,—the lodging-houses ranging from a snug slated house to a hovel, and the number expected to sleep in one bed, bearing an inverse proportion to the cost,—takes care to eat a hearty meal, and then repairs to evening prayers at the Chapel, where he hears the nightly warning against in-orthodox practices while on the Island; amongst which are included the use of intoxicating drinks, alms-giving, and "exultations," that is to say, expressions of religious praise or joy, as unfit for a time of penance. After a night, probably, of sound repose, in spite of all inconveniences, he is roused at four on Tuesday morning by the bell which summons him to join the multitude about to flock to the Prior's morning mass; that over, he is likely to set himself to make his first station round the Chapel and the Beds. Three of these stations must be accomplished during the day, but the time when is left to his choice: some perform all the three without interruption.

On Tuesday evening, having eaten nothing since the preceding evening, he is allowed to refresh himself with some bread and wine, and then goes into "Prison." It is necessary for the true appreciation of the nature of his fare to understand that the wine is the boggy-flavoured water of the lake, drank hot. The pilgrims speak loudly of its wholesome qualities, as well as of its rich and nutritious flavour; but on the second point, at least, my opinion is distinctly opposed to theirs. They

certainly, however, give the best proof of their sincerity by drinking it in large quantities, and sometimes almost scalding out of the kettle. About seven o'clock, then, our Stationer goes into "Prison," that is, into the Chapel, as substitute for the now obliterated purgatorial cave; to stay without food or sleep until the same hour on the following evening. He is not, however, obliged absolutely to remain within the doors of the Chapel during the whole of the time, but has liberty to pass in and out, under certain restrictions.

In the Chapel, the men are gathered on one side, the women on the other,—some of them on a bench that runs round the wall, some on the altar-steps, but most on the ground, seated or kneeling. When the shades of evening have deepened, a few candles are lighted here and there, throwing faint glimmerings over the confused groups,—the women in blue cloaks or red shawls, drawn over the heads of many of the wearers; some conversing in whispers, some groaning and rocking themselves; some in corners telling their beads with ceaseless perseverance; the men, with coloured handkerchiefs or nightcaps on their heads, and all barefoot (as are the women, too, though less obviously), occupied in a somewhat similar manner; varied, occasionally, by the singing of a hymn, to which a pilgrim plays a tremulous accompaniment on the flute.

About midnight, some one well acquainted with the ritual, and who not unprudently assumes the office of temporary leader, commences the Rosary aloud, and is followed by all present; the responses being audibly repeated by them in the proper places. They are now performing one Station of the prison-day, with the same prayers as are used on the other days in performing the Stations out of doors; and to mark their progress the more plainly, the leader calls out at intervals from his place on the altar-steps, "Now the Bed on the top of the hill;" "Now, the Big Bed;" "Now the Stone;" and so on, assigning the proper prayers to each stage of the imaginary perambulation.

Three Stations have thus to be gone through occupying, perhaps, from four to five hours; at the end of which time the candles have burnt and guttered away, and the new daylight looks in through the Chapel windows on a hot, sleepy, and most uncomfortable crowd; some of whom begin to stretch their cramped limbs and seek the refreshment of open air, even at the risk of an increased appetite,—under the circumstances a most undesirable acquirement; for the consumption of as much as a crumb of bread would cause them to "lose the benefit of their Station,"—a possibility which is always hanging in terror before the mind's eyes of the pilgrims. With bumpers of wine, however, they are permitted to regale themselves unrestrictedly.

In the course of this day the Prisoner is examined by a priest on the leading points of his creed, and if his answers be satisfactory,

he is *inducted* into the Confessional by means of a ticket, for which the Prior receives tennepence, and which the holder may present to any of the four priests on the island. This sum, and that paid at the ferry, are the only charges incurred by the pilgrim, in addition to those for his board and lodging.

On Wednesday evening (having gone into prison on Tuesday evening) he is present at evening prayers, though whether in a state of very vigilant attention may be doubted; after which he is released; and returning to his lodging-house, refreshes his exhausted frame with the stated allowance of bread, oaten or white, and the usual unlimited flow of wine. In a great many cases, however, tea is permitted. His next step, it can scarcely be doubted, is to bed; where he sleeps soundly till roused at four on Wednesday morning to renew his acquaintance with the less luxurious Beds outside. The rain, perhaps, is battering fiercely at his window. No help—he must brave it; and as he casts a shuddering look out into the dim, miserable morning, he sees a string of drenched figures already crouching along the prescribed course, tracing their "rough road returning in a round," who have probably been so engaged during the greater part of the night; for pilgrims commence their penances when they choose, and all the various stages are going on in the Island simultaneously.

This third day, Thursday, the Stationer "receives" (the Communion), makes three Stations, and attends evening Prayers; immediately after which his penance is at an end. He may be supposed to eat a hearty meal (the first since Monday), and either quits the Island that evening, or remains until the following morning.

There are some, however, who accomplish six days' penance, and a few nine days'; when every ceremony I have described is performed—in the first case twice, in the second thrice. I was told of a woman who attends for nine days regularly every season. In most instances, it is said, there is a perceptible improvement, on their return home, in the conduct of those who have made a pilgrimage; but it is admitted at the same time that the effect with the great majority is transient; its term of duration being very uncertain.

Whilst we were at tea in the lodging-house, pilgrims were constantly swarming in and out, like bees in a hive; one asking another if he were "in Prison," or "going out" (i. e., of the Island); or what Station he was in; or mentioning that he had just made his third in fifty-one minutes (implying, by the way, the possession of a watch); in all the motley crowd, however—there and elsewhere—every one appeared to me to behave with great seemliness and consistency.

About six o'clock in the evening, we went to the Chapel, and heard the Prior preach. His sermon was an excessively strange one to unaccustomed ears; for he addressed his

audience in the most familiar conversational tone, and even translated the language of Scripture into the humblest and most modern vernacular. Yet, doubtless, this is the right way to preach to the understandings and hearts of the uneducated, and the Prior spoke like a man who took an interest in what he was talking about; while his language, though so unadorned, was always correct and forcible; and his illustrations—in the course of which he introduced Tenant Right, Napoleon crossing the Alps, the Marquis of Anglesea, and the Pork Trade—were very much to the purpose. The congregation, on the whole, were earnestly attentive; but there were one or two fidgetty persons who encountered strongly-worded reproofs, in parenthesis, from the preacher. Few were absent from the Chapel, and from its appearance, therefore, we computed the number of pilgrims on the Island at the time of our visit to be about seven hundred.

Leaving the Chapel, we repaired to the quay, and embarked in a small boat, anticipating the large one, which speedily restored us to the mainland. A new group of Stationers were here awaiting transportation, and I confess I felt somewhat ashamed to receive various blessings from these as a faithful son of the holy Catholic Church.

Dining at Pettigo, we did not pursue our homeward journey till an hour when all Ireland lay wrapped in the clouds of the night, without moon or star; and as we approached those thick woods through which our road for some distance led, where the trees stood up black before us against the dark sky, it seemed as though we were plunging into a heavier night within the night.

GERMAN ADVERTISEMENTS.

It has been thought by rash speculators who spell the Times, that the art and purpose of advertising have attained the highest perfection in this country. When they perceive that every want that human fancy can invent, or human luxury demand, may be supplied through the agency of one or other of our broad sheets; when anything that is lost, from a run-away husband to a bolting horse; from a thousand pound-note to a piece of paper "of no use to any but the owner;" from a purse to a pin; is looked for—and seldom without a clue to its recovery—in the columns of the London newspapers, the conjecture that the perfection of publicity has been attained in this country, may be forgiven.

Yet we must, however humiliating to our national pride, undeceive the believers in this pre-eminence, by showing that, in at least one department of advertising, we are totally and hopelessly behind the Germans. The sentimental advertisement is nearly unknown to us. Although advertisements for wives sometimes meet the eye of the English quid-nunc,

there is nothing tender in them. The never absent stipulation respecting the fortune of the required bride, shows that these are anything but affairs of the heart. A middle-aged lady with plenty of money, generally satisfies the sentiment of the advertiser.

Where real feeling is concerned, we English keep it as secret as possible. We do not, like German juveniles, advertise our broken hearts, but when they are fractured gather up the pieces as speedily as possible, and have them mended in secrecy and silence. Finding sufficient expression for the aspirations of our inmost souls in the tremulous whisperings of private intercourse, or in pen-and-ink outpourings through the penny post, we have not yet acquired the habit of shedding our passionate protestations and fervent appeals over the columns of the public journals. Expensive as we are said to be in all our habits and gratifications, we have not yet contracted the costly habit of publishing to the world the raptures and torments of our loves and our griefs, at from sixpence to one shilling per line—Government duty included. It is true that "O. H.!" sometimes promises in the third column of the leading journal to meet Mary Anne "at the old place" at seven; yet he waits till that delightful hour to tell her all he hopes, and feels, and fears. The German is, it would appear, too passionately impatient for this; he makes his declaration at once, not to Fraulin Bertha alone, but to the whole world. He does not merely whisper his tale of love into her single ear: but places it in the Cologne or Prussian Gazette, before the eyes of Europe. He can never place his hand on his heart, and sing—

"I have a silent sorrow here,
A grief I'll ne'er impart;
It breathes no sigh, it sheds no tear,
But it consumes my heart."

The German swain's sorrow, so far from remaining silent, obtrudes itself into the bosom of every family which takes in the newspaper, by whose columns it is conveyed, hot from the press, to his adored Bertha; and his heart is consumed—like an ox on a rejoicing day—in the most public manner possible.

Young ladies reciprocate. Here is a specimen from a damsel in Cologne to her lover in Berlin. She conveys her secret sentiments in the largest German text of the Cologne Gazette, thus:—

Hôtel de la Couronne.

PARDON, Pardon, it was not my fault. Thou desirest a letter, but how and where? Here I cannot remain—why, thou must understand. The last was read and burnt. When shall it be? Not before Whitsuntide. It is possible thou mightest obtain permission after harvest if thou improvst and Grandpapa contin—but—yet. If I should not write, fear not that I shall always love thee.—Thine, JULIA.

Absent lovers congratulate each other on their respective birth-days in the same fashion.

The common-place method of writing their congratulations in a private letter is not dramatic enough for a super-sentimental German damsel. Like the school-girl, who was so vain of having been entrusted with a secret, that she told it to everybody; she is so proud of her forbidden attachment, that she proclaims it to the whole continent. The feminine terminal "e" of a pronoun, which occur in a recent advertisement in the Cologne Gazette, shows it emanates from a lady. Translated, it runs thus:—

A THREE-TIMES-THUNDERING Love-greeting (Lebehoek) to Henry R. . . . at New-market.

"Yes, in thee I have firm Confidence."

The love, affection, and friendship of the Germans, as expressed on each other's saints' days and holidays, form a very considerable source of revenue to the proprietors of German newspapers. They seldom publish a number without some half-dozen of these greetings. A few of them are a little puzzling to English readers. One would think, for instance, that between brother and sister there would be a sufficiently tacit understanding that, in absence, the one would live in the other's thoughts when a birthday came round. But a public congratulation is preferred. Here is one:—

TO my dear sister Minna at Breslau, a hearty Lebehoek on this her birth-day, from her brother at Cologne.

A whole circle of friends occasionally club a "Lebehoek" for the local paper, thus:—

TO HENRIETTA A. of Oberpleis, a Lebehoek on this her name day.
From several friends in Cologne.

A great proportion of these complimentary addresses are in verse. We would give specimens of this advertising anthology—if we could; but most of them are so execrably unintelligible, that the task of translation is simply impossible.

It is only in the Austrian papers that matrimonial advertisements abound. Ladies as well as gentlemen, with large hearts and small purses, seek suitable partners for life in pithy purpose-like advertisements in which no words are wasted: the Vienna Gazette of the 11th instant, displays the following:—

A TWENTY-EIGHT-YEAR-OLD Nobleman, with a fortune of 100,000 florins, wishes to marry a young lady, either a widow or a maiden. Address W. D. S., *Poste Restante*, Vienna.

Remember, ladies, that one hundred thousand florins is only ten thousand pounds sterling, and the "twenty-eight-year-old nobleman" is most probably—an Austrian.

A humbler aspirant advertises upon a point of taste. . . . Hearty is evidently his object:—

MARRIAGE INVITATION!

A SINGLE YOUNG MAN, of agreeable exterior, and not without education, who desires from

permanent sources a yearly income of 1600 florins, which will shortly be increased, desires to marry a *particularly pretty young lady*. The latter must be well-educated, and fitted, by household habits, good nature, sound understanding, and cheerful temper, to contribute to the happiness of a husband. Any lady who feels conscious that she could fulfil these great conditions, is requested to address, X. Y. Z., *Poste Restante*.

Another is a wily specimen of wife-angling. It is craftily addressed to "Parents and guardians."

A YOUNG MAN IN BUSINESS, whose income can be proved to average from 1500 to 1800 florins per annum, desires an introduction to some respectable family where he would have an opportunity of meeting with a young maiden with property, with a view, on the reciprocal satisfaction of all parties, to enter into a more tender engagement. Parents or guardians who are disposed to entertain this proposition, may address, M. N. *Poste Restante*, Vienna.

The next "Marriage invitation" that we light upon, is from a votary of Apollo as well as of Hymen:—

A YOUNG MAN, FAVOURED BY NATURE, and musical in his tastes and profession, seeks to marry a gentle maiden or widow who has cultivated the same art. As in the service of Apollo he has been blessed with every endowment except riches, it were very desirable that the lady possessed a certain fortune. Address, by permission, T. Z., *Poste Restante*.

On the 1st ultimo, **A STRONG MAN** advertised in the Vienna Gazette for a wife. He gave a minute description of his person with all the *naïvetés* of a German. Ladies were requested to take notice that he had a fair beard, but dark eyes; that he was above the common height, and stout in proportion; had an agreeable voice for singing, and was altogether of a character gay and debonnaire; in fact, just the sort of person to make home delightful. He was of noble birth. Candidates were to address their letters, *Poste Restante*, when a personal interview might be obtained. No one who had not an independence need apply:—for it appears that in Vienna "strong men" are at a premium. In the next number of the same paper, a modest "*jeune Monsieur*" expresses a wish for "*une jeune dame*" as a travelling companion to Italy.

Except the last, readers of certain English newspapers are not unfamiliar with such advertisements as the above. Sundry bachelors, anxious to improve their prospects in life, have long communicated their desires in the public prints. English ladies in the same condition have, however, refrained. The Viennese "fair and forty" have no scruples about the matter; they proclaim their wishes sometimes with a little reserve, but more frequently without any reserve whatever. From among the covert advertisements for husbands we select two. The first is from one of the

numerous inhabitants of as large a dwelling-house as is to be found in Vienna, and startles the eye with the big letters:—

A WOMAN WISHES! to take the entire charge of a single gentleman, and to do for him altogether. Apply to the Hauptstrasse, No. 782, 1st chamber of the 4th storey, door No. 17.

This minutely-detailed address reminds us of Charles Lamb's Brighton Lady, who, a victim to a tender disappointment, told everybody she had retired from the world in broken-hearted solitude, and that she lived at number ninety-nine Marine Parade.

The second man-trap is more artfully set:—

TO LET, HALF-YEARELY, at the house of an unmarried lady, of cheerful disposition, a light, agreeable chamber, having a pleasant look out upon the street. A middle-aged single gentleman (*soliden*) preferred. Apply personally, after three o'clock P. M.

The intentions of the unmarried lady of cheerful disposition, who prefers a middle-aged "single" gentleman, but very much prefers a soldier to any youth or widower, are manifestly to convert such a lodger, if she can catch him, into a husband with all convenient speed.

There is no disguise whatever in the next advertisement we shall present:—

MARRIAGE PROPOSAL OF A WIDOW.—

The same is childless, of unspotted character, and possessed of property to the value of about 16,000 florins, in real estate. Address, No. 734, Bazaar, Boornmarkt. Secrecy guaranteed.

Another lady, whose notification appeared at an earlier date, is even more explicit:—

A VERY SOLID, RESPECTABLE MISS, free, between thirty and forty, not pretty, but still not particularly ill-looking, possessed of a good business, about 700 florins ready money (convention currency), and making a profit of from 20 to 25 florins a month, desires a matrimonial union with a good-looking man of unspotted character, either bachelor or widower, between forty and fifty-five years of age, without children and debts, and having either a situation or a business. Those who may reflect on this proposition with seriousness, are requested to forward their address and a statement of their position, in well-sealed letters, to K. B. W., Vienna, *Poste Restante*, until July 17, 1850.

Besides the matrimonial "wants" of both sexes, the "Want places" column in most German papers is generally full. "Perfect" cooks, "brave" housemaids, and "solid" governesses are continually publishing their qualifications to find masters and mistresses.

We take leave of these matrimonial and general "Wants," to notice a class of advertisers who apparently want nothing but to make themselves notorious. One sentiment comes out with extreme prominence in the advertising department of the German papers—personal vanity. It is by no means uncommon for a person who has no one to congratulate him, no one to puff him off as a dear but absent friend or lover, to advertise *himself*.

A gentleman named Schmidt (the "Smith" of German nomenclature) being most desirous of acquainting Europe that he has obtained a small government appointment, and that he was a member of the defunct National "Versammlung" (Association)—concocts an advertisement, stating that several persons are going about the European Continent (he names no place), contracting debts in his name (namely, "John Smith"), and bidding them beware; for he will not pay any of those debts, for he is not any of the John Smiths aforesaid, but Mr. Under-clerk-of-the-Berlin-Custom-House John Smith (ex-member, &c.).

We find in the same paper that another gentleman is oppressed with a conviction that his movements are of infinite solicitude and consequence to the whole of Europe. His announcement commences with a startling

NOTICE!—I beg my numerous friends and acquaintances in the several parts of Europe who may be anxious to communicate with me, to address their letters to me at the seat of war, Schleswig-Holstein.—JULIUS H.—, Captain of the army of Schleswig-Holstein.

As the gallant captain has not paid us for advertising his whereabouts, we have suppressed all but the initial of his name.

Births are always made known in the papers by the husband; and in the west of Germany, when the male population is increased, the new comer is always described as a "powerful" boy. Deaths are announced in long-drawn epitaphs, describing at lugubrious length not only the virtues of the deceased, but the inconsolable sorrow of the relatives.

We conclude this Chapter of Advertising Curiosities with the announcement in the *Wiener Zeitung* of a book "for all classes," that we fear has already had a very extensive sale in the land which originated the bowl and dagger school of literature:—

FOR READERS OF ALL CLASSES.

THE DARK DEEDS OF CIVILISED MAN.

With the wonderful interventions of Providence for their discovery and punishment. By Dr. CH. FRED. GRENZ, with copper plate engravings. Contents,—

I. The Murder of Mr. O'Connor by the Mannings; Husband and Wife.

II. The Fourfold Murder by James Bloomfield Rush; with other trials.

"Give me the ballads of a people," said Voltaire, "and I will write their true history." Had he lived till now, he would have found the advertisements of a people a better index to their social tastes and habits. One Supplement of the Times, a file of the *Constitutionnel*, or a few numbers of the most extensively circulated of the German papers would be more suggestive of the wants and manners, locomotive, literary, and commercial habits of their various readers, than all the best treatises ever penned.

A LAY OF LONDON STREETS.

THE Autumn night is far advanced ;
And as I pass, with hurrying feet,
The blind black houses all seem tranced,
And scarce a living thing I meet ;
Only a beggar shuffling home,
Or girl that loers and saunters by,
Or, on a door-step, some poor child
Sleeping beneath the open sky.

The dreamy lamp-light on the stones
Droops, and fades off by slow degrees ;
From far night-cellars, mingled tones
Come like faint sighings out of trees.
Below, the earth is hush'd ; above,
A waste of empty darkness spreads,
Drowning the heavens. Sleep has gorged
London, the beast of million heads.

But suddenly I hear a sound—
A buzzing murmur, low, yet clear—
Of many feet upon the ground,
And many voices. Then appear
Lights dancing to and fro, and soon
A dark mass swells in sight, which, when
The distance lessens, shakes apart,
And scatters into throngs of men.

Amidst them, four night-guardians bear
A dismal hand-bier, upon which
I see some locks of wandering hair,
Like weeds in a neglected ditch ;
And, lower down, some heaving rags
(Strapp'd here and there, yet partly free),
From which two lean and naked arms
Toss up, like wrecks upon the sea.

Time mars us. She whom now we call
A raging tigress, wild for blood—
A danger to herself, and all
Who cross her in her desperate mood—
Perhaps had once a fair, smooth face,
A woman's heart, a human soul ;
Kept chime with Heaven's eternal laws,
And blent with music of the whole.

But poverty was in her home,
And loveless sights and sounds were there :
Fifth, hunger, cold, were free to roam
Within those precincts stark and bare.
She had one only way to 'scape
The drear monotony of want,
To lull the heart that ate itself
And make the world less spectral-gaunt.

Judge not too harshly of her fault,
The bitter growth of bitter fate.
The channel of her life was salt
With crusted tears ; and grief's dull weight
Found ease within those splendid dens,
Whence flows the Lethe of the poor,
And dawns of Eden seem to flush
Behind the massive swinging door.

She plunged into a fiery tide,
Weltering on waves of stinging joy ;
But now there comes the doleful side ;
She tastes the terrible alloy :—
A wasting fever in the brain,
A desolation without bound,
And marble aspects of despair,
That live in silence, standing round.

THE METHUSALEH PILL.

MR. PRATTLES was a poor man. He had a wife and a large family dependent on him ; and his printing business brought him in only a very slender income. His neighbours often wondered how he contrived to make both ends meet. They knew nothing of the struggle that went on within the walls of Mr. Prattles's establishment. The surrounding tradesmen were his customers. He had a shrewd notion of business, however. When the grocer over the way gave him an order to print fifty copies of "Fine Congou at three-and-sixpence," he knew very well that the grocer down the road would soon empower him to print bills advertising "Fine Congou at three-and-fivepence three farthings ;" to which would be added the further intelligence that "now was the time !" The keener the competition in the neighbourhood, the better for Mr. Prattles. Among other printing orders, Mr. Prattles one day received a command to strike off a thousand labels for "Mr. Smith's Universal Pill." No sooner had he delivered the first batch of labels, than a second order was given for five thousand more labels ; and the second order was immediately succeeded by a third, and a third by a fourth.

This influx of business surprised Mr. Prattles ; and he began to envy the prosperity of Mr. Smith. Presently it struck him that it was no difficult matter to manufacture a pill. But how could he hope to invent a story so plausible as that which enveloped Mr. Smith's pill-boxes. There was a difficulty here. Mr. Smith had fortified himself in every possible way. He had selected the most obscure villages of the country from the gazetteer, and had written very characteristic testimonials from imaginary patients residing near these remote localities. His pill was—these spurious documents declared—an infallible cure for every disease. He tacked to his pill the properties of the entire pharmacopœia. Mr. Smith's pill was advertised to accomplish everything of which medical science was capable. The history of Mr. Smith's Pill was a narrative of blessings conferred upon frail mortality. By the virtues of Mr. Smith's Pill John Dobbins of Cwyrtychemwll, in Wales, had been cured of a bad leg, which had baffled the ingenuity of the first surgeons in the country. Mr. Smith's Pill restored Miss Brown of Briar Cottage, near Battledore-cum-Shuttlecock, to life, when the rattles were in her throat. It cured asthma, consumption, water on the brain, dropsy and influenza ; it was infallible in scarlet fever, yellow jaundice, and blue cholera, gout, rheumatism, tic-doloreux, sciatica, locked jaw, and cancer invariably disappeared from every patient respectively and concurrently afflicted with any or all of these diseases, after the third box.

Mr. Smith's ingenuity was not even ex-

hausted with these arrangements. He understood his business perfectly, and felt that, in order to make his pill go down, it was necessary to secure the patronage of a peer of the realm. With this view he entered into negotiations with a poor nobleman residing abroad. The transaction was a long time pending, but at length it was signed and sealed between Mr. Smith and the Earl of Rottenborough, that his lordship should, for and in consideration of the sum of six hundred per annum, to be paid to him, the Earl of Rottenborough, by the said Mr. Smith, consent to be cured in public advertisements, by means of Mr. Smith's Omnipotent Pill, of any disease of which the said Mr. Smith might choose to call upon him, the Earl aforesaid, to testify he had been cured. Under these auspices Mr. Smith's Pills had thrived exceedingly, but it was not till Mr. Smith conferred upon himself a diploma, and inducted himself into the chair in a college which he endowed, for that single purpose, somewhere, that the Universal Pill was found in every respectable house in the three kingdoms, as the special and particular pill of Professor Smith, M.D., without whose signature all others were spurious.

Poor Prattles! how could he, who had not twenty pounds in the world, hope to compete with the rich Professor Smith. When he recounted the advantages which his rival possessed, and reflected upon his own moneyless condition, he was ready to give up his idea in despair. At this crisis of his fate his wife, one day in purest jest, told him that care would soon make him look as old as Methusaleh. This simple remark, he affectingly tells at the present time, decided him. He would have a Methusaleh Pill! His wife tried hard to dissuade him from embarking in so expensive a speculation, but he was deaf to her pleading. He wrote forthwith to his cousin, who was a chemist at Bath, and asked him to mix him a harmless pill. "Let the properties it contains neutralise one another." This was the simple direction. A bribe of a third share in the speculation decided his cousin, the chemist, to set to work immediately. The next step was to frame a very learned history of the pill—to trace its descent from Methusaleh to Prattles. With this object, Prattles consulted a battered old schoolmaster of his acquaintance, whose scraps of ancient lore sufficed for the printer's purpose. In a few hours a very interesting story, narrating the history of the receipt, was fabricated and ready for the press. It ran as follows:—

"It is well known to most people that the venerable Methusaleh lived to the good old age of NINE HUNDRED AND SIXTY NINE YEARS. The secret of so long a life has for ages remained an IMPENETRABLE MYSTERY. In these degenerate days men seldom live to gaze upon their grandchildren; but in the days of Methusaleh matters were very different. Men lived for centuries.

What potent power—what subtle elixir—held body and soul together for so long a period? 'That is the question.' About two years ago two gentlemen were travelling in THE ARID DESERTS OF ASIA MINOR. They fell in, one evening, with an encampment of Arabs. They were most hospitably received by the Mussulmen. The first peculiarity they remarked among the Arabs was that there were several men in the encampment who, though they looked very old, were nevertheless active in their gait and lively in conversation. Our travellers entered into conversation with one of these hoary sons of the desert; the old man was very communicative.

"I was in your country many years ago, when Charles the Second was King. I played tricks before him:—he was a jovial fellow. Ah! I was young then.' And the old man heaved a deep sigh. The travellers, it may well be imagined, were surprised; and, at first, somewhat incredulous.

"There is a man—but he is very old now—who fought in Palestine when one of your king's sons helped in a foolish war—I think you Christians called it the Holy War.' The old man pointed to a figure crouched to the earth. It was that of a very old man, whose hair was white as silver. 'That man,' continued the Arab, who was addressing the travellers, 'is upwards of six hundred years old!'

"Incredible!' our travellers exclaimed.

"Hush!' the old Arab continued; 'you of the degenerate West know nothing of this matter. The secret remains with us—to you it is unknown—an undiscovered mystery. Have you ever heard of Methusaleh!'

"The travellers replied in the affirmative.

"Do you know by what secret he prolonged his life to the ripe old age of nine hundred and sixty nine-years!'

"The travellers confessed their profound ignorance. Forthwith the old Arab fumbled, with his ebony hands, about the folds of his turban, and presently drew therefrom a tattered piece of parchment, so dirty, besmeared with grease, and discoloured by age, that the Arabic characters written upon it could be deciphered only by the most practised Arabic scholar. One of the travellers happened to be a proficient in Arabic. He begged the old man to allow him to peruse the precious document. To this the wily Arab consented, on the conditions that it should be read in his own hands, and that he should receive a large sum of money for allowing the travellers to transcribe its contents. These preliminaries having been arranged, the party entered the nearest tent, and the travellers became possessed of the invaluable life-preserver. On their return to England the travellers entered into a negotiation with the present proprietor of the recipe, who offers his

METHUSALEH PILLS

to the British public at threepence-half-

penny per box. None are genuine unless signed by the proprietor, John Prattles. Agents wanted for every part of the world. N.B. The Methusaleh Pills are carefully made up after the Methusaleh Receipt, from particular herbs known only to the proprietor of this invaluable medicine. As a proof of the efficacy and wonderful properties of the Methusaleh Pills, Her Majesty's Government have granted to the proprietors, to the exclusion of all pretenders, the use of a splendid RED AND BLACK STAMP. All pills pretending to be Methusaleh Pills without this stamp are forgeries, and all imitation of it is felony."

This notable prospectus was concocted in the back parlour of Mr. Prattles's house. Mr. Prattles had not been a printer all his life for nothing; he had picked, up with his types, the trick of editorship, and revised the school-master's rough-draught with skill. Mr. Prattles then wore a paper cap and an apron. He published his prospectus, adding now and then new bits, to give it additional zest. At one time it was headed

"CHEAT THE UNDERTAKERS, AND LIVE SIX HUNDRED YEARS!"

Another, the prospectus began with

"LIFE PROLONGED TO AN INDEFINITE PERIOD BY THE METHUSALEH PILLS!"

In a few years Mr. Prattles was a man of property. In time he was even able to sneer at Professor Smith, with his tool, my Lord Rottenborough.

When some foolish old man, in a remote rural district, died at an advanced age, public attention was particularly called to Prattles's patent, by a statement on the part of the firm, that the instance of longevity in question was undoubtedly the effect of the Methusaleh receipt. Prattles pocketed his shillings, and smiled at the world: he laughed and won. To make all square, as far as possible, he even went to the length of eating a few charity dinners, and subscribing a few pounds in aid of hospital and other funds.

Prattles's Pills sold prodigiously. Whenever a doubt was expressed respecting their efficacy, it was silenced by reference to the sanction of Her Majesty's Government, whose mark picturesquely adorned each box, to prove the genuineness of the Methusaleh Pills; just as plate and jewellery are stamped by the assay authorities to show the standard excellence of the gold or silver. Publicly, Mr. Prattles complained that the Government charged him threehalfpence per impression, for these "Hall Marks;" privately, he whispered that to them he owed his fortune.

Like all those who have much, Mr. Prattles wanted more. After he had exported millions of his Methusaleh Pills to every corner of the Queen's Colonial dominions, he attempted to introduce them into foreign medicine-markets.

To his chagrin, he found that in *no other country in the world* but in these dominions (except the United States of America) were articles of that description allowed to be vended—much less are they sanctioned for the sake of a paltry revenue. On the contrary, individuals, Mr. Prattles learnt, who were discovered selling such things on the Continent, are severely punished; even newspapers who advertise them, are fined. Although he met with native patent medicines during his travels on the Continent, yet they are real remedies; having all been submitted to a Board of Government Officers distinguished for their proficiency in pharmacy and medicine, who decide whether the non-professional public can be safely trusted with them or not. Mr. Prattles, however, made a brilliant fortune by his gullible countrymen.

MR. VAN PLOOS ON PENMANSHIP.

I AM a Dutchman. My father, Mr. Lastman van Ploos was, for many years, one of the principal writing-masters in Amsterdam. He taught ladies and gentlemen, as well as lawyers' clerks, with much credit to himself, and advantage to them. But the class among whom he was considered to be the most expert and successful, was that of the merchants' and traders' apprentices, whom he taught to write a free, bold, rapid, legible hand. Some few were not so good, of course; and no two were exactly alike; I speak, however, of the great balance in his favour. The most part of those who had learned to write of Mr. Lastman van Ploos could be known by their hands, which were accounted the most excellent, for good, quick writing and easy reading, in all Amsterdam.

There was a large family of us. I am afraid to say how many brothers and sisters I had, especially sisters; but all of them were taught writing by my father, and though some wrote better than others, the whole family of the van Plooses wrote good hands—with one exception. That melancholy one, was I. What pain it was to my father to receive the letters I wrote to him! Yet it was not his fault; for he did not teach me.

I will explain how this was. A few words will show why my writing did not, and to this day does not, deserve to be called a "hand," but rather a claw—and a broken claw, too, sometimes.

My father having made a considerable sum by his lessons in writing, entered into a small trade in pipes and tobacco. He was so successful in this that he soon became a merchant, abandoned pens and paper for meerschaums and kamaster; and determined that one of his sons should be educated in England, and become his agent there as soon as he was old enough for so important an office. I was the son selected for this purpose, and at the age of eight I was consigned, together with a large stock of Dutch pipes, to

the care of a friend of my father's, Mynheer Trunckenbooms, a dealer in petticoats and other woollen articles,—a most prudent and respectable man.

Arrived in London, I was placed under the care of Mynheer Trunckenboom's agent's aunt, from whom I received the first rudiments of instruction, till one day the good lady's eye was attracted by the advertisement of a country schoolmaster who undertook to board and educate young gentlemen at the sum of six and twenty pounds a year, feeding them upon the best of diet, and teaching them everything requisite to be known. This seemed so excellent a thing that she represented the case in the most eloquent manner to Mynheer Trunckenboom on his next visit to London, who thought it would be just what my father wished. Accordingly I was sent to the school of Mr. Simon Spiphlicate, of Minerva House, Ponderwell, Hertfordshire.

I shall say nothing about my general education. I shall speak only of the writing department of this academy. Oh, it was very different in its method to that of my father. There were two classes; the big boys' class, and the little boys' class. I was in the latter. At twelve o'clock every day we were called to writing, and placed at the same desk as the upper class had used before us, and on the same forms. These forms, to save the expense of two sets suited to the different heights and sizes of the two classes, were so contrived as to suit neither, being too high for the big boys, and too low for us little ones. Thus, the upper class always presented a long row of hunched backs, and boys' noses pointing perpendicularly down their quills; while the lower class presented a long row of stiff necks, and small noses pointing up their quills. This arrangement was well enough for a few intermediate sized boys; but the great majority were in the position I have described. We wrote with quills; steel-pens had not then come into use. Our pens seldom suited us; we could not mend them ourselves, and we dared not ask to have them mended, because when this favour was granted by Mr. Spiphlicate, the acquiescence was almost always accompanied by a slap on the cheek directly the pen was returned, or a crack on the crown by one hard knuckle as the boy received it. A crack on the tender crown of a little boy from the bony knuckle of a man's hand who does not measure the respective powers of giving and receiving, is not only something to feel at the time, but never to forget afterwards. I always had a ringing in my head, and a mist over my eyes, for a quarter of an hour after it. The same knuckle-crack was also administered for a bad method of holding the pen, or for thick up-strokes, crooked down-strokes, and blots and smears. The sudden blow generally caused a large drop of ink to start out from the pen, and then you had a second crack on

the nob for this new blot, the crack coming, perhaps, exactly in the same place, all sore and dingy as it was; and this made me sick to death, or else it was a mad pain.

Mr. Simon Spiphlicate was a preacher, and had a subscription meeting-house. He stood six feet two, out of his shoes. He was very thin, but had large bones. His face was an unhealthy pale, with a mouldy tint in each cheek, and his great nose was swollen, and red at the end. He had weak eyes, and wore silver spectacles with immense round glasses. The upper parts of his legs were thin, but from the knees downwards they were extremely large, and always cased in long black gaiters, strapped under the shoe, and buttoned all the way up to the bend of the knee. This dreadful figure, (which, to the apprehensions of a little boy, under my circumstances, was not so much like that of a being of his own species, as of some gigantic foreign bird,) stalked up and down behind our backs all the time we were writing. The suddenness with which a blow would fall—or the horrible expectation of it, as he stood breathing down through his nostrils upon the back of my head—made the whole time of this lesson a torture of the mind. We all wrote as in fear of our lives.

When the lesson was over—oh, what a moment this was! True, it was over; but then we all had to show up our copies to him in succession. He now stood twirling a short ruler in his fingers. When the writing was very bad, or blotty, he seized one of the culprit's hands—often the right hand—and, bending the fingers down, beat it over the knuckles; so that in a few minutes afterwards they were swollen as large as marbles, and all of a red and purple hue. This it was often my fate to receive. I was four years at Minerva House Academy. Of the methods of instruction in English grammar, in Latin and Greek rudiments, in arithmetic, and in geography and the abuse of the globe, I will say nothing; but as for writing, I came away with no epistolary "hand" of any kind, no notion of how it was to be acquired, and with a mortal hatred of the fine art of penmanship in which all our family excelled.

Mr. Spiphlicate gave me cake and wine on the morning I left; and, all smiles, shook hands with me at parting; but my heart shuddered within me at his touch. The recollection of his smiles, and the subdued and tender sound of his voice in saying "Good-bye, van Floos," puzzled my conceptions of human nature for years afterwards. "Good" with a soft tone, and a rising inflection—"Good bye!"—and the sallow smile of the griffin!—when I think of it now, though twenty-seven years have elapsed, I sometimes feel as if I should like to smash his spectacles upon his face, and assault him with a new pen.

At the age of about thirteen I left the academy of Mr. Simon Spiphlicate, and after

being refused admission into several merchants' counting-houses on account of my "hand," I was placed with a wholesale tobacconist in Oxford Street, to learn the business. My education was at an end, and my penmanship being left to itself, to proceed upon the beautiful no-foundation just described, I gradually fell into a sort of writing of the very worst kind—slow and shapeless, or rapid and illegible, and seldom twice alike. This continued through years, under various circumstances of life, till here I am, a tobacconist of forty, who can't write his wife's Christian name in a manner fit to be read!

It may here be asked, by those who consider this matter of hand-writing in a mechanical light, whether there is not something awkward or unsuitable in the shape of my hand and fingers, or a certain inflexibility, inapt at all neat and curious manipulations? Not so; but the contrary. I inherit from my father an artist's hand—not elegant in shape, but small, flexible, and having a natural instinct and cunning for any nice operations. My father, besides his matchless "penmanship," was not only a devout admirer of Gerard Dow, and all the Dutch painters, who finished everything to the minutest touch, but often amused himself with making copies of some fine etchings from these. This I also did, and attained such proficiency with my pen in making pen and ink drawings that they could scarcely be known from copper-plate etchings. I likewise took readily to musical instruments; and I did not find the same degree of difficulty in the manipulation of strings, the stopping of "ventiges," or the touching of keys, that is common to nearly all beginners. I began with ease, and always improved rapidly in proportion to finding time to practise. I have a turn for cabinet-making, am a good plain carpenter (I had almost said "rook"), have some skill in practical mechanics, and the use of all the tools and instruments, and believe that if I had been a dentist I could have taken out a double tooth in a manner that would have delighted you.

But is there no other reason, besides early misdirection and cruel treatment, for the infamous scrawl I write? Is there nothing in my nervous temperament and character which may account for it, or at least bring in a new and important element to the consideration?

If my father was a slow, skilful, painstaking, fine-finisher, phlegmatic Dutchman, what was my mother? I shall say briefly, that Madam van Ploos was a fiery-spirited Spanish lady, who always very much looked down upon my father, and despised his "hand." Her parents had made up the match, she being quite a girl at the time. She was my father's opposite in most things. She had no patience, no sort of application, no natural skill in anything; she had extraordinary energies and animal spirits, did everything upon impulse, and alternated the

warmest affections and tenderness with frequent bursts of fury that sometimes made my father's pen fly clean out of his hand!

But let us now consider a little as to what is going on "within." Now must come my statement of what I feel—of my natural ordinary sensations, in the act of writing. My thoughts, ideas, or in short, the impressions and opinions I wish to convey upon paper, come upon my mind with such a rush—all at the pit entrance, and all trying at once to get through the door—that I have absolutely no patience to make a letter, but rush scrawling along, so that it often happens I cannot myself read what I have written, on turning to it a few days afterwards. The reason is—it is not writing at all, but a set of strange marks and cyphers of no system. Would any good early teaching have superseded this? I think, in a great degree, it would. It would not have prevented a rapid scrawl, which is the result of a peculiar character in mind and temperament; but it would have a strong tendency to render the scrawl legible.

The question of how far the character of men is to be known by their handwriting, involves many very curious and interesting considerations. By some it has been regarded as a matter of divination or conjuring; but in any case there is *something* true to be made of it. We see advertisements, from time to time, in the newspapers, offering to divine and divulge the character of any unknown person whose handwriting is brought to them, at the small charge of five shillings per character. By these means men, about to engage in partnership, or to have important transactions with any one, may know beforehand the character of the person with whom they will have to do; in like manner lovers may be made wise beforehand, and those who have secret enemies may be warned and enabled to prepare for the worst. Is this all nonsense? Not *all*; but it is simply pushing, as we commonly see, a fact beyond its legitimate bounds, till it becomes an absurdity, and no fact at all worth a pinch of snuff.

Sitting in the little back parlour of my shop at Knightbridge, trying the merits of several new cases of pipes from Holland, to see how they performed, I fell into a long meditation, the other day, on this very subject, and, as cloud after cloud rose with august placidity into the air, and bowed its volume down from the ceiling, to expand and disperse itself all over the room, it seemed to me that I had elaborated and mastered the comprehension of the whole of the subject,—though I had lost several customers in consequence, who, I believe, had entered my shop, and gone out again, none the wiser.

In the proposition that character can be discovered by the handwriting, there is some truth, which may be considered under several distinct heads:—

1st. Physiologically. As the nervous system

has of necessity an influence on the handwriting, the amount of excitability in the system is displayed, more or less, according to the feelings of the moment. You may often recognise the physical temperament very plainly. The cold man, whose blood moves slowly, will generally write slowly, carefully and neatly, if not formally. The pen of the man whose blood moves quickly, dashes along, heedless of the shape of letters, or of making letters at all. The man of impulse and the man of deliberation are thus very often made apparent. It must, however, be borne in mind that the impulsive man may be very capable of the most serious deliberation, and the deliberative man (though this is less likely) be capable of impulse. A general impression is all that can be arrived at, in most cases.

Secondly. Let us look at this Metaphysically. That the mind influences the body, nobody doubts; and it is only reasonable to admit that the peculiarity of individual minds of any strength, will communicate itself to the action of the hand in writing. Those who employ the reasoning powers chiefly, will usually write slowly and legibly—(perhaps not with any regularity, for that depends upon mechanical aptitude)—while those whose imagination, passions, or fancy, is chiefly called into play, scrawl rapidly and seldom very legibly. We expect the logician to write every word with clearness and precision; we expect nothing of the sort from the dramatist. But even logicians are sometimes in a hurry; may occasionally scrawl wildly as the dramatist, so that a judgment on general principles is all that can reasonably be expected.

Thirdly, we will look at the question Biographically. How were my previous positions borne out? I found, by reference to Nichols's and Smith's collection of Autographs, and the *Isographie des Hommes Célèbres* (which I one day went to see at the British Museum, leaving my shop in charge of a youth), that in many cases the writing was very much what I should have expected; in others, it was just the opposite. Here are a few of those I most especially noted.

Queen Elizabeth. She was taught writing by Roger Ascham. Her first copy-book is to be seen in the Bodleian Library. She began well, and improved rapidly. While Princess, she came to write a beautiful engrossing hand—clear and regular almost as an engraving of letters. I turned to another signature after she had been queen a long time,—and what was my dismay! Melancholy change! The letters were now thin, spiteful,—the lines irregular,—an ugly old maid's version of her former hand—and the signature was a thing to make one bless one's self! It was an immense, thin, mountebank's letter—and then another such letter, with a signature worked between,—the whole having the appearance of an outline of some wild scaffolding whereon stood the pale grotesque skeletons of fireworks, as they look before explosion.

Martin Luther. The writing was firm and legible, though not very equal nor very straight. This I thought a true version; as he had strong passions, as well as strong reasons for what he did.

Sir Thomas More. By no means displaying the calm firmness he possessed; the lines crooked, and tumbling down hill.

Rubens. Manly, bold,—with a careless ease and clearness denoting mastery of hand.

Lord Bacon. Very like an elegant modern short-hand. Clear, neat, and regular. The signature involved with broken lines, as if a fly had struggled and died in a spider's web.

Voltaire. Very clear, regular, steady, and straight; evidently not written rapidly, but with a continuous ease, which might go on writing book after book in the same way.

Oliver Cromwell. Large, bold, legible, steady, sharp, and straight. The signature made up of halberds and pointed palisades. But another letter of his was not at all of this character. It displayed a perplexed and undecided mind—at the time it was written.

Prince de Condé. Not at all in accordance with the strong expression and buffalo-features of his face.

Charlotte Corday. Firm, clear, steady, but not without emotion.

Cucier. Very like the writing of Charlotte Corday, but not so strong and compact.

Danton. Wilful, daring, without method or care.

George the Fourth. Not at all the very gentlemanly hand most people would expect—rather like a housemaid's.

Pope. Very bad, small, full of indecision; a very hedge-row of corrections and erasures.

Cardinal Wolsey. A good hand, disturbed only by nervous energy and self-will.

Porson. Correct and steady; the reverse of his personal appearance and habits.

Shakspeare. A very bad hand indeed, confused, crowded, crooked in the lines, and scarcely legible.

Napoleon. Still more illegible. No letters formed at all; the signature a mere hasty "scrimmage" with the pen.

A few words of general gossip on the subject. Of women's hand-writing not so much can be said, at least, in our own day, when the system of writing a fine hand of a particular kind renders so many of them all alike—hands which seem to be very beautiful and legible, but which are often not at all so, from the letters *m*, *n*, *u*, *i*, and very often *a*, *e*, and *r*, being a mere series of up and down elegancies, which are indistinguishable. But among those which display character, it has often been of a very different kind to the one expected. On the other side, see what Shakspeare's experience has noticed—

Malvolio. By my life, this is my lady's hand!—These be her very *c's*, her *e's*, and her *r's*; and thus makes she her great *P's*. It is in contempt of question my lady's hand.—*Twelfth Night*.

It was a forgery! Still the fact of imitation showed there were characteristics to imitate, though whether answering to the actual character of the lady is the great point at issue.

Here are two very characteristic observations of two very celebrated men. Locke says, in a letter to Benjamin Farly, that "the quicker a man writes, the slower others read what he has written!—this," he pointedly adds, "being a remark that may concern the writers of books as well as letters." Lord Chesterfield says in one of his letters to his son—"Every man who has the use of his eyes, and of his hand, can write whatever hand he pleases."

I had made notes at the Museum for many more remarks, but, on returning home to Knightsbridge, I found that the little black Virginian boy, with feathers, who hangs on the left-hand side of my door, had been stolen, which has so disheartened me, with the study of human nature, for the present, that I shall drop my pen. I will merely conclude with a story from a French historian I have lately read, which I think admirably to the point, and will now translate.

In the early part of the reign of Louis the Fourteenth, a Bolognese, named Primi, who possessed a handsome face, and was a man of wit, and an adventurer who had no objection to make his fortune by the best means that offered, came to France to see what good luck might befall him. During his journey from Lyons to Paris he made the acquaintance of one Claude Duval, a particularly clever enterprising person, who on their arrival presented him to the Abbé de la Baume, afterwards Archbishop of Embrun. This reverend personage suddenly conceived the idea of playing off a novel and ingenious hoax, which has been called *une singulière mystification*. Finding in the boldness and finesse of Primi, together with his dialect, made up of Italian and French, his adroitness and personal address, all the qualities desirable for the execution of his project, he shut himself up with him for six weeks, seeing nobody else, excepting the Duke de Vendôme, and the Grand Prior of France, his brother, to whom he presented Primi. All three employed the whole of this time in teaching Primi the private history of persons of the Court—their intrigues, their friendships, their loves, their hatreds, &c. As soon as they considered him sufficiently indoctrinated, the Abbé de la Baume spread it abroad that he knew an Italian from whom nothing in the past or future was hidden, the moment he set eyes on the handwriting of any person concerning whom anything was sought to be known. They took care that the first signature should be that of a person whose history was fully known to Primi, by their instructions. Lords and ladies, all the wealthy middle-class men and women, the court and the city, hurried to Primi with autograph letters and signatures in their hands, and all

came away dumb-founded at his answers! From what he told them of the past, they fully believed all he told them of the future. The Countess of Soissons, above all, took him under her patronage. From her he incidentally extracted all sorts of intrigues of the Court, the whole of which he most promptly turned to good account. From the wonderful things that Primi told her about herself, she described him to the king as a man of preternatural gifts, and begged his majesty to allow Primi to examine his handwriting. After some hesitation the king sent a letter, apparently in his own hand, which the Countess immediately took to Primi. The Italian examined it carefully, and informed the Countess that this writing was that of an old miser, a usurer, a sort of old pawnbroker,—a fellow incapable of any good action. The lady stood confounded. She assured him that this once he had blundered most stupidly; but Primi persisted in assuring her that he had made no mistake. The Countess took back the letter to the king, and in courtly language conveyed to him Primi's interpretation of the character of his Majesty's handwriting. His Majesty was astonished, for the letter was, in fact, not his handwriting, but that of M. le President Rose, his private secretary, who so closely imitated the king's handwriting, that Louis continually made him write letters which he wished to be supposed in his own hand. This fact Primi had previously learnt from one of his instructors, the Duke de Vendôme, together with the private character of M. le President Rose. The king was determined to fathom the mystery. It was too deep and perplexing to be endured. The next morning he ordered his chief *valet de chambre* to bring the Italian to him in his private cabinet. "Primi," said his Majesty, "I have only two words to say:—your secret!—for which I will give you a pension of two thousand pounds:—if not, the gallows!" It is hardly necessary to say which of the two was chosen by the Italian.

GOSSIP ABOUT BRUSSELS.

THE numerous heterogeneous traits in the Belgian character (assignable, of course, to the mixed races of which the people are composed), are, in the opinion of the most amusing of travelled gossips, Herr Kohl, typified in the outward physiognomy and local site of the Belgian capital. He even traces corresponding peculiarities in the other great European capitals, most of which he conceives exhibit tolerably correct types of the character of the nations to which they respectively belong; that character being manifest in the locality and building of the cities themselves, no less than in the social and political relations of their inhabitants.

"In St. Petersburg, with its gew-gaw palaces, its newly constructed streets, running in straight parallel lines, its total deficiency of historic monuments," observes our tra-

veller, "we see plainly typified the arrogant despotism and the backward state of taste and civilisation of Imperial Russia. In gloomy Madrid, and its uncultivated environs, may be recognised the gravity and the aristocratic exclusiveness of the Spaniards of Old Castile. Does not the very first glance of Berlin reveal to the shrewd observer the whole spirit of the Prussian policy? In picturesque Edinburgh do we not behold a miniature reflection of all Scotland? Her history may be read in the ruins of Holyrood, and in the many-storied houses of the Old Town, where the narrow wynds and closes may be regarded as emblematic of Highland poverty, whilst the broad streets and splendid squares of the New Town seem to represent the thriving Lowlands, enriched by newly awakened industry and trade. In Vienna, in Venice, in Florence, in almost all great cities, we may, without much stretch of imagination, view the streets, houses, and public buildings, as so many hieroglyphics, which, being decyphered, reveal the history and character of the nation and people to which each city belongs."

This notion may possibly be somewhat fanciful; but, nevertheless, Mr. Kohl supports it by some very ingenious reasoning, and illustrates it by a multitude of curious facts in relation to the Belgian capital, some of which we here collect.

Brussels may be said to be a fruit which very plainly indicates the tree whereon it has grown and ripened. The mingled elements composing the Belgian people are distinctly manifest in the whole outward aspect of their capital.

Many exquisite old specimens of architecture, Byzantine as well as Gothic, bear evidence of the great antiquity of Brussels. The city contains buildings connected with every phase of the national history, from the periods of Burgundian and Spanish dominion to the times of Austrian and Dutch rule; and from thence to the present Belgian monarchy. In passing from one district of the city to another, it is most interesting to observe these monuments of different ages as they successively appear in view.

The Belgians are a people, who, whilst they cling with reverential feelings to what is old, nevertheless manifest great aptitude in the adoption of what is new; and they are animated by an eager desire for progression and improvement. Accordingly their capital exhibits a singular combination of the antiquated structures of past ages, and the elegant buildings of modern times;—poetic and historic tradition are found side by side with modern comfort and convenience.

In Belgium, the wealth of a rich and productive country is poured into its capital; and is visible in the markets, in the shops, and in the houses. Everywhere, without doors as well as within, the Belgians show their wealth in the aspect of their capital.

The scenery of Belgium is pleasing rather than grand; consisting chiefly of cultivated plains, here and there varied by gentle eminences. These features characterise the country in the immediate environs of Brussels. At a little distance from the city, the valley of the Senne expands into an extensive plain, overspread with rich pasture and woodland. This plain is encircled by fertile hills; so that Brussels may be said to unite, in its immediate proximity, the wooded and hilly Walloon country and the marshy land of Flanders; the former represented by the Forest of Soigné, and the latter by the swampy meadows along the Senne.

Brussels is not only surrounded by parks and gardens, but even within the city walls the eye is continually refreshed by the sight of shady trees and blooming flower-beds. The stranger, on first setting foot in the city, is impressed with the conviction that he is in the heart of a highly cultivated and fertile land. Madrid, the capital of a country in which agriculture and gardening are in a very backward state, is unadorned with vegetation; and, as far as regards trees and flowers, the Spanish capital, compared with Brussels, is like a city in the midst of a desert.

In marked accordance with the elements of the population, and with the natural features of the country, are the occupations of the Belgians in their capital. Art and science, manufactures and handicrafts, flourish in Brussels, and an enterprising and speculative spirit in trade is a distinctive trait in the Belgian character. Many branches of manufacture have been brought to the highest point of perfection in Brussels, which is not merely the residence of the Belgian court and nobility, but has from the most remote times been an active trading and manufacturing city. It is not less celebrated for lace-making and cloth and carpet-weaving, than for scientific and artistic efforts, and their successful results.

Among the residents of Brussels we find rich bankers, merchants, and manufacturers, as well as retired capitalists and land-owning nobles. In passing through the city, one frequently finds a spacious garden adjoining a densely-built group of houses; or an elegant newly-erected building abutting on a venerable old wall, the vestige of past centuries; or, after passing a range of stately houses, deserving the name of palaces, one suddenly enters a manufacturing quarter of the city, with its tall towering chimneys; then, proceeding a little further, we arrive at a canal, where ever-plying boats keep up continuous intercourse between the busy trading districts of the city. Nobles who are proud to trace their lineage, even in the twentieth degree, to John of Brabant and Margaret of Parma, drive their emblazoned equipages through the same streets in which the humble lacemakers sit at work, and in which carpet-weavers, goldsmiths, turners, &c., display at

the doors and windows of the houses the products of their industry and skill.

It is a fact highly honourable to the Belgians, that they have earned distinction in almost every branch of human industry; and that every effort turning to a useful purpose, obtains from them ready encouragement and protection. Another fact, no less creditable to the nation is, that no class or profession constituting a part of the great European family, is depreciated or despised in Belgium. This trait of the national character is strongly marked in Brussels, where priests, soldiers, government officials, noblemen, tradesmen, merchants, and mechanics, live in close contact, not only undisturbed by hostile feelings, but on a footing of mutual respect.

This state of things has, as may naturally be imagined, given rise to a vast degree of religious toleration. In Brussels the Jews have their synagogue; Protestants of various sects have their respective places of worship, and all are free to follow their own religious observances without interference or molestation. On her emancipation from Austrian and Dutch dominion, Belgium began to enjoy a reasonable share of political freedom; and since the restoration of national independence and the establishment of the Constitution of 1831, Brussels has been the favourite asylum of political refugees from all parts of Europe. During the last twenty years, great numbers of foreigners have settled in Belgium; and among them are persons of all ranks and professions; pleasure-seeking men of wealth, poor artists, and authors, princes, noblemen, and ecclesiastics.

It is scarcely possible for any one writing on Brussels, to omit, some notice of its principal squares, streets, and public buildings, several of which excel all similar objects of interest in many other European capitals. The Grand Square, called the Place de l'Hôtel de Ville, has not its equal in any city of northern Europe, and is only excelled by the great open places in the towns of Italy; as, for example, the Piazza of St. Mark, at Venice.

The Place de l'Hôtel de Ville is a spacious parallelogram, surrounded by buildings remarkable for their grandeur and beauty, and deeply interesting for their antiquity. In other parts of Brussels many old streets have been entirely pulled down, and whole districts have been newly built; but here, in the centre, and as it were the *sanctum sanctorum* of their capital, it would seem that the citizens of Brussels have preserved every object with a sort of religious care. This may be, because it is the spot on which all their most fondly-cherished national recollections rally; or, because it would be extremely difficult to operate any change in that part of the city, owing to the solid and substantial nature of the buildings. Several of the houses in this great square are of genuine old Spanish structure; others are Gothic and Flemish

buildings: all bear the stamp of venerable antiquity; and time has wrought upon them much fewer ravages than are discernible in the Piazza of St. Mark in Venice.

The Stadhuys, or to call it by its more generally adopted French name, the Hôtel de Ville, exceeds in architectural beauty any similar building in the Netherlands, where in every city the Stadhuys is an imposing and handsome structure. The slender tower which surmounts the roof of the Brussels Hôtel de Ville is one of the most elegant creations of architectural skill; on its summit stands a statue of the Archangel Michael, which, strangely enough, is made to perform the functions of a weather-cock. Even the private houses in the Place de l'Hôtel de Ville are all more or less profusely decorated with architectural ornaments. Some have been the scenes of great events which hold a prominent place in the world's history; with others are associated traditional tales of strange domestic incidents, which have been preserved in the memory of the inhabitants, from generation to generation, during three or four centuries.

I saw the window from which the Counts Egmont and Hoorn stepped forth to the scaffold prepared for their execution. We Germans, whithersoever we go, find our thoughts wandering to Goethe and Schiller. In Switzerland we seek the spot rendered memorable by Tell's renown, and we wend our way to Küssnacht and Zwinguri. In Genoa, Fiesco's palace is our grand object of attraction, and in Belgium our sympathies are absorbed in everything associated with Goethe's Egmont.

It was in the great Hall of the Brussels Stadhuys that the Emperor Charles the Fifth performed his solemn act of abdication; his son Philip kneeling at his feet, and a numerous assemblage of Princes and Nobles grouped around him. This abdication is a subject for which Belgian artists would seem to cherish a strong predilection, and in many of their paintings this scene is ably and powerfully portrayed. Few historical subjects exhibit a deeper and more varied interest, or afford better opportunity for the employment of grand pictorial accessories.

One of the most remarkable of the old historical houses on the Place de l'Hôtel de Ville at Brussels, is that now distinguished by the name of the *Hôtel de Brasseurs*. It is said to have been the residence of Charles the Fifth. Another house known by the appellation of *le Pot d'Étain*, is that in which the Duke of Wellington established his headquarters in the year 1815, and where he gave a ball on the eve of the battle of Waterloo.

But the house which most firmly rivets the observer's attention, is one fronted by a balcony. From that balcony the Duke of Alba witnessed the execution of Egmont and Hoorn. There, whilst the fatal axe was raised over the head of the noble Egmont,

Alba is recorded to have shed those crocodile tears adverted to by Schiller in his *History of the Fall of the Netherlands*.

When I visited the *Hôtel de Ville*, I was shown the keys of the city gates, which it is customary to present (as a mark of honour) to sovereigns and other distinguished personages on their solemn entry into Brussels. These keys are made of silver, and are masterpieces of workmanship. On the handle of one of them, the city itself is represented in most artistic carving. If these keys had tongues what strange tales might they not tell of the many changeful events of which Brussels has been the scene! During the last fifty years, the keys of Brussels have been presented under very various circumstances to three very different masters;—Napoleon, William of Nassau, and Leopold of Saxe-Coburg.

"GOOD INTENTIONS."

A STORY OF THE AFRICAN BLOCKADE.

No one can question the good intentions of our country in persisting in the slave blockade. Putting out of consideration the enormous sums an over-taxed people are made to contribute to this African slave war, the question remains, whether such intentions are productive of the end they have in view. That the horrors of the passage from Africa to Brazil are often frightfully aggravated by the dread of pursuit and capture by our cruisers, is well known. That, instead of providing something like a convenient space for their human cargo, and endeavouring to land all in health and safety, the traffickers in human flesh now only build the smallest and slightest "clippers" in which they stow as many slaves as they can possibly pack together, and only strive to make the run as fast as they can, is equally well known. And why? Because our cruisers have raised the price of black flesh in the Brazilian market, and the slave trader knows that, if he can only escape capture once in three voyages, and on that occasion land only a third of his cargo alive, he will have made an excellent profit on the three "ventures."

How hard a slaver will strive to escape capture, and how easily she will tumble to pieces, the following sketch will show. It is a true story in every thing but names.

On a glorious day, with a bright sun and a light breeze, Her Majesty's brig *Semiramis* stood along under easy sail, on a N.W. course up the Channel of Mozambique. Save the man at the wheel and the "look-outs" in the tops, every one seemed taking it easy. And indeed there was no inducement to exertion; for the sky was cloudless, and the temperature of that balmy warmth that makes mere existence a luxury. The men, therefore, continued their "yarns" as they lounged in little groups about the deck; the midlies invented new mischief, or teased the cook; the surgeon divided his time between

watching the flying-fish and reading a new work on anatomy (though he never turned a fresh page); while the lieutenant of the watch built "*châteaux-en-Espagne*," or occasionally examined with his telescope the blue hills of Madagascar in the distance.

"Sail ho!" shouted the look-out in the foretop.

"Where away?" cried the lieutenant, springing to his feet, while at the same moment every man seemed to have lost his listlessness, and to be eager for action of any kind.

"Over the starboard quarter, making Sou'-West."

The captain hastened on deck, while the second lieutenant ran aloft to have a look at the strange craft.

"What do you make her out, Mr. Saunders?" asked the captain.

"A fore-and-aft schooner, Sir, hull down."

"Bout ship," cried the captain; and in an instant every man was at his post.

"Helm's a lee!"—"raise tacks and sheets!"—"mainsail haul," &c.; and in five minutes the *Semiramis* was standing in pursuit of the stranger, while the men were employed in "cracking on" all sail to aid in the chase.

What is it that makes a chase of any kind so exciting? The indescribable eagerness which impels human nature to hunt any thing huntable is not exaggerated in "*Vathek*," in which the population of a whole city is described as following in the chase of the black genie, who rolled himself up into a ball and trundled away before them, attracting even the halt and the blind to the pursuit. But who shall describe the excitement of a chase at sea? How eagerly is every eye strained towards the retreating sails! how anxiously is the result of each successive heaving of the log listened for! how many are the conjectures as to what the stranger a-head may prove to be! and how ardent are the hopes that she may turn out a prize worth taking! For be it remembered that, unlike the chase of a fox on land, where no one cares for the object pursued, cupidity is enlisted to add to the excitement of a chase at sea. Visions of prize-money float before the eyes of every one of the pursuers, from the captain to the cabin-boy.

The *Semiramis* being, on the tack she had now taken, considerably to the windward of the stranger, there was every chance of her soon overtaking her, provided the latter held the course she was now steering. But who could hope that she would do that! Indeed, all on board the brig expected every moment to hear that she was lying off and running away. If she did not do so, it would be almost a proof that she was engaged in lawful commerce, and not what they had expected, and, in truth, hoped.

An hour had passed, and the *Semiramis* had visibly gained on the schooner; so much so, that the hull of the latter, which was long,

lost, black, and rakish-looking, could now be seen from the brig's tops.

"Surely they must see us," said the captain.

"She's just the build of the Don Pedro we took off this coast," said the second lieutenant, from the maintop.

"I hope she will turn out a better prize," replied the captain.

The truth is, they had captured that same Don Pedro, condemned her, and broken her up. The captain and owners of her had appealed; proved to the satisfaction of the Admiralty that she was *not* engaged in the slave trade; and, consequently, every man on board the Semiramis who had assisted at her capture, was obliged to cash up his quota of "damages" instead of pocketing prize-money. The Don Pedro, therefore, was a sore subject on board the Semiramis.

Another hour elapsed: the hull of the schooner began to be visible from the deck of the cruiser. She was a wicked-looking craft; and Jack elapped his pockets in anticipation of the cash she would bring in to them.

"Well, it's odd she don't alter course, anyhow," said the boatswain on the forecabin; "may be she wants to throw us off the scent, by pretending to be all right and proper, and not to have a notion that we can be coming after her."

"Show the colours," cried the captain on the quarter-deck; "let's see what flag she sports."

The British ensign was soon floating from the Semiramis; but the schooner at first showed no colours in reply.

Presently the first lieutenant, who was watching her through the glass, cried out, "Brazilian, by Jove!"

There was a short pause. Every sort of spy-glass in the ship was in requisition. Every eye was strained to its utmost visual tension. The captain broke the silence with "Holloa! She's easing off; going to run for it at last."

"She's a *little* too late," said the lieutenant. "Before the wind these fore-and-aft schooners are tubs, though on the wind they're clippers."

However, it was clear that the schooner had at last resolved to run for her life. By going off with the wind she got a good start of the brig; and, although it was her worst point of sailing, still the breeze was so light that, while it suited her, it was insufficient to make the heavier brig sail well.

For three hours the chase continued, and neither vessel seemed to gain on the other; but the breeze was now freshening, and the Semiramis at length began to diminish the distance between herself and the Brazilian. Right a-head, in the course they were pursuing, lay a point of land projecting far into the sea, and the chart showed a tremendous reef of rocks extending some three miles beyond it. It was certain that neither vessel could clear the reef, if they held the course they were then steering.

"Keep her a little more to windward,"

cried the captain. "We shall have her;" she will be obliged to haul up in about an hour's time, and then she can't escape, as we shall be well to windward."

The hour went by; and still the schooner showed no signs of altering her course. The captain of the Semiramis again examined his charts; but the reef was clearly laid down, and it seemed utterly impossible that the schooner could weather it by the course she was then steering. Yet, either from ignorance of the danger, or from the determination to brave it, she tried; knowing that if she escaped it and cleared the point, she would have gained an immense advantage over her pursuers.

It would be impossible to describe the anxiety with which all on board the Semiramis now watched the little Brazilian. She was literally rushing into the jaws of destruction; and, as she rose over each successive wave, it seemed as if she must be dashed on the treacherous reef at the next dip. Still she stood bravely on; and, though doubtless the lips of those on board her might be quivering at that moment in the agony of suspense, the little craft looked so beautiful, and sailed so gaily, her white sails and slender spars flashing in the sunlight, that even her pursuers mentally prayed for her safety, quite irrespective of the prize-money they would lose by her destruction on the rocks. Jack does not like to see a pretty craft run ashore, at any price.

They began almost to think the schooner "bore a charmed life;" for she seemed to be floating over the very reef itself, and the white foam of the breakers could be seen all round her.

"Blessed, if I don't think she's the Flying Dutchman," said one blue-jacket to another.

"Gammon, Bill—ain't we round the Cape? and don't you know that's just where the Flying Dutchman never could get to?" replied his messmate.

The little schooner bounds onwards merrily—suddenly she staggers, and every spar shivers.

"She has struck!" cry twenty voices at once.

Now she rises with a coming wave, and now she settles down again with a violence that brings her topmasts on the deck.

"Out with the boats," is the order on board the Semiramis, and the men fly to execute it.

Another wave lifts the schooner—another fearful crash—she rolls over—her decks are rent asunder—her crew are struggling in the water—and with them (every man shudders at the sight) hundreds of negroes, manacled to each other and fettered to the lower deck, are shot out into the foam.

Bravely pulled the seamen in the boats of the Semiramis; but two strong swimmers, who had fought their way through the boiling surf, were all they saved. So slight was the

build of the little schooner, that she had gone to pieces instantly on striking; and, within sight of the Semiramia, within hearing of the death-shrieks that rent the air from six hundred and thirty human beings, who, shackled together with heavy irons, were dashed among the waters, and perished a slow and helpless death, two only of their guolers survived to tell of the number that had sunk!

Surely this sad tale may at least be added to the catalogue of ills produced by England's "good intentions" in striving to suppress the slave trade.

HINTS ON EMERGENCIES.

AN innocent-looking little book lies on our parlour-table, an extensive demand for which would imply that English households abound in perils, and are hourly at the mercy of emergencies. Harmless as it looks, its purpose is alarming. It is called "Household Surgery; or, Hints on Emergencies." Its object appears to be to establish a surgery in every house, as Buchan introduced a Domestic Medicine Chest into every dressing-room. It is meant to arm the heads with power over the limbs of families; but it teaches masters and mistresses, husbands and wives, fathers and mothers, the theory of what they can never learn without practice; yet the very aim, end, and purpose of their existence—their prayers at night, their smallest actions by day—are all so much anxious prudence, so many fervent hopes, that they may have no practice. Happily their caution is nearly always rewarded, and their prayers granted; for although it is said that accidents happen in the best regulated families, they don't happen often.

If staircases were precipices, door-steps glaciers, coal-cellars powder-magazines, and kitchen-ranges steam-boilers continually bursting; if shower-baths were cataracts, lucifer-matches blunderbusses, and if copper tubes made a point of exploding on washing-days; if little girls preferred swallowing pins to plums, and little boys liked oil of vitriol better than almond hardbake; if half-sovereigns were coined expressly to choke little children with, and flat-irons forged only to burn fingers; if good plain cooks were seized with frequent propensities to sweeten apple-pies with sugar of lead; if carving-knives were daggers for footmen to wound inflexible housemaids with; if an impulse natural to nurses impelled them to throw babies out of window—then "Household Surgery" would be a very useful manual. But in the present mode of arranging houses, and conducting domestic establishments, the occasions for such knowledge as it conveys, occurs too seldom to provoke occasion for the book itself.

What is the use of Hints on Emergencies that only happen once in a life-time; or pages

of precautions against accidents which do not afflict one in a hundred? As a linesdraper won't learn navigation in case he may be ever called on to pilot a ship; nor a tinker master pneumatics lest somebody may some day ask him to construct a diving-bell; so a gentleman in easy circumstances will assuredly not acquire the science of surgery, lest himself, or somebody belonging to him, might at some moment between this and this day twenty years break a leg. Indeed if either of these works of super-erogation were to be called into action, and drawn into either emergency, the ship would inevitably founder; the diver would be smothered, and the patient lamed for life. In operative surgery, especially, a little learning is not merely a dangerous, it is a fatal thing.

Theodore Hook's "Cousin William" has already painted the perils of domestic medicine in the proceedings of that bold Buchan-er his aunt, who robbed everybody within her power of their health, as thoroughly as Dick Turpin cleaned out everybody in his power of their wealth; but she was a harmless nuisance compared with an Uncle Thomas, a Mr. Briggs, or an Aunt Margery, armed with a pair of forceps, a lancet, or a scalpel. Euphemia has swooned! "Open an artery!" exclaims Uncle Tom, and rushes to his text-book, ties up the arm, opens his lancet, then the vein; and lastly, being perfectly innocent of its existence—the artery below. This is a mortal injury. Euphemia lingers, and only revives after the application of much professional skill and a year's illness.

How very straight-forward and mechanical appears the art of tooth-drawing! Mr. Briggs tries his hand on the dentals of his hair; but breaks down the gums, lacerates the cheeks, and fractures the jaw-bone of his eldest-born. Everybody supposes it easy to lance an infant's gums, or divide, with a pair of scissors, the little membrane which holds down the tongue and causes what is called "tongue tie;" but there are blood-vessels around, which cannot be wounded without danger. Aunt Margery brings the sweetest of her nieces to death's door by trying that very operation. The art of surgery is so much a matter of tact and manual dexterity, that even some professionals cannot always practise it with certain impunity to patients. It is not every member of the Royal College of Surgeons who can apply a common bandage with the requisite evenness, smoothness, and neatness. The hand of the surgeon should be of this peculiar character; it should combine muscular power with very great delicacy of touch. The late Mr. Liston's hand was likened to the trunk of the elephant. Its grasp was all powerful, but the delicacy of his touch was so exquisite, that he could lay distinct hold of the minutest object. But where is this exquisite combination of manual aptitude to be found in families? Mrs. Briggs may be very clever in picking up pins, and Mr. Briggs's grasp has possibly all

HOUSEHOLD WORDS.

the power of a vice ; but of what use are these accomplishments, unless combined, in one person, with a *Listonian* knowledge of anatomy, and dexterity in the use of the *Lisfranc-knife*, the *gum-bleam*, the *lancet* ? Yet all these instruments are committed and commended, by the author of *Household Surgery*, to the hands of parents and guardians (together with the probe, the scalpel, and the forceps,) as freely as if they were knives and forks—as remorselessly as if their darling “younger branches” little locomotives were legs of lamb !

We must not, however, forget that cases and emergencies do occasionally occur in domestic life, in which some knowledge of medicine and surgery is demanded, and may be most effectually put into practice. Such are the occasions when “a little knowledge” is not “a dangerous thing,” for we may thereby mitigate suffering, and even save human life. The line of demarcation, however, must be drawn between those cases which an unprofessional person may deal with “*pro tem*,” and those which it would be dangerous for him to meddle with at all. “Thus far shalt thou go and no farther.” Every good housewife should know as well how to make a poultice as a plum pudding, and whether made of bread-and-water, linseed-meal, bran, yeast, treacle, or mustard, she should bear in mind the emphatic words of Abernethy, “Poultices are either blessings or curses as they are well or ill-made.” She should have some knowledge of embrocations, she should be learned in liniments and lotions—hence, with barts horn and oil, opodeldoc, soap-liniment, and Goulard Water, her acquaintance should be intimate. She should be able to dress a blister, put in leeches, apply poor man’s plaster, bandage a sprain, foment chilblains, put on sticking plaster, and administer other harmless styptics, including burnt and intact rag. She might also be allowed to dispense simple medicines like senna-tea, magnesia, rhubarb, Epsom salts ; but we should strictly prohibit her from using opiates, mercurial preparations, including that eternal “hydrarg.” which appears at the top of every preliminary prescription of every routine practitioner, besides iodine, and many other potent remedies which may be seriously misapplied. It should always be remembered that Medicines differ from poisons only in their doses, in other words all medicines is poison if administered ignorantly and in excess.

For advice and instruction in these harmless helps in need, the little work we are now considering will be found exceedingly efficacious. It is to the surgical operations it recommends and describes that the force of objection is greatest.

The practice of domestic surgery, ought to be exceedingly limited. The idea of “Every man his own Surgeon,” which we now contend against, would be seriously absurd, if it were not a problem how far man

may be trusted to deal surgically with his own frame. Our own opinion is, that his legitimate agency is extremely contracted, and that all conceivable “Hints on Emergencies” of that nature are entirely thrown away. We candidly confess that we see no objection to certain self-surgical operations in which men, from long practice, have, more or less, attained a certain degree of proficiency. We see not the slightest objection to the operation of shaving : a man may pare his own nails ; if he be blessed with strong nerves, and a steady hand, he may cut his own corns ; and if he be a stoic and don’t mind ridicule, or being mistaken now and then for an escaped convict, he may cut his own hair ; but we do most emphatically protest against his setting his own broken thigh, or drawing his own teeth, or cupping himself, or reducing the fracture of his own arm ; or actively treating *tetanus* instead of hastening to a professional surgeon, and, till then, resolutely holding his jaw. Cowper, the poet, vowed, that if any son of his ever made himself wings and flew from Exeter to Falmouth he would be excessively angry with him ; the same motive for indignation would exist from precisely the same cause towards any person who should attempt on his own person any of the surgical feats we have named.

Amateur surgeons should be equally chary of their advice and interference with the limbs and diseases of their neighbours. They should not be appointed Surgeons to the household without a regular training ; but in some stations and non-medical professions that training is necessary. Clergymen living in remote districts, who may not have even a village doctor to consult in a case of emergency ; captains on board ships, who may be deprived of the services of their medical officers ; travellers on land, especially in the East : intelligent emigrants taking their families into a thinly populated colony, should be provided with certain surgical instruments and such articles as may be found in every well-stored medicine chest. To this extent we must enlarge the prescribed boundary, and recommend that all such persons should acquire as much knowledge of household surgery and medicine as they possibly can ; there is no secret mystery to unravel, for happily, the principles of medical science have been so clearly elucidated that any man of ordinary intelligence may, with application and study, soon acquire sufficient knowledge to guide him on his way to alleviate human suffering, and restore health to the afflicted. As a manual, such persons, but such only, will find “*Household Surgery ; or, Hints on Emergencies*,” very useful.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 29.]

SATURDAY, OCTOBER 12, 1850.

[PRICE 2d.]

THE "GOOD" HIPPOPOTAMUS.

Our correspondent, the Raven in the Happy Family, suggested in these pages, not long ago, the propriety of a meeting being held, to settle the preliminary arrangements for erecting an equestrian statue to the Hippopotamus. We are happy to have received some exclusive information on this interesting subject, and to be authorised to lay it before our readers.

It appears that MR. HAMET SAFI CANNANA, the Arabian gentleman who acts as Secretary to H. R. H. (His Rolling Hulk) the Hippopotamus, has been, for some time, reflecting that he is under great obligations to that distinguished creature. MR. HAMET SAFI CANNANA (who is remarkable for candour) has not hesitated to say that, but for his accidental public connexion with H. R. H., he MR. CANNANA would no doubt have remained to the end of his days an obscure individual, perfectly unknown to fame, and possessing no sort of claim on the public attention. H. R. H. having been the means of getting MR. CANNANA's name into print on several occasions, and having afforded MR. CANNANA various opportunities of plunging into the newspapers, MR. CANNANA has felt himself under a debt of gratitude to H. R. H., requiring some public acknowledgment and return. MR. CANNANA, after much consideration, has been able to think of no return, at once so notorious and so cheap, as a monument to H. R. H., to be erected at the public expense. We cannot positively state that MR. CANNANA founded this idea on our Correspondent's suggestion—for, indeed, we have reason to believe that he promulgated it before our Correspondent's essay appeared—but, we trust it is not claiming too much for the authority of our Correspondent to hope that it may have confirmed MR. CANNANA in a very noble, a very sensible, a very spirited, undertaking.

We proceed to record its history, as far as it has yet gone.

MR. HAMET SAFI CANNANA, having conceived the vast original idea of erecting a Public Monument to H. R. H., set himself to consider next, by what adjective H. R. H. could be most attractively distinguished in the advertisements of that Monument. After much painful and profound cogitation, MR.

CANNANA was suddenly inspired with the wonderful thought of calling him the "Good" Hippopotamus!

This is so obviously an inspiration,—a fancy reserved, through all the previous ages of the world, for this extraordinary genius,—that we have been at some pains to trace it, if possible, to its source. But, as usually happens in such cases, MR. CANNANA can give no account of the process by which he arrived at the result. MR. CANNANA's description of himself, rendered into English, would be, that he was "bothered;" that he had thought of a number of adjectives, as, the oily Hippopotamus, the bland Hippopotamus, the bathing Hippopotamus, the expensive Hippopotamus, the valiant Hippopotamus, the sleepy Hippopotamus, when, in a moment, as it were in the space of a flash of lightning, he found he had written down, without knowing why or wherefore, and without being at all able to account for it, those enduring words, the "Good" Hippopotamus.

Having got the phrase down, in black and white, for speedy publication, the next step was to explain it to an unimaginative public. This process, MR. CANNANA can describe. He relates, that when he came to consider the vast quantities of milk of which the Hippopotamus partook, his amazing consumption of meal, his unctuous appetite for dates, his jog-trot manner of going, his majestic power of sleep, he felt that all these qualities pointed him out emphatically, as the "Good" Hippopotamus. He never howled, like the Hyena; he never roared, like the Lion; he never screeched, like the Parrot; he never damaged the tops of high trees, like the Giraffe; he never put a trunk in people's way, like the Elephant; he never hugged anybody, like the Bear; he never projected a forked tongue, like the Serpent. He was an easy, basking, jolly, slow, inoffensive, eating and drinking Hippopotamus. Therefore he was, supremely, the "Good" Hippopotamus.

When MR. CANNANA observed the subject from a closer point of view, he began to find that H. R. H. was not only the "Good," but a Benefactor to the whole human race. He toiled not, neither did he spin, truly—but he bathed in cool water when the weather was hot, he slept when he came out of the bath; and he bathed and slept, serenely, for the

public gratification. People, of all ages and conditions, rushed to see him bathe, and sleep, and feed; and H. R. H. had no objection. As H. R. H. lay luxuriously winking at the striving public, one warm summer day, MR. CANNANA distinctly perceived that the whole of H. R. H.'s time and energy was devoted to the service of that public. MR. CANNANA's eye, wandering round the hall, and observing, there assembled, a number of persons labouring under the terrible disorder of having nothing particular to do, and too much time to do it in, moistened, as he reflected that the whole of H. R. H.'s life, in giving them some temporary excitement, was an act of charity; was "devoted" (MR. CANNANA has since printed these words) "to the protection and affectionate care of the sick and the afflicted." He perceived, upon the instant, that H. R. H. was a Hippopotamus of "unsurpassed worth," and he drew up an advertisement so describing him.

MR. CANNANA, having brought his project thus far on its road to posterity, without stumbling over any obstacle in the way, now considered it expedient to impart the great design to some other person or persons who would go hand in hand with him. He concluded (having some knowledge of the world) that those who had lifted themselves into any degree of notoriety by means of H. R. H., would be the most likely (but only as best knowing him) to possess a knowledge of his unsurpassed worth. It is an instance of MR. CANNANA's sagacity, that he communicated with the Milkman who supplies the Zoological Gardens.

The Milkman immediately put down his name for ten pounds, his wife's for five pounds, and each of their twin children for two pounds ten. He added, in a spirited letter, addressed to MR. CANNANA, and a copy of which is now before us, "You may rely on my assistance in any way, or in every way, that may be useful to your patriotic project, of erecting a Monument to the 'Good' Hippopotamus. We have not Monuments enough. We want more. H. R. H.'s consumption of milk has far exceeded, from the first moment of his unwearied devotion of himself to the happiness of Mankind, any animal's with which I am acquainted; and that nature must be base indeed, that would not vibrate to your appeal." Emboldened by this sympathy, MR. CANNANA next addressed himself to the Mealman, who replied, "This is as it should be," and enclosed a subscription of seven pounds ten—with a request that it might be stated in the published list that the number of his house was ONE HUNDRED AND SEVENTY-FOUR B, at the right-hand corner of High Street and Blue Lion Street, and that it had no connexion with any similar establishments in the same neighbourhood, which were all impositions.

MR. CANNANA now proceeded to form a Committee. The Milkman and the Mealman

both consented to serve. Also the two Policemen usually on duty (under MR. CANNANA's auspices), in H. R. H.'s den; the principal Money-taker at the gardens; the Monkey who, early in the season, was appointed (by MR. CANNANA) to a post on H. R. H.'s grounds; and all the artificers employed (under MR. CANNANA's directions), in constructing the existing accommodation for H. R. H.'s entire dedication of his life and means to the consolation of the afflicted. Still, MR. CANNANA deemed it necessary to his project to unite in one solid phalanx all the leading professional keepers of Show Animals in and near London; and this extensive enterprise he immediately pursued, by circular-letter signed HAMET SAFI CANNANA, setting forth the absolute and indispensable necessity of "raising a permanent monument in honour of the Good Hippopotamus, which, while it becomes a record of gratitude for his self-sacrifices in the cause of charity, shall serve as a guide and example to all who wish to become the benefactors of mankind."

The response to this letter, was of the most gratifying nature. MR. WOMBWELL's keepers joined the committee; all the keepers at the Surrey Zoological, enrolled themselves without loss of time; the exhibitor of the dancing dogs, came forward with alacrity; the proprietor of "Punch's Opera, containing the only singing dogs in Europe," became a Committee-man; and the hoarse gentleman who trains the birds to draw carriages, and the white mice to climb the tight rope and go up ladders, gave in his adhesion, in a manner that did equal honour to his head and heart. The Italian boys were once thought of, but these MR. CANNANA rejected as low; for all MR. CANNANA's proceedings are characterised by a delicate gentility.

The Committee, having been thus constituted, and being reinforced by the purveyors to the different animals (who are observed to be very strong in the cause) held a meeting of their body, at which MR. CANNANA explained his general views. MR. CANNANA said, that he had proposed to the various keepers of Show Animals then present, to form themselves into that union for the erection of a Monument to the "Good" Hippopotamus, because, laying aside individual jealousies, it appeared to him that the cause of that animal of "unsurpassed worth," was, in fact, the common cause of all Show Animals. There was one point of view (MR. CANNANA said) in which the design they had met to advance, appeared to him to be exceedingly important. Some Show Animals had not done well of late. Pathetic appeals had been made to the Public on their behalf; but the Public had appeared a little to mistrust the Animals—why, he could not imagine—and their funds did not bear that proportion to their expenditure, which was to be desired. Now, here were they, the Representatives of those Show Animals, about, one and all, to

address the Public on the subject of the "Good" Hippopotamus. If they took the solid ground they ought to take; if they united in telling the Public without any misgiving that he was a creature "of unsurpassed worth," that "his whole life was devoted to the protection and affectionate care of the sick and the afflicted;" that his self-sacrifices demanded the public admiration and gratitude;" and that he was "a guide and example to all who wished to become the benefactors of Mankind:"—if they did this, what he MR. CANNANA said, was, that the Public would judge of their representations of their Show Animals generally, by the self-evident nature of these statements; and their Show Animals, whatever they had been in the past, could not fail to be handsomely supported by the Public in future, and to win their utmost confidence.

This position was universally applauded, but it was reduced to still plainer terms, by the straight-forward gentleman with the hoarse voice who trains the bird and mice.

"In short," said that gentleman, addressing MR. CANNANA, "if we puts out this here 'Tizement, the Public will know in a minute that there isn't a morsel of Humbug about us?"

MR. CANNANA replied, with earnestness, "Exactly so! My honourable friend has stated precisely what I mean!"

This distinct statement of the case was much applauded, and gave the greatest satisfaction to the assembled company.

It was then suggested by the Secretary, to MR. TYLER'S tiger, that several thousand circulars, embodying these statements (with a promise that the collector should shortly call for a subscription) ought to be immediately signed by MR. HAMET SAPI CANNANA, addressed, and posted. This work, MR. CANNANA undertook to superintend, and we understand that some ten thousand of these letters have since been delivered. The gentleman in waiting on MR. WOMBWELL'S Sloth (who is of an ardent temperament) was of opinion that the company should instantly vote subscriptions towards the Monument from the funds of their respective establishments: considering the fact, that the funds did not belong to them, of secondary importance to the erection of a Monument to the "Good" Hippopotamus. But, it was resolved to defer this point until the public feeling on the undertaking should have had an opportunity of expressing itself.

This, as far as it has yet reached, is the history of the monument to the "Good" Hippopotamus. The collector has called, we understand, at a great many houses, but has not yet succeeded in getting into several, in consequence of the entrance being previously occupied by the collector of the Queen's Taxes, going his rounds for the annuity to the young Duke of Cambridge. Whom Heaven preserve!

THE IRISH USE OF THE GLOBE,

IN ONE LESSON.

ONCE on a sultry summer's day a traveller halted for rest in a thick wood, beside a mountain stream. Delighting in the grateful shade and lulled by the cool ripple of the water at his feet, he then considered himself happy among mortals. "Vain world," he said, "have I at last escaped you! Men, busy gnats, who would be eagles in your flight, have I your hum no longer in my ears? The gossip of the rivulet, the whisper of the wood, replace the cries of passion and the heart-grating jest. Here is water; were there bread-fruit on a single tree, here I would lie down and live; here I would live in peace, and toil no more."

A troubled sigh, more human than the sigh of wind among the foliage, disturbed the traveller. "Be thankful to your guardian angel," articulated the same voice, "be thankful to your God, young stranger, that in this forest you have not escaped the sound of a man speaking." The traveller yawned restlessly, and felt within himself by no means thankful.

The person who had interrupted his enjoyment was a hermit of the mountain, not yet old. He said, "Will you come with me?"

"Why, really"—answered the traveller.

"I have a sight to show that you will long remember."

"A sight!" said the young man; "but I assure you I have seen so many exhibitions and things of that sort—Venice, the Cosmorama, the Industrious Fleas, the Pope, the Eruption of Vesuvius, Tom Thumb, Simphon, Jenny Lind, that really"—

"What I will show you is a thing that you have not yet seen."

"O yes, some relic—some skull, or a saint's finger-nail; I assure you, my dear fellow, I have seen tons of relics."

"Still I will show you something that you have not seen in all your travelling."

"What is it then?"

"The World."

"The—what?" ejaculated the traveller, with a slow elevation of his eyebrows. "The world? Well, now, that is particularly cool. No, no; it won't do: you can't show me any up or down, in or out, corner or square acre of the world I have not already seen. From the Cider Cellars in London to High Mass in Saint Peter's at Rome I am equally at home. All over Europe I am as familiar with Welsh rabbits as with Lachrymæ Christi. No, no. I know the world quite well enough already."

"You do not; come along with me."

"I'll tell you what," said the traveller, holding out his open hand; "I'll lay you a new hat that you can show me nothing new. Is it a bargain? Done then. So come along." As they went up the mountain side the young man chattered idly.

"Why do you talk thus frivolously with me?" asked the hermit. "When you were

speaking only to yourself, your words were earnest, though they were not true; why do you speak differently to a fellow-creature?"

"Fellow creature! ha! ha! What a way to talk to a gentleman!" exclaimed the traveller. "I see how it is, I'm in for a sermon." He stopped suddenly. "So, out with it at once—sudden death is my motto. I hate lingering agony. Where's your text?"

The hermit was silent. They continued to climb the steep.

"You talk of teaching me to know the world!" continued the traveller. "Why you don't know even the rudiments of education in it. We don't have our hearts given us to keep them in our pockets, and bring out on all occasions; they are packed up out of sight in a bony case, not to be come at easily. You, for example, look as dry and harmless as a dead leaf; and I might take you and talk to you as part and parcel of the woodland scenery, a log of it, I may say—a piece of *lignum vite*; or perhaps a male nymph; if I stopped here as I wished to do, I might talk my heart out to you, and we might be very sober upon brookwater: by the by, do you drink that, and does it give you *goutre*?"

The hermit paused before an overhanging rock. A rude porch overgrown with passion-flowers sheltered the entrance to a cave, and under this there was a stone bench placed. The traveller sat down.

"Now, hospitable friend," he said, "can you refresh a pilgrim with some hermit's fare? Produce your pumpkins."

"Presently. But this is not my home. First let us"—

"Oh! by all means; first let us see the curiosities. This, I suppose, is your museum."

The hermit with a grave look passed into the cave, and his companion followed. Within the cave there was a dim light and an earthy smell; across one part of it there hung a curtain beside which the hermit stood. "What you are now about to see"—he said.

The young man interrupted him. "This really is too bad. I suppose you've got there thirty miles of Nile or Mississippi, rolled up in a few yards of paint and canvas. I might as well have stepped in out of Piccadilly. Spare the lecture. Draw the curtain. Well, what's here? A globe? Pooh, man, I learned the globes at school. Odd, though, certainly." And the young man approached the spectacle quite silently. It was a simple globe, revolving slowly, without visible support, suspended in the air, and all around it the air glittered with a strange, inexplicable mist. The mist spread rapidly throughout the cave, enveloping the hermit and the traveller; but through it the revolving globe appeared to shine with new distinctness. The traveller had some fear to conceal, for it appeared to him that on that little orb the sand was land, the rocks were rocks, the seas

were seas, although incomprehensibly minute. The glitter of the little seas attracted him, but as he gazed on any spot it grew. His eye was fixed with terror. Waves grew under it. He knew no more about the cavern, or the hermit, or the wondrous mist; there were but two things present to his mind, himself and the great panting ocean underneath a hot bright sun. A boat with spread sails floated by so close before him, that he drew back suddenly as if to stand out of its path. Sailors were in it, one was jesting with his wife; their child, a blue-eyed flaxen-headed little man of five years old, was playing at the stern, and dabbled with his rosy fingers in the water. Suddenly he lost his balance, there was a splash, a cry—another cry, the mother's—and the father leapt into the sea to save him. Our traveller strains forward with a beating heart, they struggle vainly; he will leap in to the rescue, but an unknown power binds him, as a nightmare, and he stands motionless, and can only turn his eyes away. When next he looks, there is no ocean, but the little globe revolving in its mist.

"How it glistens—glares at us. It is too much: drop the curtain, hermit!"

The hermit draws the curtain, and they are together in the cave again. "I have been eating wild grapes in the wood, and made myself a vision," said the traveller, "or were you playing tricks with ether vapour? Pooh, friend! I have breathed chloroform a dozen times; I am not to be cheated with mere druggery."

"Shall I explain?" asked the hermit.

"Certainly—confess."

"When I was a young man," said the hermit, "indolent and careless, I soon thought that I had seen the world. All its excitements were run through, and I felt wearied; I was what the French pronounce *blasé*, just as you are now."

"Just as I am. Yes, very good. A strong comparison."

"And so I said to myself, 'I will abjure the world. For all purposes of amusement, it is a failure.'"

"For all purposes of amusement it is a failure!" echoed the traveller.

"I had read all the novels" (the traveller groaned), "seen all the exhibitions, knew what were the stock-themes in the newspapers, and I thirsted after something new."

"And thirsting vainly," said the traveller, "you shrivelled up into the dry thing I now behold."

"Pardon me," said the hermit, "I did not thirst vainly. I betook myself to antiquities, there found the novelty I required in studying black letter. I bought books of magic, and became"—

"Upon my word, I honour you," the traveller once more interrupted. "You fell back upon the forgotten wisdom of our ancestors. Wore a white waistcoat, did you not? You

ground yourself in the Disraeli-Smyth-Manners mill, and came out a Young Englander."

"No; I grew a beard. I learned the secret of the Egyptian sorcerer!"

"What! the blot of ink, the little boy, the sweeper, the cup of coffee, the sultan in his camp, and the anything and anybody you ask to see that is going on or existing in any part of the world, presented to your wondering eyes in the black magic of a blot of ink!"

"Precisely."

"For a full account of which see"—continued the lively visitor—"neither the cabala, nor any other mysterious volume of antiquity, but Lane's 'Modern Egyptians.'"

"But mine is *not* a shining blot of ink. It is as you have seen, a globe."

"Ah, we live in an age of improvements. Magic is done much better now than it was in the times of the Magi. I'd back Döbler against Trisnegistus any day."

"Mine," continued the hermit, "is simply a mimic world. Whatever part you gaze upon will grow under your eyes, and you will see whatever may be taking place in that spot at that moment. The condition of possession was, that I must abide by my seclusion from the world; the spell would bind me to it."

"All the better. Well?"—

"Well, I came hither, put my globe where you have seen it, fixed my hermitage close by. Alas! alas!"

"O bother! Why alas?"

"I find I was mistaken, traveller. I study the globe and find I did not know the world, as I pretended. I see a thousand things in it that tempt me to rush out of my seclusion, and to join my labour to the labour of my fellows; and when I try to fly, the spell retains me. I see that there is need of earnest speaking, hearty action, stirring love; speech, action, and love I have renounced; to me the world is made a hermit's toy, and I am miserable."

"A worse reason for misery I never heard," the traveller said, laughing. "As for your globe it's just a newspaper, a sort of illustrated journal. Well, now I understand the thing, we'll dip into it again, and this time take it easily. Let me sharpen the point of my cane. There, friend, there's an exhibiting rod. Point where you please, and let us both look at the same thing. You shall show me some of the things that grieve you. Heigho!" The traveller here yawned prodigiously; the hermit again drew aside the curtain. Presently he touched a point upon the globe, and not precisely finding what he meant to show, moved the cane slowly. As the pictures grew and faded, the traveller, with some impatience beat his foot upon the ground.

"Pooh," said he, "bog and waste. I have seen better dissolving views at the Polytechnic. Yes; now you stop, I see what you are at. Puddies and pigs, more than half naked

children, a mud hut with a hole for a door and a hole for a window, and one room inside for the pig-sty, parlour, bedrooms, drawing-room, and kitchen. My dear fellow, that is Ireland, one of the most hackneyed and tiresome of all subjects. As an M.P., I have read blue-books for a new excitement; read Lord Devon's Commission, heard everlasting speeches, spoken myself, know facts and figures. Oh, it's too bad; indeed it is! I know, out of speeches in parliament, precisely what that hut contains. A kettle (that's to boil potatoes in), just a few plates, a heap of straw and a bench."

"You know that?" said the hermit.

"To be sure I do. Here are statistics for you, from Sir Robert Peel's speech on the Irish famine. In these mud cabins, or mud sheds, without a second room;—places unfit for human habitation, and which rather compromised the character of pigs, who happened to be joint tenants—there lived forty-seven per cent. of the inhabitants of Donegal, ditto of Leitrim and Roscommon; fifty per cent. of Sligo men, and fifty-two of Galway; fifty-five per cent. of Limerick folks, and fifty-six per cent. of Cork and Clare; sixty-two per cent. of the inhabitants of Mayo, and sixty-six per cent. of the inhabitants of Kerry."

"You know that?" said the hermit.

"To be sure I do. And glad enough the people are to have even these mud huts, and chance enough there is of an eviction even from them. Fifty thousand families were turned out of such homes in 1849, unable to pay rent."

"The little rent that it must be!"

"The little rent! You undertake to tell me of the world. Why, my good man, the people bid against each other recklessly to get a holding. If they get a bit of ground and plant potatoes, they can eat them. If they have no land, they can have no potatoes, and they cannot eat. Men are known to have bid six times more for a small bit of land than the amount that could be got from it by the most skilful management. See Mill's Political Economy. O pooh, why I am teaching you the world."

"They cannot pay this rent!"

"Pay it! They pay all their surplus, and they owe the rest, and are of course always liable to eviction. If a windfall comes, it pays arrears of rent. Nothing can better them, so they are reckless, and we laugh at them for their improvidence."

"Why do they bid so recklessly?"

"Six hungry mouths are offering against each other famine prices for a plateful of potatoes."

"But are they not hot-blooded reckless Celts, do you not think?"

"Ah, you mean satire, but I'll answer plainly. Facts, history, are all clear against the theory of an inherent perverseness in the Irish race. The Edinburgh Review, Jan. 1849, refers you, my dear fellow, to witnesses from

all our colonies, examined before the Colonisation Committee. Mr. Pemberton and Mr. Brydson attest the success of Irishmen in Canada. Mr. Perley speaks for them in New Brunswick. In Nova Scotia they are vouched for by Mr. Uniacke; by Mr. Mintern in the United States; in Australia and Van Dieman's Land by Colonel Mitchell, Colonel McArthur, Mr. Verner, Mr. Cunningham, Mr. Beuard, Mr. Justice Therry, and the Rev. C. D. Jang. Count Strzelecki answers for them in the United States, Canada, and Australia;—they get to prosper and to grumble quite as readily as Anglo-Saxons."

"You know that?" the hermit said.

"What do you mean by asking whether I know that? I know it and say it. The fervid character of the Irish makes them as apt for hope as for despair; in their mud cabins they have never received Hope for guest; *she* never said a grace to the potatoes. The Irish character has not a small resemblance to the temperament of the ancient Greeks; and when her years of misery are over, Ireland may run a race of honour with the sister isle. Speeches and books cannot be read for nothing," said the traveller, perceiving that the hermit smiled.

"Pardon me," said the hermit, "I respect your earnestness. I only wonder that you, feeling thus and knowing so much, take no interest in home affairs."

"Familiarity, oh most innocent hermit, has bred—Heigho!" The traveller here yawned. "To think that I have come into the woods to talk about 'the Irish Difficulty.' Well, go on, Mr. Showman, I'll be lecturer, and let you see that I don't need your lessons. Pray forgive these yawns. Yes, there we have dissolving views again. Ah, now it grows. I see, I understand. Thady is working on a patch of waste land on the outskirts of a farm. He is allowed that patch of waste land for his own for three years, Mr. Hermit, during which time he may eat what he can grow upon it. At the end of three years he will have turned it into tolerable land, and then it goes into the farm, and Thady starts fresh with another bit of moor. Delicious fruit of labour to the farmer, but I would as soon be Sisyphus as Thady—Silence, hermit, I will discharge now for your benefit a vast amount of knowledge:—

"Ireland's a fine country, 'first flower of the earth,' and so on, has fine harbours, noble rivers, and a fertile land. Of this rich land nearly one-third is bog, moor, waste, totally uncultivated. The cultivated land has not increased in quantity, but dwindled. The land was held by few men, bound by the laws of land, encumbered, and almost unable to sell; hundreds of thousands of acres have gone out of cultivation. In one barony in one county of Cork, Sir Robert Peel told me in 1849, extending over eighty thousand acres, all the lands were thrown waste. A recent act facilitates the sale of encumbered

property, and will in some degree check this evil. But of the waste land, while the Irish bid their famine prices for potatoes, there are a million and a half of acres reclaimable for spade or plough—(here, Hermit, I quote the report of Mr. Griffith to Lord Devon's Commission); two and a half millions reclaimable for pasture. Two and a half millions Mr. Griffith calls hopelessly waste, but there is no soil hopeless to a small proprietor. Here, Hermit, I quote John Stuart Mill. Were these wastes bought by Government and sold again, or sold at once by their possessors, in small freehold properties, to the poor Irish tenants, each would spend such energy upon his own domain as would soon turn the mass of waste into a little home Australia. Not only would thousands be fed and raised into comfort upon what is now more useless ground, but a new thing would be seen,—a multitude of happy peasants in the sister island. I have been in Zurich, and have seen how men who own a bit of ground, love it and nourish it, plant every corner, water solicitously every single cabbage, rise with the sun, and even spend their holidays upon the cherished soil. When people come to love the land after that fashion, the land loves them, and makes them handsome presents."

"But," said the hermit, "has not this a tendency to root men to one spot—to stick them as firmly into a small patch of the earth as the vegetables they grow? does it not smother energy and check enterprise?"

"Every tree must have a root," replied the "fast" young traveller, "or it spreads no branches; so with man. Give him a *status*, and he educates his family to respect that standing and to support it. He sends his children out into the world to find similar standing places for themselves; he trains them to expect this, and not to live to snatch away some of his hard-earned acres, or to become his neighbouring rival. His branches are spread till they extend to other parts of the earth; where they, in turn, take root, and thus become centres of the same sound and beneficial expansion of population."

"Look here," said the hermit, moving the globe.

"Flanders, the Campine," said the traveller. "Yes, I know all about it. There we have a waste of sandhills. Look to the right and you perceive some spaces where the sandhills have been levelled and surrounded by a trench; broom is sown there; a few potatoes straggle up, and here and there some clover. Keep your eyes about you, Hermit, and you will see some patches where the broom is cut; they cut it after three years' growth, and sell it then for faggots—by that time fallen broom leaves have enriched the sand a little, and the roots have given it consistency. Then, Hermit, the industrious proprietor will plough it up, or turn it with the spade, and buckwheat, or even rye, will grow without manure. And after this is reaped the ground will pay the

price of some manuring ; clover and potatoes flourish, and keep cows, and the cows yield more manure ; regular cropping goes on from that time, and all the fertile plain which you see there to the left of you, O Hermit, has been made thus out of sandhills, by the solicitude of small proprietors. Them it remunerated, because they gave their own care and toil, their own leisure. It would have answered the purpose of no estate owner to pay men wages for the reclaiming of this land ; but when it was acquired in patches by hard-handed men, then by such labour it was practicable, as Arthur Young has it, "to turn sand into gold." These men all thrive. They live, it is quite true, with close economy ; but that is not because (unless in extraordinary years of famine) they are pinched by want, but because they have a motive for acquiring money ; they have a hope of raising themselves higher in the scale of wealth, by adding other little acres to their patrimony. It is this labour, with keen interest in the work, and with a fair hope of such return as human nature prompts us all to look for, that makes men contented and industrious ; this sense of property, that it is possible by hard work to acquire, that makes the peasant peaceable and gives him a conservative interest in the maintenance of law and order. It is because a labouring Irishman, in Ireland, can, by no labour, human or super-human, living in Ireland, raise himself in the social scale, that all his energy of character has been perverted, when at home, into an energy of recklessness.

"But," said the hermit, "how can you convert these wretched men into proprietors upon waste land ? They cannot buy land ; would you have it given to them ?"

"No," said the traveller, "not given certainly. It is not one thing only that Ireland wants ; it is not one provision that will remedy all her complaints. She wants a course of treatment, which has been most properly commenced. The Encumbered Estates Courts are now taking out of the hands of practically insolvent landlords numerous estates which, being sold for the benefit of creditors, come into the hands of men able to work them properly. This checks one symptom of disease ; for hitherto, instead of wastes becoming cultivated, we have had cultivated land becoming waste. Lands properly attended to, give work and wages. Now, if the wastes were, we will say, purchased by Government, their marketable value being small, they would be saleable in parcels of a few acres in extent, at prices which a labourer might compass by a few years' industry. Facilities could easily be given ; but the great thing would be an inducement to labour and to save, a possibility of rising in society above the lowest step. The ground acquired would engage much of the leisure of contented men ; and for the rest, in point of character, despite the common error of prejudice, in equal circumstances of

encouragement, I would back any Irishman against a Fleming."

"Are these your private notions ?" asked the hermit.

"No : what I think about the Irish character, I think in common with all men who have paid unprejudiced attention to the subject. What I say of waste lands is political economy, for the grinding of which I always use a Mill much and deservedly esteemed in England."

"And so you get your Irish panacea ?"

"So I get no panacea ; Mr. Hermit—there is no single panacea for a social evil. Bodies politic are complex things ; but so I get a good prescription, which may advantageously be worked into the treatment of a case which certainly is not incurable. Now you may just let down your curtain, friend. I told you there was nothing to be taught me of the world. As for your globe, as I before said, it is just an Illustrated Newspaper. I'm sick of news. As for your magic, pooh ! What magic of the past would not be clumsy, if put next door to the common-places of to-day. Well, it's no fault of yours. And so this toy of yours has made you miserable."

"Yes, Traveller, this vivid picture of the world has made me fret against the spell which keeps me bound to know and never use my knowledge. What reality of heaven can there be for me, to whom this earth, and all the men and women loving, suffering, and labouring upon it, are but a hermit's toy ? Yet you profess to know the world, and fly it !"

"Certainly, my friend. For you must understand that habit, chance of education, temper, and a thousand accidents of life, all fly to a man's eyes, and there is no such thing as the possibility of five men seeing every thing alike. One sees a ball, and says it's round ; two says it's square ; three considers it a pyramid ; four says it's like a marlin'spike ; and five says there is nothing to be seen at all. They are not perverse. There are not many perverse people now-a-days, but we do see things so very differently, that I consider eyes to be of no use in the world at all."

"But other senses—"

"Well, it's extremely hard for a man to feel a thing and own that it feels round, when he sees positively that it's square. He goes by rule of square, and then we call it prejudice ; a pardonable matter after all."

"But prejudices yield !"

"Not very often in adults, they yield in the next generation. Slow work, Hermit."

"Slow, but sure. You who were impatient to leap into the water for a phantom child, refuse to fight the tide of difficulty, even to help a nation in distress."

"There are plenty of men at work, my friend, trying their strength against the waves. Now let me try my appetite. 'Tis easier to see the world than find one's dinner in it."

So the stranger ate a dinner in the hermit's cell, and, the same evening, resumed his travels. Had he grown weary of the woods?—We met him, ten days afterwards, in London.

ADVENTURES OF A TRANSLATION.

Most English people acquainted with modern German literature have heard of Bettina Brentano, (Frau von Arnim,) a name familiarly known in Germany, through her publication of "Goethe's Correspondence with a Child." In 1835, in Berlin, this singular production of a most enthusiastic imagination issued from the press. The idolised Poet had been pleased to say, that every line of Bettina's letters contained materials for a poem; he had read them daily; and, as every thing that threw light, or promised to throw light, on aught appertaining or relating to Goethe was zealously sought for and cherished by his countrymen, this work was eagerly caught at, and universally read throughout Germany.

It is not our intention to comment on the publication. Many of our readers may have read it in the original; but it may be interesting to them to know how it fared with Bettina's earnest desire of appearing before the British public, as she had the three volumes translated in 1838, printed off seven thousand copies forthwith in Berlin, at a cost of seven hundred pounds, and dispatched them to England, buoyed with the hope of a cordial welcome on British ground. The adventures of the work may not also be devoid of general interest, as in them we have another proof of how hard our international restrictions tell upon individuals. To get the work translated at all, Bettina had battled with difficulties against which only a will strong as her own, and her peculiarly sanguine temperament, could have held out; but no English person could she find willing to undertake the third volume of her "Diary." Still bent, however, on carrying out her object, she continued the translation herself, with no further knowledge of our language than what she had acquired by comparing her German manuscript with the achievements of her translators, with which she appears to have been anything but satisfied. To give any idea of the difficulties of such an undertaking, we must be allowed, presently, to quote what the authoress herself says in her *preface*, or *Preamble*, as she terms it, and let a few extracts from the "Diary" bear witness to her numerous perplexities.

After much trouble, and great expense, the work was dispatched to England. The British authorities honoured its arrival by demanding a high import duty on the seven thousand copies, bearing no certificate of being printed in Prussia. After lengthy correspondence to and fro, they were sent back with fifty pounds cost of freight and warehousing. The Prussian custom-house, in its turn, demanded a high import duty, which is nowise to be shirked.

The catastrophe of these terrible adventures was, that when the packages are opened, their contents are found to be utterly spoilt; which could hardly be otherwise, as the cases were not calculated for twelve years' sojourn in the damp of our London docks. Worst of all, while mildew and custom-house authorities were doing their worst upon poor Bettina's literary venture, her book was pirated in America, and very coolly turned into cash for the enrichment of the pirates.

Bettina begins her third volume with an apostrophe to "The English Bards." "Gentlemen!" She writes, "The noble cup of your mellifluous tongue, so often brimmed with immortality, here filled with odd, but pure and fiery draught, do not refuse to taste, if you relish its spirit to be homefelt, though not homeborn." And in her "preamble" she says, "I was not acquainted with the English tongue, therefore relied on the consciousness of my translators. The recapitulating of their version I tried to follow, with comparing it to the German text. Often my ear was hurt by words lack of musical rhythm, that in the German text, by their harmonious sounds, and even by the union of their single parts, awake poetic sensation; I must yield to have them supplied by such as want all lofty strain. To all my objections, my relentless translator opposed the impossibility of translating it, the rigour against any arbitrariness in that language, and, besides, its penury, that allows no great choice, it consisting but in thirty thousand words. I thought, if I only did know them, to be sure I would find the right."

Whether Bettina always found the right words, or whether they were such as are calculated to awaken "poetic sensation"—what in short the exactions of the Custom House have lost to the British public—a few specimens of Miss Von Arnim's English will show.

Speaking of her qualifications as a translator, and of the difficulties of the task, she writes:—

"Unconsciously, I pursued my task, confiding in my genius, that would preserve me from doing any harm by unfit, or even unusual expressions, and persisted often in my wrong way, when my advisers would have subverted my construction, as they were absurdities. Often my version, larded with uncommon expressions, gave way to misunderstanding; then I could not ally the correction with my meaning, and would not be disputed out of my wits, impassioned as I was for my traced-out-turn, for which I had rummaged dictionary and poetry, and never would yield till the last sheet, which to-day will come in the press; and I am like one to whom, after a long prison, spring is bestowed in the free air. Forsooth, I saw in the last year no roses,—no tree blowing. My intelligence lay narrowly grated up in the dictionary of good Johnson, and the grammars that I took to my couch, and fell asleep on them; and had also a very

hard bed to no boot; for I had unfortunately in no language a grammatical learning. . . . Those who would advise me frightened me out of my wits. I struggled for my version as does an animal for its young,—it suffers them not to be touched by an indiscreet hand, but licks them clean again. So it was with me. Instinctively, and with great labour, I tried to overcome all the corrections by a deeper inducement, while people laughed at my reluctance, and said that I would never come to a good issue. . . . Had Byron still lived, he would have praised my attempt,—praised and loved me for the book's sake; for he was of a generous mind, propending to all uncommon affections. He would have bestowed on me his gentle, goodly graces; and this would have exceedingly blessed me. But now, as I have no friend yonder, and no connexion, I am like a bird that flies from its nest over the ocean, or a plant to climate in a foreign land, must dole till it is rivetted in the soil. Therefore, I beseech Mr. Longman, who grants me the honour of publishing my book, to get this little preamble inserted in the Quarterly or Edinburgh Reviews, for informing, that if there are still other Englishmen who, as Byron would have done, are inclined to preserve in their deep mind, and protect such faithfully inspired feelings, I should like they seen the pages of my Diary."

Describing in the body of her book the ruins which are scattered on the banks of the Rhine and the Main, Bettina hopes to awaken poetical sensation in the following among many similar passages:—

"The sun wheedlingly gets from our Lord, that he may ripen hundredfold ears for the children of men. Everything was contemplated, considered, explained. The wondering about former times, and that they reached so palpably into ours, made us quite stupefied people; yea, I was afraid this old, coarse-bony Time, would suddenly come over the moment of presence, and swallow it up. . . . Yesterday the sky was blue, to-day, ruby-died, and emerald, and then in the west, where it covers the earth, it chases the light in saffron garb out of its couch. For a moment, desirous love may disport, seeing whole nature slumbering soak."

At another place the friend of Goethe describes herself as "fancy's poor deluded child warbling very wild and ardent notes to the moon through the nubiferous gales that bring her a cloud-cap or a beard, and again snatch it away."

The following sample is from the last of Miss Arnim's epistles to Goethe, done into English by herself:—

"Multitudes have passed by thee, hailing thee with loud shouts of fame; the banners they have flourished; kings have come and touched the skirts of thy mantle, and brought thee golden vessels, and laid chains of honour on thy free neck. Thou knowest no more that I planted all the gathered flowers, the

wild herbs in thy bosom, and laid my hand upon it to fix them there. Thou knowest no more of my hand withheld mid thy breast, and that thou calledst me the wild hop which would root there to wind its tendrils growing up around thee, that nothing might be seen of thee but only the wild hop. Lo! in this double-wall of rock and mountain-depths abides of echo the joyful call. Lo! my breast is such an artfully framed double wall, that ever and anon a thousand times the joyous shouts of so sweet a tale echoes across thy breath in which God-immortality hath blown the breath of inspiration. Be pleased to hear me sing once more the melodies of my fairest paths of life, and in the excited rhythm of momentary joy, where of spirit and sense the vital sources stream into each other, and so exalt each other, that not the inexperienced alone become sensible and visible, but the invisible, unheard of too, be known and heard of.

"Is it of drums and trumpets the jubiling chime which shakes the clouds—is it of harps and cymbals?—is it of thousand instruments the tumult, that at command's call disposing solves itself into the measure of pure strains, forms warbling shapes, pronounces accents of celestial influences, penetrates into man's spirits, with hue and light espouses sense and mind? Is it this genial power, which running through the veins conjures the blood the earthly to reject, to nurse, to bring forth of supernal love, of supernal light, the genuine fruit? Is it not thou who has consummated it in me, when it fulgurates within my soul? Yes, it fulgurates when I think of thee! Or is it only *shelms*—museful and weening, only gazing phantasy, not espousing with its revelations what I have to confide to these leaves? Whatever it be! all into death this music of the first love may lead me. At thy feet I plant the bass; it shall pulchrate a palm-grove for thee to wander in its shades; all what of lovely and sweet thou hast said to me, that I shall whisper from twig to twig like soft carols of twittering birds: be your kisses, your caresses, between us the honey-dropping fruits of this grove: but the element of my life, harmony with thee, with nature, with God, of whose loss arises the abundance of generation upwards to light into light, decaying into light—be that the torrent the most powerful, which encompasses this grove to make it lonely with me and thee."

"Thou lookest upon me from celestial heights; let it be unknown to me, for I would not bear it; thou hast taken me from myself—where stand I firm? The ground reels—I feel myself no more on earth. My soul buoys up, I do no more know any one, I have no thought—I have no will but to sleep, bedded in clouds, on the steps of thy celestial chair. Thy glance keeping over me fire-vigil, thy all-inarming spirit bending over me in the blossom-carouse of thy love-carols. Thou! lipping over me, nightingale-futing the groans of my languishing pants. Thou storming

over me, weather-stressing the frenzy of passion. Thou, shouting—heaven-urging the eternal hymns of love, that warbling rebound on the heart. Ay! at thy feet I will sleep, while thou, valiant one—Poet! Prince! lightsomely grazing the clouds, evolvest your harmonies rooted within my heart."

A little further on Bettina Brentano gives it as her opinion, that "Beauty, by divine spirit, inculcates itself to human features, through which inspiration perspires a halo, and, unhurt by lowness, its fragrance freely evolves." Goethe's personal beauty at forty was "immarcescible," and at sixty was "re-queened" by genius.

Some of the thoughts in the original are of the highest order of fervent poetry; yet they are much marred in English by the comparative ignorance of their author of our language. It would never do to apply to a fair poetess who translates her own work into a foreign language, the proverb which defines what a client is who becomes his own lawyer. In the case before us it would hardly be just; for every allowance should be made for the difficulties she had to overcome.

HOW WE WENT WHALING OFF THE CAPE OF GOOD HOPE.

At Algoa Bay, in the eastern provinces of the Cape Colony, there is, and has been for thirty years, a whaling establishment. By what instinct these monsters of the deep ascertain the settlement of man on the shores they frequent, it would be difficult to say. But that they do so, and that they then comparatively desert such coasts is undoubted. Where one whale is now seen off the south-eastern coast of Africa, twenty were seen in former times, when the inhabitants of the country were few. It is the same in New Zealand, and every other whale-frequented coast. Nevertheless, the whaling establishment I have mentioned is still kept up in Algoa Bay—and with good reason. *One* whale per annum will pay all the expenses and outgoings of its maintenance; every other whale taken in the course of a year is a clear profit.

The value of a whale depends, of course, upon its size—the average is from three hundred pounds to six hundred pounds. The establishment in Algoa Bay consists of a stone-built house for the residence of the foreman, with the coppers and boiling-houses attached; a wooden boat-house, in which are kept three whale-boats, with all the lines and tackle belonging to them; and a set of javelins, harpoons, and implements for cutting up the whales' carcasses. Then there are a boat's crew of picked men, six in number, besides the coxswain and the harpooner. There are seldom above two or three whales taken in the course of a year; occasionally not one.

The appearance of a whale in the bay is known immediately, and great is the excitement caused thereby in the little town of Port Elizabeth, close to which the whaling establishment is situated. It is like a sudden and unexpected gala, got up for the entertainment of the inhabitants, with nothing to pay.

A treat of this sort is suddenly got up by the first appearance of a whale in those parts. Tackle-boats and men are got ready in a twinkling. We jump into the stern-sheets of the boat. Six weather-beaten, muscular tars are at work at the oars, and there, in the bows, stands the harpooner, preparing his tackle; a boy is by his side. Coils of line lie at their feet, with harpoons attached to them, and two or three spears or javelins.

"Pull away, boys; there she blows again!" cries the coxswain, and at each stroke, the strong men almost lift the little craft out of the water. The harpooner says nothing; he is a very silent fellow: but woe to the unlucky whale that comes within the whirl of his unerring harpoon!

Meantime, our fat friend of the ocean is rolling himself about, as if such things as harpoons never existed; as if he were an infidel in javelins. We are approaching him, a dozen more strokes and we shall be within aim. Yet the harpooner seems cool and unmoved as ever; he holds the harpoon it is true, but he seems to grasp it no tighter, nor to make any preparation for a strike. He knows the whale better than we do—better than his crew. He has been a harpooner for thirty years, and once harpooned twenty-six whales in one year with his own hand. He was right not to hurry himself, you see, for the whale has at last caught sight of us, and has plunged below the surface.

Now, however, the harpooner makes an imperceptible sign to the coxswain. The coxswain says "give way boys," scarcely above his breath, and the boat skims faster than ever over the waves. The harpooner's hand clutches more tightly the harpoon, and he slowly raises his arm; his mouth is compressed, but his face is as calm as ever. A few yards ahead of us a wave seems to swell above the others—"Whiz"—at the very moment you catch sight of the whale's back again above the water, the harpoon is in it eighteen inches deep, hurled by the unerring arm of the silent harpooner.

The red blood of the monster gushes forth, "incarnadining" (as Macbeth says) the waves. "Back water," shouts the harpooner, as the whale writhes with the pain, and flings his huge body about with force enough to submerge twenty of our little crafts at one blow. But he has plunged down again below the surface, and the pace at which he dives you may judge of, by the wonderful rapidity with which the line attached to the harpoon runs over the bows of the boat. Now, too, you see the use of the boy who is baling water from the sea in a small bucket, and pouring

it incessantly over the edge of the boat where the line runs, or in two minutes the friction would set fire to it.

You begin to think the whale is never coming back; but the crew know better. See too, the line is running out more slowly every instant: it ceases altogether now, and hangs slackly over the boat's side. He is coming up exhausted to breathe again. There are a few moments of suspense, during which the harpooner is getting ready and poisoning one of the javelins. It is longer, lighter, and sharper than the harpoon, but it has no line attached to it. The harpoon is to catch—the javelin to kill. Slowly the whale rises again, but he is not within aim. "Pull again boys"—while the boy is hauling in the line as fast as he can. We are near enough now. Again a whiz—again another—and the harpooner has sent two javelins deep into the creature's body; while the blood flows fast. Suddenly, the whale dashes forward. No need of pulling at the oars now: we are giving him fresh line as fast as we can, yet he is taking us through the water at the rate of twenty miles an hour at least. One would fancy that the harpoons and the javelins have only irritated him, and that the blood he has lost has diminished nothing of his strength. Not so, however; the pace slackens now: we are scarcely moving through the water.

"Pull again, boys," and we approach; while another deadly javelin pierces him. This time he seems to seek revenge. He dashes towards us—what can save us?

"Back water," cries the harpooner, while the coxswain taking the hint at the same moment, with a sweep of his oar the little boat performs a kind of curvet backwards, and the monster has shot past us unharmed, but not unharmed; the harpooner, cool as ever, has hurled another javelin deep into him, and smiles half pityingly at his impotent rage, which, he knows full well, bodes a termination of the contest. The red blood is spouting forth from four wounds, "neither as deep as a well, nor as wide as a church-door," but enough to kill—even a whale. He rolls over heavily and slowly; a few convulsive movements shake his mighty frame; then he floats motionless on the water—and the whale is dead!

Ropes are now made fast round him, and he is slowly towed away to shore, opposite the whaling establishment. A crowd is collected to see his huge body hauled up on the beach, and to speculate on his size and value. In two days all his blubber is cut away and melting in the coppers. Vultures are feeding on his flesh, and men are cleansing his bones. In two months, barrels of his oil are waiting for shipment to England. The fringe-work which lined his mouth, and which we call whalebone, is ready for the uses to which ladies apply it. His teeth, which are beautiful ivory, are being fashioned into ornaments by the turner; and his immense ribs are serving

as landmarks on the different farms about the country, for which purpose they are admirably adapted. Meanwhile our friend the harpooner and his crew are reposing on their laurels, and looking out for fresh luck; while the proprietor of the establishment is five hundred pounds the richer from this "catching a whale."

A LAMENT FOR THE FAIRIES.

BEAUTIFUL fictions of our trusting youth,
(Visions we sigh that we have only dreamed!)
When Fancy mocked the searching gaze of Truth,
And the whole earth with bright enchantments
teemed:

How have we loved to forest glades to flee;
By haunted streams (in thought) to take our
stand;

To watch you circling round the greenwood tree,
Or trace your gambols on the moonlit strand!

Or, when in gorgeous panoply arrayed,
To grace some pageant of the Elfin Queen,
You pricked along, a gallant cavalcade,
Painting the verdant turf a livelier green!

Nor less we loved you, when, with pitying air,
And hand beneficent, around you showered
Gifts, might the world's and nature's spite repair,
And leave the homeliest maiden doubly dowered.

But the bright realm of Fairyland is gone;
Its iris-tinted train hath passed away;
And Ariel, Mab, Titania, Oberon,
But grace the painter's scene, or poet's lay.

E'en Puck, dear imp of mischief and of mirth,
"O'er hill and dale," at length hath ceased to
range;

Though long-creed "Bottoms" cumber still the
earth,

Whose "asses' naws" he is not here to change!

The "Sword of Sharpness" is no longer keen;
The "Seven League Boots" we distance now, as
will;

Our sole surviving "Giant" is the Spleen,
Which, we, like David, with a stone can kill!*

No more, no more, upon the velvet mead,
On mushroom tables are your banquets spread;
No more with flying feet the dance you speed,
Till dimming glow-worms hint 'tis time for bed!

No "fairy favours" now reward the fair;
Nor pearls nor diamonds from her lips are told;
No elfin matron makes her bliss her care,
With purse exhaustless, filled with fairy gold.

Your unseen aid, like angel-help, in vain,
The toil-worn hind may, in his strait, implore;
The "shadowy fiend" to ease his task will rain,
Its stalwart blows in his behoof no more!

Virtue no longer, in her sorest needs,
By fairy hands is rescued from her thrall;
And rampant Vice, how dark see'er his deeds,
Your well-earned frowns may now no more
appeal!

* Green in his excellent poem, "The Spleen," says:—

• Fling but a stone, the giant dies."

The superstitions sweet that charmed our youth ;
The large belief that bade us still dream on ;
The dear illusions we mistook for truth ;
The "shaping power" that gave them grace—
are flown !

Yet these fair fictions of our earlier day
We have but changed for guides less kind and bland ;

The glittering cheats that lead us now astray,
Are false far than those of Fairy Land !

Love, Friendship, Hope, Ambition, Glory, Pride,
All, ignis-fatuus-like, by turns, invite,
But when we follow, make a circuit wide,
Where fields are dank, and there withdraw their light !

Though poets still, as they were wont of yore,
With filial love to fairy legends cling :
The charm is half-dispelled, for they no more
"Believe the magic wonders that they sing !"

Yet, till the Muse from earth is driven away,
And young Romance hath broken too her wand ;
Will elfin lore still grace the poet's lay,
And his heart's home be still in Fairyland !

GUNPOWDER AND CHALK.

SIR VALENTINE SALTEAR was a worthy gentleman, who had made a large fortune by constantly exporting Irish linens and lawns to France (from whence they came over to England as fine French goods), for which service to the trade of the three countries a discerning minister had obtained him the honour of knighthood. This fortune he had in part expended in building for himself a great mansion on the sea-coast of Kent, commanding a fine view of the country from the back windows, and the great ocean from the front. Every room on the first and second floors was furnished with a brass telescope, that could be screwed on to the window-sash, or by means of a pedestal, into the window-sill.

In the front of his house was a great field, in which he and his visitors used to play at cricket. It was bounded by the high, white chalk cliffs, which descended precipitously to the sea.

The cliffs, however, were unfortunately much undermined by natural caverns ; so that every year, and, in fact, every time there was a storm at sea, a large portion of the chalk-rock fell down, and in the course of six or seven years he was obliged to rail off as "dangerous" a part of the already reduced field in front of his house. He could now only play at trap-ball, or battledore and shuttle-cock.

Still the sea continued its encroachments, and in a few years more the trap-ball was all over,—it was too perilous, even if they had not continually lost the ball,—and he and his sons were reduced to a game at long-taw, and hop-sotch.

Clearly perceiving that in the course of a few years more his field sports would be limited to spinning a tee-totum. Before his front door, he engaged the services of an

eminent architect and civil engineer to build him a sea-wall to prevent the further encroachment of the enemy. The estimate of expense was five thousand pounds, and, as a matter of course, the work, by the time it was finished, cost ten thousand. This was nearly as much as Sir Valentine Saltear had paid for the building of his house.

But the worst part of the business was, that the very next storm which occurred at sea, and only a few weeks after, the waves dashed down, and fairly carried away the whole of this protective wall. In the morning it was clean gone, as though no such structure had been there, and a great additional gap was made in the cliff, plainly showing that the watery monster was quite bent on swallowing up Sir Valentine's house. He brought an action for the recovery of the money he had paid for his wall ; but while this was pending, he saw his house being undermined from day to day, and in sheer despair felt himself obliged to apply to a still more eminent civil engineer. The estimate this gentleman made for the construction of a sea-wall—one that would stand—was ten thousand pounds. It might be a few pounds more, or less—probably less. But the recent experience of Sir Valentine making him fear that it would probably be double that amount, he hesitated as to engaging the services of this gentleman. He even thought of sending over to Ireland for fifty bricklayers, carpenters, and masons, and superintending the work himself. He was sure he could do it for six thousand pounds. It never once occurred to him to pull down his house, and rebuild it on high ground a quarter of a mile farther off.

In this dangerous yet undecided state of affairs, Sir Valentine one morning, breakfasting at his club in Waterloo Place, read in a newspaper a notice of the grand mining operation and explosion that was to take place at Seaford, the object of which was to throw down an immense mass of chalk cliff, the broken fragments whereof would, at a comparatively small cost, form a sea-wall, at an elevation of about one-fifth the height of the parent rock. Why, here was Sir Valentine's own case ! His house was upon a very high chalk rock, and a sea-wall of one-fifth the height would answer every purpose. The only difficulty was his present proximity to the edge of the cliff. Still, he thought he could spare thirty feet or so, without losing his door steps, and this width being exploded down to the base of the cliff, would constitute, by its fall, a very capital mound of protection which might last for a century or more. He therefore determined to see the explosion at Seaford, and if it proved successful, to adopt the very same plan.

Sir Valentine, accordingly, on the nineteenth of September, swallowed an early cup of chocolate, and hurried off to the Brighton railway terminus, and took his place in the Express train for Newhaven. It was a return

ticket, first class, for which he paid the sum of one pound four shillings. An Excursion train had started at nine o'clock, the return-ticket, first class, being only eleven shillings; but Sir Valentine fearing that it would stop at every station on the way, and might not be in time for the great event, had prudently chosen the Express at Express price; namely, one pound four per ticket. There was some confusion in the arrangements of the terminus, apparently attributable to extensive additions and alterations in the buildings; but there was no difficulty in receiving the money.

The train started; its speed, though an Express, being nothing particular. When it arrived at Lewes, the passengers all had to alight, and wait for another train which was to take them on. At last a train arrived. It was declared to be full!

"Full!" cried Sir Valentine, "why, I have paid for the Express!—first-class—one pound four."

Full, however, this long train was. Presently a guard shouted out that there was room for three in a second class-carriage.

"I secure one!" shouted Sir Valentine, holding up his fore-finger in a threatening manner to the guard, and jumped in. In due time, and by no means in a hurry, the "Express" train arrived.

Out leaped Sir Valentine, and demanded of the first person he met how far it was to Seaford? The man said he didn't know! to the utter astonishment and contempt of the excited knight. He asked the next person; who replied that he hadn't the very least idea, but they could tell him at the "tap." Sir Valentine looked on all sides to see if there were any cabs, flies, or vehicles of any kind, and descriing several in a group at some little distance, made towards them at long running strides—a boy who had overheard his question as to the distance, following at his heels, and bawling—"Two miles as a crow flies!—four miles by the road!—two miles as a cro-o-o-o!—four by the ro-o-o-o!"

Arrived amidst the vehicles, the knight found nearly all of them either engaged, or full, and it was only as a matter of favour that he was admitted as "one over the number" to the inside of a small van without springs; where, beside the heat and crushing, he had to endure a thorough draught and three short pipes, all the way.

The road wound round the base of a series of hills and other rising ground, and a line of vehicles might be seen all along this serpentine road, for two or three miles' distance; while a long unbroken line of pedestrians were descried winding along the pathway across the fields. After a very jolting and rumbling drive, Sir Valentine found himself "shot out" with the rest of the company, in front of a small "public" knocked up for the occasion, with a load or two of bricks and some boards, and crowded to excess. Private carriages, flies, cabs, carts, waggons, vans, were stand-

ing around, together with booths and wheelbarrows, set out with apples, nuts, bread and cheese, and gingerbeer of a peculiarly thin stream. Sir Valentine having breakfasted early, hastily, and lightly, was by this time—a quarter to two—extremely sharp set; he endeavoured, therefore, to make his way into the house to get a bottle of stout and some ham or cold beef for luncheon. But after ten minutes' continuous efforts, he found he was still between the door-posts, and the noisy, choked-up window of the "bar" as far from his hopes as ever. He abandoned the attempt in disgust—but not without addressing himself to a seafaring man who was standing with his hands in his pockets, looking on:—

"Is this sense?" said the Knight. "Do you call this common sense? Do you think you are acting with any more reason than a dog possesses, to treat the public in this way? Then, your own interest—look at it!" (pointing to the crowd struggling in the door-way). "If you had any foresight, or a head for the commonest arrangements, would you not have a barrel of ale on wheels outside here?"

The sea-faring man swung round on his heel with a smile, and Sir Valentine, having made his way into the field, obtained six pennyworth of gingerbread and a dozen of small apples, with which provender he in some sort revived his exhausted frame. He now bustled on towards the foot of a broken embankment leading up to a lofty rising ground, the summit being the cliffs, a large portion of which was shortly to be detached, and thrown down by the explosion of a mine. The part to be blown off was marked out by broad belts of white, where the chalk had been thrown up, which made an imposing appearance even on the distant heights.

The sun shone brightly. All over the fields and fallow ground that lay between the halting-place just described, and the foot of the steep mount, the visitors were scattered,—pedestrians, with here and there a horseman; sight-seers,—the old and the young—men of science from various parts of the world,—infantry soldiers, sappers and miners, ladies and gentlemen, sailors, marines, country people, railway labourers, policemen, boys and girls, and—far in the rear of all, with disapproving looks—two or three old women in spectacles. Renovated by his gingerbread and apples, Sir Valentine made his way manfully up the steep grassy ascent of the hill,—chalk mountain, it might be more properly termed,—and, in the course of a quarter of an hour, he found himself at the spot where the explosion was to take place.

It was a tolerably level surface, of some hundred yards in diameter. Transverse belts of excavated chalk, with several trenches and pits half filled up, marked out the huge fragment of the solid mass which was to be separated. The boundary was further indicated by small flagstaffs, and also by sentinels, who prevented any of the visitors from trespassing

on the dangerous ground, whereon, of course, they all had a half-delightful tingling wish to perambulate, and to feel themselves liable to be blown to atoms by a premature explosion.

Beneath the part marked off by the flag-staffs and sentinels, at a great depth in the chalk rock, were buried many thousand (the Brighton Herald said twenty-seven thousand!) pounds of gunpowder, distributed in different chambers and galleries, one communicating with another by means of a platina wire. This wire was carried up through the rock into a little wooden house, in which certain chemical mysteries were being secretly carried on by engineer officers. There was a little window in front, out of which the mysterious officer now and then half thrust his head,—looked out with profound gravity upon the belts of chalk on the space before him, and, without appearing to see any of the crowding visitors, withdrew from the window. Presently another officer came, and did the same. "Come like shadows," muttered Sir Valentine, "so depart!"

But, wishing that they might "show his eyes" the mysterious operations in the little wooden house, however grievous it might be to his feelings, our anxious knight hurried round to the back, where he took it for granted there was some means of entrance, as he had seen no officer get in at the window. He was right. There was a small narrow door of planks, with a sentry standing before it, who wore a forbidding face of much importance. And now, a gentleman in blue spectacles approached, and nodded to the sentinel, who tapped at the door. The door was unlocked, and the favoured man of science entered. Through the closing door, Sir Valentine caught sight of a sort of long, shapeless table, covered with chemical instruments and utensils,—in short, an apparatus exciting great curiosity. The door closed, just as Sir Valentine handed up his card to the sentinel. The door was opened again,—his card given in; somebody took it, and it seemed to fly over a row of small white porcelain painters' palettes, standing mid-deep in water, and then disappeared, as the door was suddenly closed again. A voice within was heard to say, impatiently, "I really am afraid we can't be disturbed!"

"Can't you!" exclaimed Sir Valentine, addressing himself to a servant girl, with a child in her arms, who was trying to get a peep in at the door:—"Can't you, indeed! What treatment do you call this? Do you think gentlemen would take the trouble to come down here, such a distance, and up here, such a height, if they did not expect to see all that could possibly be seen? Is this your duty to the public who pays you? Why should you conceal any thing from me? Am I not a person of sufficient wealth and respectability to be allowed to know of all your doings up here? What brings you here but the public service? Who is your master? tell me that!"

"Edward Smith, of Seaford," answered the girl, with an angry face; "but I don't know as it's any business of yours!"

Sir Valentine brushed past the girl with a "Pooh, pahaw!" Observing it was announced, by a placard on one side of the little wooden house, that the explosion would take place at three o'clock, he took out his watch, and found that it was already half-past two. It became important to decide on the most advantageous place to take up a position, in order to have the best view of the grand explosion. Some of the visitors—in fact, a considerable number—had ascended to the very highest part of the rock, which swept upwards, with its green coating of grass, to a distance of a hundred and fifty or two hundred yards beyond the dangerous spot. Another crowd took their posts at about the same distance below the fatal spot, each crowd being widely scattered, the boldest in each being nearest, the most timid the furthest off. Another crowd—and this was the largest by far—had descended to the beach, to see, from below, the fall of the great mass of lofty rock. Many had taken boats, and rowed, or sailed out, to behold it from a more directly opposite, yet safer position.

Now, Sir Valentine Sauter, being an enthusiast in sight-seeing, had not the least doubt but the way really to enjoy the thing, would be to stand upon the portion of the cliff that was to be thrown down; and, leaping from crack to crack, and from mass to mass, as it majestically descended, reach by this means the sea, into which a good dive forwards would render your escape from danger comparatively safe and easy. On second thoughts, however, he saw that it was precarious, because if the charge of powder were in excess of the weight to be separated, a great mass of fragments might fly upwards into the air, and who could say but one of these might be the very place on which he himself was standing? He, therefore, contented himself with advancing to the extreme edge of the cliff, and peering over upon the beach below. The height was prodigious; the crowds walking about below were of pigmy size. The boats that were hovering about on the sea looked no bigger than mussel shells. Sir Valentine once thought of going out in a boat, but immediately recollecting that by doing so he should lose the fine effect of the trembling of the earth, he at once abandoned the idea. If he mounted above the scene of action he should lose the grandeur of the descent of the mass; if he stood on the mount at some distance below it, he could not see the surface crack and gape, though he might be exposed to flying fragments. He, therefore, decided forthwith on going down to the beach, and accordingly he hurried along the grassy slope, and then made his way down a precipitous zig-zag fissure in the sand hill below, till he found his feet rattling and limping over the stones of the beach.

Here he was amidst six or seven thousand people—many more than he had seen from above—some walking about, some sitting in long rows or in groups, on the damp shingles, some standing in knots—all speculating as to how soon it would now be before the great explosion. A few flag-staffs were planted, with several sentinels, to mark the line which no one was allowed to pass; and this line was very strongly marked besides by a dark crowd of the most fearless of the visitors. According to their several degrees of apprehension, the crowds were scattered over the beach at various distances, some of them being at least a mile and half off.

Sir Valentine, after an examination of all the bearings of the case, elected to have a place in the front row, close to the flagstaff; but, taking into consideration the possibility that the explosion might send up a great mass of fragments, which might come flying over that way, and crush numbers by their fall, he looked round to try and secure a retreat the instant he should see a black cloud of fragments in the air. The front line would not be able to retreat in time, because, being crowded, they would, in the panic of the moment, stumble over each other, and falling pell-mell, become an easy prey to the descending chalk. Sir Valentine, therefore, being not only an enthusiast, but also a man of foresight, took his post to the extreme right of the line, so that he could, if he saw need, retreat into the sea; to make sure of which, and at the same time to have an unimpeded view, he now stood half up to his knees in water.

It was three o'clock—the hour of doom for the chalk in its contest with gunpowder. A bugle sounded, and a movement of the sentries on the top of the rock was discerned by the thousands of eyes looking up from the beach. Many, also, who were above, suddenly thought they could better their positions by moving farther off. Below, on the beach, there was a hush of voices; not a murmur was heard. Everybody stood in his favourite attitude of expectation. All eyes were bent upon the lofty projecting cliff; and nearly every mouth was open, as if in momentary anticipation of being filled with an avalanche of chalk. Again a bugle sounded—and all was silence. Not a shingle moved.

Presently there was a low, subterranean murmur, accompanied by a trembling of the whole sea-beach—sea and all;—no burst of explosion; but the stupendous cliff was seen to crack, heave outwards, and separate in many places half-way down; the upper part then bowed itself forward, and almost at the same instant the cliff seemed to bend out and break at one-third of the way from the base, till, like an old giant falling upon his knees, down it sank, pitching at the same time head foremost upon the beach with a tremendous, dull, echoless roar. A dense cloud of white dust and smoke instantly rose, and obscured the whole from sight.

Everybody kept his place a moment in silence—the front line then made a rush onward—then abruptly stopped, bringing up all those behind them with a jerk. Who knows but more cliff may be coming down. In the course of half a minute the cloud of dust had sufficiently dispersed itself to render the fallen mass visible. It formed a sort of double hill about one-fifth of the height of the rocks above, the outer hill nearest the sea (which had been the head and shoulders of the fallen giant) being by far the largest. It was made up of fragments of all sizes, from small morsels, and lumps, up to huge blocks of chalk, many of which were two or three feet in thickness, intermixed with masses of the upper crust, having grass upon the upper surface.

Towards this larger hill of broken masses of chalk, the front rank of the crowd below, on the beach, now rushed. But after a few yards, they again stopped abruptly, bringing every body behind them bump up against their backs. Again, they moved on waveringly, when suddenly a small piece of cracked rock detached itself from above, and came rolling down. Back rushed the front line,—a panic took place, and thousands retreated, till they found the cliff was not coming after them, when they gradually drew up, faced about, and returned to the onset. At length it became a complete charge: the front rank made directly for the large broken mound, in the face of clouds of drifting chalk-dust, and fairly carried it by assault,—mounting over blocks, or picking their way round about blocks, or between several blocks, and through soft masses of chalk, and so upwards to the top,—two soldiers, three sailors, a boy, and Sir Valentine, being the first who reached it. Thereupon they set up a shout of victory, which was echoed by thousands from below. Fifty or sixty more were soon up after them; and one enthusiast, who had a very clever little brown horse, actually contrived to lead him up to the top, and then mounted him, amidst the plaudits of the delighted heroes who surrounded him. Every body, horse and all, was covered with the continual rain of chalk-dust. The heroes were all as white as millers.

It was almost as difficult to descend as it had been to get up. However, Sir Valentine managed to effect this with considerable alacrity, and made his way hastily across the field to the little "public," with intent to secure a fly, or other conveyance, before they were all occupied by the numbers he had left behind him on the beach. Nothing could be had: all were engaged. He walked onwards hastily, and was fortunate enough to overtake a large pleasure-cart, into which he got, and, after suffering the vexation of seeing every vehicle pass them, he at length arrived at the Newhaven railway station.

There, every body was in confusion, and no

information about the Express-train—for which Sir Valentine had a return ticket—could be obtained from any body. Nobody knew any thing. Meantime the crowd began to increase twofold.

Sir Valentine was dying with thirst. He made his way into a large waiting-room, and saw bottles of wine, and stout, and soda-water, bobbing and sailing over peoples' heads; but it was in vain to try and get near the window; and as to waiters, not a fellow or shadow of the kind was to be found. He was recommended to "try the tap" outside. Here it was still worse—though some fortunate individuals had, nevertheless, contrived to get drunk. Sir Valentine held up a shilling in the air for a glass of porter, till his arm was ready to drop off; and then he abandoned all hope.

"Have you heads upon your shoulders?" cried he to a tall young farmer who was leaning with his back against the wall:—"You want to make money with all your souls; and you are too stupid to know how, when the money is ready to be thrown into your mouths. Look at your tap, there? Look at all those struggling outside. Why should not a beer-cask, as easily as a water-cask, be set on a truck and wheeled out here—two or three of them—and so accommodate the public and take all the money that could be offered? But no; not you! not you! You want some clever Frenchman or German, to come and show you the way—the simple means—and then you'll bawl and scream against foreigners coming and taking the bread out of your mouth! Here have I, for instance—"

A whistle sounded from the railway platform, and Sir Valentine hurried away from the tall young farmer, who had just awoke to a belief that the gentleman was mad.

The confusion on the platform had by this time increased tenfold. A long train of carriages was there—and on the line or rail on the other side, there was another. But nobody could tell Sir Valentine which was the Express-train. This state of things continued at least a quarter-of-an-hour beyond the time when the Express-train ought to have started. At length a railway officer was able sufficiently to collect himself to listen to Sir Valentine, and inform him that this was the Express which was now going. Up and down struggled Sir Valentine amidst the crowd; but every first-class carriage was full of faces—all looking so comfortable and smiling, as he thrust his anxious face in at the windows. Finally, the whistle blew again, and in despair Sir Valentine scrambled into the only vacant seat remaining in one of the second-class carriages. The engine-whistle screamed, and onward they rolled.

"This is the way you treat gentlemen!" exclaimed he, looking round at his fellow-passengers. "You make them pay one pound four shillings for a first class Express-train—

and you oblige them to get into a second-class carriage!"

"In an Excursion-train!" drily added one of the passengers, a grazier, who was buttoned up to the chin in a grey duffel coat.

"The Excursion-train!" ejaculated Sir Valentine. There he stopped; partly for want of breath; partly from rage; but still more because of the ridicule he perceived he should encounter from his fellow-passengers. He therefore endeavoured to join in their laugh. "Ha, ha!" said he, in a hollow tone.

Arrived at Lewes, the train stopped. The stoppage continued a long time, and then the whole train was thrust backward at least a mile, when again it stopped. After another quarter-of-an-hour some of the passengers got out and looked about them. They informed their friends inside that the engine had been taken away. So, here stood the train in the bend of the railway, forming an immense crescent of carriages all crowded—with no apparent chance of advancing—and no explanation of the cause of the delay! The passengers now began to make all sorts of noises—shouts, hootings, hisses, whistles, yells, and stamping with the feet. Still, not a word of explanation from any officer or porter—indeed, only one or two appeared, and hurried away, refusing to reply to the simplest questions.

After half an hour of this "fun," a train came up on the furthestmost line. It paused a few minutes—then went on before the one which had been so long delayed.

"No doubt but that is the 'Express,'" said the man in the duffel coat.

The vociferations and noises now increased. The passengers banged with sticks against the panels of the carriages, and uttered screams and cat-calls innumerable. In the midst of this, up comes another train—also going to London. After waiting a few minutes, this also rolled onward. As it passed the dark, stationary crescent of carriages, all manner of yells, hisses, hoots, and ha-a-as of rage and disgust followed the happy train, the passengers of which answered by a victorious cheer.

This was too much to bear, and the deserted crescent now uplifted its voice in a most furious manner, and several of the most outrageous endeavoured to smash panels and seats with their sticks. At length somebody with heavy boots fell to drumming, and this gradually took a measured cadence, till all along these fifty or sixty compartments resounded the heavy drumming of a monotonous tune, with which the performers grew so pleased, that it put them into good humour, notwithstanding this abominable treatment, which they had now endured upwards of three-quarters of an hour.

Certainly, Englishmen as a mass are very ready to be pleased, and very good-natured under trying circumstances. Here, now, were

a set of men who had been uttering the most obstreperous noises, and were ready to commit violence; who yet, it was manifest, were in so good a frame of mind, that one word of reasonable explanation of the cause of this delay would have quieted them in a moment. "But no"—as Sir Valentine said—"No—this one word of reasonable explanation, is just the thing you will not give!" The train had been stationary, as described, a whole hour, by several watches.

A third train now came up, on the way to London. This time, the first to move was the long-suffering crescent, whose passengers, in passing the other train, gave a loud cheer of victorious triumph over them; which was answered by the crowd in the third class with a prolonging ba-a-ing and other lugubrious imitations of a train to Smithfield.

Nothing further occurred till the train paused near the London terminus, in order to take the passengers' tickets. When the guard came with his lanip, and received the tickets from Sir Valentine's carriage, he made a stop as he looked at the latter, and then said, with rather a suspicious look—"This is not correct!"

"You'll have to pay over again," said the man in the duffel coat.

"Correct!" exclaimed Sir Valentine, "Of course it's not correct. I paid one pound four for a first-class carriage in the Express-train; and here I am in a second-class carriage of the Excursion-train, in which these gentlemen have paid eight-and-fourpence! I'll thank you for the balance!"

"Well, well;" said the guard, with an easy, accommodating air, "I dare say this will do." And he moved on to the next carriage.

"This," said Sir Valentine, addressing the grazier in the duffel coat, "this is the cool way in which you impose upon the public! Whether you build a man a sea-wall, set up a small public-house, or carry people in a train to see a contest between gunpowder and chalk—Porter! Call Sir Valentine Saltair's carriage—You are never satisfied unless you have committed some stultified oversight, by which everybody is made uncomfortable and nobody benefited!"

"Then call it yourself!" said the porter.

A LESSON FOR FUTURE LIFE.

Every present holds a future in it,
Could we read its bosom secret right,
Could we see the golden clue and win it,
Lay our hand to work with heart and might.

True it is we shall not live in story,
But we may be waves within a tide,
That the human flood to near the glory,
That shall shine when we have toiled and died.

Therefore, though few praise or help or heed us,
Let us work—with head, or heart, or hand,
For we know the future ages need us,
We must help our time to take its stand.

That the after day may make beginning
Where our present labour hath its end;
So each age, by that before it winning,
To the following help in turn shall lend.

Each single struggle hath its far vibration,
Working results that work results again;
Failure and death are no annihilation,
Our tears, absorb'd, will make some future rain.

Let us toil on; the work we leave behind us,
Though incomplete, God's hand will yet embalm,
And use it some way: and the news will find us
In heaven above, and sweeten endless calm.

SPIDERS' SILK.

URGED by the increased demand for the threads which the silk-worm yields, many ingenious men have endeavoured to turn the cocoons of other insects to account. In search of new fibres to weave into garments, men have dived to the bottom of the sea, to watch the operations of the pinna and the common mussel. Ingenious experimentalists have endeavoured to adapt the threads which hold the mussel firmly to the rock, to the purposes of the loom; and the day will probably arrive when the minute thread of that diminutive insect, known as the money-spinner, will be reeled, thrown, and woven into fabrics fit for Titania and her court.

In the early part of last century, an enthusiastic French gentleman turned his attention to spiders' webs. He discovered that certain spiders not only erected their webs to trap unsuspecting flies, but that the females, when they had laid their eggs, forthwith wove a cocoon, of strong silken threads, about them. These cocoons are known more familiarly as spiders' bags. The common webs of spiders are too slight and fragile to be put to any use; but the French experimentalist in question, Monsieur Bon, was led to believe that the cocoons of the female spiders were more solidly built than the mere traps of the ferocious males. Various experiments led M. Bon to adopt the short-legged silk spider as the most productive kind. Of this species he made a large collection. He employed a number of persons to go in search of them; and, as the prisoners were brought to him, one by one, he enclosed them in separate paper cells, in which he pricked holes to admit the air. He kept them in close confinement, and he observed that their imprisonment did not appear to affect their health. None of them, so far as he could observe, sickened for want of exercise; and, as a gaoler, he appears to have been indefatigable, occupying himself catching flies, and delivering them over to the tender mercies of his prisoners. After a protracted confinement in these miniature Bastilles, the grim M. Bon opened the doors, and found that the majority of his prisoners had beguiled their time in forming their bags. Spiders exude their

threads from papillæ or nipples, placed at the hinder part of their body. The thread, when it leaves them, is a glutinous liquid, which hardens on exposure to the air. It has been found that, by squeezing a spider, and placing the finger against its papillæ, the liquid of which the thread or silk is made may be drawn out to a great length.

M. Reaumur, the rival experimentalist to M. Bon, discovered that the papillæ are formed of an immense number of smaller papillæ, from each of which a minute and distinct thread is spun. He asserted that, with a microscope, he counted as many as seventy distinct fibres proceeding from the papillæ of one spider, and that there were many more threads too minute and numerous to compute. He jumped to a result, however, that is sufficiently astonishing, namely, that a thousand distinct fibres proceed from each papillæ; and there being five large papillæ, that every thread of spider's silk is composed of at least five thousand fibres. In the heat of that enthusiasm, with which the microscope filled speculative minds in the beginning of last century, M. Leuwenhoek ventured to assert that a hundred of the threads of a full-grown spider were not equal to the diameter of one single hair of his beard. This assertion leads to the astounding arithmetical deduction, that if the spider's threads and the philosopher's hair be both round, ten thousand threads are not bigger than such a hair; and, computing the diameter of a thread spun by a young spider as compared with that of an adult spider, four millions of the fibres of a young spider's web do not equal a single hair of M. Leuwenhoek's beard. The enthusiastic experimentalist must have suffered horrible martyrdom under the razor, with such an exaggerated notion of his beard as these calculations must have given him. A clever writer, in Lardner's Cyclopædia, notices these measurements, and shows that M. Leuwenhoek went far beyond the limits of reality in his calculation.

M. Bon's collection of spiders continued to thrive; and, in due season, he found that the greater number of them had completed their cocoons or bags. He then dislodged the bags from the paper boxes; threw them into warm water, and kept washing them until they were quite free from dirt of any kind. The next process was to make a preparation of soap, saltpetre, and gum-arabic dissolved in water. Into this preparation the bags were thrown, and set to boil over a gentle fire for the space of three hours. When they were taken out and the soap had been rinsed from them, they appeared to be composed of fine, strong, ash-coloured silk. Before being carded on fine cards, they were set out for some days to dry thoroughly. The carding, according to M. Bon, was an easy matter; and he affirmed that the threads of the silk he obtained were stronger and finer than those of the silk-worms. M. Reaumur, how-

ever, who was dispatched to the scene of M. Bon's investigations by the Royal Academy of Paris, gave a different version of the matter. He found, that whereas the thread of the spider's bag will sustain only thirty-six grains, that of the silkworm will support a weight of two drachms and a half—or four times the weight sustained by the spider-thread. Though M. Bon was certainly an enthusiast on behalf of spiders, M. Reaumur as undoubtedly had a strong predilection in favour of the bombyx; and the result of these contending prejudices was, that M. Bon's investigations were overrated by a few, and utterly disregarded by the majority of his countrymen. He injured himself by rash assertions. He endeavoured to make out that spiders were more prolific, and yielded a proportionably larger quantity of silk than silkworms. These assertions were disproved, but in no kindly spirit, by M. Reaumur. To do away with the impression that spiders and their webs were venomous, M. Bon not only asserted, with truth, that their bite was harmless, but he even went so far as to subject his favourite insect to a chemical analysis, and he succeeded in extracting from it a volatile salt which he christened Montpellier drops, and recommended strongly as an efficacious medicine in lethargic states.

M. Bon undoubtedly produced, from the silk of his spiders, a material that readily absorbed all kinds of dyes, and was capable of being worked in any loom. With his carded spider's silk the enthusiastic experimentalist wove gloves and stockings, which he presented to one or two learned societies. To these productions several eminent men took particular exceptions. They discovered that the fineness of the separate threads of the silk detracted from its lustre, and inevitably produced a fabric less refulgent than those woven from the silkworm. M. Reaumur's most conclusive fact against the adoption of spider's silk as an article of manufacture, was deduced from his observations on the combativeness of spiders. He discovered that they had not arrived at that state of civilisation when communities find it most to the general advantage to live on terms of mutual amity and confidence; on the contrary, the spider-world, according to M. Reaumur (we are writing of a hundred and forty years ago), was in a continual state of warfare—nay, not a few spiders were habitual cannibals. Having collected about five thousand spiders (enough to scare the most courageous old lady), M. Reaumur shut them up in companies varying in number from fifty to one hundred. On opening the cells, after the lapse of a few days, "what was the horror of our hero," as the graphic novelist writes, "to behold the scene which met his gaze!" Where fifty spiders, happy and full of life, had a short time before existed, only about two bloated insects now remained—they had devoured their fellow spiders! This horrible

custom of the spider-world accounts for the small proportion of spiders in comparison to the immense number of eggs which they produce. So formidable a difficulty could only be met by rearing each spider in a separate cage; whether this separation is practicable—that is to say, whether it can be made to repay the trouble it would require—is a matter yet to be decided.

Against M. Bon's treatise on behalf of spider's silk, M. Reaumur urged further objections. He asserted, that when compared with silkworm's silk, spider's silk was deficient both in quality and in quantity. His calculation went to show that the silk of twelve spiders did not more than equal that of one bombyx; and that no less than fifty-five thousand two hundred and ninety-six spiders must be reared to produce one pound of silk. This calculation is now held to be exaggerated; and the spirit of partisanship in which M. Reaumur's report was evidently concocted, favours the supposition that he made the most of any objections he could bring to bear against M. Bon.

M. Bon's experiments are valuable as far as they go; spider's silk may be safely set down as an untried raw material. The objections of M. Reaumur, reasonable in some respects, are not at all conclusive. It is of course undeniable that the silkworm produces a larger quantity of silk than any species of spider; but, on the other hand, the spider's silk may possess certain qualities adapted to particular fabrics, which would justify its cultivation. At the Great Industrial Show, we shall probably find some specimens of spider's silk: such contributions would be useful and suggestive. The idea of brushing down cobwebs to convert them into hall-room stockings, forces upon us the association of two most incongruous ideas; but that this transformation is not impossible, the Royal Society, who are the possessors of some of M. Bon's spider-fabric, can satisfactorily demonstrate.

FATHER GABRIEL; OR, THE FORTUNES OF A FARMER.

A BACHELOR's station in the Bush, or even a bachelor's farm, is generally a wretched place. Founded to make money and nothing else, decency and comfort are little cultivated. A rude bark-covered hut for the overseer or master; another, still ruder, for the servants; the ground bare beaten with the feet of cattle, not a vestige of garden, although the soil be ever so fertile. A stockyard, ankle deep in dust, are the usual characteristics. The head of the station being a young man, who may often be found, dirty, barefooted, in his shirt sleeves, sitting alone, in melancholy state, on an old tea-chest, with a mess of salt meat and tea without milk before him, longing for a visit from a neighbour or traveller, without books or newspapers, obliged, if he would keep up

his authority, to hold very little communication with his men.

As for the men, harassed and haggard looking, ragged, unshaven, unwashed, they crowd together in an evening, perhaps fifteen or twenty in number, smoking, and swearing, and jabbering with two or three black gins, their only female companions, purchased, stolen, or strayed from a neighbouring tribe. But on the stations of married squatters, or where small settlers of a good sort have settled either on grants or purchases as dairy and grain-growing farmers, a very different sight is presented,—wives and gardens, children and green vegetables, improve the fare, the scenery, and the society. Thank heaven, every day fixity of tenure is making its way, and in a few years there is no reason why pastoral Australia, with immense advantages of climate, should not resemble that pastoral Scotland whose domestic virtues have afforded so many exquisite pictures for poets and romancers.

When I first landed in the Colony, agriculture was reckoned very low, the Highland spirit of contempt for rural toil had descended on our nomadic aristocracy. Not being bred to it, I could not share the feeling; and after months of men-companions, and salt meat and damper fare, grateful to my eyes was the view of what I will call (to mention real names would not be fair) "Father Gabriel's Happy Valley." A bright oasis, that within the memory of the oldest settler had not been touched by drought; green, and corn-waving, when all around the other side of the range was brown and barren; cheerful and alive too, with fat children running and riding in lay, for children with us ride almost as soon as they walk; handsome young wives, and nicely old women busy washing under the verandahs of their cottages, or in their gardens, or making cheese in the open air under a great tree, converted into part of a machine for cheese pressing.

From a great field of oaten hay, "The mowers' scythes sent back a flickering silver sheen," where Father Gabriel, a hale old man, led the way before a long string of sons and sons-in-law, while the little ones followed and bound the sheaves. It was almost a home scene, beneath a brighter sun and clearer blue sky than is ever found in England.

Father Gabriel, having been one of the early free-farmer settlers, had obtained a grant in this favoured spot, and made the most of it by growing wheat in increasing quantities, which during a four years' drought, he sold at 14s. and 15s. a bushel. With the help of a long family he became really rich; but instead of turning "gentleman," after the vulgar colonial fashion, or entering into wild speculations, he had pursued his plain Yeoman style of life, collecting round him as many as possible of his neighbours from his native country, so that he had formed a sort of

North-country settlement, cut off by barren land and rocky ranges, from near contact with smaller stations, until they pushed on beyond them. He and his friends had built a stone chapel, from which on Sundays the powerful voice of Father Gabriel might be heard expounding the Scriptures, something in the manner of a Presbyterian of Cromwell's day. He discontinued this practice when a dissenting minister reached the district a few years after my arrival. This chapel was very like a barn, roofed with wood slabs or shingles; being the only stone building in the district, it used to be very much admired. During service there were sometimes fifteen or twenty horses, with a fair share of side-saddles, tied up in waiting, belonging to families who had ridden ten and even twenty miles, to service. But they were seldom allowed to return any great distance without sharing the hospitality of the elders.

I made the acquaintance of one of the sons, (the old man had twelve children, and twice that number of grandchildren) at a Kangaroo hunt, and we became intimate, as he was always asking questions about England, English farming, English sports, and I was glad to learn Bushmanship, in which Kit Gabriel was a perfect master. One day he asked me over to a shearing feast. We had to cross a country, which I will describe, because it is a fair specimen of the grand but monotonous scenery of Australia. I love Australia; there I spent my happiest days, triumphing over the ill-fortune that drove me from England; there I found friends of the warmest and truest; there I quaffed deep the cup of hospitality, and found no dregs. With that bright land are associated the memory of cheerful days of toil and nights of harmless revelling, of delicious gallops over far rolling plains, of slow-pacing rides through masses of silent forest, of thought-inspiring reveries, within sight and sound of the broad calm waters of the Pacific. But although I can recall scenes of horrid grandeur, worthy of the pencil of Salvator, and of wild joyous beauty, to which even the imagination of a Turner or Danby could scarcely do justice, I must own that the sameness of the scenery for hundreds of miles, and still more, the sameness of the evergreen foliage, except in the tropical zones, and the absence of perfect cultivation, renders the greater part of Australia inferior in natural beauty, and the power of calling up pleasing associations, to the districts of England, where wild scenery and high cultivation may be viewed at one glance beneath a summer or autumnal sun. As, for instance, in Derbyshire, with its rose-covered cottages and wood-crowned hills; in Nottinghamshire, with its trim farms and forests of old oak; in Gloucestershire, with its green valleys streaked with silver streams, where even the fulling mill and the factory, become picturesque. And then, again, Australia has no Past:—but she has a Future,

and it should be the endeavour of every colonist to make that Future read well.

But to return to my ride. Our way lay over a hard sand-track; on one side, a river, or rather chain of pools; on the other, steep hills (Colonially, *ridges*), covered with Australian Pine—a beautiful tree, with excellent qualities for working freely, with a colour and smell like sandal-wood, but useless for house use, as it breeds vermin. After an hour, we turned up stony ridges, thinly sprinkled with iron-bark-trees for three miles, until the range broke off short, in sight of a broad creek, which we forded, and, leaving the river, rode over undulating ground, timbered with box and iron-bark; then over a thickly-wooded, sandy, scrubby ridge, at the end of which our course lay for a mile through an open box forest, beautifully grassed, like an English meadow, which opened upon a splendid plain, as thinly dotted with trees as a nobleman's park, which extended almost as far as the eye could reach, until, just on the horizon before us, appeared a dark boundary line, formed by a dense forest. But after riding several miles, during which we were constantly, but almost imperceptibly, descending, we came to a river never known to fail.

It was in a valley, intersected by this river, that Father Gabriel's settlement lay. Soon we could hear the lowing of the heifers, answered by their calves in the home-station pens; the swash-swashing of an oxen-driven threshing-machine, a recent investment of the patriarch's; and presently, amid other farm-yard sounds, the shrill moaning of a fiddle. I don't know which was most pleasant and homelike. A lot of horses, still hot, with saddle-marks, in a paddock; two young fellows and a girl in a nankin habit, cantering in front of us; and a lot of men, washed, shaved, and in holiday costume, gave notice of the gathering.

A young Bushman, in his broad-leaved hat, with two yards of taffeta flying; his brown, intelligent face, hair, beard, and moustachios neatly trimmed; blue or red woollen shirt, loose trousers, broad belt; seated like a centaur on his half-bred Arab; is, perhaps, as picturesque a figure as you may see anywhere in a voyage round the world. On this afternoon, not one, but some dozen such, were at the gathering.

We passed the chapel, and came in sight of the house, planted on a declivity, in sight of the river, but out of reach of winter's floods: a composite building, which first consisted of a mere hut and garden; then grew, by addition, to a good, six-roomed, one-storied cottage, of sawn boards, with glazed windows, a verandah all round, covered with beautiful creepers, eventually increased by a large double room of stone, the work of the stone-mason colonist, who, having easy-working material within reach, thus paid off a debt to Father Gabriel. It was most comfortable, convenient, and spacious as a barrack; but,

as a whole, I never saw anything like it, before or since.

From a detached kitchen, on the side of the original hut, with a monstrous chimney, came a delicious smell and flare of wood-fire, accounting clearly for the excessive warmth of the fat woman cook—a rare and blessed sight—who, surrounded by male and female assistants, was at that moment engaged in fanning herself with an old cabbage-tree hat.

A twinge of mortification shot through me as I looked down on my patched fustians, and regretted too late the snow-white ducks and sky-blue plaid shooting-jacket which lay neglected at the bottom of a sea-chest.

The shearing was concluded. The wool of twenty thousand head had been washed, clipped, sorted and packed, and the Clan Gabriel were gathered together with all friends and neighbours within seventy miles, who could spare time to celebrate a feast at the house with the best garden on that side the Blue Mountains. Father Gabriel towered even among the tall Australians, but one could distinguish at a glance the British from the Colonial born of his family; slight, fair, and small-featured were the younger brood as compared with the elder. Father Gabriel had one of those faces and forms you often see in the wolds of Yorkshire; powerful, large limbed, broad chested, with rather high cheek bones, a ruddy complexion, which the Australian sun had not been able to burn out; a bold hooked nose, eyes grey, and rather larger and less cunning in expression than most men of the same stamp; hair, whiskers, and eyebrows almost grey; a bold, capacious forehead gave benevolence to a countenance which would otherwise have been chiefly distinguished, like his fellow countrymen, by acuteness. Hard work and the climate seemed to have melted every ounce of fat out of a frame that, at his age, we commonly find full and fleshy, if not unwieldy. His wife was delightful; little, plump, active, of middle age, perfectly fair, without wrinkle, and with smooth, auburn hair without a touch of grey, that kind of hair that never gets grey, and a mouth full of unspecked teeth, an advantage which several of her married daughters could not boast. A better looking lot I never saw. The women were all clustering round a stranger cousin from England; the men, I grieve to own, just as they do in England, were gathered all together discussing stock, the merits of their horses, and the price of wool. Two little boys, the eldest not ten years of age, who had been tailing cattle all day, galloped up after us, Bushmen in miniature.

As dusk came on, the room, which went clear up to the roof, rough and unfinished, was lighted with home-made dips, stuck in bottles and bark sconces.

Presently the tuning I had heard on arrival recommenced from a corner. Mr. Budge, blacksmith and clerk, the universal genius of the settlement, took up his beloved bass, which

unglued and flat, had travelled all the way from "the North Countree," and recommenced the concert our presence had interrupted. Polly Gabriel, his god-child and favourite, a sweet little thing in the bloom of fifteen, tucked a violin under her chin. Bob Grundy, bootmaker and shepherd, blew away on the flageolet, while Jack Rackrow, an evergreen veteran pensioner of engineers, farmer and joiner, drew shrill notes from a home-made tin instrument, a cross between a penny-whistle and piccolo flute.

One, two, three, four, reels were formed, and off we went in double quick time, for by instinct I soon joined, as by degrees did a good many, without distinction of age or station; Mother Gabriel, as active as any; Dora O'Grady, the red-headed maiden, in a red and yellow gown without shoes or stockings. Famously we jigged, thumped the floor, and snapped our fingers, and wonderful were the steps in toe-and-heel, and weave-the-blanket, there and then performed, amid due shouting, while at door and window, with large admiring eyes, the shepherds and other Bush servants looked on approvingly, as may be seen when polka is performed in some English manor-house; the balance of surprise and admiration being however with our Bushmen. Then we changed to country dances; up the middle and down again; and all the company, but two or three elders, including a little, lame, old man, with a crutch-handled stick, got in motion, and it did strike me that one or two of the outsiders joined in a sort of voluntary accompaniment at the door end of the room. When I pulled up in my turn, red and breathless, I was close to the musicians, rare birds in the Bush, and this lot right-down enthusiasts. Little Polly, her eyes sparkling, her cheeks glowing, her brown curls hanging all manner of ways, cuddled her fiddle as if she loved it, and ran up and down the strings with the tapereast, if not the whitest fingers that ever patted butter,—lost to dances and admirers, everything but her own music,—but, while Budge sawed away as solemnly and earnestly as if he had been blowing his own bellows, and Grundy blew as if his life depended on his exertions, Jack Rackrow found time to admire his own performance and give directions as to the figures, to which no one paid the least attention. "I'm blessed," I heard one of the Stockmen say, "if I b'lieve the governor and the bishop have got such music." And all the bye-standers seemed of the same opinion, in which, indeed, I fully agreed.

All things must have an end, so did the dancing, from sheer exhaustion; then came supper: the table, sheets of bark laid on bushes, on which, ranged in glorious profusion, were mutton chops, boiled beef, honey, potatoes, melons, grapes, pumpkin pie, eels, parrot pie, figs, roast piglings, and dampers a yard in diameter, serving often for bread and plates too. Jars of tea, strong and sweet; bowls

of milk, and a cask of wine, home-made wine, formed the drinkables: rum, which on such occasions is usually introduced as a treat, being excluded by the scruples of our hosts. In compliment to me, as a stranger, a bottle of port was uncorked, its cost exceeding old crusty Port at a Richmond dinner. When I add that every man pulled out his own clasp-knife, that only six forks could be mustered, and that no particular order was observed in the eating, I have said everything. Soon after supper, the ladies retired; the men took their smoke; those living near saddled up, the far away ones unrolled their blankets and stretched out on the floor. Before and since I have attended balls and suppers more refined, but never so enjoyable, because it was a real luxury, no other Bush-establishment having so much music or so many pretty girls for partners.

The next day a party set out to form a new station in the interior, which had been previously explored. The sheep, in two flocks of six hundred each, had gone forward two days previously. The young men having come up from Father Gabriel's out-stations, there was a great gathering. The head of the party was Harry Granby, husband of Polly Gabriel's sister Myra. The old folks had contributed fortunes for the young people in stock, and they had determined to push on quite outside the furthest stations on ground lately discovered.

Two bullock drays were loaded with everything needed for a station. The little old lame man, with the crutch-handled stick, came up riding a half-bred Timor pony, with a pair of draught bullocks, which he insisted on presenting to the young couple as regular "good uns," instead of a pair that seemed not quite steady. A mixed herd of six hundred head of cattle were collected in a stock-yard, to go forward under charge of Granby's brother, one of the young Gabriels, and an experienced stockman, with four volunteers; the other splitters and fencers and servants had gone with the sheep.

The strangest sight, and the prettiest, was Myra Granby on her grey mare, with a great yearling colt running alongside, all ready with blankets, tin pots, holster, and provision-bags, strapped on, to march into the interior. Contrary to all precedent, a shepherd's wife, riding on one of the drays, was the only other woman. This move of Myra's created a universal outcry, but she made no answer to the last words, except cracking her stock-whip: and, looking at her firm, though rosy, mouth, and very decided eyebrows, it was clear that when Myra made up her mind, Harry had nothing to do but give way.

Amid the prayers of the fathers and mothers, good wishes of the young ones, a volley of old shoes from Dora and Molly the maid-servants, the reports of the bullock-drivers' whips, the shouts of the stockmen, and the barking of the cattle-dogs,—the

party moved off into the wilderness. To see them winding along in the distance, was almost a scene from the days of Abraham and Lot.

As the last straggler passed over the brow of the range, "There," said Father Gabriel, "there, young gentleman, that's the way we swarm off our young bees in this country. No landlord, no rent worth speaking of, no taxes. But come, let us mount and see my farm."

The skill and industry of a North-country farmer, with a large supply of labour in his own family, applied to fertile soil, ready for the plough without clearing, under a climate without winter and without droughts, had done wonders. The crops were splendid; but, to an eye accustomed to good Scotch or English farming, everything seemed rude, slovenly, and unfinished. But, as the old man truly observed, "Good, neat farming, don't pay in a colony: labour is dear, and land cheap. A crop might be got out of five acres while you were stumping one acre. For the same reason, no man can make a living as a farmer who cannot work with his own hands, and get help in his own family. Gentlemen like you, sir, should keep to squatting with sheep or cattle; and then, if you look after your men, you can do. Spend nothing you can help, and do all you can for yourself. That's the secret of Colonial success."

"I have spent more time and labour on my garden than is the custom in the colony, but then I wished to keep my family round me, and for years only hired two men; I with my sons did all the rest. We began our garden on the same day as our hut, and we eat our own cabbage and bacon the first year."

Thus chatting, we reached an eminence, where I could look down on the wild and reclaimed land, "A lovely scene," I observed; "how bright and clear everything comes out under these cloudless skies."

"Why yes," said Father Gabriel, "it does look very pretty; and perhaps you might have liked it even better the first time I saw it; the grass breast high, full of kangaroos, and the water holes alive with black swans and pelicans: but pretty as it was, I can assure you it made my heart sore to think I had brought my family into such a wilderness, so lonely, surrounded by bloodthirsty savages, so far from help, and such a deal of new kind of work to do before I could make it anything like the place where we were all reared. If my old woman had not had a good heart, and the young ones been all such hard-bitten ones and hopeful, I think I should never have pulled through. There were not many immigrants in those days, and England seemed a great deal further off than it does now. But, thank God, I would not change places now with the owner of Brancepeth Castle."

"But," said I, "you speak so fondly of Old England; you seem so glad to welcome any

English face, whether from the north or south; that I almost wonder you could ever find heart to leave home, especially as people were not crowding out as they are now, fancying fortunes are to be picked up on the beach?"

"Why, that's true, it was a wonder; I'm astonished, although I've never been sorry since my son Ralph helped me to fell the first tree; but the fact is, I came for the only reason that a man ever ought to leave his country, to my thinking—because I was going down hill fast, with a long family coming, and in an evening sitting over the fire, trying to make out what would be left after rent was paid, I used to think I could see a gaol or a workhouse in the hot coals."

The Patriarch then told me his story, which I will tell to the reader in another paper.

A GERMAN PICTURE OF THE SCOTCH.

SOME notion of what stands for an Englishman on the Continental stage was conveyed to our readers in the last number of our first volume; we are now enabled to add a few faint lines of such a portrait of Scotchmen, as obtains currency and credence amongst the Germans.

A new play was, about the time we were writing the former article, produced at the principal theatre of Vienna. The scene is laid in St. Petersburg; the real hero is a little animal, known to dog-fanciers as a Scotch terrier; but the nominal chief character is a banker from Glasgow, named Sutherland. He had failed in his native place, but in Russia he became a great man; for he was the favourite money-dealer of the Empress Catherine.

We all know the strength of a Scotch constitution, but we also know the severity of a St. Petersburg winter: yet Mr. Sutherland presents himself to his audience, amidst the frozen scenery of that ice-bound city, in what is believed abroad to be the regular everyday costume of a citizen of Glasgow; namely a kilt, jack boots and a cocked hat, with a small grove of funereal feathers. Mr. Sutherland, despite his scanty nether costume, appears to be in excellent health and spirits. He has thriven so well in the world that, in accordance with a tolerably correct estimate of the Caledonian national character, his relations at home begin to pay court to him and to send him presents. One indulges him with the hero of the piece; the small, ugly, irate, snuffy, quadruped before mentioned. The Banker takes it with a good-humoured "Pish!" little dreaming of the important part the little wretch is destined to play. He had scarcely received the gift when the Empress passes by, sees the dog, and desires to possess it, while the grateful Sutherland is

too glad to be able to gratify a royal caprice at so light a cost.

She, in the fervency of her gratitude, named the dog after the donor—a great compliment.

Alas! one day, the dog, who had eaten too plentifully of *zucchrème* (chicken stewed with truffles), was seized with apoplexy and died; though not without suspicion of having been poisoned by the prime minister, a piece of whose leg he had digested the day before. The Empress sighed far more over the loss of her dog, than she would have done for that of the minister. The one might have been easily replaced; she knew at least twenty waiting open-mouthed for the vacancy. But who could replace her four-footed friend!—she mourns him as a loss utterly irreparable. She orders the greatest mark of affectionate respect it is possible to show to be performed on the dead terrier.

The scene changes; it is night. The fortunate banker is seated at dessert, after an excellent dinner of "mutton rosbif," and "hot-a-meale pour-ridges, and patatas," indispensable to a North Briton; his legs are crossed, his feet rest upon a monstrous fender, which he takes care to inform us he has received from England, as he sits sipping his "sherri port bier," and soliloquising pleasantly over the various chances of his life. He is just about to finish his evening with some "croc," the English name for the pleasant invention of Admiral Grogan; his servant enters, to announce that the chief executioner with a file of soldiers have just dropped in, to say a word on a matter of business from the Empress.

The awful functionary, on stalking into the room, exclaimed, "I am come—"

"Well, I see you are," replied the Banker, trying to be facetious, but feeling like a man with a sudden attack of ague.

"By command of the Empress!"

"Long may she live!" ejaculates Sutherland, heartily.

"It is really a very delicate affair," says the executioner; who, like the French Samson, is a humane man; "and I do not know how to break it to you."

"Oh, pray, don't hesitate. What would you like to take?" asked the Banker, spilling the grog he tried to hand to the horrid functionary, from sheer fright.

The Envoy shakes his head grimly. "It is what we must all come to some day," he adds, after a short pause.

"What is? In Heaven's name do not keep me longer in suspense!" cries the Banker, his very visible knees knocking together with agonising rapidity.

"I have been sent," answers the awful messenger; again he stops—looks compassionately at his destined victim.

"Well!"

"By the Empress!"—

"I know!"

"To have you!"—

"What?"

"Stuffed!" saith the Executioner mournfully.

The Banker shrieked.

"Stuffed!" repeats the man, laconically pointing to a bird in a glass case, to prevent there being any mistake in Sutherland's mind as to the nature of the operation he is to be called upon to undergo."

The Executioner now lays his hand significantly on poor Sutherland's collar, and looks into his face as if to inquire if he had any particular or peculiar fancy as to the mode in which he would like to go through the preparatory operation of being killed.

"I have brought the straw," he says, "and two assistants are without. The Empress cannot wait; and we have not got your measure for the glass case yet."

The Banker looks the very picture of abject misery; but Britons in foreign comedies, are always ready to buy everything, and the Banker had lived long enough in Russia to know the value of a bribe. He therefore offers one so considerable, that his grim visitor is touched, and endeavours to lull his sense of duty to sleep by a sophistry.

"I was told, indeed, to have you stuffed," he reasons, "and got ready for the Empress; but nothing was said about time; so I don't mind giving you half-an-hour if you can satisfy these gentlemen—and he turns to his associates.

It is briefly done. The Banker pays like a man whose life depends on his liberality—we suppose several millions—for the Executioner remarks that he cannot forget that a groom in England frequently receives several thousands sterling a year; this is a very prevalent idea among the Frankish and Teutonic nations of the Continent. We once heard a Spanish general assert, in a large assembly, that the usual pay of an English ensign was five hundred pounds a month, an idea doubtless derived from some Iberian dramatist; and therefore a public functionary like the Executioner must be remunerated proportionably higher. The enormous pecuniary sacrifice gets for Sutherland some half-hour's respite; which he wisely uses by flying to the British Ambassador, Sir Bifstik, and awaits the result with great anguish.

Sir Bifstik goes to the Empress. He is admitted. He asks if Her Majesty be aware of the position of a British subject named Sutherland?

"Excellent man," says Her Majesty, "No! What is it?"

Sir Bifstik bows low at the tones of the Imperial voice, and now begins to explain himself with something more than diplomatic haste; thinking, perhaps, that already the fatal straw may be filling the Banker's members.

Imperial Catherine does not, of course, consider the putting to death of a mere Scotch

Banker, and making him in reality what some of his brethren are sometimes called figuratively—a man of straw—worth "this fuss"; and sets the ambassador down in her mind as a person of wild republican ideas, who ought to be recalled as soon as possible by his Government, and placed under proper surveillance; but nevertheless, she causes some enquiries to be made, and learns that it is in consequence of her having ordered "Sutherland" to be stuffed that he is probably then undergoing that operation.

Sir Bifstik expresses such horror and consternation at this intelligence, that the Empress believes his mind to be disordered.

"What possible consequence can the accidental stuffing of a Scotch banker be to you, milor?" she saith.

"The acci-den-tal stuff-ings of a Scotcher Bankers!" in a German idiom not generally used by our nobility, gasps Sir Bifstik, mechanically, with pale lips and bristling hair.

"Take him away! He is mad!" screams the Empress, thinking that no sane person could be concerned about such a trifling affair, and in another moment the most sacred of international laws would have been violated (on the stage), and Great Britain insulted by profane hands being laid on the person of her ambassador, when all at once a light breaks over the mind of Her Majesty;—the recalling of something forgotten. She exclaims, with a Russian *nonchalance* quite cheering to behold, "Oh, I remember; now it is easily explained. My poor little dog (I had forgotten him too) died yesterday, and I wished his body to be preserved. *Cher chien!* His name was the same as that of the Banker, I think. Alas! that cruel Death should take my dog!"

"But Mr. Sutherland has, perhaps, already been murdered!" gasps the ambassador. "I pray that your Majesty will lose no time in having him released, should he be still alive!"

"Ah, true! I never thought of that," returns the Empress.

The order is finally issued and Sutherland rescued, just as the Executioner, grown angry at his unreasonable remonstrances, resolves to delay no longer in executing the Imperial commands. To put the *coup-de-grace* on the comic agony of the poor banker, his immense red crop of hair has, in that half hour of frightful uncertainty, turned white as snow!

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 30.]

SATURDAY, OCTOBER 19, 1850.

[PRICE 2d.]

A POOR MAN'S TALE OF A PATENT.

I AM not used to writing for print. What working-man that never labours less (some Mondays, and Christmas Time and Easter Time, excepted) than twelve or fourteen hour a day, is? But I have been asked to put down, plain, what I have got to say; and so I take pen-and-ink, and do it to the best of my power, hoping defects will find excuse.

I was born, nigh London, but have worked in a shop at Birmingham (what you would call Manufactories, we call Shops), almost ever since I was out of my time. I served my apprenticeship at Deptford, nigh where I was born, and I am a smith by trade. My name is John. I have been called "Old John" ever since I was nineteen year of age, on account of not having much hair. I am fifty-six year of age at the present time, and I don't find myself with more hair, nor yet with less, to signify, than at nineteen year of age aforesaid.

I have been married five and thirty year, come next April. I was married on All Fools' Day. Let them laugh that win. I won a good wife that day, and it was as sensible a day to me, as ever I had.

We have had a matter of ten children, six whereof are living. My eldest son is engineer in the Italian steam-packet "Mezzo Giorno", plying between Marseilles and Naples, and calling at Genoa, Leghorn, and Civita Vecchia. He was a good workman. He invented a many useful little things that brought him in—nothing. I have two sons doing well at Sydney, New South Wales—single, when last heard from. One of my sons (James) went wild and for a soldier, where he was shot in India, living six weeks in hospital with a musket ball lodged in his shoulder-blade, which he wrote with his own hand. He was the best looking. One of my two daughters (Mary) is comfortable in her circumstances, but water on the chest. The other (Charlotte), her husband run, away from her in the basest manner, and she and her three children live with us. The youngest, six year old, has a turn for mechanics.

I am not a Chartist, and I never was. I don't mean to say but what I see a good many public points to complain of, still I

don't think that 's the way to set them right. If I did think so, I should be a Chartist. But I don't think so, and I am not a Chartist. I read the paper, and hear discussion, at what we call "a parlor" in Birmingham, and I know many good men and workmen who are Chartists. Note. Not Physical force.

It won't be took as boastful in me, if I make the remark (for I can't put down what I have got to say, without putting that down before going any further), that I have always been of an ingenious turn. I once got twenty pound by a screw, and it's in use now. I have been twenty year, off and on, completing an Invention and perfecting it. I perfected of it, last Christmas Eve at ten o'clock at night. Me and my wife stood and let some tears fall over the Model, when it was done and I brought her in to take a look at it.

A friend of mine, by the name of William Butcher, is a Chartist. Moderate. He is a good speaker. He is very animated. I have often heard him deliver that what is, at every turn, in the way of us working-men, is, that too many places have been made, in the course of time, to provide for people that never ought to have been provided for; and that we have to obey forms and to pay fees to support those places when we shouldn't ought. "True," (delivers William Butcher), "all the public has to do this, but it falls heaviest on the working man, because he has least to spare; and likewise because impediments shouldn't be put in his way, when he wants redress of wrong, or furtherance of right." Note. I have wrote down those words from William Butcher's own mouth. W. B. delivering them fresh for the aforesaid purpose.

Now, to my Model again. There it was, perfected of, on Christmas Eve, gone nigh a year, at ten o'clock at night. All the money I could spare I had laid out upon the Model; and when times was bad, or my daughter Charlotte's children sickly, or both, it had stood still, months at a spell. I had pulled it to pieces, and made it over again with improvements, I don't know how often. There it stood, at last, a perfected Model as aforesaid.

William Butcher and me had a long talk, Christmas Day, respecting of the Model. William 's very sensible. But sometimes

cranky. William said, "What will you do with it, John?" I said, "Patent it." William said, "How Patent it, John?" I said, "By taking out a Patent." William then delivered that the law of Patent was a cruel wrong. William said, "John, if you make your invention public, before you get a Patent, anyone may rob you of the fruits of your hard work. You are put in a cleft stick, John. Either you must drive a bargain very much against yourself, by getting a party to come forward beforehand with the great expenses of the Patent; or, you must be put about, from post to pillar, among so many parties, trying to make a better bargain for yourself, and showing your invention, that your invention will be took from you over your head." I said, "William Butcher, are you cranky? You are sometimes cranky." William said, "No John, I tell you the truth;" which he then delivered more at length. I said to W. B. I would Patent the invention myself.

My wife's brother, George Bury of West Bromwich (his wife unfortunately took to drinking, made away with everything, and seventeen times committed to Birmingham Jail before happy release in every point of view), left my wife, his sister, when he died, a legacy of one hundred and twenty-eight pound ten, Bank of England Stocks. Me and my wife had never broke into that money yet. Note. We might come to be ok, and past our work. We now agreed to Patent the invention. We said we would make a hole in it—I mean in the aforesaid money—and Patent the invention. William Butcher wrote me a letter to Thomas Joy, in London. T. J. is a carpenter, six foot four in height, and plays quoits well. He lives in Chelsea, London, by the church. I got leave from the shop, to be took on again when I come back. I am a good workman. Not a Teetotaler; but never drunk. When the Christmas holidays were over, I went up to London by the Parliamentary Train, and hired a lodging for a week with Thomas Joy. He is married. He has one son gone to sea.

Thomas Joy delivered (from a book he had) that the first step to be took, in Patenting the invention, was to prepare a petition unto Queen Victoria. William Butcher had delivered similar, and drawn it up. Note, William is a ready writer. A declaration before a Master in Chancery was to be added to it. That, we likewise drew up. After a deal of trouble I found out a Master, in Southampton Buildings, Chancery Lane, near Temple Bar, where I made the declaration, and paid eighteenpence. I was told to take the declaration and petition to the Home Office, in Whitehall, where I left it to be signed by the Home Secretary (after I had found the office out) and where I paid two pound, two, and sixpence. In six days he signed it, and I was told to take it to the Attorney-General's chambers, and leave it there for a report. I

did so, and paid four pound, four. Note. Nobody, all through, ever thankful for their money, but all uncivil.

My lodging at Thomas Joy's was now hired for another week, whereof five days were gone. The Attorney-General made what they called a Report-of-course (my invention being, as William Butcher had delivered before starting, unopposed), and I was sent back with it to the Home Office. They made a Copy of it, which was called a Warrant. For this warrant, I paid seven pound, thirteen, and six. It was sent to the Queen, to sign. The Queen sent it back, signed. The Home Secretary signed it again. The gentleman throwed it at me when I called, and said, "Now take it to the Patent Office in Lincoln's Inn." I was then in my third week at Thomas Joy's, living very sparing, on account of fees. I found myself losing heart.

At the Patent Office in Lincoln's Inn, they made "a draft of the Queen's bill," of my invention, and a "docket of the bill." I paid five pound, ten, and six, for this. They "engrossed two copies of the bill; one for the Signet Office, and one for the Privy-Seal Office." I paid one pound, seven, and six, for this. Stamp duty over and above, three pound. The Engrossing Clerk of the same office engrossed the Queen's bill for signature. I paid him one pound, one. Stamp-duty, again, one pound, ten. I was next to take the Queen's bill to the Attorney-General again, and get it signed again. I took it, and paid five pound more. I fetched it away, and took it to the Home Secretary again. He sent it to the Queen again. She signed it again. I paid seven pound, thirteen, and six, more, for this. I had been over a month at Thomas Joy's. I was quite wore out, patience and pocket.

Thomas Joy delivered all this, as it went on, to William Butcher. William Butcher delivered it again to three Birmingham Parlors, from which it got to all the other Parlors, and was took, as I have been told since, right through all the shops in the North of England. Note. William Butcher delivered, at his Parlor, in a speech, that it was a Patent way of making Chartists.

But I hadn't nigh done yet. The Queen's bill was to be took to the Signet Office in Somerset House, Strand—where the stamp shop is. The Clerk of the Signet made "a Signet bill for the Lord Keeper of the Privy Seal." I paid him four pound, seven. The Clerk of the Lord Keeper of the Privy Seal made "a Privy-Seal bill for the Lord Chancellor." I paid him, four pound, two. The Privy-Seal bill was handed over to the Clerk of the Patents, who engrossed the aforesaid. I paid him five pound, seventeen, and eight; at the same time, I paid Stamp-duty for the Patent, in one lump, thirty pound. I next paid for "boxes for the Patent," nine and sixpence. Note. Thomas Joy would have made the same at a profit,

for eighteen-pence. I next paid "fees to the Deputy, the Lord Chancellor's Purse-bearer," two pound, two. I next paid "fees to the Clerk of the Hanaper," seven pound, thirteen. I next paid "fees to the Deputy Clerk of the Hanaper," ten shillings. I next paid, to the Lord Chancellor again, one pound, eleven, and six. Last of all, I paid "fees to the Deputy Sealer, and Deputy Chaff-Wax," ten shillings and sixpence. I had lodged at Thomas Joy's over six weeks, and the unopposed Patent for my invention, for England only, had cost me ninety-six pound, seven, and eightpence. If I had taken it out for the United Kingdom, it would have cost me more than three hundred pound.

Now, teaching had not come up but very limited when I was young. So much the worse for me you'll say. I say the same. William Butcher is twenty year younger than me. He knows a hundred year more. If William Butcher had wanted to Patent an invention, he might have been sharper than myself when hustled backwards and forwards among all those offices, though I doubt if so patient. Note. William being sometimes cranky, and consider Porters, Messengers, and Clerks.

Thereby I say nothing of my being tired of my life, while I was Patenting my invention. But I put this: Is it reasonable to make a man feel as if, in inventing an ingenious improvement meant to do good, he had done something wrong? How else can a man feel, when he is met by such difficulties at every turn! All inventors taking out a Patent must feel so. And look at the expense. How hard on me, and how hard on the country if there's any merit in me (and my invention is took up now, I am thankful to say, and doing well), to put me to all that expense before I can move a finger! Make the addition yourself, and it'll come to ninety-six pound, seven, and eightpence. No more, and no less.

What can I say against William Butcher, about places? Look at the Home Secretary, the Attorney-General, the Patent Office, the Engrossing Clerk, the Lord Chancellor, the Privy Seal, the Clerk of the Patents, the Lord Chancellor's Purse-bearer, the Clerk of the Hanaper, the Deputy Clerk of the Hanaper, the Deputy Sealer, and the Deputy Chaff-wax. No man in England could get a Patent for an India-rubber band, or an iron hoop, without feeling all of them. Some of them, over and over again. I went through thirty-five stages. I began with the Queen upon the Throne. I ended with the Deputy Chaff-wax. Note. I should like to see the Deputy Chaff-wax. Is it a man, or what is it?

What I had to tell, I have told. I have wrote it down. I hope it's plain. Not so much in the handwriting (though nothing to boast of there), as in the sense of it. I will now conclude with Thomas Joy. Thomas said to me, when we parted, "John, if the

laws of this country were as honest as they ought to be, you would have come to London—registered an exact description and drawing of your invention—paid half-a-crown or so for doing it—and therein and thereby have got your Patent."

My opinion is the same as Thomas Joy. Further. In William Butcher's delivering "that the whole gang of Hanapers and Chaff-waxes must be done away with, and that England has been chaffed and waxed sufficient," I agree.

THE NEW ZEALAND ZAUBERFLOTE.

IN THREE CHAPTERS.—CHAPTER I.

EVERYBODY who loves wonderful music knows, or ought to know, Mozart's Magic Flute (*Zauberflöte*); but we are quite sure there are few, indeed, who know anything about the Magic Flute which a certain New Zealand chief invented for a special and original occasion, and played upon in a very grim and original manner. This story, though a curious mixture of the grand and grotesque, and, perhaps, the improbable, is not without its serious moral meaning. It claims to be regarded as historical. For the authenticity of its foundations we refer the reader to an extremely interesting work, entitled, "*Savage Life and Scenes in Australia and New Zealand*,"* by George French Angas, who, in the course of a journey of eight hundred miles on foot through the latter country, actually saw the chief, who is the hero of the tale, together with the Magic Flute on which, many years ago, he was so unintentional, yet so extraordinary, a performer.

"Taōnni, King of Mokau," says our traveller "was one of the most powerful and superstitious of the old heathen chiefs, and was scrupulously attached to the religion of the Tohunga. Around his neck he used to wear a small flute, constructed out of the leg-bone of Pomar, a northern enemy of his tribe; and upon this instrument he at one time played with peculiar satisfaction." Vol. ii. p. 86.

We have also heard that this barbarian chief had in his possession a suit of armour which was given by one of the kings of England to the Bay of Islands chief, the valiant Shongi, or E. Hongi, when that warrior visited England on some question of territory. The subsequent history of the armour since the time of Shongi is very curious, but by no means so extraordinary and interesting as the subsequent history of the flute, which we have obtained from private sources, and now present to our readers.

Taōnni was a great chief in Mokau, when the king of that country was at war with a neighbouring potentate named Te Pomar, of the tribe of Waikatoto. The king being very

* Or, *an Artist's Impressions of Countries and People at the Antipodes*.—Two vols.; Smith, Elder, and Co., 1847.

ill on the morning of a battle, ordered himself to be carried to the field on a litter, and set down in the thick of the fight. In this state, with the darts, and clubs, and tomahawks of friends and foes all whirling about his head, he sang his war-song, and so died. A terrible contest then took place over his body, which was eventually carried off by Te Pomar, notwithstanding all the furious efforts of Taōnui. But the great warrior Te Pomar, knowing how much the old king had been beloved, and also greatly revering him for the heroic manner of his death, nobly restored the body, and sent a present of honour with it for the funeral ceremonies. He also proposed honourable terms of future peace, which were accepted by a majority of the chiefs of both tribes. This nobleness of Te Pomar galled the pride of Taōnui as much as the carrying off the body from the battle-field had enraged his warlike spirit. However, he bore it all with haughty and unbroken silence.

But a contest over the body of a very different kind now ensued. Several Catholic missionaries had been for some time in Mokau, where by their skill in medicine and surgery they had much ingratiated themselves with the people, and they had contrived gradually to make a great many converts. Hitherto they had managed all this very gently, and by reasoning, and strong appeals to the imagination; but the death of the king was a great opportunity for a bold effort at a wholesale conversion. They, therefore, stepped forward, and declared that the permission which had been given them by the old king to dwell in his country, and teach their religion to those who chose to listen to them, was a sign that he himself had been a convert in his heart,—consequently, he should be buried according to their rites and ceremonies. At this, Taōnui rose in anger, and insisted that the body of the king should be buried in a secret cave, according to their old heathen custom with the greatest chiefs. He prevailed. But while they were bearing the body to a place from whence it was to be taken by night to the secret cave, there suddenly arrived the daughter of Te Pomar. Her name was Teōra; she was a beautiful girl of thirteen, and had just become a convert to Christianity. She came with many attendants, and presents, and proposals of lasting peace between the tribe of her father, the Waikatotos, and that of Mokau. These were accepted by the majority of the chiefs; but a missionary who accompanied her, then proceeded to request that the late king should be buried after the forms of the new religion that had been brought among them. Aided by the young Teōra, he was so far successful with the chiefs and people, that the body was placed in a shell of basket-work and broad leaves, by way of a coffin, and, being hoisted on the shoulders of six of the converts, they were bearing it off, attended by a large concourse. They approached the entrance of a wood, where a grave had been dug. At this

juncture, Taōnui, in his war-mat, and with all his arms, met them on the pathway. He darted at the coffin,—overthrew it with so violent a shock, that four of the six bearers rolled over with it on the grass; he then tore the body of the old king out of the coffin, and calling upon all those who revered the old heathen faith of their fathers and their ancestors, to rally round him, carried off the body, after a brief struggle, in which many were wounded on both sides, and several killed. Teōra returned to Te Pomar with the bad news; and Taōnui, for this act of decision and valour, was immediately declared King of Mokau. The missionaries, together with many of the converts, were driven away; and the religion of the Tohunga, with all the old heathen forms, was re-established in its original barbarity.

Te Pomar held a council of chiefs to determine what amount of reparation they ought to demand of the Mokaurie tribe for the recent outrage on their offers of peace; this question, however, was speedily settled by Taōnui, who declared war upon the Waikatotos, for their interference with the old religious ceremonies;—and all the former hostilities were immediately resumed.

In the first pitched battle that occurred, Taōnui, with a view to giving the most alarming importance to the occasion, caused the suit of rusty armour (steel, inlaid with brass) which had been given to one of his great predecessors by the English king, to be carried amidst the front line of the bravest warriors. It may be matter of surprise that King Taōnui did not invest himself in the armour, but the thought never once occurred to him, because it was held in superstitious reverence, as coming from the chief warrior of a great and distant warlike nation, who, they took for granted (little dreaming that his Britannic Majesty of that date had worn a great powdered wig, but never smelt any other sort of powder), had always worn it in battle. For anybody else, therefore, to wear it, would have been irreverent to their "great friend over sea;" it must also be confessed that Taōnui, being well aware of the weight; (having once, in secret, tried the armour on, after he became king); had found that it would impede all those movements of active skill and chivalrous daring which characterise the battles of the aborigines. He therefore displayed it simply as a "terror," and to show that the spirit of the great over-sea English warrior aided the righteous battles of the people of Mokau.

The result, however, was far from gratifying to the superstitious feelings of the Mokauries. They won this first battle, it is true, but not without considerable havoc among their warriors; while, to add to the chagrin of a disastrous victory, Te Pomar himself carried off in his embrace the suit of sacred armour. The spears on which it had been elevated were broken and cast upon the earth, and the

armour was finally dragged by ropes through the boundary river, and so lost to the Mokaeries.

Taōnui, on his return, assembled all his chief warriors that same night, and led them to the dark wood in which was the cave of their great Idol. After sacrificing some of the prisoners taken in battle, according to their custom, while the priests sung one of their barbarous hymns, the king made all his chiefs swear with him a solemn vow of vengeance against Te Pomar, and that they never would cease to make war upon the Waikatotos, till he was slain, and his male relations also, while the women were made the slaves of Taōnui. This was accordingly sworn by the assembled chiefs; and the priests informing them that the whispers of the Idol assured them of success, they went home very much exalted.

From this night, scarcely a week passed without some skirmishes of wandering parties, and never a month without either a battle in one or other of the *pahs* (villages), or an attempt of the Mokaeries to surprise Te Pomar amidst his chiefs. Te Pomar acted grandly in the affair of the armour. He said he preferred peace to war, and did not like his warriors to be killed on account of a battle-dress which nobody could wear; he therefore offered magnanimously to return it to Taōnui with presents of honour, and proposed that they should then bury the war-club and hatchet, and be friends. Te Pomar merely stipulated that the King of the Mokaeries should consent, in a friendly way, to his retaining the armour for the legs, simply to show that he had not been compelled to surrender the battle-dress, but had done so of his own free will and good feeling, and with a desire that all old animosities should be forgiven and forgotten.

To this proposal of the renowned Te Pomar, so great, and, though coming from a heathen, so Christian-like in its spirit, Taōnui sent the most haughty and provoking reply he could invent, viz. this: "Taōnui will rub the heads of Te Pomar's warriors with cold potatoes and fish; and as for the leg-armour, he will take Te Pomar's legs away from him at the same time."

From this day, war to the death became inevitable between these two great chiefs. Fiercious descents upon each other's villages were made continually, during which time Taōnui was secretly planning a general attack by all the warriors and fighting-men he could muster. As soon as he was ready, he assembled his entire force one night,—crossed the boundary lines with speed, then over a broad river, and then through a wood,—by which means he came with all his force upon Te Pomar, who thought it was only a small skirmishing party, until surrounded by his enemies. A great slaughter was the consequence, Te Pomar falling among the number, by the hand of Taōnui, who also carried off

his daughter, Teōra, with other women of his household, to become slaves. Furthermore, in fulfilment of his vow, and to gratify his vengeance, for what he chose to call his wrongs, and the indignities put upon him, Taōnui cast the remains of Te Pomar among a heap of broken and worn-out war weapons, and domestic utensils and refuse, preserving only the large bone of one leg. This he carefully dried and prepared, and then manufactured into a native flute. He made some rude carvings over it, describing his last great battle and victory.

Upon this flute the king sometimes amused his savage fancies in playing; and on great occasions he even wore it round his neck attached by a leathern thong. The sound of the instrument was truly strange and doleful. If a leg-bone could have memory, and lament its fallen state, a lamentation to that effect was the only impression that the ear of a properly-constituted human being could derive from the sound. But the savage feeling of Taōnui was far from appeased by the death of the great Te Pomar, whose noble character and actions were well remembered by the chiefs of both the tribes; and however silent the Mokaeries might be on the subject (because after a chief is dead his name must never be mentioned), what was in their minds now and then glanced forth accidentally, which renewed the rage of the king. He, therefore, took a wicked pleasure in playing this doleful flute, with which he often celebrated the memory of his final victory over the departed chief. In a very short time, he took to wearing it constantly dangling from his neck; and whenever he sat still, and was not smoking, or after he had remained thoughtful for half an hour, he always solaced himself with a tune upon this unfortunate flute. He even taught his son, Waipata, a fine youth of seventeen, to play the same hideous tune, and exhorted him to treasure up the same vindictive feelings.

Meanwhile Teōra, the daughter of Te Pomar, now a beautiful young girl of fifteen, was a slave to Kaitemata, one of the wives of the king—the oldest of them, the ugliest, the most ill-tempered, and the one he most hated. He could not venture to get rid of this wife, because, according to a superstition of his nation, very ugly old women who were wives of chiefs, often became witches, and he did not know what mischief Kaitemata might be able to do him, or his goats and poultry, to say nothing of his great droves of wild pigs. So, to keep her mind occupied, and also to gratify his hatred of the race of Te Pomar, he gave Teōra into her charge.

To the surprise, however, of the king, he found that this cross old wife neither beat, nor even scolded Teōra. The old woman was in truth, brought into an amiable state towards this young girl by her sweet and forgiving disposition. But Taōnui attributed this to a different cause—that of want of

respect to himself; and, having removed Teōra to another of his wives, he ordered his son Waipata to give her a beating over the shoulders every day with a whip made of strips of dogskin.

Now, the youth did not dare to disobey; but as he had the utmost repugnance to strike this young girl, he contrived to administer the blows in a way not to give the slightest pain—in fact, after a few mornings, Teōra ceased to shed tears at the indignity, but only held down her head, and smiled amidst her blushes. She even, after a few days, entered into conversation with him, during the beating, on the subject of her conversion to Christianity.

The king was not long in finding out how he was again cheated. He sent his son off to a distant hunting-ground, with orders not to speak for three months and three days; and then sat himself down to consider what cruelty he should inflict upon Teōra. He could not condescend to raise his hand against her, considering it beneath his dignity as a king and a valiant warrior; but, after mature reflection, he resolved to wound her in another way. With this view, he ordered her into his presence and made her dance, amidst her deep sighs and lamentations, while he played upon the doleful flute, in its loudest and most discordant tones, in celebration of his triumph over her noble-spirited father.

Having gratified his remorseless love of vengeance, he betook himself to a wood at some distance, and seating himself at the foot of a tree, began to smoke and meditate on all that had occurred before he became king of Mōkan; till gradually he fell into a train of speculations on his present state, and laid plans for provoking fresh hostilities with the Waikatotos, in the hope of ultimately subjugating them under his own rule, or else driving them away, and seizing upon their country. The sun had now set, and his pipe was laid aside, but he still continued occupied with these thoughts.

The tree beneath which the king was sitting commanded a treble prospect. There was the dark forest itself, with its great trunks, its winding ways, deep nooks, and down-sweeping masses of thick, broad-leaved foliage; and there was an open space on the left, that led downwards to a grassy glen, covered with rich beds of the greenest grass, over which, at intervals, were clusters of the tea-tree shrub in full bloom, and the crimson fuchsia, over-run by a creeper with little white, bell-shaped blossoms, the glen terminating in several vistas of wild loveliness and changeful colour in the fading light. To the right, there was a large break in the forest, through which an undulating sweep of land appeared, clothed with numerous armies of feather-leaved ferns, of red and of russet hue, that stood in separate divisions, over which continually went fluttering a number of black and white moths, like bean-flowers dancing adrift on the wind; and beyond the curling crests of the dense arrays

of these vegetable warriors, stretched away long swamps of *tohi-tohi* grass, flanked by a dark wall of bulrushes, till the swamp reached the foot of a range of lofty indigo-shaded mountains—over the heads of which, pale blue and grey mountains were seen,—over whose heads again, snow-white tops and peaks were just visible, mingled with soft clouds and filmy vapours.

Let it not be supposed that the mind of the king was at all occupied with this beautiful scenery; he had only chosen this spot as his favourite smoking and meditating seat, on account of its distance from any *pahi*, and the little chance of being disturbed. But now, as the shades of evening were coming on, he prepared to depart; for, though a thoroughly valiant warrior, and also one of the bravest of men in his mind, considering the amount of his superstitious belief, he shared a portion of the alarm common to all his nation at any prospect of being left alone in the dark. Before he rose, however, he took up his flute, performed his usual tune of triumph upon it, and, being in a state of considerable elasticity of spirit, finished with a long insulting squeal—a despicable quavering of the doleful instrument, expressive of his splenetic scorn and contempt for the memory of the dead king, Te Pomar. As he concluded, however, and before he had arisen from his seat, the last part of the strain, or rather, the vile squealing, was repeated by the forest echoes—then by the echoes from the glen, each time with certain modifications—then from the vistas beyond the glen—then, from the undulating land, with its armies of ferns—still with gradations that had now become harmonious—till finally, the echoes took it up from various parts of the distant mountains, and gradually modulated and swelled into a noble strain of music. It was grand, martial, and solemn, like the lofty death-march of some great hero.

Taōau sat listening with a puzzled expression of awe. The march was not repeated; all around was silent. He did not know what to understand, nor what he should fear. Yet, somehow or other, he associated it with the tune of triumph he had just been playing, and consequently with the memory of Te Pomar. Should he fear any one dead, whom he had defied and overthrown while living? No:—and yet,—the dead were often able to come back, and then they were *tapu* (sacred), or at all events able to do harm, and particularly when the air was getting dark.

It was now twilight, and as the king had no means immediately at hand of procuring a lighted stick, without the protection of which no Mōkaurie likes to be out at night alone, he started up, and strode out of the forest.

He had not proceeded far, before he became ashamed of his recent discomposure of mind, and proportionately indignant at the cause. Recovering himself with a scornful toss of the head, he presently arrived at the opinion that

he had really heard no such thing—it was a dream—he had fallen asleep without knowing it, and was asleep when he had fancied himself awake. How should such music proceed from the vile flute? It was not possible. He would play again, as he walked homeward; and following up this intent, his fingers dropt mechanically upon the flute. But his hand was instantly withdrawn, and his eyes stared down at the instrument,—for the bone was in a state of vibration from one end to the other.

Taōnui gave a short cough,—deliberated a moment—then, passing the thong over his head, by which the flute was suspended, he raised his hand behind his head, and flinging it as far from him as possible, hastened homeward with long strides.

Fifty or sixty paces—and he came to a pause. Stamping on the earth with rage, he turned about, and hurried back to the spot where he had flung the flute—found it—snatched it up in his grasp, and raising his arm high in the air, he shook the flute at the distant mountains with furious gesticulations of menace and defiance. All the vibration in the bone had now ceased, and hanging it round his neck as before, he again turned his steps towards his village, which he just managed to reach before dark.

From this time Taōnui did not lead a very pleasant life. His mind was not at ease; he scorned the whole thing, and yet he could not dismiss it from his mind. He did not feel a wish for some time to play his old tune again upon the flute,—in fact, though nothing could have made him own it to himself, he did not exactly like to venture. Very soon this thought presented itself to his mind. It was unbearable; and he instantly took the flute, and played as before. Nothing came of it. Ah, but would he play in the evening, in some distant place, near the echoes, and none? Yes, undoubtedly he would—not now, perhaps—not this instant—but whenever he took it into his head.

Meanwhile, he would not revoke nor relax the punishment of exile and silence, to which he had sentenced his favourite son, Waipata; and as for Teōra, though he did not again order her to dance to the sound of the doleful flute, he devised a new cruelty towards her, by compelling her to live in a hut within sight of the unburied remains of Te Pomar.

But, why not play the flute again in some solitary spot, and in the evening, by way of defiance to his dream, and setting the troublesome recollection at rest, for ever? Why not, indeed—why not, then, at once?

Taōnui accordingly walked forth the next evening to a remote, open space, which had once been subject to volcanic eruptions, and presented the strange appearance of a number of small funnel-shaped craters. The track was surrounded by russet-coloured regiments of ferns, sow-thistles, swamps of peat-bogs, with here and there a dragon-tree. The only other object was the ruined tomb

of a great chief, visible at some three hundred yards distance in the back-ground. It was half overgrown with rank vegetation. Its form was that of a log-hut without a door, and having a huge projecting roof, supported with heads of hideous figures, carved out of tree-trunks, whose eyes were formed of *poroia*, or pearl shells, which had a most grimly melancholy effect in the distance. The intervals in the wood-work of the tomb were filled up with decorations of coloured stones, shells, and the feathers of the green and golden cuckoo and the albatross. To keep off the sacrilegious, there had been a row of low palings all round it, painted red—the New Zealand colour for mourning; but as it is a rule never to repair a tomb, they had nearly all fallen to decay, and only presented here and there a prong or fang of dingy red.

This mausoleum being *tapu*, or sacred, Taōnui had selected it, with a vague feeling, that if the ghost of Te Pomar, or any devilish spirit should come, in consequence of his performance on the flute, it would be a good thing to have a tomb in the background into which he might thrust the devil, or retreat himself, if the evil one was too strong for him. He thought this a perfectly legitimate use of the tomb, because all spirits understood one another. The king defied all mortal men, and spirits too—only he did not feel so secure as to the results of a contest with the latter.

To this desolate track came the King of Mōkau, a number of wild hogs rushing gruffly away at his approach, and taking his stand among the volcanic remains, where great stones of pumice and ledges of lava, half-covered with rank moss, interspersed with white violets and the New Zealand daisy, or half hidden in brushwood, formed a sort of centre to the uncouth region, he turned himself on all sides, to ascertain that he was alone, and that nothing could come upon him by surprise. He then took up the doleful flute—and commenced playing. Nothing came of it for some time, except that the bone began to vibrate under his fingers in a manner that much disturbed him: still, he would not desist, and concluded with a squealing flourish of insult to the memory of Te Pomar.

The flute vibrated with electrical force, and shot forth sparks at every pore. Taōnui's fingers had instinctively dropped it; and, after a moment's pause, he distinctly heard the same grand death-march as before, not by an accumulation of modulating echoes, over distant mountains, but appearing to issue from the flute itself, though with a dim and smothered sound, as if buried in the recesses of the bone.

Taōnui shuddered from head to foot, as well he might, with such a flute hanging from his neck. The music ceased. The king, in motionless astonishment, continued staring down at the flute for some minutes after it had become silent. It was again a flute as before—the leg-bone of his former enemy. He

slowly approached his hand down to it,—and touched it with one finger. No sound came from it, and it had no vibration. He glanced all round him with a rapid stare—then a deliberate scrutiny—and then his eyes were again rivetted upon the flute.

Presently, his savage pride, and all the recollections of his warrior-deeds, came to make him boil with rage at the dismay he had been made to feel,—and, seizing the flute with fury, he began to blow into it, and play with all his might.

In spite of himself, and of all his intentions and efforts, the tune of scorn and triumph, he began with, by long wailing notes, echoes, and moaning transitions, modulated into the grand death-march of a hero!

He dropped the flute; but the strain was instantly repeated all round his head, in tones of thunder! It swelled—it rolled—it was in the air all round him—its great gongs and shell-cymbals were now thundering and crashing and booming round his feet—it came in ear-crashing bursts from the funnel mouths of the volcano-craters—it again became measured and sustained, and swept away over the blocks of lava and pumice, and over all the rank vegetation, and settled above the roof of the ruined mausoleum. Taōnui staggered hither and thither with each change of place in this tremendous orchestra, and, glaring at the roof of the mausoleum, he gasped for breath, and whirled his arms aloft, with a sort of madly-defying dismay. Whereat, the tall wooden-carved figures with pearl-shell eyes, all dropped their lower jaws, and extended their arms—seeing which, Taōnui, with a yell of horror, fled fast away, followed by a long succession of similar yells from the fallen jaws of the figures of the tomb!

Without intending to imply that any of these extraordinary scenes were the work of the renowned witches of New Zealand, we shall content ourselves with stating the fact that *makutu*, or witchcraft, was most implicitly believed in by the Mōkaurie tribe, as by nearly all the other tribes, and is, to this day, most fully believed in by all who remain unconverted, and even by some of these,—who say “the dibble (devil) is too strong to let go.” Even so recently as 1844, a celebrated witch of Waikato, named Eko, possessed such power over the imaginations of the people, that having been insulted by a gay young Maori fellow, she calmly told him a few days afterwards that she had taken out his heart—it was gone! Fully impressed with this belief the poor young fellow actually died.

From whatever cause he conjectured the recent events to have proceeded, not one word to anybody, of any part of them, spake the king. In deep and sullen silence he brooded over the business, and the more he thought of it, the less he understood it, and the less could his haughty and overbearing nature endure the sense of defeat which he felt he

had suffered from the flute. Of course he identified this leg-bone instrument with his ancient foe, Te Pomar. But, what was to be done? Here was he, the King of the Mōkauries—and here was the leg-bone of his slain enemy, who had several times triumphed over him:—which was to be the master, and make the other tremble and do his bidding? The answer was simple. The King of Mōkau must be the master. Is he to be alarmed by his own music—the loud sounds he chooses to produce? And if witches have meddled with the wooden images of the *tapu* house of a dead chief, so as to make them gape and yell—let the witches go and live in the tomb, if they like, and dare to do so. All this is nothing to Taōnui, who is a great warrior, and lord of all Mōkau.

Thus did the king silently reflect, while seated alone on the roof of his royal house; solacing himself, however, with a pipe, or by chewing *cordie* gum and roasted bull-rush root. Sometimes he condescended to relieve his spleen by abusing his queen—the lady who enjoyed the honour of being regarded as his chief wife;—but never did he deign to breathe a word of the mixed wonder and awe of his recent affair with the flute.

While seated in this way, one evening, he saw a chief hastening towards his house with manifest signs of alarm—and presently another—and soon a third. The king came down from his seat on the roof, and went out to meet them. They all came with the same story. The unburied remains of the late King of the Waikatotos (they avoided mentioning his name aloud) which had been cast to perish among rubbish within sight of the hut where his daughter the slave Teōra dwelt, were coming to life again—not in the form of a warrior, but in the form of a spirit.

Taōnui was about to cry out angrily that he did not believe it—but he checked himself, and accompanied the chiefs in silence; for he *did* believe it.

When they arrived within view of the mound of rubbish on which the body of the once great Te Pomar had been flung, they all stopped abruptly. Luminous mists and violet-coloured flakes of light were gleaming all over the mound, and beautiful meteors were dancing above it. The chiefs who had accompanied the king decamped with sudden ejaculations—for it is considered no disgrace in a warrior to be afraid of spirits. But Taōnui, though he heartily wished himself a hundred miles away, firmly held his ground, and watched the spectral appearances.

Perplexed to the utmost, he mechanically bent his steps towards the hut with a vague notion in his mind, or rather in his impulses, of killing Teōra as the probable cause of all this. Arriving at the door, who should he see but his old discarded wife Kaitemata, who had taken up her abode with Teōra! This seemed to explain everything to the king. All the recent magical events were revealed

to him as by a flash of lightning. He immediately walked away with a lofty scowl. Is Taōnui, then, the victim of *makutu* (witchcraft),—and is the mind of a great chief to be rent and tortured by devils?

Feeling convinced that old Kaitemata was at the bottom of all the mischief—for had she not favoured the slave-daughter of his enemy from the first?—the king came to the resolution of destroying both of them at one blow. He, however, desired to do this by some means which should take effect so unexpectedly, and without his laying a hand or weapon upon either of them, that there should be no excuse for spirits to interfere in their favour. Such was the sophistry with which he deceived himself. As for the plan itself, his territory offered several local advantages for any purpose of, apparently, accidental destruction.

The interior of New Zealand contains so many natural wonders, that it need not require any great stretch of imagination among the natives to pass over to the supernatural. As one, among the various proofs of this which might be adduced, we will present the reader with an extract from the travels of Mr. George French Angus, in New Zealand, whose unpretending volumes are crowded with curious facts and interesting information.

"I visited the boiling springs which issue from the side of a steep mountain above Te Itapa. There are nearly one hundred of them; they burst out, bubbling up from little orifices in the ground, which are not more than a few inches in diameter, and the steam rushes out in clouds with considerable force: the hill-side is covered with them, and a river of hot water runs down into the lake. The soil around is a red and white clay, strongly impregnated with sulphur and hydrogen gas: pyrites also occur. Several women were busy cooking baskets of potatoes over some of the smaller orifices; leaves and fern were laid over the holes, upon which the food was placed; I tasted some of the potatoes, and they were capitally done.

"About two miles from this place, on the edge of a great swampy flat, I met with a number of boiling ponds; some of them of very large dimensions. We forded a river flowing swiftly towards the lake, which is fed by the snows melting in the valleys of the Tongariro. In many places in the bed of this river, the water boils up from the subterranean springs beneath, suddenly changing the temperature of the stream, to the imminent risk of the individual who may be crossing. *Along whole tracks of ground I heard the water boiling violently beneath the crust over which I was treading.* It is very dangerous travelling, for if the crust should break, scalding to death must ensue. I am told the Roturua natives, who build their houses over the hot springs in that district, for the sake of constant warmth at night, frequently meet with fatal accidents of this kind:—it has happened that when a party have been dancing on the floor, the crust has given way, and the convivial assembly have been suddenly swallowed up in the boiling cauldron beneath! Some of the ponds are ninety feet in circumference, filled with transparent pale blue

boiling water, sending up columns of steam. Channels of boiling water run along the ground in every direction, and the surface of this calcareous flat around the margin of the boiling ponds is covered with beautiful encrustations of lime and alum, in some parts forming flat saucer-like figures. Husks of maize, moss, and branches of vegetable substances were encrusted in the same manner. I also observed small deep holes or wells here and there amongst the grass and rushes, from two inches to as many feet in diameter, filled with boiling mud, that rises up in large bubbles as thick as hasty-pudding: these mud pits send up a strong sulphurous smell. Although the ponds boiled violently, I noticed *small flies walking swiftly, or rather running on their surface.* The steam that rises from these boiling springs is visible at a distance of many miles, appearing like the jets from a number of steam-engines." Vol. ii. pp. 113, 114, 115.

To a certain cavern, beneath which the king knew there was one of these boiling springs, he determined to send both Teōra and Kaitemata, as soon as he had hewed away the pumice floor to so thin a substance, that it would be certain, before long, to crack and fall in with their weight. He should thus be rid of two witches—for that they were such, he now regarded as an ascertained fact.

Of this, if any additional proof were needed, the king received further confirmation that very evening. A Maori runner came from the distant hunting-ground where Taōnui had exiled his son Waipata, on account of the favour he had shown to Teōra, to inform him that Waipata had secret communications with the young slave-girl, who had induced him to abandon the religion of Tohunga, and become a Christian; and, finally, that his son had gone mad, and wore trousers!

Taōnui, smothering his indignant fury, still preserved a haughty silence, not untouched with an air of melancholy, as he reflected on the humiliating fall of Waipata. He entertained no doubt but his son had gone mad. Vengeance and the boiling springs were, however, at hand; and he now hastened to his preliminary work in the cavern.

THE PENNY SAVED;

A BLUE-BOOK CATECHISM.

Rising Young Operative. "Please, father, what is a blue-book?"

Paternal Operative. "A blue-book is a thick heavy catechism done up in blue covers."

"What is it for?"—"Why, when Parliament sets some of its Members to inquire about a subject, and hear evidence quietly in a room for to get at facts, they print the evidence and so on, and send it to all the other Members, so that they may read and know the facts."

"What is that blue-book you have borrowed to read?"—"It is all about Savings Banks."

"But, do not the Parliament men know

all about Savings Banks already?"—"Not a bit. That's why they have to make these huge blue-books to tell 'em. This one is on the 'Savings of the Middle and Working Classes.' As secretary to our shop-savings club, I was examined as one of the witnesses."

Inquisitive Shop-mate. "Don't you think it is a blest hardship that if a man saves enough to buy a bit of land, he is not able by law to do so?"—"Why, for sums between one hundred and five hundred pounds it's shockingly difficult to get good and safe investments of any sort from the present state of the law."

"If you want to buy a bit of land you can't, —especially if it is mortgaged,—can you?"

"Not by no means. Why it costs more than the land is worth to what they call 'investigate the title.'"

"Then people can't club small sums and be partners in an enterprise, can they?"—"Oh, bless you, no! If they do so without a Charter or an Act of Parliament, every one of them is responsible to no end of money."

"And people who know what they're about don't, eh?"—"No, indeed. If a man has fifty pounds, he can't say he will subscribe five to a concern and lose so much if it fail. He must be ready to lose all his fifty if it fails. People with five hundred pounds to invest, can't invest fifty as a share in such an enterprise and go no further. They must risk all their five hundred on the venture, though they are sure of only getting profit on the five. So they don't invest in that way when they're prudent; but the reckless do."

"What is the cause of that?"—"The Law of Partnership."

"But does not that affect the rich as well?"—"Yes, but a larger enterprise, with money at command, affords to buy an Act of Parliament or Charter, but that luxury is too expensive for a little undertaking."

"What do you call a little undertaking?"

"A Society for the Improvement of Dwellings of the Poor; or a Society for Building Baths and Washhouses, or anything of that sort—any local improvement of a humble character is too small to afford a Charter."

"Why, what then does a Charter cost?"

"Some hundreds. The Charter of the Metropolitan Association for Improving the Dwellings of the Industrious Classes cost one thousand one hundred and thirty-nine pounds, seven shillings, and eightpence; out of which seven hundred and twenty-four pounds, ten shillings, and eightpence went in pure fees to the Crown officers. Here it is all down in the blue-book."

"Indeed! Well, well, what next?"—"Why the next thing was that six or a dozen similar societies in different parts of the country, finding the cost of a Charter, abandoned their benevolent designs."

"What good would a Charter have done them? Why couldn't they go on without it?"—"A Charter would have placed them out of the law of partnership, and enabled the

projectors and supporters of the charity to contribute to it according to their means. Without it they would be responsible for its success with all their property."

"Is that the law of partnership?"—"Yes. By the English law of partnership, all partners are answerable with their whole substance for the acts of any one."

"You say by the English law; but does not the same law exist in other countries?"

"Certainly not. All civilised countries differ from England in the law of partnership. They have either partnerships in which the responsibility is altogether limited, the limit being in each case known; or they have a kind of partnership called *commandite*."

"And what is *commandite* partnership?"

"Here you have it: The partnership *en commandite* allows any number of men to subscribe money to an undertaking in a limited amount; they are the *commanditaires*, and they are not allowed to perform any act of management; the managers of any partnership *en commandite* become responsible with all their property."

"Is not that the same as if the managers of an English partnership borrowed the money supplied elsewhere by *commanditaires*?"—"No, it is not. The lender is a creditor with other creditors, but the *commanditaire* can have no claim until all other creditors are paid. A firm that borrows, multiplies its liabilities; monies advanced *en commandite* multiplies strength."

"Does the English law deter people from speculation?"—"Quite the contrary; it perverts wholesome enterprise into a gambler's risk, and converts numerous undertakings into speculations which would otherwise be fit for prudent men to patronise, to an extent suited to their means. It filters out sensible people, and lets the reckless pass through into the management of valuable projects."

"How does this act upon us handicraftsmen and operatives?"—"Not directly, in this latter point of view. His labour is his capital. It is not much to him to lose his all of cash. But it deters people of the middle class—people with three hundred pounds or four hundred pounds capital, and others of a higher class than that—from sharing in a great number of small undertakings which are of true value to the poor. The law of partnership in England needs revision, and will be revised; but the direct wants of the poor man can be met without revising it."

"How does it act directly on the poor?"—"It is a rich man's law. If working-men combine for any purposes of industry, one may defraud the rest of all the common stock, or any part of it, and there is no redress for the defrauded parties—no redress of any certain kind, or of a kind cheaply attainable."

"What sort of law ought we to have, then?"—"An extension of an Act that they already have to protect Friendly Societies, which should protect also Industrial Associa-

tious ; make them legal under a law all their own, enable them to bring disputes before a magistrate, and summarily punish any one among them who should not dishonestly towards the rest."

"And these Industrial Associations, what do the workmen want with them?"—"Well, I'll tell you. Look at my case. Once I worked as journeyman to a rich man, who established with his capital a large shop, and bought for himself a country-house. He lives in his country-house, and seldom sees his shop; he pays wages to a large number of workmen, receives their work, and sells it to the public at a price which enables him to pay a manager for overlooking us, and live at ease upon the surplus, doing nothing. That made us think that if some of us, who were steady, clubbed together to maintain a shop, we might sell our work in it ourselves, and so divide among ourselves the profit of our labour; it goes now to a master who does nothing, and whose sole advantage over us is that of having capital."

"But your Associations might not answer?"—"Perhaps not; but what we say is, that the law gives to a rich man power to use us, and compels us to be used. It is at our own peril if we club our work together and try to get the entire value of our labour for ourselves; no law protects us against one cheat among a hundred companions. We say that we are not free men, if we have not a right to earn our bread in any honest way we can. It's very likely most of us would still prefer to work for certain wages; and we'd be well content to do so if we did so by our own free choice; but we are not content because we have not liberty of action."

"What do you want, then?"—"Why we cannot now associate without making ourselves a Joint-Stock Company, and coming under a parcel of laws made for people who can wrap up every penny we have in a five-pound note. We want extended reading of the Friendly Societies Act, so that we may have liberty to combine our labours if we please, and cheap protection, when we do so, against one another. We want no special advantages. We only want our arms untied; free-trade in labour. Let us find out for ourselves what is good for us; don't hinder us from any fair attempt to turn our money to advantage; don't compel us to work for a master and put by our money in the Savings Banks, or Three per Cents. It may be some of you are right in saying that is best for us. Perhaps it is. If it is, we shall find it out also, never fear. But let us find it out; don't dictate to us, leave us free to act; and then, if we go wrong, we shall know it's our own fault, or a thing that can't be helped; and not put down a part of it to your denial of our honest wishes. Fustian don't envy Broad-cloth; each lives best in the society to which he has been born; but fettered men envy the free. The way to spread content among the

working-classes, is to show them that you look on them as men and not as children, and to give them choice to earn their bread on any path they like, (that is an honest one.

"Do you think we ought to have what we want?"—"Of course, I do. Whether the plan of Industrial Associations would succeed is, of course, yet uncertain, but it well deserves a trial. More than that,—we ought to have the right of trying it. Then, if we fail, we should know who is to blame; and those few (for there would not, at first, be a large number probably) who commenced with the experiment would go back to the old plan of wages."

"But if they succeeded and this system spread?"—"Then that would be a blessing to this country. The class of middlemen who live upon the work of others is now very large; that would decrease, and the country would be enriched by a far larger number of producers. The loss of intermediate profit-takers would also cheapen produce, and a more extended sense throughout the country that each man was working for himself would impart to the whole body of the people a free manly tone, and give to all a greater interest in peace and order. I think, that although the result may possibly not realise a sanguine vision, yet, that it is unjust to forbid attempts which point in a right direction. If we neglect these wishes of the working-classes, we cannot wonder if they say that rich men make rights for themselves which do not fit the uses of the poor, and give the poor man no equivalent."

"What are they going to do about Savings Banks?"—"Government says, it intends to be responsible for their security, and that will take away a prevalent impression that they are unsafe. Possibly, as they are the safest, so they are the best investment for the savings of the working-classes, but we have no right to drive them to this kind of hoarding. The mere sense of so much money being kept for them by other people, out of their sight, has not so great a moral hold upon their minds as would be had by something which they every day could see and use. If they invested savings in their daily work, in cottages, or, better still, a piece of ground, which they could call their own, man is so constituted as to be more usefully acted upon by that visible fruit of his exertion than by the abstract idea of possessing its equivalent in money. That is truer of a man the more you find him unsophisticated. I would, therefore, have the workman's labour and the money, or the fruit of it, to be his own, and remove all removable impediments to his free use of either."

"You think much of investment in a cottage or a piece of land?"—"Yes, all experience abroad, and all we know of history, and all we see doing about us, show how beneficial such investments are."

"All this being the case, what do you mean

to say at the next meeting of our Shop Savings Bank!"—"Why, I mean to make a speech. I mean to say, that both the middle and the working-classes of men desire to invest money in land. That the uncertainty and complexity of titles, the length and expense of conveyances, together with the cost of stamps, place such investments beyond common reach. ('Hear, hear!' from the Rising Young Operative and the Shop-mate). That simplifying titles, shortening conveyances, would be a good thing for the landowners themselves, by increasing the available value of their property. And then I shall wind up by saying, that I know, from what I was told by a lawyer, yesterday, that it would be easy enough to simplify the present law."

A GUERNSEY TRADITION.

THE Bailiff's * home was a lordly hall,
And his land stretch'd far and wide,
And many stout serving-men came at his call,
And great were his pomp and pride.

Near this mansion there stood a neat little cot,
Nestling in bush and tree;
The owner, a peasant of humble lot,
With one verge† of land from his forefathers got,
None happier seem'd than he.

He loved his children, he loved his wife,
Their words and their acts were right;
So they led in the cottage a peaceable life,
Though they labour'd from morn till night.

No spring there was on the peasant's ground,
But, whoe'er in the cot might dwell,
(It was known to the country folks many miles round)

Had a right to the rich man's well.

When his earthen picher the villager brought
At the rich man's well to fill;
How the Bailiff grudged, he little thought,
His draughts from that limpid rill.

And why was he vex'd when the man he saw?
Oh, why for the water care?

'Twas because the man had a right to draw,
That he hated to see him there.

'Twould not perchance have been e'er denied,
Had he begg'd it eve and noon,
But it sadly offended the Bailiff's pride
That he had not to ask the boon.

"Thy land and hut I desire to buy,"

He said one day with a frown;

"Name the sum you expect, be it ever so high,
I will instantly pay it down."

Poor Massey bow'd as he humbly spake—

"My father first drew his breath

In this cottage; I prize it for his dear sake,
And will never resign it till death.

"I lost my mother while yet a child,

But once it was her abode;

Could I part with the home where my mother
smiled—

Where she taught me the fear of God!

* The Bailiff, or chief judge, in the Royal Court of Guernsey is named by the English sovereign. Gualtier de la Salle, the first Bailiff, was appointed in 1284.
† Vergee, about half an English acre.

"'Tis here I've lived with my loving wife,
And little ones, now in Heaven;
And those who survive me shall have it for life,
To them by the law it is given."

On this fancied grievance the Bailiff dwelt,
As Massey his picher fed;
Such hatred at length to the peasant he felt,
That he wish'd the poor man dead!

But he knew the cottage would then by law
Descend (and it vex'd him sore)
To those who would come for the water, and draw
As their father had done before.

But if he perish'd with infamy,
The land would never be theirs;
By the Sovereign claim'd, no relations could be
Accounted a felon's heirs.

At length there came to the Bailiff's heart
A plan—"and it must succeed,"
So he said to himself, for he dared not impart
To any the shameful deed.

In the traiking* season he went one day,
And a rich silver cup he bore,
When the peasant and family all were away,
And he enter'd the unlock'd door.

He approach'd the timeworn oaken chest,
And lifted the unlock'd lid,
And under the riment, their holiday best,
The bright silver tankard hid.

He went away with a hurried pace,
And closed the door with care;
But the eyes of the Lord are in every place,
And they surely beheld him there.

In the dead of night he went forth once more,
To a corn-stack that stood hard by,
And a heavy burthen of plate he bore,
And conceal'd it from mortal eye.

The morning dawn'd and the Bailiff rose,
And summon'd his menials soon;
"In order my costliest service dispose,
For guests will be here at noon."

Each man has now his appointed task;
For the service of plate they go;
Then questions in whispers they fearfully ask,
And are hurrying to and fro.

The Bailiff listens—at length a page,
In the tremulous voice of fear,
Announces the loss; and his well-foign'd rage,
It was dreadful (they said) to hear.

Like a savage man, of sense bereft,
With oaths he reviled them all;
And threaten'd, if no one acknowledg'd the theft,
His vengeance on each should fall:

But promised pardon to every one
Who by noon had the crime confess'd;—
They were innocent all, so ere setting of sun
The constables came, and the search was begun
In the presence of many a guest.

The stately mansion below, above,
And the arbours for pleasure round,
Are search'd, and the servants their innocence
prove;

No plate can be anywhere found.

* Traik is sea-weed used as fuel and manure.

And then, pursuing his wicked plan,
(And, oh, with what vile intent !)
To the cottage of Massey, good peaceable man,
The Bailiff his constables sent.

The man's surprise was, indeed, extreme,
Though assured there could be no cause ;
Their visit appear'd like a troublesome dream
To him who ne'er broke the laws.

"My friend," said one, in a kindly tone,
"Our errand I'll briefly state ;—
In this cottage it seems not as yet to be known
That the Bailiff has lost his plate.

"Throughout his mansion and grounds we sought ;
Not even a cup was seen ;
And though to search here we a warrant have
brought,
We shall find nothing here, I ween."

He straightway went to the oaken chest,
And lifted the unlook'd lid ;
Then forward with wonder they every one press'd,
For under some raiment, the countryman's best,
A rich silver cup was hid.

'Twas the great man's tankard, beyond mistake ;
His arms were engraven fair ;
With a truthful look Massey solemnly spake,
"I pray that the Lord may my children forsake,
If I know how the cup came there !"

At the stately mansion the news they hear,
That the tankard is found at last :
The Bailiff and guests at the cottage appear,—
And now the plot ripens fast.

He orders Massey at once to jail,
Right glad that he had the power :—
They who heard the poor wife and her little ones
wail,
Could never forget that hour.

And joy was seen in his eyes to shine,
As he saw the good man depart :—
"The vergee of land shall surely be mine,"
He said, in his wicked heart.

In her lonely cottage the mother kneels,
The little ones round her cry ;
She speaks not a word, for too keenly she feels ;
Her prayer is a deep-drawn sigh.

The cell held not the captive long,
The Bailiff brook'd no delay ;
He felt like a tiger, so savage, so strong,
Impatient to seize his prey.

The Court is summon'd, they meet in haste,
The Bailiff as Judge presides ;
Accused as a thief at the bar there is placed
The man who in God confides.

The case is stated, and clear his guilt,
So most in the Court believe,—
"Now prove thyself honest, or surely thou wilt
Be hang'd—there is no reprove."

"With the learned (said Massey) I argue not,
To their skill I make no pretence ;
But from childhood till now a good name I have
got,
I cannot tell how the cup came in my cot ;—
And that is my sole defence."

"A poor defence !" was on many a tongue,
"If Massey can say no more ;
And guilty or not the poor man will be hung,
And the sooner his pangs be o'er."

The Bailiff rises, to pass no doubt
The sentence of shameful death,
When proceedings are stopp'd by a cry without ;
Men, women, and children, unite in the shout,—
In rushes a man out of breath.

He gasps awhile, he is faint and weak,
And wondering they gather round ;
His errand to learn they all eagerly seek,
Then faintly he utters, scarce able to speak,—
"The plate of the Bailiff is found !"

Up rose the Judge with an angry frown
(Yet his terror was great to see),
"That was not the stack which I bade them take
down—
What man has done this to me !"

On leaving home that important morn,
He had given his men command
To remove from the threshers a large stack of corn
To which he then waved his hand.

Which stack their master was pointing at,
The men did not rightly know ;—
In one was the plate, they began taking that ;
It was God who had order'd it so.

The Judge forgot that his words of ire
Would surely himself condemn ;
And no stronger proof did the Jurats* require,
His guilt was quite clear to them.

Poor Massey his eyes was seen to raise
With a grateful look to heaven ;
No word did he speak, but acceptable praise
To God from his heart was given.

"And now, good man, you may go in peace,
No longer detain'd you are." *
The Jurats are happy to give him release,
And the Bailiff is placed at the bar.

That just and right in that ancient time
Was the law of the Isle, we find :
He was sentenced to die for his terrible crime ;
The doom for Massey design'd.

FATHER GABRIEL'S STORY.

"You see my family had been farmers and freeholders in the county for more than two hundred years ; but my father being a more forward and colonial-like man than the rest of his neighbours made a good bit of money. He was fortunate enough to get some of Mr. Collings's calves, the beginning of the celebrated Durham breed, and to know their value before other people did. Then a coal field being found near his farm, and part of it wanted for works, he was able to sell that for a good price, and keeping our old house took a lot of additional land as a tenant on the V— estate. He held at last near a thousand acres, and had all the benefit of war prices at an easy rent. It was like coining money in those days. We didn't set up to be gentle-folks like some, but we kept on steadily. There were ten of us ; but as it happened, all girls but me, and I was the youngest but two. My elder sisters were married off quick, being well-favoured lasses, as likewise well-portioned.

* The twelve Jurats are chosen by the Members of the States.

"I was five-and-twenty turned when I met my missis at Tyemouth one summer; she was a neighbour's daughter; but he being a widower, she had lived away with an aunt, in Northumberland! We soon settled to be married in the autumn, but my mother dying put it off till the winter. Well, this death and my being the only son, brought it about that, instead of my father stocking a farm for me, I took my wife to live with him, and took a share of his farm, and I often think that, under Providence, this was the road that led me to Australia.

"Having a fancy that way, I took special charge of the horned stock; to please my missis I had given up hunting, and so set to work to follow Mr. Collings's example, and try what could be made of the short-horns; partly, perhaps, because our neighbours laughed at the notion, and I always like to think for myself. My head herd was a Yorkshireman, by the name of Tom Birkenshaw; he had been our head carter, but having broken his ankle bone, which set stiff lame, and so bad for travelling, he was made bulherd.

"Tom was, indeed, I may say he is, for he don't live far off, although he's getting old now, as knowing a fellow about cattle or horses as ever walked in shoe-leather. You'll mind a little man in a blue night-cap, with a crutch-handled stick. That was Birkenshaw. He had but two faults: he was apt to get a drop too much beer now and then, and he couldn't leave the game alone. There were preserves all round us, and if he'd been content with what was found on our farm it would not have mattered so much; but that did not suit him—he must be poaching in the very midst of the preserves. Then he had two dogs that could do anything but speak, as regular poachers and as fond of it as Tom himself was.

"Well, father warned him, and I warned and threatened, but it was no use. Go into his cottage when you would between August, when the leverets are so tender, and February, you were sure to smell game, though not a bit of fur or feather was to be seen; he used to say to me, 'Bless your heart, Master Gabriel, it's not the beasties I care for; it's going after them.' His lame leg rather interfered with his sport; for before that accident, there was not a man in the county could get nigh him if he got a fair start. Well, as I told him, to make a long story short, he was caught, one moonlight night, by the earl's gamekeeper, when he and his brindled dog Patch were enjoying themselves in a twelve-acre meadow of the Earl of D——'; Patch driving the hares into the gins, and Birkenshaw taking them out and resetting them. The gamekeeper shot the dog from behind a hedge where he had been lying waiting, and chased my man, overtook him, and knocked him down. John jumped up, his blood boiling at the loss of Patch, caught the keeper a crack with a short cudgel, that laid

him flat, took to his heels, and ran home and told no one.

"Two hours afterwards a party of watchers found the keeper lying where John had stretched him, groaning, bloody, and insensible. The next day he recovered his senses, and by midnight poor John was in Durham Castle, heavily ironed. He was tried at the next assizes, and sentenced to be transported for life. It was only by very strong interest that he escaped being hanged. Birkenshaw told the judge he would sooner be hanged, and many of his friends agreed that hanging could not be worse—so blind are we poor mortals to what is best for us. We promised to take care of his wife and two little boys. John was taken away ironed, on the top of the coach for London.* He passed through the village and our farm, and there was not a dry eye. The miners wanted to rescue him, but we persuaded them it would do no good. Years passed before we ever heard whether he was dead or alive. His poor wife soon pined away and died, and the two little boys came to us. You'd scarcely believe it; but, fore their father had been gone six months, I caught them and my eldest son Ralph in the hay-loft making gins for hares. You may be sure I threshed them all well.

"Just before the war ended, when my two eldest were growing up, nice boys, big enough to ride to market with me, my father and I agreed to take another large arable farm, that had been very badly done by the last tenant, on a long lease; we thought we had a good bargain, and that it would be ready by the time my son Ralph was old enough to take to it; for although my father was getting on in years, he was as hale and as hearty as many a man of fifty. But the very week after signing the lease, as the old man was returning from Durham on his mare, that had carried him without shying or stumbling for nigh fourteen years, she slipped up in coming along a bridle-road and threw him against a stone wall, breaking his collar bone and cutting his head open; there he lay, through a frosty night, for many hours before he was found; he lingered several weeks, but never rallied. Long as we had lived together; I seemed to have lost him just when I needed him most.

"Before the year was out peace was signed, and down went prices. I had to pay off my sisters' fortunes, fixed by will when wheat was at 120s. a quarter. Then came a heavy bond to pay as security, that my father had given for a relation, who had taken contracts and made great sums through the war, but ended by a great mistake. All my troubles came at once; a compit we had a heavy stake in, and which I took from my sisters, because they had married far away, burst out with fire-damp, was filled with water, and then could not be cleared. So one way or another, what with the heavy sums needed for stocking and putting in heart the new farm, my ready money all melted away. Then came, after a

short gleam of sunshine, a regular fall of prices of agricultural produce. The landlords spoke fair; they gave us an act of parliament that they said would keep corn at 80s., though even that would scarcely do for some of us; but we dined and drank toasts, hurrahed, and went home satisfied. Meat, wool, and corn all went down; it was quite plain, that if such times continued, at the same rents, break we all must. Those that had lived fast with small capital, began to go first. But you know, sir, a farmer dies as hard as a fox or a dingee; he can't shift his pivot so easy as a tradesman or a manufacturer; and he takes a longer time to break, for the landlord who's the chief creditor, will wait a long time, knowing he can come in at last and sweep away all. Well, I could have managed to make a good fight with my old farm, by cutting down expenses, wearing an old coat, putting my hand to the plough; but how was I to save money for the children? Besides, the other farm, with so much money sunk on it, was a regular dead weight; and my father being gone, I was obliged to leave much to a bailiff.

"Things got very black indeed; and although they talked very loud in parliament and at county meetings, I could not see any real chance of good prices.

"Well, one day who should come up with a letter of introduction from Mr. Lambton but a sun-burnt foreign-looking gentleman, 'from New South Wales,' a Mr. M——, wanting to buy a lot of good short-horns, both bulls and heifers, thorough-bred horses and Cleveland bays, and implements, to take out; and likewise to hire a good farm-bailiff, and a man to take care of his horses out. He was sent to me, as one likely to tell him where to get the best of every thing. I rove about with him, sold him some stock, and naturally had a good deal of talk with him, was surprised to find that Botany Bay, the only place we'd ever heard of, was in New South Wales. When he found by my grumbling that I was not quite satisfied, he offered to use his influence if I would go out with my family and some labourers, to get me a grant of land where there would be scarcely a rent, and no taxes, if I would sail in the ship with his stock. He said I could, he was sure, make my fortune in ten years, and a lot more about what a country it was for cattle and sheep. Well, I didn't take much heed of it at first; I did not like the idea of leaving Old England, or taking my wife and family to Botany Bay. But I told all to my wife, and she did not say much, but she listened hard.

"The Lord be thanked, my father never made a gentleman of me; I took my turn at all farming work, from driving to ploughing, from cutting and plashing hedges to building a wheat-stack; likewise, I went into our forge and learned to make a set of horse-shoes and put them on, as well as to sharpen and mend all implements.

"I brought up my own lads the same

way, and I found the use of it, and so have they.

"Well, as things got worse, I cut down all I could, worked early and late, and lived as hard nearly as my grandfather; and my wife never grumbled, or even looked sad, when I was by, but I used to see the tears running down her cheeks as she lay asleep, for we both knew there would be but one end, unless some great change took place in rents and price of corn, and that end was ruin. We were both thinking of what Mr. Lambton's friend had offered; but we said nothing to each other, for at that time people in the country looked on emigration and transportation as much the same thing, and Australia was thought a country of thieves and savages.

"It was a few days after I had paid my rent, I had tried to get a reduction, but the landlords of the second farm were only trustees, and said they could not do it; for the third year, the rent had come out of my capital, and I was sitting smoking a pipe, and wondering what was to become of us all, and whether Botany Bay was as good a place for a farmer as what Mr. M—— had told me, when the post-boy comes up on his pony, on his way to the castle, and whistles as having a letter. He was a new post-man (Bob Spurrer, that other lad, enlisted in the dragons and was killed at Waterloo; the lasses were all in the dairy, so I stept out myself. Says he, 'Is there a woman here by the name of Molly Birkenshaw, 'cause I've a letter for her, and it's four and elevenpence, a letter from furrin parts, I take it.'

"When he said this you might have knocked me down with a feather. I knew in a moment where it was from,—the very place I had been thinking on that minute. So I stared at him a bit, and then I said, quite slow, 'There was a wench o' that name, but she's dead, but you can give me the letter, for her lads are here.'

"'Aye,' says he, 'but you must pay for it.'

"With that I snatches the letter from him, and throws him a crown piece, and off he goes, and I stood looking on it as if I was in a dream. There it was, plain enough, 'Molly Birkenshaw, Gnarledoak Farm, Lambercroft, near Durham, England,' and stamped 'Sydney, New South Wales, Ship-letter.' Chris Birkenshaw came in soon after with a team, and we broke it to him gently. The poor lad cried above a bit. Well, we opened the letter, and, sure enough, it was from his father. I can show it you, for I keep it safe locked up; I call that letter my title-deed, for without it I should never have worked here.

"He told how he had written several times, but his letters never came to hand, as he guessed himself. It seemed he had done well, having got assigned to a master that treated him well—he being valuable from his knowledge of cattle and horses; and that after a few years he had got his pardon for shooting a Bushranger. About this, he said (I'll show

you the letter when we get home) 'he put two balls through my hat; but I fetched him down with oge of my snap shots, without putting the gun to my shoulder, as he looked round a tree. You mind, Moggy, how I used to knock the rabbits that way, holding the gun across my knees; but there's no rabbits here, nor game worth speaking of, which is a great pity; but perhaps it is all for the best. Then he went to tell how he'd got a fifty-acre grant and a small lot of cattle, and had made money by his wages and by attending to the great Mr. L——'s herd of breeders, and had bought grants of land from drinking fellows; and what a good country it was for all kinds of live stock; and what a profit wheat paid, the government wanting such a quantity of meal for the prisoners; and how land could be had on grant by a farmer with some money; and how drunken many of the people were, and how well sober people got on; 'for,' says he, 'I've given up drink, Moggy, ever since I got my liberty!' Then he asked after his old friends, and even the game-keeper, hoping he had got over that clout; and after his old master, that was me, and wished Master Bowsted, a wild young gentleman that used to go poaching with Tom, might think of coming out; and then he gave a list of prices of cattle and sheep, and wages; and ended by saying he had sent 50*l.*, to be paid through the Durham bank, to Mister Gabriel, that's me, for the passage of his wife and family; and if he did not hear this time, he should not write no more, but give it up for a bad job. And, sure enough, three days after came a notice that the money had come.

"Well, we spelled it over again and again; the two lads wept, and so did my wife; and I could scarcely help weeping myself, to think what a comfort it would have been to poor Moggy Birkenshaw if she had lived, and to think, too, what a help and warning this letter seemed. Well, I got on my nag, and took a turn round the farm, just to give me time to consider what or whether I should say any thing about emigrating to my wife. The time was come for me to make up my mind. Tom Birkenshaw's letter had turned the scale with me; but when I looked round, and saw in the distance the spires of the cathedral that had so often been a glad sign of home near, after a long absence, my heart almost failed me. The thought of a farewell for ever to the country and the county and the parish where I was born; of seeing no more the fields in which I had laboured and sported for nearly forty years, seemed indeed a draught too bitter. Then, again, I recalled my present position, sliding surely, in spite of my struggles, in spite of my clings to every twig of stay—down, down to ruin; and my heart was hardened for any change that offered fair hopes of an honest living.

"At length, my mind was made up. I would speak to my wife that very evening,

and find whether she would cross the seas, or fight it out with poverty at home. With this resolution I rode back, firmer in my saddle than I had been for many a day. It was dusk, and supper laid out: they were waiting for me for prayers; it was my second son Barnard's turn to read a chapter. My wife (it was not her custom) went herself, fetched the Bible, a lighted candle, and, putting her finger on a place, said to Barnard, in a voice that sounded as if she was swallowing her tears, 'There, read there,' and the boy read:—

"Now the Lord had said unto Abram, Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will shew thee."

"Then" I looked at her and with a sad and serious smile, her eyes answered me, and I knew we were agreed.

"The next day we began to prepare for our long journey. Weary work it was and painful, deciding what to take and what to sell. Many a treasure was sacrificed; old oak presses, chairs, and bedsteads, that had belonged to our family for centuries, had to go under the auctioneer's hammer. But we went at the work with a will, and cleared away wholesale. We, who were old and the full-grown, were sad; but the children played and enjoyed the confusion, which made us still sadder.

"Having chosen what furniture would be useful, as well as what would take up little room and sell for nothing, and made a careful muster of tools and agricultural implements, half of which turned out useless, I selected three of my finest yearling bulls, and made a barter of other stock for a cart and a blood stallion.

"The sorest trial was the day of sale, and the remarks of my friends and neighbours. No criminal was ever considered more a doomed man; and on looking back, I often wonder how I had courage to persevere. I got rid of my farms at a great sacrifice; but having made up my mind to go, I thought the sooner I was gone the better.

"The only parties who would join me in emigrating were two young men, small farmers, Granby's father and Will Blackwood, who was killed by the Blacks near where we stand; he's buried by the chapel, but you can see the mounds where we covered over the savages. Budge and Grundy followed us two years afterwards. It was only those very hard up that would think of crossing the sea.

"As for the Squires they were very angry; they did not like the example set to tenants, and abused me as if I had been a deserter or a traitor. Emigration was not in fashion as it is now.

"Of friends of my own standing, one did not like the sea, another thought times would mend, another was getting ready when his wife stopped him, and so they stayed. Out

of a dozen all came down to the workhouse or day-labour, except one, and he went to Canada and did well. Mr. M——, the gentleman from New South Wales, was delighted to hear of my going with such a useful party, and got me a cheap passage, on condition of our looking after his bulls, rams, and horses.

"We were a large party, and every one able to work, except the baby; but my capital had dwindled to a few hundred pounds. Every one of my servants has done well. Bill Bonser, my head farm-servant, paid his own passage; he's one of the richest men in the colony now. The two young Birkenshaws married two of my daughters; one of them is in Port Philip. Betty Laddow, the dairy-maid, married my second son, Barnard. Hugh Sands, my ploughman, has a nice farm on the river; you saw him last night, a dark, stout little man; and Dolly Russell, our nurse, has married the rich Mr. N——, and lives in greater style than the governor's lady, which she deserves, for she was as good as she was pretty.

"We sailed to London from Newcastle in a smack, and sent the stock with the men and two of my lads by land. The misery of the voyage and the lodging in London would almost have turned us back if it had not been too late. Only my wife never gave in; and depend upon it, sir, in emigrating, a wife of the right sort is half the battle.

"We were five months from London to Port Jackson, calling in at the Cape for water and fresh provisions, but we only lost one bull. We were ready to kiss the ground when we landed. My third son George took a fancy to the sea; and though he stayed at home until we were settled, he went off, and now commands a whaler out of Sydney. I found it best to sell my live stock, for which I got great prices. Mr. M——'s letters put me pretty right; but within a week of landing, Tom Birkenshaw limped into our lodgings. We had written to him when we made up our minds, but the letter did not arrive much sooner than ourselves. Tom was much older, worn and grey, with downcast look, but still something that gave the idea of money in both pockets, and he rode a tidy nag. The meeting between him and his orphan lads was a very moving sight. It seemed curious that times should so turn round, that my best friend should be my herd, and he a prisoner too. I had influence to get a good grant, and Birkenshaw put me up to what land to ask for, and what official gentleman to conciliate by letting him have one of my horses on his own terms. Birkenshaw bought my team of oxen and waggons; I had a tent; he engaged me my hands, a bullock-driver, a stockman and two others, all from our neighbourhood, all prisoners.

"I came down to this place when there was not a settler within a hundred miles, and literally pitched my tent, a three-poled one,

on the river side. Having been accustomed to find house and outbuildings, fences, fields, gardens, beside shops for all clothes and implements, ready to our hands, we had every thing to make, and very little to make it with. But I pulled off my coat and began, and for fifteen years, from daylight to dusk, never left off for six days a-week, besides teaching the children in the evening, when they were not too sleepy to listen to me. After fifteen years, I found I could rest a little, and now I only give a hand's turn at harvest or shearing time. But then I have had six more children born to me, besides grandchildren; and in this country truly we may say with the Psalmist, 'Children are an heritage of the Lord. As arrows in the hand of the strong man, so are children; happy is the man that hath his quiver full of them,' for food grows faster than mouths, and they are well earning their worth, when at home they would want a maid to look after them.

"It is true I have been very fortunate; there will never be such times again for making money—since the free grants of land and the assignment of prisoners have both been done away with. Then my land has always been free from drought, and is right down good land, needing little work for clearing; although, as for that, you may take my word, there is more good land than the squatters like to own. Why, I have had four sets of servants that have done well, besides a lot of idle drinking fellows. There was my first bullock-driver, Frank Fetlock; he was transported for stealing corn to feed his master's horses; when he was before the magistrates they offered to let him off if he would enlist, as he was a very fine-looking fellow. He often laughed about it, saying what a good job it was he wouldn't consent, although he rued his answer when first sent to the hulks for transportation. Frank was an ingenious fellow, always at work on straw hats or stockwhips, or something, when not busy for me. When he left, he had a mare, a few head of stock, and a little money saved up to begin with. Yorkshire-like, he was a rare hand at chopping and swapping, and now he is one of the richest men in the district. Then there was Tom Nash, a stockman of mine; he came out as groom to Colonel I——, quite a fine gentleman flunkey when he arrived, a cockney too; he threw up his livery, because he saw where money was to be made, gave up all expenses, saved money, and is a squatter now, with perhaps as fine a stock as any in the colony. Those of my old neighbours from Gnarledoak, that have come out and laid down to work, have done well; go where you will, the hard workingman, with a large family, is thriving. But then there are failures. Farmer Cudworth had 3000*l.* when he landed; he was always grumbling, hated the country, hated the people, and made them hate him, spent as much money on clearing and fencing twenty acres as should

have gone to crop a hundred; would stick to all his old country notions, lost his money, took to drinking, and died. Squire Brand's son came to me with a letter of introduction; he had 8000*l.*, would not wait to learn any thing, bought sheep the Sydney bank had a mortgage on—a regular bad lot; then left all to his overseer while he was dancing at the governor's balls, playing the fashionable, and made a complete failure; he went home. And so you see, sir, the long and short of it is, that for a man that can work himself, this is a famous country, and likewise money is to be made by carefully laying out money in stock and waiting for the increase; but as a general rule the money made by gentlemen who have not much capital, and have not been accustomed to soil their hands, is by seeing, living being cheap and neither shop nor fashions in the Bush to tempt into spending money idly. I could tell a score of stories about settlers I've known, of all sorts, that have done well, and that have made a regular mull of it. Fair words and hard work will carry you through; it's better to say *come than go*, if you want work done in the Colony. There was young C—. But what's that by the fallen gum-tree; as I live there's a dingee at a sick ewe. Loo Boomer, Loo Bounder! at him, good dogs!" The hounds caught sight just as master Dingee began to steal across the plain, just like a great hill fox, only, instead of carrying his brush gallantly in the air, it was tucked miserably between his legs; away went the hounds, at full speed; we followed, leaping fallen trees and cracks, the old man standing up in his stirrup, with his hat in his hand, cheering the dogs at the top of his voice; after a sharp burst, just as master Dingee was getting into a scrubby thicket, Boomer turned him, and Bounder pulled him down, not without receiving a grab that nearly cut off his fore leg; in one minute my knife laid the brute's throat open. This ended our gossip for that day, as I suspect Father Gabriel was rather ashamed that old sporting instincts and hatred of the Bushman's curse, the native dog, should have made him forget his position as an elder at Gabriel's Chapel.

THE MODERN ROBBERS OF THE RHINE.

"How picturesque!" says Mrs. Smith, as she stands in the centre of a group on board a Rhine steamer, all of whom are looking up at the ruined castles along the choice portion of the banks near Pfalz.

"How poetical!" says her daughter, Miss Smith (just budding sixteen), who has been reading the scraps of Byron and Southey quoted in that ubiquitous red volume, Murray's "Handbook."

"Crack wines grow hereabouts, I believe!" says the son of twenty-two, who smokes, and wishes to be able to talk about what he has

tasted, when he gets back to London and his untravelling companions.

"Ah! ah!" says Smith, senior, to his friend Jones, who forms one of the party of forty or fifty English people daily seen—now steam-travelling is so cheap—making a holiday on the Rhine. "Ah! ah! Sir, I flatter myself we now-a-days know a great deal better how to manage things than our forefathers did. Talk of the wisdom of our ancestors, Sir! it's all moonshine; bosh, Sir; why every one of those tumble-down places that my wife thinks so *picturesque*, and my daughter calls so *poetical*, used to be full of thieves. People who write novels, and that sort of trash, may colour them up into heroes, Sir; but they were nothing but thieves, footpads, highwaymen, nests of roystering vagabonds, who got along by robbing on the highway and plundering the boats that came down this river. But now-a-days we manage these things better. Policemen and newspapers have stopped that sort of thing. Depend upon it, our brave ancestors, our wise ancestors, were nicely beaten and robbed. They put up with it; but we, Sir, know better." And so saying, Smith drew up his head in a very significant way.

Mr. Smith used to go every year to Margate or to Brighton; but cheap trains and cheap steamboats have lured him to the Rhine, where he thanks his stars that he lives in 1850—in these our later days, when the robbers of that famous stream are supposed to exist only in its legends. Simple Mr. Smith!

The bold robber-barons of the older period, and the famous Schinderhannes of more modern date, are gone, it is true; but just change an English sovereign on a Rhine steamer, speak English at a Rhine hotel, or stay but one day at Wiesbaden, Homburg, or Baden-Baden, and it will soon be evident enough that we have modern types of the old originals—real, living, breathing, cunning, unscrupulous robbers of the Rhine.

Smith and family had changed English gold for Belgian silver and German copper, and they had found some difficulty in solving the knotty problem, "How to make it right!" They had stopped, too, at Belgian and at Rhine hotels, and had been still more puzzled than ever by the mysterious reckonings sometimes made in Bavarian florins of twenty pence and sometimes in German florins of two shillings; they had tried in vain to unravel the difficulty of kreutzers and silber groschen, of thalers and gulden, and, more than all, to make up their minds what could be the values of the numberless varieties of little dirty coins they received in change for their handsome English gold. Young Smith, with an eye to realities, had discarded descriptions and inquiries, and had determined upon a plan of his own for the study of Continental numismatics. He had changed a sovereign when he landed at Ostend into the money of Belgium, asking

for pieces of different denominations. Into a pocket by itself he put the change as taken, made up, as it was, of pieces of five francs, francs, half-francs, quarter-francs, two sous, sous, and centimes. On his road he studied these; and when he got to the frontier of Prussia, at Verviers, and whilst the custom-house and posting-house formalities were in progress, he found time to change the Belgian money for Prussian coins. Now he found his special pocket laden with thalers and silver groschen. A day's steam took them to Biberich, and when there, a third series of coins were in request. The money of Frederick William was converted into that of the Grand Duke of Nassau, and this again, next day, was changed into the gulden of Frankfort. At Heidelberg (Bavaria) another set of moneys were obtained for the often re-converted produce of the sovereign; and only one day later, the contents of the special pocket were from the mint of the Duke of Baden. The very cheap and excellent railway of that potentate took them towards Basle, whence Schaufhausen was within easy reach. Here, at the Falls of the Rhine, the young numismatic investigator changed his money into the popular currency of Switzerland—batzen and rappen. At each stage of this progress—at each step in this practical illustration of changing a pound upon the Rhine—the whole contents of our friend's special pouch had been turned out, and had been replaced by innkeepers or other traders with the moneys of the place where the transaction was completed.

At Schaufhausen there were, as usual, many Englishmen who, also as usual, had a growl about the moneys and the hotels.

"I have been making myself practically acquainted with the currency in a way of my own," said Smith, junior.

"How so?" inquired one of the group of travellers who were gossiping on the subject.

"I changed a sovereign," explained our hero, "at Ostend; and then changed what I got for it in Prussia; then changed that in the Duchy of Nassau; and that again in the free city of Frankfort; and so on repeated the process in Baden and Bavaria—in fact, in each separate jurisdiction through which we passed."

"Practical man," said one.

"Capital notion," said another.

"Knowing dog," cried a third.

"Rather costly experiment, I fear," suggested a German, who spoke good English, and had been one of the listeners. "Pray, what shape has your pound assumed at last?"

"There it is," said Smith, as he suited the action to the word, by emptying the contents of his experimental pocket upon the table.

The exhibition looked very unpromising, certainly. The glittering twenty-shilling piece left at Ostend was now represented by as ugly a collection of dirty, worn, counterfeit-looking a jumble of silver and copper as ever

an Israelite counted out in the Jews' Lane, at Frankfort.

"Count it up," said Smith the younger.

"Very good," said the German, and he began.

"Five francs—ten—" said Smith.

"Stop," said the German, "Swiss francs and French francs are different things—different values. I will tell you the worth of this heap." He went to work to tell them over, and stated the result in batzen and rappen.

"And how much is that worth in English sterling coin?" asked a bystander.

"Just fourteen shillings and a penny farthing," replied the German.

"What?" shrieked Smith.

"Fourteen shillings and a penny farthing English," repeated the German.

And so it was, sure enough. Exactly five shillings and tenpence three farthings was the price of changing a sovereign between Ostend and Schaufhausen. That was the trifling toll taken by one section of the modern robbers of the Rhine!

Expressions of surprise and indignation were numerous upon this discovery, and straightway each of the party began to detail his own special grievance, with such warmth that all were speaking and scarcely one listened. The enormous charges for luggage on the railways had raised the ire of one traveller; a second growled over the payment of so much a package for insurance of his portmanteau on board the steamer from Cologne to Bonn, from Bonn to Coblenz, and so on at every stage, till the costs for baggage were almost greater than the fare of its owner. A third vented his wrath upon the system of charging every innocent English tourist *salon fare* at the office of the Rhine steamer, the said *salon* being a mere means of getting an extortionate price which no German paid, because everybody who paid second-class had precisely the same cabin, the identical accommodation and attendance, bestowed on the victim of *salon* prices. Another growled out that the dearest wines came from the same bin with those of moderate price; another, that an Englishman was charged one-third more for everything than a Frenchman, and twice as much as a German; but the grievance of grievances came from a middle-aged country squire, who was travelling with his wife and a party of relations. They were six, and the ladies, being unwilling to endure great exertion, had made short stages, and thus consumed three weeks on the way from Ostend to Schaufhausen. "Three beds appear in every bill, of course," growled the elderly gentleman; "and in every bill one bed, I find, involves two wax lights. I have reckoned up, Sir," continued the matter-of-fact squire most emphatically; "I have made an exact calculation, Sir; and I find that on the Rhine, between Cologne and Schaufhausen, in eighteen days, it has taken just one hundred

and eight wax candles, price one hundred and eight francs, to light us to bed!"

Here was another slight glimpse of the presence of modern robbers on the Rhine. But the great men of the plundering trade are not to be found hidden in the guise of *maitre d'hôtel*, money-changer, or steam-boat *conducteur*; they wear another costume, and assume a loftier denomination.

In literature, in science, in art, we find Germany quite on a level with the present age. She has produced men and books equal to the men and books of England or France, as the names of Goethe, Schiller, Humboldt, Liebig, and a score of others bear testimony. But whilst in poetry, philosophy, and science, she is on a par with the best portions of modern Europe; in politics—in the practical science of government—she is an indefinite number of centuries behindhand. Governmentally, she is now where the English were during the Saxon Heptarchy, with seven or more kingdoms in a space that might be well governed by one sceptre. Where she might get along very well with two, she has a dozen petty kings, and petty courts, and petty national debts, and petty pension-lists, and paltry debased and confusing coinages, and petty cabals, quarrels, and internixture of contending interests. England, long ago, was relieved of separate Kings of Wessex and Kings of Mercia, Kings of Scotland and Kings of Wales; France has no more turbulent Dukes of Burgundy or Alsace claiming sovereign power over portions of a fine country, naturally one and indivisible; but poor Germany yet suffers from such troublesome divisions of dominion. Imagine a King of Lancashire, with two free cities of Manchester and Liverpool in its confines; a King of Yorkshire and a Grand Duke of the Midland Counties; an Emperor of Middlesex; a Sovereign Elector of Kent and Sussex; with reigning Dukes of Hampshire and Gloucestershire and Wiltshire; a King of Scotland, and then a King of Wales, who claimed besides all the little odds and ends of territory, got—some by marriage, and some by conquest—in various disjointed parts of the country. Imagine some of these petty divisions Romanist, and some Protestant, and some of mixed faiths; different coinages, opposed interests, each backed by standing armies, in which every man, high and low, was for some years compelled to serve. Imagine all this to exist in our country, and we have some idea of the governmental condition of Germany in 1850.

Out of this division of territory arises, of course, a number of small poor princes; and as poor princes do not like to work hard when their pockets are low, we find them busy with the schemes, shifts, and contrivances, common from time immemorial with penniless people who have large appetites for pleasure, small stomachs for honest work—real, living, reigning Dukes though they be, they have added to the royal "businesses" to

which they were born, little private speculations for the encouragement of *rouge et noir* and *roulette*. These small princes have, in fact, turned gambling-house keepers—hell-keepers in the vulgar but expressive slang of a London police court—proprietors of establishments where the vicious and the unwary, the greedy hawk and the silly pigeon, congregate, the one to plunder and the other to be plucked. That which has been expelled from huge London, as too great an addition to its vice, or, if not quite expelled, is carried on with iron-barred doors, unequal at times to protect its followers from the police and the infamy of exposure—that which has been outlawed from the Palais Royal and Paris, as too bad even for the lax morality of a most free-living city—that huge vice which caters to the low senses of cunning and greediness, and tempts men to lose fortune, position, character, even hope, in the frantic excitements of, perhaps, one desperate night—such a vice is housed in fine buildings raised near mineral springs, surrounded by beautiful gardens, enlivened by music and sanctioned by the open patronage of petty German princes holding sway in the valley watered by the Rhine. In fact, unscrupulous speculators are found to carry on German gaming-tables at German spas, paying the sovereign of the country certain thousands of pounds a year for the privilege of fleecing the public.

The weakened in body are naturally weakened in mental power. The weak in body are promised health by "taking the waters" at a German bath. The early hours, the pleasant walks, the good music, the promised economy, are inducements. The weakened mind wants more occupation than it finds, for these places are very monotonous, and the gaming-table is placed by the sovereign of the country in a noble room—the *Kursaal*, to afford excitement to the visitor, and profits—the profits of infamy—to himself.

There are grades in these great gaming-houses for Europe. Taking them in the order in which they are reached from Cologne, it may be said that Wiesbaden is the finest town, having very pleasant environs, and the least play. The Grand Duke of Nassau, therefore, has probably the smallest share of the gaming-table booty.

Homburg, which comes next in order, is far more out of reach, is smaller, duller—it is indeed very, very dreary—and has to keep its gaming-tables going all the year round, to make up the money paid by the lessees of the gambling-house to the Duke. The range of the Taunus is at the back of the "town" (a village about as large, imposing, and lively as Hounslow), and affords its chief attraction. The rides are agreeable if the visitor has a good horse—a difficult thing to get in that locality—and is fond of trotting up steep hills, and then ambling down again. In beauty of position, and other attractions, it is very far below both Wiesbaden and Baden.

Baden-Baden is the third, and certainly most beautiful of these German gambling-towns. The town nestles, as it were, in a sheltered valley, opening amongst the hills of the Black Forest. In summer its aspect is very picturesque and pleasant; but it looks as if in winter it must be very damp and liable to the atmosphere which provokes the growth of *gout*. At Baden there is said to be more play than at the other two places put together. From May till the end of September, *roulette* and *rouge et noir*—the mutter of the man who deals the cards, and the rattle of the marble—are never still. The profits of the table at this place are very large. The man who had them some years ago retired with an immense fortune; and one of his successors came from the Palais Royal when public gaming was forbidden in Paris, and was little less successful than his predecessor. The permanent residents at Baden could alone form any idea of the sums netted, and only such of those as were living near the bankers. They could scarcely avoid seeing the bags of silver, five franc pieces chiefly, that passed between the gaming-tables and the bank. A profit of one thousand pounds a fortnight was thought a sign of a bad season; and so it must have been, when it is calculated that the gambling-table keeper paid the Duke a clear four thousand pounds a year as the regal share of the plunder, and agreed to spend two thousand a year in decorating the town of Baden. The play goes on in a noble hall called the Conversations House, decorated with frescoes and fitted up most handsomely. This building stands in a fine ornamental garden, with green lawns and fine avenues of tall trees; and all this has been paid for by the profits of *roulette* and *rouge et noir*. Seeing this, it may cause surprise that people play at all; yet the fascination is so great that, once within its influence, good resolutions and common sense seem alike unequal to resistance. All seems fair enough, and some appear to win, and then self-love suggests, "Oh, my luck will surely carry me through!" The game is so arranged that some win and some lose every game, the table having, it is said, only a small percentage of chance in its favour. These chances are avowedly greater at *roulette* than at *rouge et noir*, but at both it is practically shown that the player, in the long run, always loses. It is whispered that, contrary to the schoolboy maxim, cheating *does* thrive at German baths; and those who have watched the matter closely, say a Dutch banker won every season by following a certain plan. He waited till he saw a heavy stake upon the table, and then backed the other side. He always won.

Go into one of the rooms at any of these places, and whom do you see? The off-scourings of European cities—professional gamblers, ex-officers of all sorts of armies; portionless younger brothers; pensioners; old men and old women who have outlived all other ex-

citements; a multitude of silly gulls, attracted by the waters, or the music, or the fascination of play; and a sprinkling of passing tourists, who come—"just look in on their way," generally to be disappointed—often to be fleeced. Young and handsome women are not very often seen playing. Gaming is a vice reserved for middle age. Whilst hearts are to be won, dollars are not worth playing for. Cards and rouge, and dyspepsy seem to be nearly allied, if we may judge by the specimens of humanity seen at the baths of Wiesbaden, Homburg, and Baden. The players—and player and loser are almost synonymous terms—are generally thin and anxious; the bankers, fat and stolid. As the brass whirls round, the table-keeper has the look of a quiet bloated spider, seemingly passionless, but with an eye that glances over every chance on the board. At his side see an elderly man, pale and thin, the muscles of whose lower jaw are twitching spasmodically, yet with jaded, forced resignation, he loses his last five pounds. Next him is a woman highly dressed, with false hair and teeth, and a great deal of paint. She has a card in her hand, on which she pricks the numbers played, and thus flatters herself she learns the best chances to take. Next to her see one of the most painful sights these places display. A father, mother, and young girl are all trying their fortune; the parents giving money to the child that they "may have her good luck," reckless of the fatal taste they are implanting in her mind. Next is a Jew, looking all sorts of agonies, and one may fancy he knows he is losing in an hour, what it has cost him years of cunning and self-denial to amass. And so on, round the table, we find ill-dressed and well-dressed Germans, French, Russians, English, Yankees, Irish, mixed up together in one eager crowd; thirsting to gain gold without giving value in return; risking what they have in an insane contest which they know has destroyed thousands before them; losing their money, and winning disgust, despondency, and often despair and premature death. Never a year is said to go by without its complement of ruined fools and hasty suicides. The neighbouring woods afford a convenient shelter; and a trigger, or a handkerchief and a bough, complete the tragedy.

Let us say no more of our civilisation having banished Schinderhannes, and his predecessors, the half-soldiers, half-thieves, who built the stone towers now crumbling up above the vineyards of the noble German river. Their booty in a year could not have equalled the plunder of a single month at Wiesbaden, Homburg, or Baden-Baden. The real freebooters of the place are still extant, and carry on their trade under the banner of chieftains who share the spoil—the reigning Dukes of Nassau, Homburg, and Baden—who are the veritable grand modern robbers of the Rhine.

CHIPS.

AN ANECDOTE OF THE IRISH POOR LAW.

We may introduce the following Chip by premising that, at the introduction of the Poor Law into Ireland, the workhouses were built by means of loans, advanced by the Government, on the security of the rates. Constructed generally in that style of architecture called "Elizabethan," they were the most imposing in the country in elevation and frequency, and placed usually in the wretched suburbs of towns and villages, formed amongst the crumbling and moss-green cottages, a pleasing contrast in the eye of the tourist. They were calculated to accommodate from five hundred to two thousand inmates, according to the area and population of the annexed district, but some of them remained for years altogether closed, or, if open, nearly unoccupied, owing to the ingenious shifts of the "Guardians," under the advice of the "Solicitor of the Board." Their object was to economise the resources of the Union, to keep the rates down, and in some instances they evaded the making of any rate for years, after the support of the destitute was made nominally imperative by the law of the land.

As there was a good deal of patronage in a small way placed at the disposal of the "Guardians," great anxiety was manifested by those eligible to the office. Most Justices of the Peace were indeed, *ipso facto*, Guardians, but a considerable number had to be elected by the rate-payers, and an active canvass preceded every election. A great deal of activity and conviviality, if not gaiety, was the result, and more apparently important affairs were neglected by many a farmer, shopkeeper, and professional man, to ensure his being elected a "Guardian," while the unsuccessful took pains to prove their indifference, or to vent their ill-humour in various ways, sometimes causing less innocuous effects than the following sally:—

At a certain Court of Quarter Sessions, during the dog-day heat of one of these contests, a burly fellow was arraigned before "their worships" and the jury, charged with some petty theft; and as he perceived that the proofs were incontestably clear against him, he fell into a very violent trepidation. An attorney of the court, not overburdened with business, and fond of occupying his idle time in playing off practical jokes, perceiving how the case stood, addressed the prisoner in a whisper over the side of the dock with a very ominous and commiserating shake of his head.

"Ah, you unfortunate man, ye'll be found guilty; and as sure as ye are, ye'll get worse than hangin' or transportation. As sure as ever the barrister takes a pinch of snuff, that's his intention; ye'll see him put on the black cap immaydiately. Plaid guilty at once, and I'll tell ye what ye'll say to him after."

The acute practitioner knew his man: the poor half-witted culprit fell into the snare; and after a short and serious whispering between them, which was unobserved in the bustle of the Court-house usual on such occasions, the prisoner cried out, just as the issue paper was going up to the jury, "Me lord, me lord, I plaid guilty,—I beg yer worshop's an' their honours' pardon!"

"Very well," said the assistant-barrister, whose duty it was to advise upon the law of each case, and preside at the bench in judicial costume; "very well, Sir. Crier, call silence."

Several voices immediately called energetically for silence, impressing the culprit with grave ideas at once of his worship's great importance, and the serious nature of the coming sentence.

"Withdraw the plea of not guilty, and take one of guilty to the felony," continued the assistant-barrister, taking a pinch of snuff and turning round to consult his brother magistrates as to the term of intended incarceration.

"Don't lose yer time, ye omdhaun!" said the attorney, with an angry look at the prisoner.

"Will I be allowed to spake one word! yer worships?" said the unfortunate culprit.

"What has he to say?" said the assistant-barrister with considerable dignity.

"Go on, ye fool ye!"—urged the attorney.

"My lord, yer worships, and gentlem'n av the jury," exclaimed the culprit, "sind me out o' the counthry, or into jail, or breakin' stones, or walkin' on the threadmill, or anything else in the course o' nature, as yer worships playses; but for the love o' the Virgin Mary, don't make me a 'Poor Law Garjin'."

THE TREASURES OF THE DEEP.

SOME of these treasures were fished up, and brought to our readers' knowledge in our article on Billingsgate in our tenth number. We received an additional illustration of the subject from a correspondent:—

"People talk of the 'treasures of the deep' with generally a very confused notion of their own meaning; if, indeed, they have any meaning at all. Probably they have some incoherent ideas of rich merchantmen that have gone down with their costly cargoes, mingled with coral reefs and pearl fisheries, as forming no inconsiderable portion of those treasures. But how often do they think of the countless riches which the sea produces in the living things that dwell in it! Take, for illustration, the whale alone. For ten days the writer of this was becalmed in the latitude of the Azores or Western Isles. During the whole of that period huge whales were incessantly 'blowing' in every direction round the ship. As many as twenty or thirty at a time might be seen rolling their unwieldy bodies half out of the sea, and puffing up large fountains of spray into the air. At a moderate calculation, two hundred and fifty whales were seen from

the deck in those ten days. At an equally moderate calculation, each whale was worth four hundred pounds. Their gross value was, therefore, one hundred thousand pounds!"

THE MONSTER PROMENADE CONCERTS.

"CHARMING place this," said a mad lady to us while looking out of a window of the finest Lunatic Asylum in North Britain; "so retired, so quiet, so genteel, so remote from the busy hum of men and women. The view you perceive is lovely—quite sylvan (there were two trees in the remote distance). 'Silence reigns around,' as the poet says, and then you see, Sir, we do not allow street bands to come here."

On inquiry, we were told that this patient was a London literary lady. Her mania, like Morose in Ben Jonson's *Epicure*, was against noise. She constantly prayed for deafness. She walked in list shoes, and spoke in a whisper as an example to others. The immediate cause of her confinement had not been ascertained, but we have no doubt that she had been driven stark mad by the street discord of the Metropolis. We firmly believe her case is not singular. Judging from our own experience of the extremest brink of insanity, to which we have been occasionally driven by the organic and Pandean persecutions to which we have been subjected, we should say that much of the madness existing and wrought in this County of Middlesex, originates in street music. If Dr. Connolly cannot hear us out in this opinion, we shall be rather astonished.

A man of thoughtful habit, and of a timid, or nervous temperament, has only to take apartments in what lodging-house keepers wickedly call in their advertisements, "a quiet neighbourhood," to be tolerably sure of making his next move in a strait waistcoat to an asylum for the insane. In retired streets, squares, terraces, or "rows," where the more pleasing music of cart, coach, and cab wheels does not abound, the void is discordantly filled up by peripatetic concerts, which last all day long. You are forced, each morning, to shave to the hundredth psalm groaned out from an impious organ; at breakfast you are stunned by the basses of a wretched waltz belched forth from a bass trombone; and your morning is ruined for study by the tinkling of a barrel piano-forte; at luncheon acute dyspepsia communicates itself to your vitals in the stunning *buldering* of a big-drum; tuneless trumpets, discordant cornets, and blundering bass-violos form a running accompaniment of discord to your afternoon walk: hurdy-gurdies, peradventure, destroy your dinner; fiddles and harps squeak away the peace of your whole evening; and, when you lay your distracted head on your pillow you are robbed of sleep by a banditti of glee singers, hoarsely creaking, "Up rouse ye then, my merry, merry men!"

Yet this is a land of liberty, and every man's house is his castle!

A man may have every comfort this world can afford—the prettiest house, the sweetest wife, the most unexceptionable cook, lovely children, and a good library—but what are these when the enjoyment they afford is destroyed by an endless *charivari*; when domestic happiness is made misery by street discord; when an English gentleman is denied what is insured to every Pentonville prisoner—peace; when a wise legislation has patented the silent system for convicts only, and supplies no free-born Briton with a defence from hideous invasions of his inmost privacy: a legislature which, here, in London, in the year of grace eighteen hundred and fifty, where civilisation is said to have made some advances—permits bag-pipes!

This is a subject upon which it is impossible, without the most superhuman self-control, to write with calmness.

Justice is supposed in this country to be meted out with an even hand. A humane maxim says, "Better let ten guilty men escape, than one innocent man suffer." Yet what have the public, especially of "quiet neighbourhoods," done; what crimes have we committed; what retribution have we invoked; that we are to be visited with the indiscriminating punishment, the excruciating agony, squealed and screeched into our ears out of that instrument of inflexible torture, the Scotch bagpipe! If our neighbour be a slanderer, a scoundrel, a giver of bad dinners, or any other sort of criminal for whom the law has provided no punishment, and a bag-pipe serenade be your mode of revenge on him, shut him up with a piper or pipers in the padded room in Bedlam, or take him out to the Eddystone lighthouse; but for the love of mercy, do not make us, his unoffending neighbours, partakers of his probably just, but certainly condign, punishment!

We have, however, a better opinion of human nature than to believe in such extreme vindictiveness. We rather attribute these public performances of sonorous savagery to the perverted taste of a few unfortunate individuals, who pretend to relish the discords, and who actually pay the kilted executioners of harmony. The existence of such wretched amateurs might be doubted if we did not remember that the most revolting propensities are to be found among mankind. There are people who chew tobacco; a certain tribe of Polynesian aborigines deem *assafetida* the most delicious of perfumes; and Southey, in his *Travels in Spain*, states that the Galician carters positively refused to grease their wheels because of the delight the creaking gave them. Yet although the grating of wooden axles, or even the sharpening of saws, is music to the pibroch, it appears from a variety of evidence that bad taste can actually reach, even in the female mind, to the same of encouraging and patronising street bagpipers.

We scarcely believed our eyes when we read, some days since, the following police report:—

"MARLBOROUGH-STREET. — Two boys, named Campbell, dressed as Highland pipers, and each provided with a pair of bagpipes, were charged with having refused to quit Suffolk-street, where they were playing, when requested to do so.

"A clerk to Mr. Garratt, an inhabitant, said, about 11 o'clock the boys put their pipes at work, and kept up such a concert of groaning and screeching with them, that his employer gave him directions to tell them to remove. Witness did so, and the boys refusing to comply with the request, a constable was employed, and they were brought to this court.

"The boys said they were the sons of a Scotch piper. They got their living by playing on the bagpipes, and they had been employed by a lady who liked bagpipe harmony, to play before the door of the hotel in Suffolk-street, where she was staying.

"Mr. HARDWICK told the boys they must not adopt such a mode of getting their own living as would hinder other people from getting theirs. It would be impossible for professional men or tradesmen to carry on their daily avocations in the hearing of such a din of discordant sounds as would be caused by a couple of pairs of Scotch bagpipes. To the street musical abominations of the Italian boys had recently been added that of Scotch bagpipers,—a kind of concert sufficient to drive invalids and ordinary people crazy. The street musicians must be told that the law obliged them to go away whenever they were told to do so by any housekeeper in streets where they were playing. For the present offence he would inflict a fine of one shilling only, which should be made twenty shillings on the next occasion."

Mr. Hardwick did the best he could. If he could have transported the patroness of bagpipes for life to Staffa or to the lesser Cumbraes, the justice of the case would have been fully met. But, as we have before complained, the law, as applicable to nuisance-noises, is exceedingly defective.

Do we wish to banish all music from the busy haunts of men? By no means. Good music is sometimes emitted from our pavements—the kerb sends forth here and there, and now and then, sounds not unworthy of the best appointed orchestra. Where these street performers received their musical education it is not our business to inquire. But their arrangements of some of the most popular opera music, show that their training has been strictly professional. Quintette, Sextette, and Septette bands of brass and string are occasionally heard in the open street, whose performances show that the pieces have been regularly scored and rigidly rehearsed. "Tune, time, and distance" are excellently kept; the pianos and fortes are admirably coloured—there is no vamping of basses; no "fudging" of difficult passages. We look upon such players as musical missionaries who purvey the best music from the opera houses and from the saloons of the nobility to the general public, to the improvement of its musical taste. But where

even these choice *pave* professionals have us at a disadvantage is in their discoursing their excellent music at precisely the times when we do not want the sounds of the charmer, charm he never so wisely. The habitant of the "quiet neighbourhood," foud as he is of *Casta Diva* or the *Rosen Waltz*, would rather not be indulged with them just as he is commencing to study a complicated brief, or while he is computing the draft of a difficult survey. When he wants music he likes to go to it; he never wants it to come to him.

Upon this premise we propose, for the benefit of the world at large, a sweeping street-music reform; and any enterprising member of Parliament is quite welcome to the draft of a bill on the subject, with which we now conclude:—

The bill should be entitled,

"An Act for the better Preservation of the Public Peace by the better Regulation of some certain kinds of Street Music, and by the utter Abolition of certain other kinds of Street Music."

The first proviso should give authority to certain competent musicians, and bands of musicians, to play at certain appointed places at certain appointed hours of the day, and under certain regulations.

That the places appointed shall be, in summer, the Parks and Public Gardens in and around London; and in winter certain covered spaces, to be set apart and appointed by the proper authorities.

That the performers shall have no other remuneration than the contributions of their listeners, which will be naturally regulated by the pleasure they give, consequently, by their proficiency.

That no unauthorised grinder of organs, music-mills, or hurdy-gurdies; no blower of bagpipes, Pan's-pipes, horns, cornepeans, trombones, trumpets, clarionets, or bassoons; no scraper of fiddles or violoncellos; no scratchers of harps or guitars; no beaters of drums, dulcimers or tamborines,—be allowed to disturb the public thoroughfares, under pain of various penalties, to be afterwards agreed and settled on; whereof the lightest shall be imprisonment and hard labour for no less a period than ten days (for, say illicit flutes, hautboys, or Pan's-pipes), and the heaviest—only applicable to bagpipes—transportation for life beyond the Border.

Vivat Regina!

HOUSEHOLD WORDS.

A WEEKLY JOURNAL:

CONDUCTED BY CHARLES DICKENS.

No. 31.]

SATURDAY, OCTOBER 26, 1850.

PRICE 2d.

LIVELY TURTLE.

I HAVE a comfortable property. What I spend, I spend upon myself; and what I don't spend I save. Those are my principles. I am warmly attached to my principles, and stick to them on all occasions.

I am not, as some people have represented, a mean man. I never denied myself anything that I thought I should like to have. I may have said to myself, "SNOADY"—that is my name—"you will get those peaches cheaper if you wait till next week;" or, I may have said to myself, "Snoady, you will get that wine for nothing, if you wait till you are asked out to dine;" but I never deny myself anything. If I can't get what I want without buying it, and paying its price for it, I do buy it and pay its price for it. I have an appetite bestowed upon me; and, if I balked it, I should consider that I was flying in the face of Providence.

I have no near relation but a brother. If he wants anything of me, he don't get it. All men are my brothers; and I see no reason why I should make his an exceptional case.

I live at a cathedral town where there is an old corporation. I am not in the Church, but it may be that I hold a little place of some sort. Never mind. It may be profitable. Perhaps yes, perhaps no. It may, or it may not, be a sinecure. I don't choose to say. I never enlightened my brother on these subjects, and I consider all men my brothers. The Negro is a man and a brother—should I hold myself accountable for my position in life, to him? Certainly not.

I often run up to London. I like London. The way I look at it, is this. London is not a cheap place, but, on the whole, you can get more of the real thing for your money there—I mean the best thing, whatever it is—than you can get in most places. Therefore, I say to the man who has got the money, and wants the thing, "Go to London for it, and treat yourself."

When I go, I do it in this manner. I go to Mrs. Skim's Private Hotel and Commercial Lodging House, near Aldersgate Street, City, (it is advertised in "Bradshaw's Railway Guide," where I first found it), and there I pay, "for bed and breakfast, with meat, two and ninepence per day, including servants."

Now, I have made a calculation, and I am satisfied that Mrs. Skim cannot possibly make much profit out of me. In fact, if all her patrons were like me, my opinion is, the woman would be in the Gazette next month.

Why do I go to Mrs. Skim's when I could go to the Clarendon, you may ask? Let us argue that point. If I went to the Clarendon I could get nothing in bed but sleep; could I? No. Now, sleep at the Clarendon is an expensive article; whereas sleep, at Mrs. Skim's, is decidedly cheap. I have made a calculation, and I don't hesitate to say, all things considered, that it's cheap. Is it an inferior article, as compared with the Clarendon sleep, or is it of the same quality? I am a heavy sleeper, and it is of the same quality. Then why should I go to the Clarendon?

But as to breakfast? you may say.—Very well. As to breakfast. I could get a variety of delicacies for breakfast at the Clarendon, that are out of the question at Mrs. Skim's. Granted. But I don't want to have them! My opinion is, that we are not entirely animal and sensual. Man has an intellect bestowed upon him. If he clogs that intellect by too good a breakfast, how can he properly exert that intellect in meditation, during the day, upon his dinner? That's the point. We are not to chain the soul. We are to let it soar. It is expected of us.

At Mrs. Skim's, I get enough for breakfast (there is no limitation to the bread and butter, though there is to the meat) and not too much. I have all my faculties about me, to concentrate upon the object I have mentioned, and I can say to myself, "Snoady, you have saved six, eight, ten, fifteen, shillings, already to-day. If there is anything you fancy for your dinner, here it is. Snoady, you have earned your reward."

My objection to London, is, that it is the head-quarters of the worst radical sentiments that are broached in England. I consider that it has a great many dangerous people in it. I consider the present publication (if it's "Household Words") very dangerous, and I write this with the view of neutralising some of its bad effects. My political creed is, let us be comfortable. We are all very comfortable as we are—I am very comfortable as I am—leave us alone!

All mankind are my brothers, and I don't think it Christian—if you come to that—to tell my brother that he is ignorant, or degraded, or dirty, or anything of the kind. I think it's abusive, and low. You meet me with the observation that I am required to love my brother. I reply, "I do." I am sure I am always willing to say to my brother, "My good fellow, I love you very much; go along with you; keep to your own road; leave me to mine; whatever is, is right; whatever isn't, is wrong; don't make a disturbance!" It seems to me, that this is at once the whole duty of man, and the only temper to go to dinner in.

Going to dinner in this temper in the City of London, one day not long ago, after a bed at Mrs. Skim's, with meat-breakfast and servants included, I was reminded of the observation which, if my memory does not deceive me, was formerly made by somebody on some occasion, that man may learn wisdom from the lower animals. It is a beautiful fact, in my opinion, that great wisdom is to be learnt from that noble animal the Turtle.

I had made up my mind, in the course of the day I speak of, to have a Turtle dinner. I mean a dinner mainly composed of Turtle. Just a comfortable tureen of soup, with a pint of punch; and nothing solid to follow, but a tender juicy steak. I like a tender juicy steak. I generally say to myself when I order one, "Snoady, you have done right."

When I make up my mind to have a delicacy, expense is no consideration. The question resolves itself, then, into a question of the very best. I went to a friend of mine who is a Member of the Common Council, and with that friend I held the following conversation.

Said I to him, "Mr. Groggles, the best Turtle is where?"

Says he, "If you want a basin for lunch, my opinion is, you can't do better than drop into Birch's."

Said I, "Mr. Groggles, I thought you had known me better, than to suppose me capable of a basin. My intention is to dine. A tureen."

Says Mr. Groggles, without a moment's consideration, and in a determined voice, "Right opposite the India House, Leadenhall Street."

We parted. My mind was not inactive during the day, and at six in the afternoon I repaired to the house of Mr. Groggles's recommendation. At the end of the passage, leading from the street into the coffee-room, I observed a vast and solid chest, in which I then supposed that a Turtle of unusual size might be deposited. But, the correspondence between its bulk and that of the charge made for my dinner, afterwards satisfied me that it must be the till of the establishment.

I stated to the waiter what had brought me there, and I mentioned Mr. Groggles's name. He feelingly repeated after me, "A tureen of

Turtle, and a tender juicy steak." His manner, added to the manner of Mr. Groggles in the morning, satisfied me that all was well. The atmosphere of the coffee-room was odouriferous with Turtle, and the steams of thousands of gallons, consumed within its walls, hung, in savoury grease, upon their surface. I could have inscribed my name with a pen-knife, if I had been so disposed, in the essence of innumerable Turtles. I preferred to fall into a hungry reverie, brought on by the warm breath of the place, and to think of the West Indies and the Island of Ascension.

My dinner came—and went. I will draw a veil over the meal, I will put the cover on the empty tureen, and merely say that it was wonderful—and that I paid for it.

I sat meditating, when all was over, on the imperfect nature of our present existence, in which we can eat only for a limited time, when the waiter roused me with these words.

Said he to me, as he brushed the crumbs off the table, "Would you like to see the Turtle, Sir?"

"To see what Turtle, waiter?" said I (calmly) to him.

"The tanks of Turtle below, Sir," said he to me.

Tanks of Turtle! Good Gracious! "Yes!"

The waiter lighted a candle, and conducted me down stairs to a range of vaulted apartments, cleanly whitewashed and illuminated with gas, where I saw a sight of the most astonishing and gratifying description, illustrative of the greatness of my native country. "Snoady," was my first observation to myself, "Hail Britannia, Britannia rules the waves!"

There were two or three hundred Turtle in the vaulted apartments—all alive. Some in tanks, and some taking the air in long dry walks littered down with straw. They were of all sizes; many of them enormous. Some of the enormous ones had entangled themselves with the smaller ones, and pushed and squeezed themselves into corners, with their fins over water-pipes, and their heads downwards, where they were apoplectically struggling and splashing, apparently in the last extremity. Others were calm at the bottom of the tanks; others languidly rising to the surface. The Turtle in the walks littered down with straw, were calm and motionless. It was a thrilling sight. I admire such a sight. It rouses my imagination. If you wish to try its effect on yours, make a call right opposite the India House any day you please—dine—pay—and ask to be taken below.

Two athletic young men, without coats, and with the sleeves of their shirts tucked up to the shoulders, were in attendance on these noble animals. One of them, wrestling with the most enormous Turtle in company, and dragging him up to the edge of the tank, for me to look at, presented an idea to me which I never had before. I ought to observe that

I like an idea. I say, when I get a new one, "Snooty, look that!"

My idea, on the present occasion, was,—Mr. Groggles! It was not a Turtle that I saw, but Mr. Groggles. It was the dead image of Mr. Groggles. He was dragged up to confront me, with his waistcoat—if I may be allowed the expression—towards me; and it was identically the waistcoat of Mr. Groggles. It was the same shape, very nearly the same colour, only wanted a gold watch-chain and a bunch of seals, to be the waistcoat of Mr. Groggles. There was what I should call a bursting expression about him in general, which was accurately the expression of Mr. Groggles. I had never closely observed a Turtle's throat before. The folds of his loose cravat, I found to be precisely those of Mr. Groggles's cravat. Even the intelligent eye—I mean to say, intelligent enough for a person of correct principles, and not dangerously so—was the eye of Mr. Groggles. When the athletic young man let him go, and, with a roll of his head, he flopped heavily down into the tank, it was exactly the manner of Mr. Groggles as I have seen him ooze away into his seat, after opposing a sanitary motion in the Court of Common Council!

"Snooty," I couldn't help saying to myself, "you have done it. You have got an idea, Snooty, in which a great principle is involved. I congratulate you!" I followed the young man, who dragged up several Turtle to the brinks of the various tanks. I found them all the same—all varieties of Mr. Groggles—all extraordinarily like the gentlemen who usually eat them. "Now, Snooty," was my next remark, "what do you deduce from this?"

"Sir," said I, "what I deduce from this, is, confusion to those Radicals and other Revolutionists who talk about improvement. Sir," said I, "what I deduce from this, is, that there isn't this resemblance between the Turtles and the Groggleses for nothing. It's meant to show mankind that the proper model for a Groggles, is a Turtle; and that the liveliness we want in a Groggles, is the liveliness of a Turtle, and no more." "Snooty," was my reply to this, "You have hit it. You are right!"

I admired the idea very much, because, if I hate anything in the world, it's change. Change has evidently no business in the world, has nothing to do with it, and isn't intended. What we want is (as I think I have mentioned) to be comfortable. I look at it that way. Let us be comfortable, and leave us alone. Now, when the young man dragged a Groggles—I mean a Turtle—out of his tank, this was exactly what the noble animal expressed as he floundered back again.

I have several friends besides Mr. Groggles in the Common Council, and it might be a week after this, when I said, "Snooty, if I was you, I would go to that court, and hear the debate to-day." I went. A good deal of it was what I call a sound, old English dis-

cussion. One eloquent speaker objected to the French as wearing wooden shoes; and a friend of his reminded him of another objection to that foreign people, namely, that they eat frogs. I had feared, for many years, I am sorry to say, that these wholesome principles were gone out. How delightful to find them still remaining among the great men of the City of London, in the year one thousand eight hundred and fifty! It made me think of the Lively Turtle.

But, I soon thought more of the Lively Turtle. Some Radicals and Revolutionists have penetrated even to the Common Council—which otherwise I regard as one of the last strongholds of our afflicted constitution; and speeches were made, about removing Smithfield Market—which I consider to be a part of that Constitution—and about appointing a Medical Officer for the City, and about preserving the public health; and other treasonable practices, opposed to Church and State. These proposals Mr. Groggles, as might have been expected of such a man, resisted; so warmly, that, as I afterwards understood from Mrs. Groggles, he had rather a sharp attack of blood to the head that night. All the Groggles party resisted them too, and it was a fine constitutional sight to see waistcoat after waistcoat rise up in resistance of them and subside. But what struck me in the sight was this, "Snooty," said I, "here is your idea carried out, Sir! These Radicals and Revolutionists are the athletic young men in shirt sleeves, dragging the Lively Turtle to the edges of the tank. The Groggleses are the Turtle, looking out for a moment, and flopping down again. Honour to the Groggleses! Honour to the Court of Lively Turtle! The wisdom of the Turtle is the hope of England!"

There are three heads in the moral of what I had to say. First, Turtle and Groggles are identical; wonderfully alike externally, wonderfully alike mentally. Secondly, Turtle is a good thing every way, and the liveliness of the Turtle is intended as an example for the liveliness of man; you are not to go beyond that. Thirdly, we are all quite comfortable, leave us alone!

HIRAM POWER'S GREEK SLAVE.

They say Ideal Beauty cannot enter
The house of anguish. On the threshold stands
This alien image with the shackled hands,
Called the Greek Slave; as if the artist meant her
(The passionless perfection which he lent her,
Shalowed, not darkened, where the sill expands)
To, so, confront man's crimes in different lands,
With man's ideal sense. Pierce to the centre,
Art's fiery finger! and break up ere long
The serfdom of this world. Appeal, fair stone,
From God's pure heights of beauty, against man's
wrong!
Catch up, in thy divine face, not alone
East grief, but west, and strike and shame the
strong.
By thunders of white silence, overthrown.

THE DUTIES OF WITNESSES AND JURYMEN.

I AM not a young man, and have passed much of my life in our Criminal Courts. I am, and have been, in active practice at the Bar, and I believe myself capable of offering some hints towards an improved administration of justice.

I do not allude to any reform in the law, though I believe much to be needed. I mean to confine myself to amendments which it is in the power of the people to make for themselves, and indeed, which no legislature, however enlightened, can make for them.

In no country can the laws be well administered, where the popular mind stands at a low point in the scale of intelligence, or where the moral tone is lax. The latter defect is of course the most important, but it is so intimately connected with the former, that they commonly prevail together, and the causes which remove the one have, almost without exception, a salutary effect upon the other.

That the general diffusion of morals and intelligence is essential to the healthy working of jurisprudence in all countries, will be admitted, when it is recollected that no tribunal, however skilful, can arrive at the truth by any other way than by the testimony of witnesses, and that consequently on their trust-worthiness the enjoyment of property, character, and life, must of necessity depend.

Again, wherever trial by jury is established, a further demand arises for morals and intelligence among the people. It follows then, as a consequence almost too obvious to justify the remark, that whatever in any country enlarges and strengthens these great attributes of civilisation, raises its capacity for performing that noblest duty of social man, the administration of justice.

Let me first speak of witnesses and their testimony. It is sometimes supposed that the desire to be veracious is the only quality essential to form a trustworthy witness; and an essential quality it is beyond all doubt; but it is possessed by many who are nevertheless very unsafe guides to truth. In the first place, this general desire for truth in a mind not carefully regulated, is apt to give way, oftentimes unconsciously, to impressions which overpower habitual veracity. It may be laid down as a general rule that witnesses are partisans, and that, often without knowing it, their evidence takes a colour from the feeling of partisanship, which gives it all the injurious effects of wilful falsehood—nay, it is frequently more pernicious. The witness who knowingly perverts the truth, often betrays his mendacity by his voice, his countenance, or his choice of words; while the unconscious perverter gives his testimony with all the force of sincerity. Let the witness who intends to give evidence worthy of confidence, be on his guard against the temptations to become a partisan. Wit-

nesses ought to avoid consorting together on the eve of a trial; still more, discussing the matters in dispute, and comparing their intended statements. Musicians have observed that if two instruments, not in exact accordance, are played together, they have a tendency to run into harmony. Witnesses are precisely such instruments, and act on each other in like manner.

So much with regard to the moral tone of the witness, but the difficulties which I have pointed out may be surmounted, and yet leave his evidence a very distorted narrative of the real facts. Consideration must be given to the intellectual requirements of a witness. It was the just remark of Dr. Johnson that complaints of the memory were often very unjust towards that faculty, which was reproached with not retaining what had never been confided to its care. The defect is not a failure of memory, but a lack of observation—the ideas have not run out of the mind, they never went into it.

This is a deficiency, which cannot be dealt with in any special relation to the subject in hand; it can only be corrected by cultivating a general habit of observation, which, considering that the dearest interests of others may be imperilled by errors arising out of the neglect to observe accurately, must be looked upon in the light of a duty.

A still greater defect is the absence of the power of distinguishing fact and inference. Nothing but a long experience in Courts of Justice, can give a notion of the extent to which testimony is adulterated by this defect. It is often exemplified in the depositions of witnesses, or rather in the comparison between the depositions which, as your readers know, are taken in writing before the committing magistrate, and the evidence given on the trial.

Circumstances on which the witness had been silent when examined before the magistrate shortly after the event, make their appearance in his evidence on the day of trial; so that his memory purports to augment inaccuracy in proportion to their time which has elapsed since the transaction of which he speaks!

I have observed this effect produced in a marvellous degree in cases of new trial, which in civil suits are often awarded, and which frequently take place years after the event to which they relate. The comparison of the evidence of the same witness as it stands upon the short-hand writer's notes of the two trials, would lead an unpractised reader to the conclusion that nothing but perjury could account for the diversities; and this impression would be confirmed, if he should find, as in all probability he would, that the points on which the latter memory was better supplied than the earlier, were just those on which the greatest doubt had prevailed on the former occasion; and which were made in favour of the party on whose side the witness

had been called. But the critic would be mistaken. The witness was not dishonest, but had failed to keep watch over the operations of his own mind. He had perhaps often adverted to the subject, and often dis-couraged upon it, until at length he confounded the facts which had occurred, with the inference, which he had drawn from such facts, in establishment of the existence of others, which had in reality no place except in his own cogitation, but which after a time took rank in his memory with its original im-pressions.

The best safeguard a witness could employ to preserve the unalloyed memory of transac-tions, is to commit his narrative to writing, as soon after the event as he shall have learnt that his evidence respecting them is likely to be required; and yet I can hardly recommend such a course, because so little is the world, and even that portion of the world which passes its life in Courts of Justice, acquainted with what may be called the Philosophy of Evidence, that a conscientious endeavour of this kind to preserve his testimony in its purity, might draw upon him the imputation of having fabricated his narrative; and this is the more probable, because false witnesses have not unfrequently taken similar means for abiding by their fictions.

It is worthy of note how much these dis-turbing causes, both moral and intellectual, fasten upon these portions of evidence which are most liable to distortion. Words, as contra-distinguished from facts, exemplify the truth of this position; every witness ought to feel great distrust of himself in giving evi-dence of a conversation. Language, if it runs to any length, is very liable to be misunder-stood, at least in passages.

But supposing it to be well understood at the moment, the exact wording of it can rarely be recalled, unless the witness's memory were tantamount in minuteness and accuracy to the record of a short-hand writer. He is con-sequently permitted to give an abstract, or, as it is usually called, the substance of what occurred. But here a new difficulty arises; to abstract correctly is an intellectual effort of no mean order, and is rarely accomplished with a decent approach to perfection. Let the jurymen bear this in mind. He will be often tempted to rely on alleged confessions of prisoners sworn to by witnesses who cer-tainly desire to speak the truth. These con-fessions often go so straight to the point, that they offer to the jurymen a species of relief from that state of doubt, which, to minds unpractised in weighing probabilities, is irk-some, almost beyond description. Speaking from the experience of thirty years, I should pronounce the evidence of words to be so dangerous in its nature as to demand the utmost vigilance, in all cases, before it is allowed to influence the verdict to any impor-tant extent.

While I am on the subject of evidence,

infirm in its nature, I must not pass over that of identity of person. The number of persons who resemble each other is not inconsiderable in itself; but the number is very large of persons who, though very distinguishable when standing side by side, are yet suffi-ciently alike to deceive those who are without the means of immediate comparison.

Early in life an occurrence impressed me with the danger of relying on the most con-fident belief of identity. I was at Vauxhall Gardens where I thought I saw, at a short distance, an old country gentleman whom I highly respected, and whose favour I should have been sorry to lose. I bowed to him, but obtained no recognition. In those days the company amused themselves by walking round in a circle, some in one direction, some in the opposite, by which means every one saw and was seen—I say in those days, be-cause I have not been at Vauxhall for a quarter of a century. In performing these rounds I often met the gentleman, and tried to attract his attention, until I became con-vinced that either his eye-sight was so weakened that he did not know me, or that he chose to disown my acquaintance. Some time afterward, going into the county in which he resided, I received, as usual, an invitation to dinner; this led to an explanation, when my friend assured me he had not been in London for twenty years. I afterwards met the person whom I had mistaken for my old friend, and wondered how I could have fallen into the error. I can only explain it by supposing that, if the mind feels satisfied of identity, which it often does at the first glance, it ceases to investigate that question, and occupies itself with other matter; as in my case, where my thoughts ran upon the motives my friend might have for not recog-nising me, instead of employing themselves on the question of whether or no the indi-vidual before my eyes was indeed the person I took him for.

If I had had to give evidence on this matter my mistake would have been the more dangerous, as I had full means of know-ledge. The place was well lighted, the inter-views were repeated, and my mind was undis-turbed. How often have I have known evidence of identity acted upon by juries, where the witness was in a much less favour-able position (for correct observation) than mine.

Sometimes, a mistaken verdict is avoided by independent evidence. Rarely, however, is this rock escaped, by cross-examination, even when conducted with adequate skill and experience. The belief of the witness is belief in a matter of opinion resulting from a com-bination of facts so slight and unimportant, separately considered, that they furnish no handle to the cross-examiner. A striking case of this kind occurs to my recollection, with which I will conclude.

A prisoner was indicted for shooting at the

prosecutor, with intent to kill him. The prosecutor swore that the prisoner had demanded his money, and that upon refusal, or delay, to comply with his requisition, he fired a pistol, by the flash of which his countenance became perfectly visible; the shot did not take effect, and the prisoner made off. Here the recognition was momentary, and the prosecutor could hardly have been in an undisturbed state of mind, yet the confidence of his belief made a strong impression on all who heard the evidence, and probably would have sealed the fate of the prisoner without the aid of an additional fact of very slight importance, which was, however, put in evidence by way of corroboration, that the prisoner, who was a stranger to the neighbourhood, had been seen passing near the spot in which the attack was made about noon of the same day. The judge belonged to a class now, thank God! obsolete, who always acted on the reverse of the constitutional maxim, and considered every man guilty until he was proved to be innocent.

If the case had closed without witnesses on behalf of the prisoner, his life would have been gone: fortunately, he possessed the means of employing an able and zealous attorney, and, more fortunately, it so happened that several hours before the attack the prisoner had mounted upon a coach, and was many miles from the scene of the crime at the hour of its commission.

With great labour, and at considerable expense, all the passengers were sought out, and with the coachman and guard, were brought into court, and testified to the presence among them of the prisoner. An *alibi* is always a suspected defence, and by no man was ever more suspiciously watched than by this judge. But when witness after witness appeared, their names corresponding exactly with the way-bill produced by the clerk of a respectable coach-office, the most determined scepticism gave way, and the prisoner was acquitted by acclamation. He was not, however, saved by his innocence, but by his good fortune. How frequently does it happen to us all to be many miles at a time without having witnesses to prove our absence from one spot by our presence at another! And how many of us are too prone to avail ourselves of such proof in the instances where it may exist!

A remarkable instance of mistake in identity, which put the life of a prisoner in extreme peril, I heard from the lips of his counsel. It occurred at the Special Commission held at Nottingham after the riots consequent on the rejection of the Reform Bill by the House of Lords, in 1831.

The prisoner was a young man of prepossessing appearance, belonging to what may be called the lower section of the middle rank of life, being a framework knitter, in the employment of his father, a master manufacturer in a small way. He was tried on an indictment

charging him with the offence of arson. A mob, of which he was alleged to be one, had burnt Colwick Hall, near Nottingham, the residence of Mr. Musters, the husband of Mary Chaworth, whose name is so closely linked with that of Byron. This ill-fated lady was approaching the last stage of consumption, when, on a cold and wet evening in autumn, she was driven from her mansion, and compelled to take refuge among the trees of her shrubbery,—an outrage which probably hastened her death.

The crime, with its attendant circumstances, created, as was natural, a strong sympathy against the criminals. Unhappily, this feeling, so praiseworthy in itself, is liable to produce a strong tendency in the public mind to believe in the guilt of a party accused. People sometimes seem to hunger and thirst after a criminal, and are disappointed when it turns out that they are mistaken in their man, and are, consequently, slow to believe that such an error has been made. Doubtless, the impression is received into the mind unconsciously: but although on that ground pardonable, it is all the more dangerous. In this case, the prisoner was identified by several witnesses as having taken an active part in setting fire to the house.

He had been under their notice for some considerable space of time: they gave their evidence against him without hesitation, and probably the slightest doubt of its accuracy. His defence was an *alibi*. The frame at which he worked had its place near the entrance to the warehouse, the room frequented by the customers and all who had business to transact at the manufactory. He acted, therefore, as doorkeeper, and in that capacity had been seen and spoken with by many persons, who in their evidence more than covered the whole time which elapsed between the arrival of the mob at Colwick Hall and its departure. The *alibi* was believed, and the prisoner, after a trial which lasted a whole day, was acquitted.

The next morning he was to be tried again on another indictment, charging him with having set fire to the Castle at Nottingham. The counsel for the prosecution, influenced by motives of humanity, and fully impressed with the prisoner's guilt on both charges, urged the counsel for the prisoner to advise his client to plead guilty, undertaking that his life should be spared, but observing at the same time that his social position, which was superior to that of the other prisoners, would make it impossible to extend the mercy of the Crown to him unless he manifested a due sense of his offences by foregoing the chance of escape. "You know," said they, "how rarely an *alibi* obtains credit with a Jury. You can have no other defence to-day than that of yesterday. The Castle is much nearer than Colwick Hall to the manufactory, and a very short absence from his work on the part of the prisoner might reconcile the evidence of all the witnesses, both for him and against him;

moreover, who ever heard of a successful *alibi* twice running?"

The counsel for the prisoner had his client taken into a room adjoining the court, and having explained to him the extreme danger in which he stood, informed him of the offer made by the prosecutors. The young man evinced some emotion, and asked his counsel to advise what step he should take. "The advice," he was answered, "must depend upon a fact known to himself alone—his guilt or innocence. If guilty, his chance of escape was so small, that it would be the last degree of rashness to refuse the offer; if, on the other hand, he were innocent, his counsel, putting himself in the place of the prisoner, would say, that no peril, however imminent, would induce him to plead guilty." The prisoner was further told, that in the course of a trial circumstances often arose at the moment, unforeseen by all parties, which disclosed the truth; that this consideration was in his favour, if he were innocent, but showed at the same time that there were now chances of danger, if he were guilty, the extent of which could not be calculated, nor even surmised. The youth, with perfect self-possession, and unshaken firmness, replied, "I am innocent, and will take my trial." He did so. Many painful hours were away, every moment diminishing the prisoner's chance of acquittal, until it seemed utterly extinguished, when some trifling matter which had escaped the memory of the narrator, occurred, leading him to think it was possible that another person, who must much resemble the prisoner, had been mistaken for him. Enquiry was instantly made of the family, whether they knew of any such resemblance: when it appeared that the prisoner had a cousin so much like himself, that the two were frequently accosted in the streets, the one for the other. The cousin had absconded.

It is hardly credible, though doubtless true, that a family of respectable station could have been unaware of the importance of such a fact, or that the prisoner, who appeared not deficient in intelligence, and who was assuredly in full possession of his faculties, could be insensible to its value. That either he or they could have placed such reliance on his defence as to induce them to screen his guilty relative, is to the last degree improbable, especially as the cousin had escaped. Witnesses, however, were quickly produced, who verified the resemblance between the two, and the counsel for the prosecution abandoned their case, expressing their belief that their witnesses had given their evidence under a mistake of identity.

The narrator added, that an *alibi* stood a less chance of favourable reception at Nottingham than elsewhere, although in every place received with great jealousy. In one of the trials arising out of the outrages committed by the Luddites, who broke into manufactories and destroyed all lace frames of a construction

which they thought oppressive to working men, an *alibi* he said, had been concocted, which was successful in saving the life of a man notoriously guilty, and which had therefore added to the disrepute of this species of defence. The hypothesis was, that the prisoner, at the time when the crime was committed, at Loughborough, sixteen miles from Nottingham, was engaged at a supper-party at the latter place; and the prisoner, having the sympathy of a large class in his favour, whose battle he had been fighting, no difficulty was experienced by his friends in finding witnesses willing to support this hypothesis on their oaths; but it would have been a rash measure to have called them into the box unprepared. And when it is considered how readily a preconcerted story might have been destroyed by cross-examination, the task of preparing the witnesses so as to elude this test, was one requiring no ordinary care and skill. The danger would arise thus:—Every witness would be kept out of court, except the one in the box. He would be asked where he sat at the supper! where the prisoner sat, and each of the other guests; what were the dishes, what was the course of conversation, and so forth—the questions being capable of multiplication *ad infinitum*; so that, however well tutored, the witnesses would inevitably contradict each other upon some matters, on which the tutor had not foreseen that the witness would be cross-examined, or to which he had forgotten the answer prescribed. The difficulty was, however, surmounted. After the prisoner's apprehension, the selected witnesses were invited to a mackerel supper, which took place at an hour corresponding to that at which the crime was committed; and so careful was the ingenious agent who devised this conspiracy against the truth that, guided by a sure instinct, he fixed upon the same day of the week as that on which the crime had been committed, though without knowing how fortunate it would be for the prisoner that he took this precaution. When, on cross-examination, it was found that the witnesses agreed as to the order in which the guests were seated, the contents of the dishes, the conversation which had taken place, and so forth; the counsel for the Crown suspected the plot; but not imagining that it had been so perfectly elaborated, they inquired of their attorneys as to whether there was any occurrence peculiar to the day of the week in question, and were told that upon the evening of such day, a public bell was always rung, which must have been heard at the supper, if it had taken place at the time pretended. The witnesses were separately called back and questioned as to the bell. They had all heard it; and thus not only were the cross-examiners utterly baffled, but the cross-examination gave tenfold support to the examination, in chief, that is, to the evidence as given by the witnesses in answer to the

questions put by the prisoner's counsel in his behalf.

The triumph of falsehood was complete. The prisoner was acquitted. When however the attention of prosecutors is called to the possibility of such fabrications they become less easy of management. The friends of a prisoner are often known to the police, and may be watched—the actors may be surprised at the rehearsal; a false ally may be inserted among them; in short there are many chances of the plot failing. This however is an age of improvement, and the thirty years which have elapsed since the days of Luddism have not been a barren period in any art or science. The mystery of cookery in dishes, accounts, and *alibis*, has profited by this general advancement. The latest device which my acquaintance with courts has brought to my knowledge is an *alibi* of a very refined and subtle nature. The hypothesis is, that the prisoner was walking from point A to point Z, along a distant road, at the hour when the crime was committed. The witnesses are supposed each to see him, and some to converse with him, at points which may be indicated by many or all the letters of the alphabet. Each witness must be alone when he sees him, so that no two may speak to what occurred at the same spot or moment of time; but, with this reservation, each may safely indulge his imagination with any account of the interview which he has wit to make consistent with itself, and firmness to abide by under the storm of a cross-examination. "The force of falsehood can no farther go." No rehearsal is necessary. Neither of the witnesses needs know of the existence of the others. The agent gives to each witness the name of the spot at which he is to place the prisoner. The witness makes himself acquainted with that spot, so as to stand a cross-examination as to the surrounding objects, and his education is complete. But as panaceas have only a fabulous existence, so this exquisite *alibi* is not applicable to all cases; the witness must have a reason for being on the spot, plausible enough to foil the skill of the cross-examiner; and, as false witnesses cannot be found at every turn, the difficulty of making it accord with the probability that the witness was where he pretends to have been on the day and at the hour in question, is often insuperable; to say nothing of the possibility and probability of its being clearly established, on the part of the prosecution, that the prisoner could not have been there. I should add, that, except in towns of the first magnitude, it must be difficult to find mendacious witnesses who have in other respects the proper qualifications to prove a concocted *alibi*, save always where the prisoner is the champion of a class; and then, according to my experience, —sad as the avowal is,—the difficulty is greatly reduced.

These incidents illustrate the soundness of

the well known proposition, that mixture of truth with falsehood, augments to the highest degree the noxious power of the venomous ingredient. That man was no mean proficient in the art of deceiving, who first discovered the importance of the liar being parsimonious in mendacity. The mind has a stomach as well as an eye, and if the bolus be neat falsehood, it will be rejected like an overdose of arsenic which does not kill.

Let the jurymen ponder these things, and beware how he lets his mind lapse into a conclusion either for or against the prisoner. To perform the duties of his office, so that the days which he spends in the jury-box will bear retrospection, his eye, his ears, and his intellect must be ever on the watch. A witness in the box, and the same man in common life, are different creatures. Coming to give evidence, "he doth suffer a law change." Sometimes he becomes more truthful, as he ought to do, if any change is necessary; but unhappily this is not always so, and least of all in the case of those whose testimony is often required.

I remember a person, whom I frequently heard to give evidence quite out of harmony with the facts, but I shall state neither his name nor his profession. A gentleman who knew perfectly well the unpalatable designation which his evidence deserved, told me of his death. I ventured to think it was a loss which might be borne, and touched upon his infirmity, to which my friend replied in perfect sincerity of heart, "Well! after all, I do not think he ever told a falsehood in his life—out of the witness box!"

TWO ADVENTURES AT SEA.

HAVING made up my mind to sail for Australia, my next care was to select a vessel. They were not so plentiful, so punctual, or so much puffed as they are now. For want of knowing any better, and partly from a dislike to crowds that has always been part of my character, and perhaps did much toward making me happy in the Bush when friends and companions of the same age were miserable, I took a passage in a small, fast-sailing brig, under two hundred tons burden, which was intended to be sold for a coaster in the colony. The captain was going out to settle; he took his wife with him, but I was the only passenger. Captains on shore, and captains at sea are quite different creatures. This was one of the old school. On shore, he seemed like a jolly fellow, rough and good-natured—at sea, he was a perfect brute, got drunk every evening, thrashed his wife, and ill-used his men; but, although profoundly ignorant on most subjects, a thorough seaman.

On the morning we were to sail, we lay in the stream of the Mersey, blue Peter flying and anchor tripped; we waited for the captain and mate so long, it seemed as if we should miss the tide. At length he came, as fast as

two pair of oars could pull him, looking very red and angry; no mate, but a strange man sitting in the stern sheets beside him. It seemed the mate had given him the slip at the last moment, and he had been obliged to engage the stranger, with very little enquiry. This man was a lanky north country man, with a deadly pale face, without whiskers, a bald forehead, an immense mouth, black eyes, with an awful squint, and a costume of seedy black, so that he looked much more like a hedge schoolmaster than a sailor. He carried a parcel of sea-faring clothes in his hand, which the captain had been obliged to buy for him at the nearest sloopshop. He brought nothing else, but a large very light chest, and an enormous appetite. But, in spite of his unprepossessing appearance, and shore-going costume, the crew at once recognised him as a regular sea-dog. Indeed, by the time he got into his pea-coat and loose trowsers, and had a fortnight of our fare, if he did not grow handsomer, he seemed, at any rate, transformed into the style of man that attracts thunders of applause in a minor theatre as a wicked pirate. At least, that was my impression when, after a fortnight's landsman's misery, I crept on deck in the Bay of Biscay, to see the "seas" not "in mountains rolling," but as still as a mill-pond; and our mate, Mr. Clank, his complexion very much improved by sea air and salt water, taking his turn at the helm, in regular "old salt style."

I have now made the long sea voyage half-a-dozen times, and have come to the same conclusion I did at the end of my first—that there are very few who can do much real work at sea. On shore it is very easy to prepare journals, plan a course of study, lay in a store of scientific books, but when once you get into blue water, your berth becomes a very Castle of Indolence. What with sea-sickness, and the appetite that follows your recovery, you find your time pretty well consumed by eating, drinking, smoking, and dozing, relieved by reading a novel or playing a game at cards. There are exceptions, as, perhaps, on board a yacht, where you can go ashore when you please; but, as a general rule, gossip and brandy-and-water are the two great resources of a long voyage—more shame to the weakness of the passengers.

For my part, by the time I got my sea-legs I had every inducement to study, for the captain and his wife were no companions to me. I did read my store of books twice over, learned to splice a rope, and, after a fashion, to haul, reef, or steer; had a good deal of chat with an old sailor, who afterwards became one of my best hands in the Bush, but the end was, that, in spite of my instinctive prejudice, I was drawn into intimacy with the mate. He could talk, and, like most persons who can, was communicative to a degree that he must have often found disagreeable, if not dangerous, but conversation was a necessity to him, and I have no doubt he would have

related his adventures to a Black gin or a Police officer, sooner than remain silent. So I used to sit smoking in the evening, and far on into the night, while he murmured away his adventures in his strong northern burr, like a talking mountain torrent.

I soon found that my companion was a finished scoundrel up to the chin, in every sort of rascality. On shore I should never have spoken to him twice: at sea he was amusing. He had been everywhere, and in every sort of craft, according to his own account; had had money and lived in great style, told stories of whales, slavers, Indians and pirates, by the dozen. He early confided to me that nothing but misfortune would have driven him to engage in such "a miserable little tub of a craft, under such a know-nothing lubber as Captain Glum. A misfortune, Sir, that any gentleman might have fallen into."

This misfortune he presently let me know, consisted in having been convicted of bigamy and sentenced to two years' imprisonment. He had only been discharged a couple of days, when he joined us. To hear him, he was a victim,—just one of those heroic victims of London passions one meets with in French and German novels. He ended his story by saying,

"So I've paid the penalty; and now I'm free, and next time I shall manage better." For already he had his eye on a third wife. After this, before turning in for that night, he begged a couple of shirts of me.

A few days afterwards he again drew me into conversation, saying,

"Excuse me, but I've been thinking what a pity it is that a smart, clever young gentleman like you, should go to bury yourself up in the Bush, beyond Sydney there. I've been up there myself, once; but there's no life, no fun, nothing suitable—nothing go-ahead, as the Yankees say. The sea's the thing for a man of spirit."

"I thought there was very little to be done at sea, now-a-days."

"No more there is in the old jog-trot; but you have behaved very much like the gentleman, and I don't mind telling you a thing or two. I've been in a whaler hailing from Sydney; and it wasn't whales we made our money by, I can tell you. The time, it's about five years; we'd been out four months after sperm whale, and done next to nothing. I was second mate; the first mate was a Yankee, and the captain was a native Australian. The crew were a lot of all sorts and colours. One of our best harpooners was a New Zealander, and another a half-breed from Hudson's Bay. Some prime seamen among them, but not to be trusted ashore. Well there was a regular grumbling about our bad luck; for you see whalers are manned on the 'lay.' No wages, every man has a share in the take. I'd noticed the captain and the mate very thick, jawing together in a whisper

up and down the quarter-deck; and so one day, it was a Sunday, mind, the captain slips into the cabin and soon after sends for me. There was he with the spirit-case before him, and the mate sitting cheek by jowl. 'Take a seat. A glass of grog, Mr. Clank,' says he, quite civil, and the mate gets up and shuts the door; 'help yourself,' and with that he shoves the rum over to me, 'and don't spoil it with water.' You may believe I didn't wait for twice asking; and it was prime stuff, surely; slipped down one's throat like new milk. 'Take another,' says he; and when he said that, I knew there was mischief up, let alone his being so civil. When I'd drawn my breath, the captain began again—

"Bad luck so far, Mr. Clank; we shan't have much to take home for our wives and sweethearts, at this rate."

"Why no," says I, "we couldn't have been more unlucky if we'd had a black cat or a parson aboard."

"And yet," puts in the mate, "there's better things than whales to be found in these seas sometimes for those that have the pluck to pick them up!" I could see the captain was watching me all the time.

"So I answers, rather slow, 'Well I'm game, as long as it's follow my leader.' The captain gives a deep 'ah,' as if he was satisfied, and turning to the mate, with a wink, says, 'Well I think we may put her about,' and so he offered his box of Manillas to take my choice, which I took for a hint to back out.

"That night we shifted our course until we got right into the Straits of Sunda."

"One afternoon, a short time after this talk in the cabin, the mate calls to me, and puts his glass into my hand, and begs me to take a squint at something right aways on our starboard bow."

"What do you make out?" says he.

"John Chinaman," says I, "a regular Noah's ark; one, two, three, a regular fleet of junks."

"That's just it," says the mate, "these are better than sperm whales. That's the Monsoon fleet going down to buy goods at Singapore. There's a merchant in every one of those junks with a cabin like a parlour, a regular room all to himself. He has his goods all nicely packed in small packages, and his money in silver ingots and dollars in jars ranged round like an apothecary's shop; so, as soon as it's dusk, I think we must go and do a bit of trade with the Chinaman."

"I dropped down in a minute. You know, Sir, I would not, on any account, have done anything against Christians like ourselves, but you see to take anything from these Pagans, with their Idols and their Joss Houses, was only spoiling the Egyptian—spoiling the Egyptian, Sir."

My squinting friend, who had been drinking all the time, at my expense, said this with a sort of hypocritical snuffle, quite indescribable;

perhaps he was afraid of going too far with me. He continued, "We kept edging off and on till it was dark, just keeping the junk fleet in view. I had a couple of boats all ready and some picked hands, a lot of cutlasses, and a dozen handspikes at the bottom of the boat under a sail. We said aloud we were going to have a trade with the Chinaman. The lights of the joss-houses served us to steer by; we did it as neat and comfortable as could be. The first junk the crew were all asleep until we were on deck, though it was a heavy climb, but we had hooks for that all ready."

"The mate knew where the merchant was to be found, walked straight there, while all but three kept guard forward, and in less than half an hour we had all the silver and half-a-dozen bundles of silk in the boats. The second junk we had to quilt one fellow, though generally a dozen will run like sheep before one of our sort. Altogether we made a very good night of it, and before morning were clear out of sight; and we played that game as long as the season lasted. The crew were very well satisfied; we put into South American Ports, and got rid of the most knowing. When we got back into Sydney my share was better than three hundred pounds. I don't know what the captain said to the owners, but they seemed very well content to ask no questions."

"Why, good heavens!" I involuntarily and foolishly exclaimed, at the end of this rascally relation, "that was rank piracy."

"Oh no, Sir, only not like cleaning out a square-rigged ship; those yellow pig-eyed fellows, with their pigtails, would not be believed on their oaths: only spoiling the Egyptians."

So saying, he took a huge gulp at the grog. It was too dusk under the shadow of the sail for me to see the expression of his countenance, or for him to see that of mine, as he mouthed his pet phrase as if it had been an answer to everything.

Warning with the grog, and my silence, which he took for consent, he recommenced, "Why, Sir, that's nothing to what a friend of mine did to get a cargo of sandal-wood. You see he was master of a small schooner in the sandal wood trade—that's a bartering trade with the South Sea Islanders, who are most of them fierce savages, and many of them cannibals. He'd sold his cargo pretty well and went into port to lay in a stock of articles for barter, and have a spree; and spree he did, to that extent that he not only spent all his money, but, when he came to be sober, he found he had married a lass that he certainly would not have chosen if he had known it; a regular vixen, above five feet ten, with a colour like a rose, and a lot of fair hair that hung to her waist nearly; a real beauty; but when her back was up, and that was about twice a day, she'd smash everything and everybody near. Well, here was a pretty concern, his money spent and a wife

on his hands that would run him in more debt in a month than he could pay off in a year. However, it was done; he could not give up the port, it was too profitable; so he thought his case over calmly, and soon made up his mind.

"He invited his wife to go to sea for a short trip, which she was very willing to do. Before many weeks she'd given the captain a black eye and bred a mutiny. The men came aft and insisted on the lady being put ashore; however my friend managed to pacify them.

"At length they reached the Sandal Wood Island and King Kettle came on board; an Indian king, so called because he had made a crown of a bright copper kettle. The captain presented him with a second-hand drummer's coat, besides other valuables, and introduced him to his wife, who divided the savage's admiration with the coat; he had never seen any white woman but an old one before.

"The captain went on shore with King Kettle, and the next day without the usual delays, the natives began bringing a cargo of sandal-wood down to the beach; they got the finest lot I ever saw; when it was loaded, King Kettle invited the captain and his lady to go ashore to a feast and dance. I will say that for her, she was afraid of nothing; the captain, before all the crew, recommends her not to go, and that makes her positive that she would. She puts on a light green satin dress with short sleeves, scarlet satin turban with an ostrich feather, all her hair hanging in curls down her back, and a pair of pocket pistols in her belt. She looked so grand, for all the crew were so mad with her goings on, they gave her three cheers when she stepped into the boat. Well, the captain came back alone, and told the crew his wife would stop, a piece of news that vexed nobody but one young fellow, who was for arming a boat, but nobody heeded him. At any rate, they up anchor and made sail, for it was a place where more than one ship's company had been murdered. However, there were people that will have it he sold his wife to King Kettle for that cargo of sandal-wood; and when, twelve months after, news came that King Kettle, after worshipping his white wife for some time, had had his patience exhausted like many others, and not only killed but eaten her, according to the custom of the country; my friend's only remark was an expression of wonder whether he digested her, 'Because,' says he, 'if he did, King Kettle's the only person she ever could agree with!'"

This story, so coolly told, quite finished me up. With a short good night and a very hollow laugh at King Kettle's digestion, I turned in, having first loaded my pistols and put them under my pillow. My dreams were not very pleasant. It would have been odd if they had been, transplanted so suddenly from the calm security of civilisation to the

middle of the ocean, bound up in the space of a few square feet, certainly without a friend, and probably with a felon.

I was awakened by a fearful cry, and rushed upon deck at the same time as the captain. There was a large ship bearing right down upon us, the man at the wheel in his fright threw the brig up into the wind.

"Starboard," roared the captain to the stranger ship, snatching up a speaking trumpet. "Starboard" we all shrieked in chorus, the shrill voice of the captain's wife above all. Through the moonlight I saw something white dash at the wheel of the stranger, and just as her bowsprit was over us she paid slowly off, and past us, grinding along our stern with a sound that chilled me to my heart. We were saved. The captain's wife fell on her knees and returned thanks for our wonderful escape; most of us followed her example, but when the mate, who had been lying in a drunken sleep on deck, came up rubbing his eyes, the captain snatched up a handspike and knocked him down; the mate jumped and flew on him like a tiger, but the crew were too quick for him and got him down; in the mean time the captain had run for his pistols, but after a great row the mate went forward, and we all coiled down again in our berths.

A few days afterwards, the water turned bad. The owners, to save money, had given us half-cleansed beer-barrels, so it was decided to put into Rio de Janeiro. After the running-down night, the mate had been disrated, and sent forward among the men, for it was his watch, and it seemed as if the watches in both vessels had been asleep. From that time he was never sober. He had found out the way to bore a hole in a cask of rum, and suck at it through a thin bamboo tube every evening at dusk.

I was sitting one morning reading Don Quixote for the second time, when Clank came with a piece of wood in his hand, and asked me to lend him a large case-knife, that, among other foolish things stuck into emigrants, I had purchased for my outfit. I handed it to him without a word; he went straight to the grindstone and began to sharpen it. "Halha!" cried impudent little Duds, the cabin-boy, "are you going to kill a pig this morning? A bit of fresh meat would be a treat." "You shall have fresh meat enough in five minutes," was the answer. "I'm going to cut that infernal captain's liver out!" and with that he sprang at the captain, who was just coming on deck. As luck would have it, one of the men, a sharp fellow, was coming aft, with a handspike. In an instant he threw it so cleverly, it took the mate between the legs and flung him flat; the knife flew out of his hand overboard, his head striking the captain in the middle of his fat paunch, upset him. Two or three of us jumped on top of the mate, who began to howl like a demon, and no wonder; for, in my anxiety to keep him

down, I never thought of the cigar in my mouth, and all the time the crew were making a spread eagle of him, I was burning a hole in the back of his neck with the red end of it.

We made him hard and fast, for he was raving mad with *delirium tremens*. To cool him, every time the watch was called, the captain had a bucket or two of salt water thrown over him.

Four days before we reached Rio, a low, long, black schooner hailed and asked very anxiously for news from Europe. They sent a boat aboard us, and we all fully thought we were in for a regular clearance. The officer in command, a black-bearded, neat-looking little fellow, spoke broken English with a French accent. Whether it was that they were only slavers, or that we were not worth robbing, or that they had better business on hand; after accepting a file of newspapers, and asking me especially, as I spoke French, what news from France, they were about to depart, when the officer's eyes fell upon our prisoner in chains.

With a start, and a French oath, he exclaimed, "T'ien c'est toi, Monsieur Louche, que diable fait-tu ici!"

Then followed a whispering, which ended by the Frenchman coolly saying to the captain, "Dis is a friend of mine; I vil save you de trouble of taking him any more." With that they hurried into their boat, and in a few minutes we had seen the last of the Dominie, as a Scotch sailor had named him.

Years passed before we met again.

THE TWO TREES.

I saw two trees. The one was fair and high,
And threw its leafy-branches round it wide;
So perfect was its shape, that ev'n the sky
Seemed proud to have that space thus occupied:
Yet was it hollow; all its heart was gone;
But year by year it swell'd and flourish'd on.

The other was by grandeur so unmark'd,
That it was scarce distinguish'd where it stood
With many more—sometime before impark'd
From the last vestige of an ancient wood—
But though small glory clothed it as it grew,
Its heart was to the core still sound and true.

And as it pleased the lord of that domain
At length to try the truth of those two oaks,
The proud one with a few sharp clefts was slain;
The humble one sustained a thousand strokes;
And when at length at eventide it fell,
A nobler fall was not in all the dell.

The proud one, yielding little but its dress,
Was left upon the spot to rot away;
The humble one lived still—in use to bless,
In ornament to charm, from day to day—
Transferr'd into the mansion's fairest room,
Where Genius flings round Art immortal bloom.

Also I knew two men, like those two trees:
The one was in profession great and high,
And scorn'd the other, who could not so please
With much display the superficial eye.
Who does not see how meek true worth may stand,
Whilst great pretence would cumber all the land!

For he (the humbler) powerful was, but mild—

Teacher of teachers, strong, profound, but clear;
Unostentatious as a little child,

Yet in sagacity an ancient seer;
And though his days were not in public spent,
He gave again, through man, what God had lent.

And while an epitaph upon a wall,
Which many criticise, but few believe,
Now of the faded Pharisee tells all—

Excepting what he did to make us grieve—
His neighbour's woes dwell in Wisdom's heart,
And unto all his race their good impart.

PROTECTED CRADLES.

WHEN the child of the Lancashire or Yorkshire operative first sees the light, it is assailed by every possible disadvantage that can stunt its growth and enfeeble its intellect. It is disarmed for the battle of life at the threshold of existence,—its limbs are palsied by drugs, and deformed by careless nursing, sometimes by criminal nursing. The expense of providing for her family drives the mother to the factory, and leads to the employment of an ignorant hireling nurse, who, to earn the pittance with a minimum of trouble, journeys to the chemist's shop, and purchases Godfrey's Cordial. With this notable mixture she returns to her charge, stupifies it, and so earns "peace and quietness." Gradually she finds that the Cordial has not the old effect,—that it is not strong enough; to remedy this, she adds a little laudanum, or, mayhap, some crude opium, to the mixture, and again is her charge as quiet, almost, as death. She extends her nursery; "takes care of," perhaps, eight or nine infants, and becomes a good customer to her neighbour, the chemist.

Indisputable facts prove the extent to which this system is adopted. Walking about Manchester and Birmingham, advertisements of "Mothers' quietness," "Soothing Syrup," arrest the attention at every turn. It is easy to perceive that the druggists are driving a good trade—that the quiet homes of the poor reek with narcotics. The Report of the Board of Health furnishes some appalling facts on this head. In Preston, twenty-one druggists sold, within the space of one week, no less a quantity than sixty-eight pounds of narcotics, nearly all of which were for the use of children; and the calculation of the quantity of Godfrey's Cordial sold in Preston, gave a weekly allowance of half an ounce to each family! Generally, Godfrey's Cordial is mixed in the proportion of one ounce and a half of pure laudanum to the quart, and the stronger it is the faster it is sold. It may be had at public-houses and general dealers', as well as at druggists'; and on market-days the people from the surrounding neighbourhoods regularly provide themselves with this "mother's comfort," as they purchase other household provisions. About two thousand gallons of Godfrey's Cordial are sold in Manchester alone every year. Mr. F. C. Calvert, at a

recent meeting at Manchester, stated that in one chemist's shop in Deansgate, two hundred and fifty gallons were sold in the course of a year, the same quantity in a shop, one hundred gallons per annum in another, the same quantity in a shop in Hulme, and twenty-five gallons each in two shops in Chorlton-on-Medlock.

These nurses, to whom the children of the factory people are entrusted, are either laundresses or superannuated crones. The more they drug the children entrusted to them, the greater number they can undertake to manage. This consideration acts as a powerful incentive to drug.

That wholesale death is the result, is fully proved. Among the gentry in Preston, for instance, the average number of deaths of children under five years old was seventeen per cent.; among tradesmen, about thirty-eight per cent.; and among operatives fifty-five per cent. Of every one hundred children born among the gentry, ninety-one reach their first year; eighty among the trading classes; and sixty-eight among the operatives. The vital statistics of Preston for six years show that no less than three thousand and thirty-four children were swept away before they had attained their fifth year, who, had they been the offspring of wealthy parents, would have survived that period of their childhood.

But, of all the localities specified in the return of the Board of Health, Ashton is the most fatal. The proportion of infant deaths in this Godfrey's stronghold is thirty-four per cent. In Nottingham it is thirty-three per cent.; in Manchester, thirty-two per cent.; Bolton, thirty-one per cent.; Leicester, Salford, and Liverpool, thirty per cent. These towns may be classed as the head-quarters of factory labour—the localities where mothers are away from their children from sunrise till after nightfall. In London the proportion of infant deaths is twenty-three per cent.; in Plymouth, twenty-one per cent.; and in Bath, Shrewsbury, and Reading, twenty-one per cent. In these places mothers generally attend to their own offspring. A vast proportion of the mortality in Manchester is that of children under the age to labour in the mills. More than forty-eight per cent. of the deaths in Manchester are those of sufferers under the age of five years; and more than fifty-five per cent. are under the age of ten years; while in the aggregate of purely rural districts the proportion is not more than thirty-three per cent. Dr. Charles Bell, in the course of a speech delivered in Manchester, at a meeting convened to consider the propriety of establishing Day Nurseries in that town, stated, that "thirty-eight per cent. of poor children died, who would not die if they were properly attended to." Mr. Clay's investigations showed, that, out of about eight hundred families of married men employed in the mills of Preston, the children living in each family averaged

2·7, dead, 1·6; and that seventy-six out of every hundred had died under five years of age. Yet this calculation does not give us a full conception of the ravages which death makes amongst the children of the poor; inasmuch as the investigator declares, that, of the eight hundred families he examined, only one hundred and thirty-three mothers appeared to be working.

We have adduced sufficient evidence, however, to prove two important facts; namely, that an extensive system of careless nursing and criminal drugging is pursued in the manufacturing towns of England, and that, amongst those classes by whom this system is carried on, the rate of mortality is thirty-eight per cent. higher than amongst those classes where children are properly clothed, fed, and cared for. Absence of sanitary precautions, insufficient food, and, in many cases, the nature of their employment, increase the rate of mortality amongst the artisan classes; but these, it would appear, from the mass of authentic evidence which lies before us, are influences of minor importance when taken in relation to the streams of laudanum and aniseed which stupify their childhood. Much has been lately written on the degeneration of race in our manufacturing towns. Many writers have placed this physical decline to the account of the loom; but it is fair to interpose the drugs upon which weavers are suckled. It is reasonable to attribute the stunted forms, the bloodless cheeks, the nerveless limbs, which are to be met in the great factories of England and France, to the forsaken cradle rather than to the labour of the workshop. Mr. John Greg Harrison, one of the factory medical-inspectors, thus describes the effect of the drugging system:—

"The consequences produced by the system of drugging children, are, suffusion of the brain, and an extensive train of mesenteric and glandular diseases. The child sinks into a low torpid state, wastes away to a skeleton except the stomach, producing what is known as pot-belly. If the children survive this treatment, they are often weakly and stunted for life. To this drugging system, and to defective nursing its certain concomitant, and not to any fatal effect inherent in factory labour, the great infant mortality of cotton towns must be ascribed."

Those who regard the rapid increase of the population with dismay, and are prone to foster any system which tends to diminish the great circle of the human family, will perhaps be inclined to throw a veil before this child-slaughter, and to let the deadly system effect an extensive emigration of souls from this world; but to those whose human sympathies are quickened at a tale of grievous social wrong committed upon helpless childhood, who acknowledge fully the sanctity of life—that life is to be cared for before all other human considerations—the drugging system, of which we have faintly sketched an

outline, will appear as an evil and a public stigma, to be removed at any risk or cost.

As it is impossible, in the present state of things, to remove the mother from the factory, the point to which attention must be concentrated, is to the means of providing the safest custody for her infant during her absence. The solicitude with which maternal duties are discharged, cannot perhaps be hired at any cost from a stranger; yet, as we shall show, a well regulated system of nursing, under scientific and other responsible supervision, may supply all the physical requisites of which infancy stands in need. Motherly tenderness cannot, perhaps, be guaranteed at so much per kiss, but a judicious selection of experienced and well-disposed nurses, under the control of ladies' committees, may be safely relied upon to provide all that is positively necessary to the health of unconscious infancy.

Some few years ago, M. Marbeau, who is known to political students as the author of various works on political economy, was employed by the civil authorities of France to report on the state of the infant schools of Paris. He pursued his investigations with enthusiasm. He saw how well the state provided for children from two to six years old; how admirably the primary schools for more advanced children worked, and finally the national gratuitous adult classes abounded, where the poorest—the pauper and the workman—might acquire sound and invigorating knowledge.

This admirable machinery struck him, however, as being essentially and radically defective. It provided for the mental growth of children above two years old; but where was the provision for the first two years of existence? In whose hands were the infants of those poor women who were employed from home throughout the day? His investigations into this matter, disclosed a system of infant training that sufficiently accounted for the large proportion of deaths amongst the children of the poor. He forthwith submitted to the authorities a scheme for the establishment of *crèches* (or cribs) in the different suburbs of Paris. These institutions were to be Day-Nurseries for the children of the poor. With the help of a few charitably-disposed individuals, M. Marbeau opened the first public *crèche*, which he describes in his work on the subject:—*

"The superior of the *Sœurs de la Sagesse* provided, near the house of refuge, which is under her care, a very humble place, but which sufficed for our first attempt. This place was put at our disposal on the 6th, and on the 18th of November our *crèche* was opened. Its furniture consisted of a very few chairs, some baby chairs, a crucifix, and a framed copy of the rules of the establishment. The cost of its fitting up was barely three hun-

dred and sixty francs (nearly fifteen pounds). At first there were but eight cradles; but charity soon furnished means sufficient for twelve; and linen was plentifully supplied.

"The superintending committee chose two nurses amongst the poor women out of work; both were mothers, and worthy the confidence of other mothers. Agreeably to the rules laid down, the committee refused to admit any other children but those whose mothers were poor, well conducted, and who had work at a distance from their own homes. At first there were scarcely twelve children, but this number was soon exceeded. When the *Crèche St. Louis d'Antin* was opened, there was not one single child registered there; a week afterwards there were six candidates, and a month after that, eighteen. They were obliged to enlarge it. There can be nothing more interesting, than the sight of this little *crèche* between two and three o'clock, when the mothers come and suckle their children for the second time in the day; they seem so pleased to embrace their little ones, to rest from their work, and to bless the institution which procures them so many benefits. One of them used to pay seventy-five centimes (sevenpence-halfpenny) a day—half her own earnings—and the child was badly attended to; she now only pay, twenty (twopence), and he as well taken care of as the child of a rich man. Another kept her little boy, eight years old, from school, to look after the baby, and now he is able to attend school regularly. Another is pleased to tell you that her husband has become less brutal since she paid ten sous less for her child—ten sous a day make such a difference in a poor family.

"There is another, who was only confined a fortnight ago, suckling her new-born child. She is asked how she would have done without the *crèche*?

"Ah! Sir, it would have been as it was with his poor brother. I sell apples, and can scarcely earn fifteen sous a day; I could not spare fourteen to have him looked after. Poor little fellow! he died when he was fourteen months old, from want of care. Oh, Sir, my little angel would have been living now, if there had been a *crèche* six months ago!"

M. Marbeau's experiment has been adopted in various parts of France and Germany, with uniform success. In Paris these day-nurseries open every morning at half-past five, and close every evening at half-past eight—that is, they open half-an-hour before the time at which work is usually commenced in Paris, and close half-an-hour after the time at which work is generally over for the day. The children are required to be under two years of age, and the offspring of poor and well conducted parents. No child is admitted till it has been vaccinated, or while it is ill. This latter cause of exclusion declares the infancy of the institution. Day-nurseries without an infirmary or sick ward attached to them, can be only a partial boon

* We quote the passage as we find it translated, by a lady, in an interesting pamphlet, entitled *Day-Nurseries*.

to the industrious poor. The mother brings her child properly wrapt up and provided with linen for the day; attends punctually at appointed hours to suckle it, and fetches it before the close of the institution in the evening. The charge paid by the mothers per diem for one child is twopence, and threepence for two children. The nurses are appointed and directed by the lady managers. The room is carefully ventilated; and the diet and other arrangements are under the immediate direction of regularly appointed medical men and lady inspectors. In most of these nurseries there is a mattress in the middle of the chief apartment, where the children can be laid at any time with perfect safety. At the present time there are about twelve of these useful institutions in operation throughout Paris. In 1846, when a report on the subject was drawn up, there existed nine institutions, the number of children in which averaged from twenty-five to eighty, at a cost averaging, for each infant, from sixty to seventy centimes per diem.

M. Marbeau's experiment has been initiated in England, and it is to its extension that we desire to draw especial attention. Last March, a house was opened in Nassau Street, Marylebone, for the reception of infants; and lately a nursery, under the control of the parochial authorities, has been established at Kensington. The Nassau Street nursery contains two large airy rooms. It is furnished with eight wire-work cradles. All children admitted must be the offspring of respectable parents. They must be vaccinated, and be between the ages of three months and three years. The charge for daily food and attendance is threepence per child, and fourpence for two of the same family. The authors of the pamphlet entitled "Day-Nurseries," show very satisfactorily that these charges are not sufficient to maintain a self-supporting nursery; but that fivepence per diem will suffice for the proper care and feeding of an infant. A recent meeting of influential gentlemen at Manchester has elucidated in a most acceptable manner the subject of Day-Nurseries. The Bishop of Manchester very pertinently declared, that "it was not merely the awful per centage—the thirty-eight in every hundred who died—but the infinitely worse sixty-two who lived—lived to be trained to habits of idleness, and to be driven to habits of dissipation." The Bishop also supports the views of the authors of "Day-Nurseries" on the point that these nurseries should not be eleemosynary institutions, but self-supporting establishments, maintained by the co-operation of the working-classes. This is a judicious and a wholesome law. According to the calculation before us, a mother might send her child to a "Day-Nursery," where it would receive every comfort, including wholesome food and sound medical care, for the weekly charge of half-a-crown. Under the present drugging system, mothers usually

pay the washerwomen, to whom they are obliged to commit their babes throughout the day, from four to five shillings weekly. On this score, therefore, of pecuniary economy, no less than in discharge of that sacred duty which the parent owes to the helpless being he has brought into the world, the working man whose wife is away from home throughout the day, is bound to aid, as far as he is able, in the immediate establishment of wholesome, well-directed Nurseries.

The Committee of influential townsmen now formed at Manchester to establish such Nurseries throughout their great manufacturing city, can do little if they be not supported by the workpeople.

It has been urged, in opposition to the establishment of Day-Nurseries, that such institutions tend to encourage the contracting of imprudent marriages or illicit connexions. This view cannot be supported by any evidence, nor be proved by the most tortuous logic; on the other hand, experience demonstrates that the destruction of infant life has the effect of increasing population, by lightening the probable obligations of marriage. Another objection raised by M. Marbeau's opponents is, that these Nurseries will inevitably relax the strength of domestic affections. This plea is so groundless that it is wonderful to find any voices raised in its support. In the first place, the proposed Day-Nurseries are not intended to be receptacles for the children of mothers who are able to take care of their own progeny. They are not intended to foster a system of rearing children away from home; no—the object aimed at is to provide the best and tenderest nursing for children who are *inevitably* deprived of the watchful attendance of a mother. In the place of an ignorant nurse, redolent of laudanum, it is proposed to place a skilful attendant under medical surveillance. Instead of a squalid apartment, reeking with all kinds of unwholesome and offensive emissions from the wash-tub, it is proposed to raise lofty, well-ventilated rooms; and, lastly, it is proposed to rock children to sleep in the careful arms of a nurse, rather than by the influence of opium and amiceed. To us, these propositions savour rather of that enlightened care which we are beginning to feel for every grade of the human family, than of that carelessness, in respect of the public morals, which the narrow-minded and the bigotted would fain attach to them. The atrocious practices at present openly pursued towards children, must justify the promoters of Day-Nurseries, in the opinion of all thinkers, be they on the opposition or majority benches of any house of assembly.

Advertisements of the readiness of certain Day-Nurseries to receive tenders for the supply of "tops and bottoms," rattles, baby-baskets, cradles, and cots, will form a new feature in the columns of the morning papers; and it is more than probable that the vicinity

of one of these establishments would not be chosen as the most quiet spot upon earth, by any nervous old gentleman, when a round dozen of the young inmates were teething. It is not difficult to imagine the look of horror with which the ghost of Malthus (if such things be) will rise to witness the ceremony of laying the foundation stone for the first Day-Nursery. As the advocate of mercenary matches, this suppositious spirit will assuredly make some kind of demonstration on the occasion. Yet it is hardly necessary to invite the ghost, since so many still cling to his crotchets, and a few would not even dash the cup of poison from an infant's lips. There cannot be many who would leave the cradle unguarded,—the hapless babe to die by slow degrees. A regard for the future—for the generations with which our children will work and live—is that to which the advocates of these Nurseries direct our particular attention. It is a question whether the artisan class shall dwindle, in physical stamina and in mental capacity, to poor, dwarfed images of God, under the laudanum doses of Preston and Manchester; or whether, by showing a parental solicitude for those children, whose parents are called away to the factory and the loom, by affording them, at a fair rate of remuneration, the advantages of scientific treatment and honest care, we will endeavour to give them a fair chance of becoming strong and intelligent Englishmen. The question of Day-Nurseries—the question of Protection for the Cradle—has an intrinsic importance which reaches beyond the exigencies of the hour; it is one that concerns every man, and will interest every man who acknowledges that social duty, which has never been publicly derided even in the darkest passages of the world's history—the duty of the adult to the infant.

A MEMORY.

SOMETIMES in halls of beauty and of love,

Where many fair and many proud ones be,
And where the reckless and the thoughtless move,
I picture thee.

Thy memory comes to my lone heart enfolden

In strains of sweetest music; murmuring low,
Strange tales of dames and knights in pageants
olden,

And courtly show.

The lonely wind that sighs in murmurs deep

Round some old ruin dear to love and fame,
Luring the passer-by to pause and weep,
Might breathe thy name!

I picture thee the spirit of some spot

Beautifully haunted by an olden spell;
Some waving wood, or silver-streaming grot,
Or perfumed dell.

Ever retiring in thy simple grace,

A gentler, dearer presence, never shone
From mortal figure or from lady's face,
Than thy dear one.

A very rose-bud to the gazer's eye,

Yet to the sense thou art a blooming flow'r,
Pouring thy fragrance on the summer sky
At evening hour.

Ever in dreams thou com'st. I may not trace

In waking hours the presence of that spell
Which holds me bound with such a winning grace.
—Farewell!

THE NEW ZEALAND ZAUBERFLÖTE.

IN THREE CHAPTERS.—CHAPTER II.

THE spot to which the king bent his thoughtful steps, was situated at some miles' distance from his village, and was, in fact, on the extreme borders of the country of the Mokauries, and not very far from the district to which he had banished his son Waipata. Not only was the place itself unfrequented, but the way to it was among the most lonely of the many lonely tracks that abound in this country. After some two hours' journey, you might, in passing across a moist slope of grass and reeds, or an undulating reach of ferns, come suddenly upon the motionless body of a Maori bird-catcher, lying upon his face, half covered with leaves and green tufts, having one hand extended with a piece of "odoriferous" pork, or shark's flesh, grasped in his fingers, to attract the bird—the other hand also embedded in the grass, being ready to seize the bird directly he had fixed his beak and claws in the bait. Or, in walking by the borders of a still river, you might see a thick mass of broken reeds, drift-wood, duck-weed, and decayed bullrush slowly floating down the stream, which is, in sooth, a native fisherman, who lies on his face, with his nose and mouth turned sideways now and then, for breath, in whose extended hand, a similar bait for fish, or bird, is grasped. These not very enlivening varieties, with a distant view of a party of wild hog-hunters, were the only interruptions to the unbroken solitudes through which the king wound his way. The loveliness of Nature had no voice for his ear; or rather he had no ear for Nature's voice. At every step, he either breathed vengeance upon Teōra and Kaitemata, or turned over in his mind his ingenious plan for its execution.

Full of this design of rendering the cavern over the boiling springs, to which he was now making his way, the efficient means of destruction, Taōnui arrived at the rapids of a river, which terminated in a series of cataracts. The gleaming waters shot, wavering and heaving along, till they reached the edge of the table-land, over which they rushed, and fell foaming from rock to rock in their descent—here a cataract, green and vivid; there, another one, grey and purple—now falling gloomy in the shadow of chasms and over-hanging ledges,—now one level sheet below of seething foam, hurrying to utter darkness. A narrow, flying-bridge, con-

structed by the Maories simply of plaits of tough flax-leaves knotted together, and fastened to bushes on one side, and to a fallen tree-trunk on the other, was the only means of crossing the gulf between the two precipices, beneath which rushed the succession of cataracts on their downward course. Trying the strength of this swinging bridge with one foot, to see if these flax-leaves were yet rotten, and deciding that it was sufficient for his weight, the king at once advanced upon it, with the light and hasty foot of his nation, when his progress was arrested, midway, by observing something black projecting from the rapids above, as they came hurryscurrying onward towards the verge of the rocks. He could not take his eyes from this black object. It was a human leg of gigantic proportions—and nothing more. However magnified, he felt it was the leg of Te Pomar, the fellow to the one, the chief bone of which he now wore hanging to his neck, in form of a flute! The leg passed over the verge of the precipice, and disappeared. But looking down, and straining his eyes towards the onward-speeding foam at the bottom of the last of the cataracts, he again saw, through the mist and spray, the leg sticking upright and sailing away into the darkness.

The frail bridge swayed askant with the bending form of Taonui, as he gazed after the horrid apparition of the leg—some of the knots cracked and gave way—and the bridge elongated and swayed down in the middle, so that the king had a narrow escape in hastily scrambling over, and catching the long, wiry *toki-toki* grass on the other side, to secure his safe arrival. These things, however, are common to savage life, and he walked onward without turning his head; but the vision of the other leg of Te Pomar—that was not an ordinary occurrence, and the king was not a little discomposed by it. Witchcraft! Of course, it was all witchcraft; and Teora and Kaitemata should very shortly suffer for it.

Such sights as this are unpleasant, even to the strongest mind, and Taonui, as he sped onward, had more than once a tingling impulse to look behind him, fully expecting that he should see the gigantic leg making long hops after him, and perhaps with the addition of the half of the body belonging to that side; but his proud nature would not allow him to manifest any such signs of fear, and he accordingly pursued his course till he arrived at the entrance of the cavern.

The rock in which the cavern had been scooped, partly by age and decay, and partly by the natives, had once been used for some of the ceremonies and rites of heathen worship. Figures of men in various ugly attitudes had been carved in the rock; and some of them were painted in red and yellow, but all of them being destitute of mouths. The interior was gloomy; and on entering the inner part of the cave, a hand and arm, all

black, appeared to be thrust through some hole in the side of the rock. This was not really so. The exact shadow of a hand and arm had been marked out on the side of the cave, and painted black, while the rock behind it was painted white, so that it gave the appearance, to any one suddenly entering, of a hand and arm being thrust through the rock, and thus admitting light. At this, the king was not at all surprised, having seen such things before in various caverns; he was, however, not at all pleased to find on the present occasion, that the hand and arm strongly reminded him of Te Pomar. As he stood looking at it, either the lights and shades from without gave it a vibratory appearance, or else the arm made a slight wavering motion. He stood awhile to contemplate this. No further movement took place. It lay fixed to the side of the rock. Being assured of this, he now proceeded to scrape away the rough upper-crust of the pumice floor of the cavern with a sharpened stone affixed to a handle which he had brought for that purpose. After working a short time, he distinctly heard the water of the springs boiling beneath.

Taonui was so rejoiced at this, from the speedy end which he now imagined there would be to all his troubles, that he paused in his labour, and took up the flute, to give a little flourish of joy expressive of his final triumph. With this intent he applied the aperture to his mouth. A strange expression passed across his features—and he withdrew it. A long black thorn had projected itself from the mouth-hole straight into his mouth, while a bright green and golden lizard wriggled itself out at the other end, and falling on the pumice-dust beneath, flashed out of sight. Also the thorn slipped back into the flute, and could not be got out by knocking or shaking, neither could anything like it be seen on holding the flute up to the light.

Now, the lizard is one of the *atua*s, or minor gods of New Zealand, and is accounted sacred. "Well," said the king, after a pause, "the *atua* is on my side, and has come to tell me so." He wilfully chose to overlook the fact that the black thorn had come to him, and the lizard-god had fled from him. He had a certain misgiving as to how the matter stood, but he would not permit the warning to have a true interpretation in his mind. "The *atua*s are on my side," exclaimed he, catching up his tomahawk, and resuming his work over the pumice-floor of the cave with renewed vigour.

He had not given many blows when he became aware of a shadow that wrought up and down in the corner of one eye—on the side next to the hand and arm. It seemed as though the black arm rose and fell at every stroke he made. When he looked directly at it, and raised his arm, the black arm was stationary; when he bent his eyes downwards and raised his arm, the black arm undoubtedly did the same. He looked up suddenly!—

there was the black arm in its place. He went on with his work slowly—and with his eyes turned to the floor of the cave—and he was sure that the black arm rose and fell with his. But he could not catch it. He tried till he was really sick with vexation and rage at the evasive nature of this new distress.

Taōnui sat himself down among the punice dust, in the middle of the cave, to consider this unpleasant phenomenon. He actually vented groans at the impossibility of settling the question, one way or the other. And as he thus sat groaning, and plucking out the hairs from his chin, with a pair of mussel-shell tweezers, the punice-crust of the flooring cracked all round him, and the next instant he fell through, and found himself in a huge natural cauldron of boiling water.

A great quantity of the floor having fallen with him, he had most fortunately landed upon a sort of protecting seat of punice and sandstone, at no great depth from the surface; and there he sat upon a very novel and unpleasantly hot throne, with water boiling all round him in a hissing and bubbling circle. A great steam rose up through the chasm over-head, and filled the cave.

Being unable to reach the broken edges of the great hole through which he had fallen, even if the steam would have permitted him to see, Taōnui would have been parboiled on his seat before long, had not the steam issuing from the mouth of the cavern attracted a young hunter to the spot. This was no other than his son, Waipata; a circumstance very fortunate, though not very remarkable, as the district to which he had been sent was only a few miles distant from the cavern, but the fact of his having for his companions Teōra and Kaitemata, was, no doubt, a very curious accident. Previous to this event, Kaitemata had been followed for several days by a black pig who had lost one eye, and would never leave her, and this having made her restless in her mind, she had communicated her fears to Teōra that some evil spirits were besetting the king, whom she had accordingly watched, and followed to this place, having persuaded the amiable slave-girl to bear her company.

To the Maori bush-call of "*Koo-i, Koo-i?*" ("Where are you?") the half-smothered voice of the king responded from his hot vapour-bath below; and the three, with the help of a cord of twisted flax-leaves and grass, presently enabled Taōnui to emerge into the upper air. They assisted him to a seat on a ledge of rock outside the cavern, and here Teōra fanned him with a large fan, hastily made of leaves. He sat looking at each of them alternately in mute astonishment, until his eye became rivetted on the small black pig, that stood with its snout at Kaitemata's heels; a grim smile then passed over the king's features. For a familiar pig to follow a lady was no uncommon sight—but a pig with one eye denoted mischief. Directly he could speak, he bade them all begone!

They immediately obeyed; and Taōnui remained sitting with his back against the rock for several hours, after the manner of dignified chiefs in New Zealand, who often sit thus to meditate and smoke, but are yet more often in a state of utter apathy. The latter, however, was by no means the present condition of Taōnui; nor can we say the former, if, by meditation, is implied a certain degree of calmness. He sat, the spectacle of a hard heart humbled, but not softened.

After a long time, he arose, and bent his course homeward with long strides. If he had been humbled, this was over now. As he passed across the swinging flax-leaf bridge he shook his tomahawk at the water. Onward he sped, looking neither to the right nor to the left, his eyes glaring straight before him, yet scarcely noting any objects. By the time he approached his *pah*, not more boiling were the springs he had left than the blood of the New Zealand king; and his feelings at his late defeat, and equally at the humiliating manner of his deliverance, becoming quite unbearable, he caught up the fatal flute, and, with inflated cheeks and dilated nostrils, began his old tune.

Among some of the tribes of New Zealand, there is attached to the outer fence-work of a fortified *pah*, a war-bell, or a war-horn, the latter being known as the *pūhoro-pūhoro*, or *pah-trumpet*. This is only common to the fortified *pahs*. It is a huge wooden tube of seven feet long, carved at the mouth-piece, and widening out at the sound-end, which emitted a loud, deep, roaring noise, and was only used to denote alarm or warning of coming danger. From the *pah-trumpet*, then, of his village, did all manner of sounds proceed, at every effort made by Taōnui to play his flute. He stopped. The *pah-trumpet* stopped. He raised the flute to his mouth, and again endeavoured to play it. The *pah-trumpet* resounded with all he intended to play on the flute, and in prolonged and terrific tones.

That the king, in his barbaric way, was a valiant-hearted fellow has been sufficiently displayed; the utmost bravery is, in fact, indispensable to every great chief; but among all his chiefs there was certainly no one who possessed the same amount of mental courage as Taōnui. In the present instance he felt wrought up to a pitch that would have enabled him,—

"To look on that which might appal the devil."

He, therefore, attempted to bully his own common sense into the notion that the sounds last heard had been, not merely of his own making—for in an indirect way this was so—but of his own will and intention. "I blew with all my might," ejaculated he. "I wished to make the *pah-trumpet* echo; and I will do this thing again!"

Instead of the loud roaring noise of the war-horn, there was this time the grand death-march of a hero, sounding as if beneath the earth,

and continuing some time after Taōnui had withdrawn the flute from his mouth. It ceased.

"'Tis good!" said the king, addressing his flute, with a haughty, self-willed, purblind, patronising air; "thou hast played well this evening!"

He immediately received a tremendous kick on the shin, as if from some gigantic bony foot—but no one was visible. That it was a kick from a leg of some kind or other, he had reasons for knowing of too acute a kind to doubt for a moment. Where was the assailant? He turned round and round. There was nobody—nothing!

The king walked, or rather limped, towards his house very slowly. He presently met a chief. He was about to ask—but suddenly checked himself. The chief began a brief conversation with him on a new method of preparing the ground for *kumera* (a sort of kidney potato), and then passed on. Not a word about seeing anybody with a skeleton leg—nor of the prodigious blowing of the pah-trumpet, which seemed at the time to shake the whole village.

The king met another chief, who, on seeing him, advanced with an air of more excitement than is usual with these dignified *raupatu* (men of high rank), and Taōnui drew himself up, to hear what he would say. The chief informed him that the Australian kangaroos, which had been long expected as a present to him from a powerful chief living on the western sea-coast, had arrived only an hour ago, and were all in good health, and likely to thrive, and give him a capital breed. Not a syllable about seeing any apparition with a skeleton leg and foot—nor of the roaring noise of the village war-horn.

Arrived at home the queen met Taōnui beneath the broad red and white verandah of his royal house, where she had been busily engaged in preparing him an excellent supper after his hunting excursion, as she had supposed it. "Here," said she, "are *kumera*, cooked with slices of deliciously stale shark" (only considered eatable when very "gamey"), "burnt fern-root, and mussels kept hot a long while for you. What do you say? But I have more than this. Here are maize-cakes, *henua* cakes, bacon, and a leaf-full of roasted ghost-moths. What do you say? Still no word. Are not these enough for you?"

"Have you nothing else to speak about?" demanded the king, out of all patience. "Have you nothing else to tell me?"

"I can get you very quickly the heart of a fine young *nikau* palm-tree," said the queen, in alarm at his manner; "also some butter-milk and wild turnips. Oh, I see—it is the kangaroos. Yes—they have arrived."

Taōnui could endure it no longer, and stamped upon the ground. "Who blew the pah-trumpet?" bellowed he in the poor queen's ear—"and why was it blown?—tell me that!" His other wives, and the women and slaves of his household, all came rushing

out to the verandah. "Tell me that!" he continued to say, "tell me who did it, and why!—tell me, all of you!—any one!—somebody!"

Nobody spoke. They all stood looking at each other. Nobody had heard it.

Inarticulate with the perplexity of his rage, Taōnui glared all round at the assembled group,—and continued to do so, till gradually the sense of being bewitched came upon him, and his passion began to subside into a strange confusion with himself. What he had seen, and heard, and felt, were all very real to him; yet nobody else appeared to have the least cognisance of it. Where were their senses—or, what had happened to his? As to his having caused the wonderful music of his own free will, if he had still wilfully endeavoured to persuade himself of that, he, at least, knew very well that he had not kicked his own shins. That violent blow came out of the air—out of nothing—but not from nobody. It was of no use to try and conceal his condition from himself any longer. He could not harden himself against so many odds.

From this point, the king's haughty and vindictive spirit began to topple on its barbaric elevation, and he felt most bitterly the want of human sympathy and friendly advice. He even once thought of opening his mind to the queen; which he might have done without any disgrace, because the estimation in which women were held by his people was by no means so low as is common with savage tribes; but this very natural and sensible thought was destroyed by his pride almost as soon as it had glanced across him. He refused to see or speak with any one for some days; he even would not go and look at the kangaroos. Finally he determined to call a council of the oldest and wisest chiefs of Mōkan, and relate to them all that had happened.

Meanwhile, he retained enough of his tyrannical and revengeful feeling to give orders that his son Waipata, as he had embraced Christianity, should instantly leave the *pah* of his fathers, and go and dwell on the coast, near one of the missionary stations; directing, at the same time, that Teōra should be taken to a lonely and deserted house, once celebrated in accordance with its horrid name, viz. *kai tangata*, or Fat-man House. A supply of food and water for a certain period were to be placed within, and the door was then to be fastened, and Teōra left to her fate. As for old Kaitemata, he took no steps against her for the present.

There was no sort of doubt about the love that existed between Teōra and Waipata. They had roved away together for several hours every day while the king was secluded in his moody state at home—a proceeding undoubtedly opposed to New Zealand notions of propriety; but their circumstances were peculiar. They were now seated in the depths of a great forest at the mossy foot of a lofty *totara* tree, with the foliage of which the flowering *climatis* had mingled, and ascending to the

very summit, it fell down on all sides in snowy chains and garlands. A wreath of the white starry blossoms of this odorous creeper were bound round the dark tresses of the young girl, and fell with them over her shoulders and bosom. Around grew the mighty trees indigenous to the country, having, like the tree beneath which they sat, their own luxuriant foliage enwoven with bright and elegant parasitical plants rising to their very topmost crowns and pinnacles, and often hanging down in beautiful festoons, and gracefully swaying wreaths. One old and decayed tree, a grand-sire of the woods, was visible among the others; but even his hoary sides, and broken mouldering bark, were clothed with mosses and orchids, and his dark hollows were filled with scarlet fungi. Beneath all this there was a prodigious undergrowth, among which appeared the tree fern, the *nikau* palm, the wild fuchsia—with its double set of flowers, one green and purple, the other purple and red, the pollen on the anthers of the former being of the most brilliant cobalt blue—shrubs and plants, some of yellow-tinted leaves, others of the darkest purple-green, almost like glossy black; while here and there lay fallen trunks, some nearly overgrown with grasses and lichens, and others with the exquisitely-scented *horopito*, straggling about in clusters of trumpet-shaped blossoms, varying from the deepest crimson to the most delicate pinky white. One opening through the foliage admitted a peep beyond, which consisted of a series of gentle hills, enclosed again at no great distance by the circling belt of the great forest; but the whole of these hills were covered with the wild cabbage in blossom, and presented beneath the sun one entire surface of shining gold.

In this equally magnificent and lovely scene of nature's profusion, sat Teōra and Waipata discoursing, in accents of love, the leading truths of that religion of deep-hearted humanity which they had so recently adopted in place of their native creed of ignorance and cruel passions.

These happy hours, however, were soon to be at an end. Even in this deep solitude the emissaries of Taōnui very speedily discovered them, and they were immediately disposed of, according to his directions—Waipata being sent to the sea-coast, and Teōra fastened up in Eat-man House, with the means of prolonging existence only for a certain time.

The day appointed for the council of chiefs having arrived, Taōnui attired himself in the most imposing manner for the occasion. Over his large, bony shoulders he threw his ample war-cloak of dogs'-hair interwoven with flax, flung aside, however, in such a manner as to display the rich tattooing of his chest and limbs, over which all sorts of lines, devices, and grotesque figures had been engraved in purple and black lines. His close-cropped black hair was adorned with a bunch of the feathers of the *kaka*, or brown parrot, indige-

nous to New Zealand, to which he had added, for this important occasion, a blossom of the *warrator*, a large flower of a deep crimson colour. Round his neck he wore a mighty necklace of boars'-tuaks, while his ears were adorned with costly specimens of the teeth of the tiger-shark. Those parts of his legs which were not tattooed, he had painted with *kokowai*, a sort of red ochre; but Taōnui carefully avoided all covering or ornament on his feet, lest he should in any degree obscure or injure the effect of the six toes with which nature had especially honoured each foot,—a distinction, however, enjoyed by two or three other great chiefs in New Zealand at that period, and also at the present day.

The most eminent among the Mokaorie chiefs assembled as the king had commanded, and retiring to a forest they all seated themselves in a circle and began to smoke. At length the king stood up in the midst, and began a speech, in which he related the wonders and offensive performances of the flute, up to the period of the thunder-march in the vicinity of the ruined mausoleum. Seeing, or fancying he saw, doubts mingled with surprise in the grave features of the elder chiefs, Taōnui paused. A long silence ensued.

One of the oldest chiefs then proposed that the king should immediately play upon the flute as before, that they might be the better able to judge of the effect.

With this request the king immediately complied, and he distinctly heard the grand death-march, as before. "There!" said the king, with a look of grizzly satisfaction. But nobody else had heard it. He played again, and heard the march. Nobody else heard it. The chiefs all looked at each other, and then at the king.

Taōnui, now getting quite desperate, went on with passionate energy and volubility to narrate the rest of the events, till he came to describe the prodigious sounds that issued from the pah-trumpet; whereupon the chiefs began to exchange significant glances with each other, and some of them even touched their heads and nodded, clearly indicating their opinion that the king had gone mad. Secretly as all this was done, Taōnui had, in part, observed it, or rather become conscious of it, and snatching up the flute he was about to blow with all his strength, in the wild hope of producing some terrible result which should, at least, compel them to believe his tale, when a loud cry of women was heard to issue from the pah, followed by the actual blowing of the pah-trumpet in signal of alarm.

The council was broken up in an instant, and Taōnui, with all the chiefs, hurried out of the forest and flew towards the pah. At the outer stockade, beyond the last range of stiles and fences with which the king's pah was fortified, they met the queen and all Taōnui's household, together with many boys and a score of yelping dogs. The cause of this—and which the queen and a dozen voices in

chorus loudly related at the same instant, so that it was impossible to understand it—was the sudden breaking loose of all the kangaroos, who had made their escape, and were now in full flight across the country.

As soon as this intelligence became intelligible, Taōnui, who was only too glad to break up so unsatisfactory and maddening a conference, formed a hunting-party with several chiefs, and set out in pursuit of his property. He was reminded of Teōra by the queen, and asked whether he intended she should remain fastened up to be starved to death in Eat-man House; but he turned a deaf ear to this, and making no reply hurried away after his kangaroos.

It should be understood that kangaroos, not being indigenous to New Zealand, the arrival of such a present as nine of those creatures was an event of considerable importance, as it was to be hoped that the breed might be propagated, and thereby afford an admirable addition to the very limited livestock of the country. Valuable, however, as these creatures were in the eyes of the king, it was not the excitement of their escape that rendered him unable to attend to the queen when she reminded him of Teōra, but rather that he wished her death to happen by a sort of indirect process, since he was withheld from killing her in an off-hand way, in consequence of the influence of the flute and all its witcheries.

So away the hunting-party sped, men and dogs, after the nine kangaroos, who with their long flying leaps were making their way across the country,—now secreting themselves in forests, now springing forward again in terror at the sound of their approaching pursuers,—till, finally, having turned their course to the more open spaces of the sandy scrub, over whose dry clumps and ridges, bushes and shrubs, they could rapidly make way in a direct line by leaps, while their pursuers were obliged to make all sorts of windings and semicircles, they completely distanced them, and, for a time, were lost.

"GIVE WISELY!"

AN ANECDOTE.

ONE evening, a short time since, the curate of B, a small village in the north of France, returned much fatigued to his humble dwelling. He had been visiting a poor family who were suffering from both want and sickness; and the worthy old man, besides administering the consolations of religion, had given them a few small coins, saved by rigid self-denial from his scanty income. He walked homewards, leaning on his stick, and thinking, with sorrow, how very small were the means he possessed of doing good and relieving misery.

As he entered the door, he heard an unwonted clamour of tongues, taking the form of a by no means harmonious duet,—an

unknown male voice growling forth a hoarse, bass, which was completely overscreamed by a remarkably high and thin treble, easily recognised by the placid curate as proceeding from the well-practised throat of his house-keeper, the shrewish Perpetua of a gentle Don Abbondio.

"A pretty business this, Monsieur!" cried the dame, when her master appeared, as with flashing eyes, and left arm a-kinibo, she pointed with the other to a surly-looking man dressed in a blouse, who stood in the hall, holding a very small box in his hand. "This fellow," she continued, "is a messenger from the diligence, and he wants to get fifteen francs as the price of the carriage of that little box directed to you, which I'm sure, no matter what it contains, can't be worth half the money."

"Peace, Nanette," said her master; and taking the box from the man, who, at his approach, civilly doffed his hat, he examined the direction.

It was extremely heavy, and bore the stamp of San Francisco, in California, together with his own address. The curate paid the fifteen francs, which left him possessed of but a few sous, and dismissed the messenger.

He then opened the box, and displayed to the astonished eyes of Nanette an ingot of virgin gold, and a slip of paper, on which were written the following words:—

"To Monsieur the Curate of B.

"A slight token of eternal gratitude, in remembrance of August 28th, 1848.

"CHARLES F.—

"Formerly serjeant-major in the ---th regiment; now a gold-digger in California."

On the 28th of August, 1848, the curate was, as on the evening in question, returning from visiting his poor and sick parishioners. Not far from his cottage he saw a young soldier with a haggard countenance and wild bloodshot eyes, hastening towards the bank of a deep and rapid river, which ran through the fields. The venerable priest stopped him and spoke to him kindly.

At first the young man would not answer, and tried to break away from his questioner; but the curate fearing that he meditated suicide, would not be repulsed, and at length, with much difficulty, succeeded in leading him to his house. After some time, softened by the tender kindness of his host, the soldier confessed that he had spent in gambling a sum of money which had been entrusted to him as serjeant-major of his company. This avowal was made in words broken by sobs, and the culprit repeated several times, "My poor mother! my poor mother! if she only knew——"

The curate waited until the soldier had become more calm, and then addressed him in words of reproof and counsel, such as a tender father might bestow on an erring son. He finished by giving him a bag containing one

hundred and thirty francs, the amount of the sum unlawfully dissipated.

"It is nearly all I possess in the world," said the old man, "but by the grace of God, you will change your habits, you will work diligently, and some day, my friend, you will return me this money, which indeed belongs more to the poor than to me."

It would be impossible to describe the young soldier's joy and astonishment. He pressed convulsively his benefactor's hand, and after a pause, said:

"Monsieur, in three months my military engagement will be ended. I solemnly promise that, with the assistance of God, from that time I will work diligently." So he departed, bearing with him the money and the blessing of the good man.

Much to the sorrow and indignation of Nanette, her master continued to wear through the ensuing winter, his old threadbare suit, which he had intended to replace by warm garments; and his dinner frequently consisted of bread and *soupe maigre*.

"And all this," said the dame, "for the sake of a worthless stroller, whom we shall never see or hear of again!"

"Nanette," said her master, with tears in his eyes, as he showed her the massive ingot, whose value was three thousand francs, "never judge hardly of a repentant sinner. It was the weeping Magdalen who poured precious ointment on her Master's feet; it was the outlawed Samaritan leper who returned to give Him thanks. Our poor guest has nobly kept his word. Next winter my sick people will want neither food nor medicine; and you must lay in plenty of flannel and frieze for our old men and women, Nanette!"

"CAPE" SKETCHES.

A WORD or two on the labour resources of the colony as existing in the ABORIGINAL AND NEIGHBOURING RACES, will show what kind of European labourers are most in demand.

There is perhaps no British colony in which so many varieties of the human race are to be constantly seen as at the Cape of Good Hope. Hottentots, Mozambiques, Kafirs, and Fingoes, Negroes, Bojesmans, Bechuanas, Grignas, and Malays, are to be seen every day; and although the uninitiated European might be contented to class them all together as "coloured people," they have each distinctive traits of character, colour, language—and in fact, almost every sign which marks a nation or a race. There is as much difference between the personal appearance of a Kafir and a Hottentot as between the latter and a Malay; and far more than between a German and an Italian. Yet the country of the Hottentots and that of the Kafirs border on each other. Of the eight varieties I have mentioned (for I reckon Kafirs and Fingoes as one race), seven have perfectly distinct languages.

Probably the most hideous language in the world, and the least articulate, is that of the Bojesmana. It is more like the chattering of apes than the tongue of man. Next to it, and only a few degrees better, is the Hottentot. It is, however, rarely spoken, or even understood by the Hottentots themselves, who have all learnt Dutch or English from their masters. The Kafir tongue is positively beautiful, as far as the sound is concerned, and is dignified and expressive at the same time. Yet the Kafirs themselves are very bad linguists; for although the Fingoes have been settled in the colony for the last fifteen or twenty years, I never met one who could hold a conversation freely in Dutch, and scarcely one who even understood a single word of English.

The Hottentots are the principal domestic servants (of all descriptions) in the colony—especially in the eastern province. They are a most eccentric race—a most extraordinary mixture of good and evil qualities. In fact, nearly every Hottentot is a kind of living paradox. He is a drunkard and a thief, and yet he will practise wonderful abstinence, and never rob his master. He will serve you for two or three months in sobriety and honesty, then he will give you warning, pocket his wages, walk off to the nearest canten, and never be sober for a month, or for whatever time his money may last. While in your service you may intrust him with anything, and he will never be tempted to "pick and steal." After he has left you, he will as soon appropriate your Willingtons (if he calls to see his successor in office) as wear his own untanned shoes. He is a very dirty fellow, and will neither clean your room, your boots, nor your knives and forks, unless you are eternally driving him to the work; yet he will wash his hands with the utmost care before he touches the food he is preparing for your dinner; though he has the greatest natural antipathy to the contact of cold water, and if he wears any linen at all, never changes it till it is worn out and in rags. He is consequently by no means a pleasant valet, nor are the women of his race by any means agreeable as cooks or housemaids. Unless your olfactory nerves are unusually obtuse, it is advisable never to go into any room which a Hottentot damsel has been putting in order for at least half an hour after her departure.

The Malays generally live by fishing or acting as carriers; some of them are men of considerable property. They follow the Mohammedan religion, are very clean in their persons and houses, very temperate and very industrious. Indeed, they are by far the best and the most civilised of the coloured races. Very few of them go into service. Some in Cape Town act as grooms, and are clever in their treatment of horses, and excellent riders. The religious festivals of the Malays are great sights. These people at the Cape by no means deserve the character of

treachery and dishonesty generally given them by travellers who have visited Malacca.

The Fungoes make very good hardmen; and are also employed in landing goods from the surf boats in Algoa Bay. They are a fine, sturdy race, temperate and industrious, and extremely parsimonious. The money which they save they bury in the earth in some place known only to themselves, and as they often purchase cattle it is by no means unusual to see them tender in payment some hundred or two of shillings and sixpences encrusted in dirt, having been dug up after, probably, two years' interment. Many of them make a bargain with their masters to receive so many cows per annum instead of money, as this species of property is the highest of all in their estimation. And here I may mention a circumstance, probably not known to the general reader, and to which may be traced the late disastrous Kafir war.

It is the law among the Kafirs, that each man shall purchase his wife from her father, by payment of a certain number of head of cattle according to the young lady's rank in life. Now it often happened among Kafirs, as among civilised Europeans, that young men of very small means, or of none at all, fell in love with young maidens whose parents were men of high degree, and turned up their noses at poor suitors. The ardent youths thus repulsed, felt that something desperate must be done to win their beloved mistresses. Therefore, having no very great respect for the distinctions of *men* and *town*, they would walk over the boundary into the colony, pick out the requisite number of cattle from the first herd they saw, drive them to their own kraals and then—claim their brides. The colonists, not taking a romantic view of the proceeding, called it theft; and one day, catching a lover thus employed, he was lodged in goal. He was afterwards being conducted by a very small escort of soldiers to a town on the frontier for trial, and was handcuffed to a Hottentot prisoner. On the road, a large party of armed Kafirs rushed out of the Bush, attacked the guard, chopped off the arm of the Hottentot in order to free their countryman from his companionship, and before the guard could recover from the surprise of the attack, made their way back into the Bush—the Hottentot's amputated arm dangling to the wrist of the liberated Kafir! The Governor of the colony sent to the chief into whose territory they were tracked, to demand the delivery up of the offenders. The chief refused and told the Governor to come and fetch them "if he dared." The other chiefs joined in the defiance; and war, of course, became inevitable.

The other coloured tribes I have mentioned, are less numerous within the colony. The Hottentot is the most civilised of them all (except the Malay); but even he has hitherto learnt more of the vices than the virtues of civilisation. Nations emerging from barba-

rism pass through a transition state, which, though leading to good in the end, is worse, while it lasts, than the original savage condition.

The kind of EUROPEAN LABOUR required, must now be considered. It may easily be imagined from the above rough sketch of the aboriginal tribes of South Africa, that pending their arrival at a state of civilisation, the European settlers are very badly off in having to depend upon their labour and services in farming and domestic operations. The annoyance to good housewives in having a set of dirty and drunken servants, is beyond description. Therefore, on the arrival of every shipload of emigrants, (and they are far too few,) there is a perfect rush to the beach to offer engagements to the new comers. Twenty-five and thirty, or even thirty-six pounds a year are freely offered as house-maid's wages to any girl from England, without an inquiry whether she has ever been into service before. Unfortunately these girls have frequently been spoilt on the voyage by the idleness in which their days have been spent; besides being none the better for "Jack's" society, who, though an excellent fellow in his way, is by no means "the house-maid's best companion."

Farm servants are in great request. A shepherd will get from fifty to seventy pounds a year, a house to live in, and excellent rations for himself and family, however numerous. Few are the sheep-farmers fortunate enough to possess a good English or Scotch shepherd.

Very superior shepherds—men of some education—may become large sheep-owners themselves in time, thus:—Merchants and shop-keepers of property have generally farms in the country, which they cannot of course attend to themselves. They are glad, therefore, to select a competent person, one thoroughly acquainted with sheep, with a good knowledge of the country, and able to speak Dutch, to take charge of their farm, receiving as a remuneration one third of the increase of the flock each year. Dutch is indispensable, because half your neighbours and three-fourths of your servants speak no other language. It is easily acquired—especially by Scotchmen, who declare that it is "mickle like their ain bonnie tongue."

The lowest rate of wages paid to any journeyman artisan is five shillings per diem. Sawyers, carpenters, bricklayers and smiths, earn much more. Plumbers and glaziers are in great request. If you are unfortunate enough to break a pane of glass, you may frequently have to wait a week or ten days before the glazier can find time to come and mend it. When I was in Port Elizabeth, there was but a solitary glazier there (in a town of three thousand inhabitants), and if sent for, he would probably reply with great dignity and composure,

"Mr. C.'s compliments, and some day next

week he will see what he can do for you!" Mr. C. was very fond of cricket and Cape smoke.

One of the first things that strikes a newly-arrived settler in a colony is the position of "labour,"—exactly the reverse of what he has seen it at home. Here labour goes begging; in the colonies, it is the employers who are the petitioners. I have known a lady walk about the whole day, calling at Hottentot huts, and offering bribes to any dirty wench she might find there, to come and be her servant, and all without success. Yet the lady was considered the most popular mistress in the town. I have turned out in a new shooting-coat, and been immediately assailed with the question, "Who made it?" "S—," I have replied. "Oh, do you think he will make me one just now? Are you in favour with him? If so, put in a word for me," &c.; though my questioners were perfectly ready with their money to pay for the coat, if the tailor would only "be kind enough" to make it. A watchmaker once kept my watch three months, though he only had to put a new glass in it! He was very fond of hunting and horse-racing.

I have a great respect for "the rights of labour," and I think a day's work deserves a day's pay; but when the supply of work so far exceeds that of workmen, the employer stands in a very uncomfortable position, while idle fellows, by only working an occasional hour or two at their craft, get very decent livelihoods. The cricketing glazier and the horse-racing watchmaker were prosperous men.

THE SETTLERS formerly had a mutual distrust and dislike of each other. The English and Dutch settlers were ever indulging in a rancorous domestic warfare; but that is rapidly disappearing and internarrriages are frequent. The only subject on which any feud is at present likely to be raised is the Church. Any attempt on the part of Government to make the Church of England an *Establishment* in the colony will be met with the most violent and rancorous opposition from the Dutch colonists. It is not *their* Church, and they were owners of the soil and rulers of the land, before the English set foot in South Africa.

The Dutch are a very liberal and hospitable set of people at the Cape of Good Hope. In Cape Town many of them are merchants of the highest standing and consideration. In other parts of the colony they are principally "boers,"—that being the Dutch word for "farmer." In England we attach something reproachful to the word "boor," which the persons it designates do not deserve. The Dutch colonists are seldom engaged in trade. They are most frugal people, and generally prosperous; but they are certainly uneducated, and severely "non-progressionists." They use the same plough as their ancestors used eighty

years ago, though it is the most lumbering machine ever beheld, and takes twelve oxen to draw it. They shear their sheep with the wool all dirty on their backs, though every Englishman washes his most carefully, and, consequently, gets a much higher price for his wool. They reject steam-mills and every other improved contrivance for grinding their corn, and still adhere to the primitive method of pounding it with a kind of pestle and mortar. A flail is unknown among them,—the corn is trodden out by horses or oxen, as described, or alluded to, in the Laws of Moses; thus entirely spoiling the straw.

In person, the Dutch boers are the finest men in the Colony. I have constantly seen them from six feet two to six feet six inches high; broad and muscular in proportion. Their strength is gigantic, and though a very peaceably disposed set of men, they evidently entertain a compassionate contempt for any diminutive "Englander." Their admiration of feats of daring, activity, and strength, is unbounded. Such a man as Mr. Gordon Cumming would be welcomed with open arms, and begged to stay for any length of time at the poorest Dutch boer's hut in the Cape Colony. They marry young, and have generally very large families. To the second and third generation they live at the same homestead, building an additional hut for each newly-wedded couple. As many of them live to a great age, it is no uncommon thing to see a grandfather and grandmother of ninety, surrounded by half-a-dozen sons, having in their turn, each one, another half-dozen grown up children. They are a very religious people, and observe the sabbath with the greatest decorum, however far they may be situated from church or chapel. And indeed it is a sight calculated to impress the beholder with the most pleasurable and enduring emotions, to see assembled in the large room of the principal dwelling in a Dutch homestead, a whole family, numbering perhaps forty or fifty, from the grey-headed grandsire to the flaxen-locked infant, listening with devout attention to the hallowed words of the sacred book, and joining in prayer and praise to the Great Father of the whole human family.

Four times a year the sacrament is administered in every Dutch church in the colony. And then, from far and wide, the waggons pour into the towns, bringing families who have travelled even one hundred and fifty miles to partake of the Lord's Supper. New Year's Day is always one of these occasions, and indeed it is a general holiday throughout the land, and is the most sacred day in the Dutch Calendar. A stranger would imagine that some fête or great entertainment, some fair or festival, had drawn together the crowds of young and old assembled in the towns on this day. Little would he imagine that they had been summoned there only by the recollection of the divine words, "This do in remembrance of me."

"Familiar in their Mouths as **HOUSEHOLD WORDS**"—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 32.]

SATURDAY, NOVEMBER 2, 1850.

[PRICE 2d.]

GOTTFRIED KINKEL;

A LIFE IN THREE PICTURES.

PICTURE THE FIRST.

THE winter of 1844 was a severe one in Germany. Both sides of the Rhine, for many miles between Coblenz and Cologne, were frozen hard enough to bear a horse and cart; and even the centre, save and except a thin stream where the current persisted in displaying its urgent vitality, was covered over with thin ice, or a broken film that was constantly endeavouring to unite and consolidate its quivering flakes and particles. We were staying in Bonn at this time. All the Englishmen in the town, who were skaters, issued forth in pilot-coats or dreadnought pea-jackets, and red worsted comforters, with their skates dangling over their shoulders. Holding their aching noses in their left hands, they ran and hobbled through the slippery streets, and made their way out at the town-gates near the University. They were on the way to Poppelsdorf—a little village about a mile distant from Bonn. We were among them;—red comforter round neck—skates over shoulder.

The one great object in this little village is a somewhat capacious and not unpicturesque edifice called the Schloss, or Castle, of Poppelsdorf. The outer works of its fortifications are a long avenue of trees, some pretty fir groves and wooded hills, numerous vineyards, and a trim series of botanic gardens. The embrasures of its walls are armed with batteries of learned tomes; its soldiers are erudite professors and doctors who have chambers there; students discourse on philosophy and art, and swords and beer, and smoke for ever on its peaceful drawbridge; and, on the wide moat which surrounds it, Englishmen in red comforters—at the time whereof we now speak—are vigorously skating with their accustomed gravity. This scene was repeated daily for several weeks, in the winter of 1844.

One morning, issuing forth on the same serious business of life, we perceived that the peasantry of Poppelsdorf, who have occasion to come to Bonn every market-day, had contrived to enliven the way and facilitate the journey by the gradual construction of a series of capital long slides. We stood and contemplated

these lengthy curves, and sweeps, and strange twisting stripes of silver, all gleaming in the morning sun, and soon arrived at the conviction that it was no doubt the pleasantest market-pathway we had ever seen. No one was coming or going at this moment; for Popples is but a little *dorf*, and the traffic is far from numerous, even at the busiest hours. Now, there was a peculiar charm in the clear shining solitude of the scene, which gave us, at once, an impression of loneliness combined with the brightest paths of life and activity.

And yet we gradually began to feel we should like to see somebody—student or peasant—come sliding his way from Popplesdorf. It was evidently the best, and indeed the correct mode for our own course to the frozen moat of the castle. But before we had reached the beginning of the first slide (for they are not allowed to be made quite up to the town-gates), we descried a figure in the distance, which, from the course it was taking, had manifestly issued from the walls of the castle. It was not a peasant—it was not one of our countrymen; be it whom it might, he at least took the slides in first-rate style. As he advanced, we discerned the figure of a tall man, dressed in a dark, long-skirted frock coat, buttoned up to the throat, with a low-crowned hat, from beneath the broad brim of which a great mass of thick black hair fell heavily over his shoulders. Under one arm he held a great book and two smaller ones closely pressed to his side, while the other hand held a roll of paper, which he waved now and then in the air, to balance himself in his sliding. Some of the slides required a good deal of skill; they had awkward twists half round a stone, with here and there a sudden downward sweep. Onward he came, and we presently recognised him. It was Dr. Gottfried Kinkel, lecturer on Archaeology; one of the most able and estimable of the learned men in Bonn.

Gottfried Kinkel was born in a village near Bonn, where his father was a clergyman. He was educated at the Gymnasium of Bonn, and during the whole of that period, he was especially remarkable, among companions by no means famous for staid and orderly habits, as a very quiet, industrious, young man, of a sincerely religious bent of mind, which gained for him the notice and

regard of all the clergy and the most devout among the inhabitants of the town. His political opinions were liberal; but never went beyond those which were commonly entertained at the time by nearly all men of education. He studied divinity at the University, where he greatly distinguished himself in various branches of learning, and obtained the degree of Doctor in Philosophy.

He first preached at Cologne, and with great success, his oratory being considered as brilliant as his reasonings were convincing. His sermons were subsequently published, and became very popular, and he was chosen as a teacher of Theology in the University of Bonn.

He next turned his attention to the study of the Arts. On this subject he wrote and published a History, and lectured on "Ancient and Mediæval Art," both in the University and other public institutions, with unparalleled success and applause.

His labours at this period, and for a long time after, were very arduous, generally occupying thirteen hours a day. Being only what is called a "privat-docent," he did not as yet receive any salary at the University; he was therefore compelled to work hard in various ways, in order to make a small income. However, he did this very cheerfully.

But his abandonment of Theology for these new studies, caused him the loss of most of his devout friends. They shook their heads, and feared that the change denoted a step away from the true and severely marked line of orthodox opinions. They were right; for he soon after said that he thought the purity of religion would be best attained by a separation of Church and State!

Dr. Kinkel suffers no small odium for this; out he can endure it. He has uttered an honest sentiment, resulting from his past studies; he has become a highly applauded and deservedly esteemed lecturer on another subject; he is, moreover, one of the best sliders in Bonn, and is now balancing his tall figure (as just described) with books under one arm, on his way to the University.

Happy Gottfried Kinkel!—may you have health and strength to slide for many a good winter to come!—rare Doctor of Philosophy, to feel so much boyish vitality after twenty years of hard study and seclusion!—fortunate lecturer on Archaeology, to live in a country where the simplicity of manners will allow a Professor to slide his way to his class, without danger of being reproved by his grave and potent seniors, or of shocking the respectable inhabitants of his town!

PICTURE THE SECOND.

The Castle of Popplesdorf commands the most beautiful views of some of the most beautiful parts of Rhenish Prussia; and the very best point from which to look at them, is the window of the room that used to be the study of Dr. Gottfried Kinkel. • That used to

be—and is not now—alas, the day! But we must not anticipate evils; they will come only too soon in their natural course.

In this room, his library and study, we called to see Dr. Kinkel. There he sat—dressing-gown, slippers, and cloud-compelling pipe. The walls were all shelves, the shelves all books,—some bound, some in bounts, "some in rags, and some in jags,"—together with papers, maps, and scientific instruments of brass and of steel. There stood the Hebrew, Greek, and Roman authors; in another division, the Italian and French; on the other side, in long irregular ranges, the old German and the modern German; and near at hand, the Anglo-Saxon and English. What else, and there was much, we had not time to note, being called to look out at the window. What a window it was!—a simple wooden frame to what exquisite and various scenery! Let the reader bear in mind, that it is not winter now—but a bright morning in May.

Close beneath the window lay the Botanic Gardens, with their numerous parterres of flowers, their lines and divisions of shrubs and herbs. Within a range of a few miles round, we looked out upon the peaceful little villages of Popplesdorf and Kessenich, and the fertile plain extending from Bonn to Godesberg—with gentle hills, vales, and ridges, all covered with vineyards, whose young leaves gave a tender greenness and fresh look of bright and joyous childhood to the scenery. Beyond them we saw the Kessenicher Höhe, the blue slate roofs and steeples of many a little church and chapel, and the broad, clear, serpent windings of the Rhine, with the grey and purple range, in the distance, of the Seven Mountains, terminating with the Drachenfels. Over the whole of this, with the exception only of such soft, delicate, shades and shadows as were needful to display the rest, there lay a clear expanse of level sunshine, so tender, bright, and moveless, as to convey an impression of bright enchantment, which grew upon your gaze, and out of which rapture you awoke as from a dream of fairy land, or from the contemplation of a scene in some ideal sphere.

Fortunate Dr. Kinkel, to have such a window as this! It was no wonder that, besides his studies in Theology, in ancient and mediæval art, and in ancient and modern languages—besides writing his History of the Arts, and contributing learned papers to various periodicals—besides preaching, lecturing, and public and private teaching, his soul was obliged to compose a volume of poems—and again displease the severely orthodox, by the absence of all prayers in verse, and the presence of a devout love of nature.

For, here, in their placidity,
Learning and Poesy abide;
Not slumbering on the unfathomed sea,
Yet all unconscious of the tide
That urges on mortality
In eddies, and in circles wide.

Ah, here, the soul can look abroad
 Beyond each cold and narrow stream,
 • Enrich'd with gold from mines and ford,
 Brought sparkling to the solar beam;
 Yet be no miser with its hoard,—
 No dreamer of the common dream.

Thus sang Dr. Kinkel, in our imperfect translation thus inadequately echoed; and here he wrought hard in his vocation, amidst the smiles of some of the loveliest of Nature's scenes.

But besides the possession of all these books, and of this wonderful window, Dr. Kinkel was yet more fortunate in his domestic relations. He was married to an amiable, highly educated, and accomplished lady, who endeavoured, by all the means in her power, to assist his labours, and render them less onerous by her own exertions. She was a very fine musician, and a superior pianoforte player—one of the favourite pupils of Moscheles, and afterwards, we believe, of Mendelssohn. She divided her time equally between assisting her husband, educating their child, and giving private lessons in music; and because this accomplished hard-working couple did not find their energies quite worn out by toiling for thirteen hours a day, they gave a private concert at the Castle once a month, at which a whole opera of Mozart or Weber was often gone through—both the instrumental and vocal parts being by amateurs, or pupils of Madam Kinkel.

So, once again, we say, notwithstanding all these labours, Dr. Kinkel's life in the Castle of Poppelsdorf, was that of a fortunate and happy man. At this period he was about two and thirty years of age. He could not have been more; probably he was less.

PICTURE THE THIRD.

It is the year 1848, and the Continental Revolutions are shaking all the foreign thrones. Everybody, not directly or indirectly in the pay of a Court, feels that the lot of the people should be ameliorated. The populations of all nations have borne enormous burdens, with extraordinary patience, for a very long time—say a thousand years—and at last they have no more patience left. But what is all this to abstract thought, to learning and science, to poetic raptures and picturesque ease? It has hitherto been regarded as too grossly material, or of too coarse and common a practicality for the great majority of those whose lives were passed in abstract studies and refinements. Ay—but this must not continue. The world has come to a pass at which every soul must awake, and should be "up and doing."

Dr. Gottfried Kinkel, now, besides his other honours and emoluments, and private earnings, is installed as a salaried Professor in the University of Bonn. It cannot be but such a man must awake, and take an interest in these Continental revolutions which are boiling up all round him. Still, it is not likely he will

step into the vortex, or approach it. His worldly position is strong against it—all his interests are against it; moreover, he has a wife, and besides he has now three children.

Howbeit, Dr. Kinkel does rise with these events, and his wife, so far from restraining him, feels the same enthusiastic patriotism, and exhorts him to step forward, and swell the torrent of the time. He feels strongly that Prussia should have a constitution; that her intellect and sober character deserves a constitutional monarchy, like ours in England, with such improvements as ours manifestly needs, and he places himself at the head of the popular party in Bonn, where he delivers public orations, the truthful eloquence and boldness of which startle, delight, and encourage his audiences.

He is soon afterwards elected a member of the Berlin parliament. He sides with the Left, or democratic party; he advocates the cause of the oppressed people and the poor; he argues manfully and perseveringly the real interests of all governments, in granting a rational amount of liberty, showing that in the present stage of the moral world, it is the only thing to prevent violence, and to secure good order. His speeches breathe a prophetic spirit.

The revolution gathers fuel, more rapidly than can be well disposed, and it takes fire at Baden. The flames reach near and far—many are irresistibly attracted. They have seen, and too well remember, the faithlessness and treachery of governments—they believe the moment has come to strike a blow which shall gain and establish the constitutional liberty they seek. Dr. Kinkel immediately leaves his Professorship; he believes he ought now to join those who wield the sword, and peril their lives in support of their principles. He proposes to hasten to Baden, to defend the Constitution framed by the Frankfort parliament. His patriotic wife consents, and in the evening he takes leave of her, and of his sleeping children.

It must not be concealed that with this strong feeling in favour of a constitutional monarchy, there was an infusion of principles of a more sweeping character; nor would it be going too far to say that amidst the insurgents of Baden were some who entertained opinions not far removed from red republicanism. Be this as it may, we are persuaded that Dr. Kinkel's political principles and aims were purely of a constitutional character, however he may have been drawn into the fierce vortex of men and circumstances which surrounded him.

Dr. Kinkel serves for eleven days in a free corps in Baden, where the army of the insurgents have assembled. At the commencement of the battle, he is wounded, and taken prisoner with arms in his hands. The sequel of these struggles is well enough known; but the fate of the prisoners who survived their wounds, must be noticed.

According to the Prussian law, Dr. Kinkel should have been sentenced to six years' confinement as a state prisoner. This sentence is accordingly passed upon the other prisoners; and with a wise and commendable clemency many are set free after a short time. But as Dr. Kinkel is a man of high education and celebrity, it is thought best to give him a very severe punishment, according to the old ignorance of what is called "making an example,"—as if this sort of example did not provoke and stimulate, rather than deter others; and, as if clemency were not only one of the noblest attributes of royalty, but one of its best safeguards in its effect on the feelings of a people.

Dr. Kinkel is, accordingly, sentenced to be imprisoned for life in a fortress, as a state criminal; and away he is carried.

But now comes into play the anger and resentment of many of those who had once so much admired Kinkel, and held him up as a religious champion, until the woeful day when he left preaching for the study of the arts; and the yet more woeful, not to call it diabolical hour, when he announced his opinion that a separation of Church and State might be the best course for both. After a series of intrigues, the enemies of Kinkel induce the King to alter the sentence; but in order to avoid the appearance of unusual severity, it is announced that his sentence of imprisonment in the fortress shall be *alleviated*, by transferring him to an ordinary prison. In pursuance, therefore, of these suggestions of his enemies, he is ordered to be imprisoned for life in one of the prisons appropriated to the vilest malefactors—viz., to the prison of Naugard, on the Baltic.

Dr. Kinkel is dressed in sackcloth, and his head is shaved. His wedding-ring is taken from him, and every little memento of his wife and children which might afford him consolation. His bed is a sack of straw laid upon a board. He has to scour and clean his cell, and perform every other menial office. Light is allowed him only so long as he toils; and, as soon as the requisite work is done, the light is taken away. Such is his melancholy lot at the present moment!

He who used to toil for thirteen hours a day amidst the learned languages and the works of antiquity, in the study of Theology, and of the arts—the eloquent preacher, lecturer, and tutor—is now compelled to waste his life, with all its acquirements, in spinning. For thirteen hours every day, he is doomed to spin. By this labour he earns, every day, threepence for the state, and a halfpenny for himself! This latter sum, amounting to threepence a week, is allowed him in mercy, and with it he is permitted to purchase a dried herring and a small loaf of coarse brown bread,—which, furthermore, he is allowed to eat as a Sunday dinner,—his ordinary food consisting of a sort of odious pap

in the morning (after having spun for four hours), some vegetables at noon, and some bread and water at night.

For months he has not enjoyed a breath of fresh air. He is allowed to walk daily for half-an-hour in a covered passage; but even this is refused whenever the gaoler is occupied with other matters, and cannot attend to trifles.

Dr. Kinkel has no books nor papers;—there is nothing for him but spinning—spinning—spinning! Once a month he is, by great clemency, allowed to write one letter to his wife, which has to pass through the hands of his gaoler, who, being empowered to act as censor, judiciously strikes out whatever he does not choose Madame Kinkel to know. All sympathising letters are strictly withheld from him, while all those which severely take him to task, and censure his political opinions and conduct, are carefully placed in his hands, when he stops to take his breath for a minute from his eternal spinning.

Relatives are not, by the law, allowed to see a criminal during the first three months; after that time, they may. But after having been imprisoned at Naugard three months—short of a day—Dr. Kinkel is suddenly removed to another prison at Spandau, there to re-commence a period of three months. By this device he is prevented from seeing his wife, or any friend—all in a perfectly legal way.

The gaoler is strictly enjoined not to afford Dr. Kinkel any sort of opportunity, either by writing or by any other means, of making intercession with the King to obtain pardon, or the commutation of his sentence into banishment. All these injunctions are fully obeyed by the gaoler—indeed the present one is more severe than any of the others.

Nevertheless, the melancholy truth has oozed out—the picture has worn its tearful way through the dense stone walls—and here it is for all to see,—and, we doubt not, for many to feel.

Gottfried Kinkel, so recently one of the most admired professors of the University of Bonn, one of the ornaments of the scholarship and literature of modern Germany, now clothed in sackcloth, with shaven head, and attenuated frame, sits spinning his last threads. He utters no reproaches, no complaints; but bears his sufferings with a sweet resignation that savours already of the angelic abodes to which his contemplations are ever directed. He has entreated his wife to have his heart buried amidst those lovely scenes on which he so often gazed with serene rapture, from his study-window in the Castle of Poppelsdorf.

Those who behold this last picture, and revert to the one where the professor came happily sliding his way to his class at the University, may perchance share the emotion which makes us pass our hands across our eyes, to put aside the irrepressible tribute of

sorrow which dims and confuses the page before us. His worst enemies could never have contemplated anything so sad as this. Many, indeed, have already relented,—but let their interceding voices be heard before it is too late.

The literary men of no country are united, or they might move the whole kingdom. Still less are the literary men of different countries united, or they might move the world. But are they, therefore, without a common sympathy for one another? We are sure this is not the case; and making this appeal to the literary men of England, we believe it will not be in vain. Nor are we without hope, that a strong sympathy of this kind, being duly and respectfully made known to the King of Prussia, or to Baron Manteuffel, the Minister of the Interior, may induce His Majesty to consider that the revolution being at an end, clemency is not only the "brightest jewel in a crown," but its noblest strength, and that, while royal power can lose nothing, it must gain honour by remitting all further punishment of one who has only shared in the political offence of thousands who are now at liberty. All that the friends, at home and abroad, of Gottfried Kinkel ask is—his liberation from prison, and a permission to emigrate to England or America.

THE DOOM OF ENGLISH WILLS.

CATHEDRAL NUMBER THREE.

THE core of the inquiry which Mr. William Wallace had at heart, lay imbedded in the depositories of unimpeachable Ecclesiastical Registry number three. To the city of that See he therefore repaired, warmed by that flaming zeal which only burns in the breast of an earnest antiquary, and which no amount of disappointment can quench. Though sanguine, even for an antiquity-hunter, the hopes which rebounded from his previous failures, sunk within him, when he remembered that whereas he was in former instances fortified with letters of recommendation—almost of command—from the Bishops of each Diocese; on this occasion, he had to fight single-handed, (like another St. George,) the dragons that "guarded" the treasures he sought. He had no better introduction to the third Deputy-Registrar than an honest purpose; and, his former experience taught him that that was about as unpromising an usher into such a Presence as could be imagined. Mr. Wallace therefore commenced this new attack with no strong presentiment of success.

Strengthened with an ally, in the person of a friendly attorney, Mr. William Wallace marched boldly to the great functionary's house, a splendid edifice in the Cathedral Close, with thirty-three windows in front, extensive grounds behind, detached stables and a tasteful boat-house at the edge of what is here called the "Minster Pool."

Into this great house of a great man, Mr. William Wallace was ushered by his friend. Nothing could exceed the obsequiousness of the man of law, and great was the civility of the man of wills. The interview was going on pleasantly and the antiquary was beginning to believe that at last he had found a pattern Deputy-Registrar, when the lawyer happened to mention that Mr. William Wallace was a literary man. Mr. Wallace felt that this would be fatal—and it was so. He knew the condescending contempt Ecclesiastical Registrars entertained for the literary world, from the little circumstance of hearing only the week before in another Registry, the most eminent historian of the present day, and our best archaic topographer, designated as "contemptible penny-a-linera." Mr. Wallace was therefore not at all astonished when the Deputy-Registrar folded up his smiling countenance into a frown. He evidently knew what was coming. Literary men never pay, and Mr. William Wallace wanted to consult 'his' registers gratis.

When this shrewd surmise was, by a word from the attorney, realised, the Registrar struggled hard to smoothe his face again to a condition of bland composure; but in vain. The wound which had pierced through his pocket, rankled within. The depravity of literary people in endeavouring to dig and delve for historical information without paying for the privilege of benefitting the public by their researches, was too abominable! The Registrar was so good as to say that he would grant Mr. Wallace the privilege of consulting any wills he pleased—on the usual terms: namely, two shillings and sixpence for every document.

With this condescending permission (which placed Mr. Wallace on exactly the same footing as the great body of the public which had not done itself the honour of visiting the Deputy-Registrar) he repaired to the Searching Office. The point he had set himself to ascertain at this Cathedral Registry number three, hinged upon an authentic attestation of the decease of the father of a distinguished general under Charles the First. The name was a very common one in the diocese, and of course continually occurred in the index. Will after will was produced by the clerks; half-crown after half-crown fell glibly out of Mr. Wallace's pocket. Still no success. Of all the namesakes of the person sought, who had become testators in the early part of the seventeenth century, the one particular testator whose last act and deed Mr. Wallace sought, was not to be found. This proved an expensive day. Mr. Wallace had had to pay, in the course of it, twenty-five pounds; although he was not allowed, as at the other places, to make a single extract.

For this large sum Mr. Wallace gained nothing but materials for a little wholesome criticism on the indexes or calendars. Some of the Wills in this Registry are dated as

early as the beginning of the fourteenth century; but all the Registrars since that time, with their progressively enormous incomes, have not found it consistent with their duty to have a list of these early Wills made; for the first volume of calendars commences with the Wills of 1526, and ends with those of 1861. It is a volume only in name. It has no back; all the leaves are loose, and it is brought in and thrown down to whomever wishes to consult it as if it were a bale of damaged goods out of a wreck. Like more of the early indexes, the alphabetical arrangement is not of surnames, but of Christian names; so that the searcher has to run the gauntlet down interminable columns of the "Johns," "Thomases," "Jameses," and "Jonathans" that bristle upon each page like (as Leigh Hunt said of the "Smiths" in the Directory) the iron railings along a London street. This lump of almost useless leaves has never been copied into a legible form by any Registrar since it became unfit for use. The income of the office even of Deputy Registrar sometimes admits of the maintenance of from six to a dozen race-horses, but the expense of compiling paper calendars could never be tolerated. To make indexes of wills that have never been catalogued would be quite out of the question; for the Registrar charges his clients for the time of his clerks in making searches, and it was owned to Mr. Wallace that it would take a year (at from one to two guineas per day) to find any will dated before the year 1526.

The searching office of this Registry was, like the others, inconvenient, small, and often crowded. The policy of the clerks was, therefore, to despatch the inquirers as fast as possible, so as to ensure a rapid change of visitors and a streaming influx of half-crowns. On the second day of Mr. Wallace's search the trouble he had given on the previous day for his money was intelligibly hinted to him. He was broadly told that he was "very much in the way;" for room was so much required that some applicants were plainly told that they must "come again to-morrow." To others who had not their inquiries ready cut and dried, in a business form, and who threatened long explanations respecting testators, a deaf ear was turned, or a pretended search was made, and they were told "there was no such will in the place." A pleasant case occurred on the second morning. An illiterate labourer tried to make the officials understand that an uncle of his wife had, he had heard, left him a legacy, and "he wanted to know the rights o' it." He gave the name and the exact date of the death, and a clerk retired under pretence of searching for the document. In a very short time he returned with—

"No such will in the place—half-a-crown, please."

"Half-a-croone?" said the countryman, "Wat vor?"

"Half-a-crown!" repeated the clerk.

"Wat, vor telling me nought?"

"Half-a-crown!" was again let off with a loud explosion, over the stiff embrasure of white cravat.

"But darn me if oi pay 't," persisted the expectant legatee.

"Half-a-crown!"

The countryman went on raising a storm in the office, in midst of which the "Half-a-crown!" minute guns were discharged with severe regularity. At length, however, the agriculturist was obliged to succumb, and after a mighty effort to disinter the coin from under a smock-frock, and out of the depths of a huge pocket and a leather purse, the poor man was obliged to produce and pay over what was probably a fifth of his week's earnings.

This circumstance having attracted Mr. Wallace's attention and pity, he took a note of the name of the testator; and, after the inquirer had left, found it in the Calendar, and by-and-by, by dint of a little manoeuvring, got a sight of the will. In it he actually found that the poor man had been left a small legacy.

The extent to which similar practical pleasantries are indulged in, it is impossible to estimate. Many of the most cruel wrongs inflicted and suffered in some families, originate in the infinite varieties of carelessness and neglect that pervade the unimpeachable Ecclesiastical Registries of this country.

Meanwhile Mr. William Wallace had been actively employed in calling for wills and paying out half-crowns. It was quite evident from the calendars that no greater care was taken of paper and parchment here than in the other Registries. Several wills entered in it, as having been once in the depository—wherever that was—had against them the words "wanting" and "lost." That ancient records should in the course of centuries fall aside, cannot be wondered at, even in a Registry, which produces at present to its officers from seven to ten thousand per annum; but what excuse can there be for the loss of comparatively modern ones? Certain wills were not to be found of the years 1746; 1750; 1753; and 1757.

Mr. Wallace soon found that in a place where dropping half-crowns into the till and doing as little as possible in return for them, is considered the only legitimate business, he was looked upon even at twenty-five pounds per day as a sort of bad bargain, who required a great deal too much for his money. They could not coin fast enough by Mr. William Wallace, and the Deputy-Registrar indulged the office with his august presence to inform him, that as he gave so much trouble for the searches he was making, he must pay, besides two-and-six-pence for every future search, two guineas per diem for the use of the office!

It happened that the Bishop of Cathedral number three was then in the city, officiating at an ordination, and to him Mr. William Wallace determined to apply for relief from this extortion. He enclosed to his Lordship his letters from other prelates and stated his case. The answer he received was the Bishop's *unqualified authority* to search wherever and for whatever he wanted in the Registers of his Lordship's diocese.

Although this letter was addressed by the Bishop to the servant or deputy of his servant, the Registrar, yet Mr. Wallace's dear-bought sagacity had taught him to place very little faith in a Bishop's power over his inferiors. As it turned out, he found himself one of those who are blessed, because, expecting nothing, they are not disappointed. The Deputy-Registrar received his superior's mandate with supercilious *sneer*. The old story—"The Bishop had no jurisdiction whatever over him," but this once, &c. &c.

Mr. William Wallace had met in Cathedral numbers one and two, repulses and rudeness. But each Cerberus who pretended to guard the documentary treasures of those dioceses, honestly showed his teeth. They had not been guilty of deceit. Deputy-Registrar number three was wiser in his generation. He gave a cold assent to the Bishop's mandate in Mr. Wallace's behalf; but with it such wily instructions to his clerks, as rendered it as nugatory as if he had put it in his waste basket or had lighted his cigar. During the two days that half-crowns rained in silver showers from the Antiquary's purse, nearly every Will he asked for was produced; but now, on the third day, when the Bishop's letter had closed his purse strings, Mr. Wallace demanded document after document, and was told by the "Concaveators" of this important kind of public property, that they had "been lost," "could not be found," "mislaid." But the most frequent return was, "destroyed at the siege of the City, in the year 1643"—stolen away with the Tomb of Marston when

"Famatic Brooke
The fair Cathedral storm'd and took."

The result of the three days' investigations stood thus: "During the two paying days, out of a hundred Wills asked for, eighty were produced. Throughout the non-paying day, out of ninety Wills asked for, only *one* was produced!"

When half-crowns were rife, not one word was said about "the siege of the City, in the year 1643," although nearly all the Wills Mr. Wallace was obliged with a sight of, were dated anterior to that destructive event.

For some explanation Mr. Wallace repaired to the Deputy-Registrar's abode. It was too late. The clever sub. knew what was coming—and retreated from the field. The servant's answer to Mr. Wallace was,

"Out of town, sir!"

But Mr. William Wallace was foiled even more completely in another point: he had a great desire to see where and how the Wills were kept. He knew their condition in 1832, from what Ulster King-at-Arms said before the Ecclesiastical Commission, "I consider the records very dirty; they have not, apparently, been dusted for many years." The remarkable result of Mr. Wallace's urgent inquiries was that not a soul he asked could, or would, tell in what place the ecclesiastical records of Cathedral number three were deposited. It was vouchsafed to him that modern Wills were preserved in the Registrar's splendid edifice; but whether the ancient Wills lay interred in cellars, or were hoisted into lofts, or shared the gangers and cornbins of race-horses, no amount of inquiry, no watching the clerks when they went out of one door of the searching office to procure the documents demanded, and then came in at another, could discover. An old, stout, surly clerk, declared, in as staid a tone as if he were telling the truth, "that he *did not know* where the records were kept."

Mr. Wallace gave up this investigation in despair and left the city. The *locus* of the documents was to him a mystery and a wonder!

The habits of the antiquary do not, however, dispose him to indulge in listless despair. To find out the secret masses of the records of Cathedral number three was a task Mr. William Wallace had so earnestly set himself, that next to his domestic relations and his literary labours, it grew into one of the duties of his existence; therefore, on his way to Cathedral number four, he paid another visit to the city of Cathedral number three, fortified with letters to some of its clergy. To be sure *they* could clear up the mystery.

His first application was to one of the Canons. Did he know where the ecclesiastical records were kept? Well, it was odd, but it never entered his head to inquire. He really *did not know*. Perhaps some of the Chapter officials could tell.

To one of these lies Mr. Wallace. Even that functionary—whose courteousness, together with that of his colleague, was pleasant to the applicant by the force of mere contrast—was equally unable to reveal the secret. "But surely," he added, "such a place cannot, when one sets about it, be so impenetrable a mystery. I have an idea that the *Miller* could enlighten you."

"The Miller?"

"Yes. He knows everything about the town. Try him."

Mr. Wallace had business at the searching office, and having transacted it, determined to make another effort in this legitimate quarter. The following short dialogue occurred between him and the clerk:—"Pray," said Mr. Wallace, "where are the Wills kept?"

"That's not your business!" was the answer. Mr. Wallace returned to the charge

but the clerk became deaf, and went on with some writing, precisely as if Mr. William Wallace were invisible and inaudible.

The Miller was the only resource. He was from home, and his wife gave the same answer as everybody else had done. "But," she said, pointing to an individual who was sauntering into the Close, "there's one as can tell 'ee. He's a *ratchetty* man—he is." Without waiting to inquire the meaning of this strange expression, off starts the record-hunter upon the new secret. He runs down his game in no time. It consists of a burly biped, bearing a cage of fine ferrets. Round his person is displayed the broad insignia of office,—he is a rat-catcher.

Here Mr. William Wallace's perseverance triumphs. The Rat-catcher knows all about it. "Why you see, Sir," he said, "I contracts for the Registrar."

"What for?"

"What for? Why, I catches the rats for him at so much a-year."

"And where do you catch them?"

"Where do I catch them? Why, where the old wills is."

"And where is that?"

"Where is that? Why, *there*."

The Rat-catcher points to a sort of barn that rises from the edge of the Minster Pool. It has no windows on the ground-floor. On the first-floor are six—two in the front of the building and four at the end,—twenty-seven windows less than are displayed in the front of the Registrar's beautifully glazed house; but much of the little glass afforded to the registry is broken. To mend it upon seven thousand a-year would never do, especially when old parchment is lying about in heaps. Why pay glaziers' charges when ancient wills and other ecclesiastical records keep out wind and weather as well as glass?—for light is a thing rather to be shunned than admitted into such places. Accordingly, as the Rat-catcher points to the shed, Mr. Wallace observes numberless ends of record rolls and bundles of engrossed testaments poked into the broken windows: in some places variegated with old rags.

Judging from the exterior, and from the contract for rat-catching, the interior of this depository of the titles of hundreds of thousands of pounds worth of property, must be an archaeological Golgotha, a dark mouldy sepulchre of parchment and dust.

Lawyers say that there is not an estate in this country with an impregnable title; in other words, it is on the cards in the game of ecclesiastical and common law, for any family to be deprived of their possessions in consequence of being unable to establish a perfect title to them. How can it be otherwise when the very deeds by which they have and hold what they enjoy, are left to be eaten by rats, or to be stuffed into broken windows?

THE SOWER.

"This is the strife, and eke the affraie,
And the battill, that lasteth ale."—CHAUCER.

Though his heart may dare to glory,
Conscious of a God innate—
Yet to read his future story,
To foresee his future fate,
To fore-sing his future singing,
Never doth the Poet heed:
Every day to him is bringing
All of which the day hath need.

Faithful is his hand and fearless:
Wholesome seed, he knoweth well,
May be sown in weather cheerless,
But will spring up where it fell.
Seed was given to his keeping,
And from Heaven it was sent;
He has sown it. Is it sleeping
In the soil?—he is content.

THE NEW ZEALAND ZAUBERFLÖTE.

IN THREE CHAPTERS.—CHAPTER III.

It so chanced that the direction taken by the kangaroos led towards the sea-coast, and to that quarter of it where Waipata had been sent since his conversion to Christianity. The young man being out with three or four of the Maori youths, amusing themselves in practising with their spears, were suddenly alarmed by the advance of large wild creatures of a kind they had never seen before, and, therefore, regarded as very strange and dangerous monsters. Onward came these nine monsters, almost in regular succession, with their large dark eyes staring like lamps before them—their long ears sticking up like horns—their long thick tails stretching out straight behind—and taking leaps of ten or twelve feet high, and from twenty to thirty feet in length. As the first passed along, Waipata—partly in fear, and yet partly from a daring spirit, flung a spear at the creature. The weapon pierced it deeply in the flank,—so that the leaping flight was at once turned to a limping escape. The instant the effect was seen by the other youths, away sang their spears, and down stumbled three more of the poor kangaroos. The hunting mania was now in a blaze, and with a loud yell, the young men gave chase, and in a very short time, the kangaroos, who though wounded, had all contrived to keep together to the last, lay rolling on the sand near the sea, with their huge hind legs kicking in the air. At this moment Taōnui and his party made their way round a rock, and beheld the slaughtered creatures—and who had done it!

The king sat down upon a stone, and bent forward, looking at the dying and dead kangaroos. The chiefs explained to Waipata the mischief he had done; but Taōnui said nothing. He saw how it all was. Witchcraft—the "dibble"—the influence of his old enemy Te Pomar—of Teōra—of Kaitemata and her black one-eyed pig—and of the magic flute! Against all explanation and apologies

from his son, he only waived his hand—and he continued to do this till Waipata, and his friends, and, in fact, all the chiefs, and everybody else, left him sitting there alone.

Thus sat the king till evening; and, feeling that nothing worse could occur to him than had already happened, he would not move even at night. A Maori youth, however, was sent by Waipata from the missionary station, to light a fire near him for company and protection, and also with a bottle of rum to prevent ague from the night-dews. Taōnui received these attentions without giving any token of recognition; after the young man was gone, however, he took a copious draught of the rum, and then sat and contemplated the fire in a state of grim apathy till he fell asleep.

He had not slept long before the thought of the flute presented itself to his mind in the most persuasive form—proposing to him, as it seemed, that he should be reconciled to the memory of the great Te Pomar—that he should never again exult over his fall—that he should liberate Teora before it was too late, and cease to persecute her, or punish his son, for embracing the Christian religion. But in vain—he would not attend to it—he would not be softened and humanised—and in the end he transformed the suggestions of his dream into a taunt that he dared not play the flute again.

No sooner did the idea present itself than up went the flute to his mouth,—and, instead of a discordant insult to the memory of Te Pomar, in an instant he received a violent kick on the shin, as if from some prodigious leg! He started up. Who had done this? Nobody was near. Nothing was to be seen but the dying embers of the fire, and the horrid heap of slaughtered kangaroos, all with their huge hind-legs sticking up in the air. Had they been alive, such a kick might have been administered by one of these legs; but they were all rigid in death.

While the king was looking at the mangled and hideous heap, one of the limbs moved—certainly it had moved—and now it moved again. Presently there was a horrid “stir” all over the unsanguined mass—one of the kangaroos lifted its head up, and, with its ears bolt upright, and its eyes turned towards the king, gave a sneeze so loud that it seemed to split the adjacent rock. Whereupon, all the nine kangaroos started up, and made off at long leaps across the sands.

Taōnui looked after them! Had he been deceived, after all? An irresistible impulse made him snatch up his long spear, and give chase with his utmost speed. They were a considerable distance a-head of him, yet he was surprised to find himself gaining upon them, as their large bodies fled, with long flying leaps, across the sands, the clear moon shining brightly down upon their glossy backs and long thick out-stretched tails, giving them the strange appearance of creatures made of a sort of ghostly silver, flying, with the sea

on one side of them, and the land on the other, and belonging to neither. They now turned a corner of the cliff, and were lost to sight.

Taōnui pursuing at full speed, turned the same corner. The kangaroos were at a great distance, but one of them had detached itself from the rest, and was turning back. Yes—it was coming to meet him. There was something stately, if not threatening, in its air. Could the creature intend to attack him?

As the figure advanced, the moon gradually shone brighter and brighter upon it, till the king could clearly distinguish the suit of armour given by a king of England to the chief Shongi E. Hongi in days of yore. It was absolutely the suit of armour—but was anybody inside it? A battle was intended by the armour—that was apparent. At the distance of a spear's throw, the figure paused, and made signs of defying the king to single combat.

Taōnui would willingly have declined it, but it was too late, and, besides, he would be slain if he did not fight. Without further hesitation, therefore, he flung his spear. It smote the suit of armour on the breast with unerring aim, and broke off at the point. A strange noise issued from the inside of the armour. It was evidently not empty. Somebody was inside. It advanced, apparently having no weapons, though with a very confident bearing.

Taōnui now whirled his tomahawk through the air. It smote with a loud ringing sound upon the helmet, and fell down in the sand. The king, then, in a sort of despair, uttered his war-cry, and rushing onward with his *meri ponamu* (a green, flat war-club), commenced a valiant assault upon his inexplicable antagonist, who, however, contented itself with turning its back—raising one leg—and administering a kick in the king's ribs so tremendous that he flew before it, and dashed up the sand for several yards, as he rolled over in all sorts of wild postures.

Expecting, as a matter of course, to be killed by some novel process, the fallen Taōnui looked up, and saw long ears sticking out at the sides of the helmet, and a long projecting nose. It was one of the kangaroos! And now the others all returned, and after performing a series of exulting leaps round about him, the nine kangaroos all danced upon the prostrate body of the king, till he became insensible.

The religion of the *Tohunga*, which was the established church of New Zealand at this period, and continues to be so to this day with most of the tribes who remain firm to heathenism, could by no means be designated as idolatry. They had small household gods, such as lizards, and little deformed figures hung round their necks: they also had great fear of spirits, devils, and apparitions of all sorts, but no definite adorations on a grand

scale. Something of this kind, however, appears to have been the case at an earlier date, as the remains of certain temples plainly indicate. One of these, in a very secluded part of the interior, contained the remains of a grotesque Idol, whose advice was sought on very important occasions, by the priests, or by the chiefs whom the priests could influence. The approach to the temple of the idol was of course *tapu*—nobody dared to go near it. Many little spots on the outskirts, where an ancient chief or great priest had stood, were marked off by a circle of sticks. The remains of a treble row of stakes were stuck round about the entrance to this temple, intervalled with tall upright posts, on the tops of which were carved figures, larger than life, of men in all sorts of frightful attitudes, most of whom were thrusting out enormous tongues, with an expression at once of the most savage provocation and threatening. The carvings on the outer walls of the temple were coloured with black, red, and white; but the interior was in darkness, except, here and there, an uncertain light admitted through cracks and crevices, which cast a hazy mist of faint rays upon the squatting figure of a deformed green Idol, with red eyes encircled by three white rings—a great gourd-like face, elaborately tattooed in black—tall flat ears, immensely wide, speckled, and of a blood-stone colour—and a large black mouth in two arches, not unlike the form presented by a flying crow.

Gradually returning to a state of consciousness, the first thing Taōnuī perceived was the figure of this Idol squatting on a mound of sand, with its red eyes shining directly upon his face. The king sat up—and they both remained seated for some time, looking at each other.

At length the Idol arose, and beckoning Taōnuī, led the way across the sands into the scrub. The king having arisen, had followed, as if by some dreadful fascination; but he hesitated to advance among the shrubs and ridges of the scrub. The pagod, perceiving this, pointed to the flute which hung from Taōnuī's neck, and immediately a funeral march resounded—not like the one he had recently heard, but made up of all the most discordant and vile sounds he had been accustomed to play in his first use of the instrument. To this march, the king felt himself obliged to move in measured time, after his "spiritual" conductor, who now advanced without once turning his head.

The Idol led the way through the arid and stunted mazes of the scrub, and thence across the country, and through a forest,—now fording rivers,—now climbing over rocky ridges,—the discordant music of the march ringing in the king's ears all the time. He had thrice endeavoured to detach the flute from his neck, but all he could effect was to half strangle himself; on which occasions he always saw the squat shoulders of the pagod

shake with silent laughter. In this manner they proceeded, till they arrived at the borders of a channel, across which they passed in a canoe made of the hollowed trunk of a tree, and landing on an island, proceeded to a ruined pah, which Taōnuī well knew, for almost the only building in it, that was still standing, was Eat-man House.

This house, with the objectionable culinary name, had several historical traditions connected with it, which we pass over with a shudder, merely remarking that its present external appearance was by no means suggestive of pleasing thoughts. The door-post and boards of the portico were carved with figures having flat shell eyes, with their tongues protruded as in savage insult and defiance; and the row of stakes round the house was adorned in various places with dried human heads of chiefs who had fallen in battle—the mouths of the victors being carefully sewn up close, while those of the vanquished had been distended to the utmost, and then sewn back in that horrid position, to indicate that they were still in a constant terror, and calling out! A large head over the door, intended, perhaps, to represent the original owner of the house—the renowned Shongi of Eatman,—was elaborately tattooed, and adorned with a long beard made of dogs' tails. In this frightful place was Teōra now fastened up, and perhaps had been starved to death.

To a semicircular space in front of this lonely house, the Idol now led the way, and took his seat on a high stone which had been placed against the door to keep it fastened. At the same moment, a pointed flame burst out of the ground between Taōnuī and the pagod, the feet of the former becoming fixed to the spot where he stood. Presently Taōnuī perceived a figure seated on his right, closely shrouded in the long war-mat of a great *rangitira*. A second flame now burst out of the ground by the side of the first; and presently Taōnuī noticed a second figure, seated opposite to the other, shrouded in like manner in his war-mat. A third flame arose—and with it a third shadowy chief arose and took his seat; a fourth flame, and a fourth shadowy figure, and so on, till all the flames uniting in the centre, there was a great fire, and round it were seated a circle of shadowy warriors, whom the king now discovered to be those Waikatoto chiefs who had fallen in battle by the side of the great Te Pomar.

A strange stir and bustle was now going on among the trees of a grove just behind Taōnuī. He could not turn his head to see what it was; but, somehow, he became aware that it was the preparation for a great feast. A long roasting-stake was thrown over his head, and fell near the fire. Several vessels made of baked clay, and of stone and shell-work, were also pushed within the circle. But what were they to eat? Where was the

feast? What was to be roasted, and eaten? His kangaroos, perhaps; and to this, the king after the treatment he had received, had no sort of objection. Meanwhile all the seated figures maintained a solemn silence. Taōnui looked from one to the other, but could gather nothing from their immovable faces, all of which were painted with *koko-wai* or red ochre, denoting the importance of the occasion.

At length a voice, which evidently came out of the middle of the fire, cried aloud,—“Bring forth the feast.”

After a silence, during which nothing appeared, all the shadowy chiefs answered in chorus, “*Koo-i, koo-i?*”—where are you?”

Taōnui gazed all round, wondering why the victims were not brought, as he now clearly saw that a cannibal feast was intended.

“Bring forth our feast!” again cried out the Voice of the Fire. Nothing appeared. Taōnui again looked round at the faces of the shadowy warriors seated about the fire, till at last his eye encountered that of the Idol, who, after holding him with serpent-like fascination, relaxed its features in a hideous smile. Whereupon all the shadowy chiefs uttered a sudden laugh, and turned their dead eyes full upon Taōnui, who now understood that he himself was the victim—the “feast,” who was to be brought forth.

The shadowy chiefs now rose up, and with shouts and yells performed a war-dance, and then a funeral dance, and then a festive dance, in rapid succession round Taōnui; they then seized him,—dragged him to the fire,—and tearing off his cloak, prepared to thrust the sharp end of the roasting-stake between his shoulders.

The king, finding his last moment had arrived, nerved himself to die as became a great warrior.

“I cannot dance my war-dance amidst your hands,” he cried; “but I dance it in my soul, with defiance and scorn. I curse you, my Idol; and I thrust out my tongue at all your priests, and at the religion of *Tohunga*. I also defy the powers of witchcraft; and I here call upon the spirit of the young slave, Teōra, who is dead, to do her worst, in revenge for the slaughter of her father, and all the injuries I have heaped upon his memory. And now I shall remain silent.”

Taōnui having concluded this, his last speech, which, as is usual, he was allowed to finish without interruption; the point of the stake was inserted in his shoulders; but the hands that were thrusting it in, were then arrested by a colossal arm, which the king recognised as the one he had seen in the cavern; while a giant leg at the same time trampled out the fire. One side of the wall of *Eat-man House* now fell down, and the same great dark arm, which Taōnui had previously felt must belong to the dead chieftain,

Te Pomar, led forth Teōra, who waved a garland of lilies and blossoming clematis,—in the sweet odours of which the shadowy warriors, the hideous Idol, and all the frightful preparations of vengeance, faded away. Teōra smiled forgiveness, and took the hand of Taōnui, whose senses gradually left him, and a soft slumber came over him.

When he awoke, he found himself again on the sea-shore. It was still night. Had he been visited with a dreadful dream? No—he felt sure it had been more than that. It was no witchcraft, so far as Teōra was concerned. After all, she was no witch—she had saved him. And the spirit of Te Pomar had saved him, too—thus returning good for evil. If the new religion had taught this, it was better than the religion of *Tohunga*. He resolved never to play the magic flute again, but bury it with funeral ceremonies.

A soft harmonious music now arose from the sands: it swelled into the grand funeral march of a hero, and passed onward till it died away over the sea. Then came a deep silence—and in that silence, the king heard a gigantic pacing up and down the sands close to the margin of the sea. No one was visible. The pacing up and down continued. Then the moon rose, bringing into view pile upon pile of clouds, commencing in a purple-grey hue from the horizon, formed by the distant curving line of the sands, the purple getting fainter till the clouds were all grey, up to the bright mountain peaks that environed the rising moon. Still the gigantic pacing continued (though no figure was visible, the king felt it must be the once mighty chief), and after a time, it seemed to pass close to him, as in friendly reconciliation, and thence on—and on—till something like a lofty Shadow seemed to step from the distant line of sands upon the lowest purple ridge of sky, and thus ascended, step by step, into the towering clouds, till lost amidst the brightest of the grey and mountainous peaks. In remote echoes across the sea, the noble death-march of a hero was again faintly heard, as the moon sailed onward on her course, majestically drawing after her all the masses and piles of clouds.

Taōnui stood for a time entranced and elevated by the stately quietude of this magnificent vision. Coming so soon after the horrid scene from which he had been liberated, it was too much for the most obdurate nature to endure unmoved. The proud heart of Taōnui was softened by the nobleness of the acts of Te Pomar and his daughter, and something not unlike tears gushed into his eyes, for the first time in his life, as he sank down and pressed his face upon the sand, overcome by emotions which were perfectly new to him. If he had known a Christian prayer of manly penitence, he would have poured it forth; but what he sincerely felt was essentially the same thing.

The missionary station near which Waipata

had been sent to reside, was situated on a gentle acclivity, fronting one of the many beautiful picturesque bays which are found round the coast of New Zealand. It was a long low-roofed house made of wood and reeds bound together with flax, painted white, having a large verandah entirely covered with roses, geraniums, and woodbine, imported from Europe; amidst the luxuriance of which many birds had built their nests, not only all over the roof, but in every one of the thickly garlanded posts that upheld it. The wild pigeon and the graceful *tui* flew from tree to tree, and the hum of bees filled the air. The sea lay blue and bright below, and so exquisitely transparent, that any one bending over a rock might see families of shell-fish with their coral heads and shoulders projecting far out, all busily feeding at the bottom, to the depth of twelve or fifteen feet. Black swans sailed along near the shore, red-bills lay basking in crannies of the rocks, and the snowy albatross often passed across the blue sky. The mangrove fringed the borders of the bay, together with beautiful trees in full blossom, while sea-birds sat on the boughs pruning their lustrous feathers in the sun, as the sparkling drops of the briny wave flew from their expanded pinions.

It was a delightful thing to behold Taōnui, very shortly after the events last described, advancing towards this missionary station, at the head of a number of his chiefs, and all those of his tribe who had been converted, holding his son by one hand, and the daughter of Te Pomar by the other. Assembling all who followed, in a great circle, the king addressed them in a speech. He reminded them of all his wars against Te Pomar—of the hatred he had borne him—and of his victory. He then spoke of his revengeful feeling after the death of that great warrior, and told them it had cost him very dear, as he had suffered, in various ways, far more than he had inflicted, or could possibly inflict. But now a Good Spirit had descended upon his soul, and taught him better things. He gladly sanctioned the love of his son for Teōra, whom he had now brought to be married according to the forms of the Christian religion. He did not tell the chiefs around him, nor any of his tribe, that he should himself become a Christian. A man who was sincere could not suddenly adopt any new religion. But he for ever abjured the religion of Tohunga, with its idols and gods of all kind; and he promised his utmost protection to all who taught, and all who embraced the Christian faith, and that he would strive to conform in all his future feelings and actions to the teaching of the precepts of that divine priest and master whom they called Christ.

Teōra and Waipata were married the same day at the missionary station, and Taōnui with his own hands, collected the remains of Te Pomar, which, together with the won-

derful flute, he buried in the evening with the highest funeral ceremonies of his tribe. The last part of this consisted in bearing the remains to a secret cave.

To render this secrecy the more effectual, and therefore the more to show honour by its solemn mystery, the king, at night, unaccompanied by any one, took up the remains of the departed chief, enveloped in a cloak of the finest flax, and carried them in his arms through a forest into the deepest recesses of a beautiful stalactite grotto he had fixed upon, and there deposited them with profound reverence, and a truly contrite heart. As he came forth again into the open air, the lofty funeral march of a dead hero sounded with its grand and elevating pathos, and Taōnui now, in sympathy with its harmony, beheld the benign Phantom of Te Pomar slowly rise before him, its arms extended nobly towards him, and thus ascending into the night, till its shadow mingled with the air, through which the stars, one by one, came gently forth.

THE GOLDEN AGE.

THE father sits, and marks his child
Through the clover racing wild;
And then as if he sweetly dream'd,
He half remembers how it seem'd
When he, too, was a reckless rover
Amongst the bee-beloved clover:
Pure airs, from heavenly places, rise
Breathing the blindness from his eye.
Until, with rapture, grief, and awe,
He sees again as then he saw.

As then he saw, he sees again
The heavy-loaded harvest wain,
Hanging tokens of its pride
In the trees on either side;
Daisies, coming out at dawn,
In constellations, on the lawn;
The glory of the daffodil:
The three black windmills on the hill,
Whose magic arms fling wildly by,
With magic shadows on the rye:
In the leafy coppice, too,
More wealth than miser's dreams can show,
The blackbird's warm and woolly brood,
With golden beaks agape for food!
Gipsies, all the summer seen,
Native as poppies to the green;
Winter, with its frosts and thaws,
And opulence of hips and haws;
The mighty marvel of the snow;
The happy, happy ships that go,
Sailing up and sailing down,
Through the fields and by the town;—
All the thousand dear events
That fell when days were incidents.

And, then, his meek and loving mother—
Oh, what speechless feelings smother
In his heart at thought of her!
What sacred, piercing sorrow mounts,
From new or unremembered founts,
While to thought her ways recur.
He hears the songs she used to sing;
His tears in scalding torrents spring;

Oh, might he hope that 'twould be given,
 Either in this world, or in heaven,
 • To hear such songs as those again!

—But life is deep and words are vain.
 Mark yonder hedgerow, here and there
 Sprinkled with Spring, but mainly bare;
 The wither'd bank beneath, where blows,
 In yellow crowds, the fresh primrose;
 What skill of colour thus could smite
 The troubled heart strings thro' the sight;
 What magic of sweet speech express
 Their primeveral tenderness!
 Can these not utter'd be, and can
 The day-spring of immortal men!

BITS OF LIFE IN MUNICH.

THE following traits of life in Munich are traced by a young lady who is studying painting in that city, under a master, and in company with a female friend. This little preface is necessary for the reader, to understand, better than he would without it, several of the fair writer's allusions, and to acquaint him with the independent kind of life two young ladies can lead, with perfect propriety and security in "the capital of Art":—

PILGRIM BROTHERS.

This is August, and the nights are now and then so hot and close, that after our tea, spite of its being twilight, we sometimes feel bound to take a walk. The other evening, for example, we took ourselves, therefore, along one of the old streets of Munich—a street very long, and very ill-paved, and with the house-fronts handsome with old carving and stucco-work; a street where in the evening all the inhabitants gossip at their open windows and doors; a street much infested with bakers' shops; and where, through quaint, old window panes, you catch glimpses of queer, old witch-like women, or young girls like Faust's Margaret, sitting spinning; a street which, if one could write graphically, one would revel in describing. I always vastly enjoy going up this street, and wanted to see it, as well as to see the effect of the sunset behind the tall tower and building which surrounds the Bavaria when once you pass through the Sendlinger Gate and get out on the plain.

Just about the middle of this queer old street we met a crowd, heard a hum of voices, saw banners waving, crucifixes borne aloft. It was the return of a pilgrimage. Hot, weary, dusty, foot sore, on they came. First walked priests, with their dusty banners and crucifixes; white-robed children followed, carrying faded wreaths and garlands, their poor little heads drooping with fatigue. Now a band of men, a *Bruderschaft*, dressed in their pilgrim garb, large blue cloaks with heavy capes, on which conspicuously showed the pilgrim cockleshell; then a group of young girls, many carrying bulrushes in their hands instead of palm-branches, and relics from the holy spot they had pilgrim'd to; next

trooped on men, men, men, their shoes covered with white dust, their heads bare, their hands folded; old men, middle-aged men, lads; here and there a picturesque, fanatical-looking head, with lank locks and hollow cheeks, and sunken eyes; or brooding and morose-looking, with wild, bushy hair, and huge growth of beard; a strange assembly!—but nevertheless, the greater number were of the quiet, respectable, citizen class; and one felt how strange it was to see such jolly-looking, everyday sort of good shopkeepers joining in a pilgrimage; they seemed so opposed to everything like sentiment and enthusiasm. And all the men muttered prayers, every now and then their hoarse voices rising into a monotonous chant of the word, *Heilige! Heilige! Heilige!* And on they came, and on! like a stream of phantoms in a bewildering dream. They rushed past in the twilight, walking so fast with their dusty feet, and muttering their monotonous words, till one felt almost delirious. And now in the distance the young girls' voices, and the voices of the little children swelled into a solemn strain, and on came women, and women, and women, old and young, and middle-aged, and dusty, also, and praying and muttering also! All, with the exception of one lady in a bonnet, who walked in the middle of the procession—a singular, gaunt, fanatical-looking woman—nil, with this exception, appeared to be of the limble class—worn, hard-featured, suffering women. Yet on they streamed, till one felt breathless! It was a striking, and, some way, to me an unusually thrilling sight!

A GROUP OF BUILDINGS.

And now we were out on the quiet plain, which stretched away into an horizon of deep blue mountain-like clouds; a pale amber sunset-streak fading away by the most delicate of gradations into a lovely azure, athwart which stretched a fantastic mass of dark indigo clouds; the moon trembling above the sunset light, and here and there a dainty star twinkling in the amber and azure; whilst behind the dark mass of the Bavaria tower flashed ever and anon rose-tinted summer lightning, turning the mass of blue clouds into a range of lilac mountains, and the Bavaria building into an enchanted castle.

We were so charmed with our walk, that we determined, whenever we could, to make a point of going out to see these effects, and then trying to remember them, and put them down on our return home. The next evening we took our walk out through the Triumphal Arch at the end of the Ludwig Strasse. I must certainly have mentioned how inexpressibly beautiful the Ludwig Strasse looks in the evening, the uniformity of the Byzantine architecture broken, yet not destroyed by the pale and harmonious tints employed in the various masses of building; delicate reds, and stone colours, and greys, with here and there a mass of pure dazzling white, all

brought into the most delicious harmony by the glow of evening; the two white slender towers of the Ludwig church rising solemnly into the blue heavens, and surmounted each with a golden cross, which ever seems to catch the rays of the sun, and to gleam and sparkle when all else is sombre and dark. Then in the evening and twilight, how cool and refreshing, and soothing, is the splash of the two fountains which play in the open space before the University and the Jesuits' School! How I should love, were I a youth, to study in the University! That pure, solemn, calm, beautiful building, white as of the purest marble, with its long rows of round-arched windows; its long band of medallions also, a medallion between each centre window, and enclosing the head of a legislator, a philosopher, or a poet! And as the western sky is lit up by the setting sun, its light streams through painted windows, and the contrast between the cool building, seen in shadow, and these gemmed, glowing windows, is magical. There is a monastic calm about the building, which, to a studious and poetical nature, must be delicious. The Jesuits' School is of a pale, warm, stone colour, of the same style, but by no means so beautiful. But the whole effect of this square is very poetical and striking, as you can believe, and when the Triumphal Arch at the end of it is completed, will be something quite unique. The gateway is to be surmounted by a figure of Bavaria, drawn by lions, in a triumphal car; on the front and sides of the gate are very beautiful basso-relievos, and statues of white marble.

The road beyond the Triumphal Arch is lined by poplars, and the entrance by this road into Munich, most impressive. For about half a mile on one side the road, are scattered villas and *cafés*. The Queen has a lovely little villa there, simple and elegant, and built in the style of domestic architecture peculiar to Munich, and which strikes one as being singularly beautiful and appropriate. I wonder what Ruskin would say to it!

A CONCERT AND A PLAY.

But now for more personal matters; and first, for a concert. As the tickets were sent late, we had but very little time for preparation. We dressed in a desperate hurry, putting off with our working dresses, our character of art-students, and with our tickets in our hands, and our two keys—the latch-key and key of our rooms—set off across the Residenz Platz and the Odeon Platz. It was a rehearsal concert of the students of the Conservatorium, and the large hall was crowded to overflowing already.

At the first door we found such a crush of officers and students, all blocking up the entrance, that it was quite impossible to get in; but the glimpses we caught of a painted ceiling and crowds and crowds of people, seated in long rows and filling the galleries,

was quite exciting. We thought that perhaps in the gallery there might be room, so rushing first down steps and then up steps again; we came to what we supposed a gallery-door; but no, it was a door just opposite to the one we had tried to get in at, and close to the orchestra, and a capital place. Of course, we had to stand, and so had numbers of others; but it was very amusing as well as interesting.

The performers were all pupils, and many of them very young. There was one little violinist, not more than twelve certainly, who played splendidly, and with such beautiful earnestness and composure, and with such a world of feeling! The applause was immense, and you felt how proud his mother and his friends must be; but he was like a little unmoved statue, with his white face shaded by its dark brown hair. It was all a matter of course to him.

The friends and relations of the pupils were a marked feature of the scene; many of them quite poor people. And such numbers of little lads! we had a whole host of them just before us, and very much amused we were. One little lad leaned with all the air of a used-up man of fashion, against the balustrade of the orchestra, in the face of the whole company, and yawning with the greatest disdain of all present, whilst he crossed his little legs and played with his little gloved hands.

It might strike you as strange that we venture to concerts and theatres by ourselves; but nothing is easier or more comfortable. We walk quietly to the opera, in the pleasant sunshine. The Theatre looking so beautiful with its fresco-painted pediment, all the square alive with a gay crowd streaming also theatre-wards. We take our places quietly in the reserved seats; and having thoroughly enjoyed ourselves, at the cost of one shilling and eight pence, equally quietly and comfortably walk home again. There is no crushing of carriages and cabs, no shouting of watermen and hackney-coachmen. Two or three carriages may be there, their lamps shining out like huge glow-worms at the bottom of the flight of steps; but people who have carriages quietly get into them, and there is no stir and bustle; and those who have none wend their way home singly or in groups; and the moon lights up that beautiful little square, with its palace front, its theatre, its Pompeian-like post-office, its quaint side of old shops; or the stars look down out of a deep blue, calm sky, and all is silence and poetry.

The other night we went with some acquaintance to the theatre in the An—the people's theatre—but not the one that you and I went to, and where I behaved so ill by laughing at a tragedy instead of crying. No, this is quite a grand affair. It reminds one of a handsome steam-boat cabin; just about the same size, and gilt and decorated in the same taste—or rather want of taste. All, however, was very bright and fresh, and the acting very good. We laughed immensely.

It was a little piece called "The Ground Floor and the Second Floor; or, the Freaks of Fortune." You can imagine the sort of thing; and how there were two stages, as it were, so that you saw what was going on in two families at once. Of course, one family was a very grand, and the other a very poor one. It was very droll in parts, and full of un-English things, that particularly amused us. There were two little children that acted beautifully; one a little girl, about ten, who acted a boy. The way those children ran about the stage, and played, and slapped each other, and plagued their mother, was the prettiest thing I ever saw.

GETTING HOME.

It rained in torrents as we went and returned, and as it was fine when we set out we were not at all prepared for wet. I don't know what one is to do in this changeable climate. When we were on the Isar bridge the rain came down with such fury, and the wind blew so fiercely, that I thought the long procession of umbrellas, and people returning from the little theatre, would certainly be carried away into the river. Prince Adelbert, the present king's brother, was there, and he had to walk home also in the rain and mud. Of course there are two performances daily at this theatre, one at four o'clock, the other at eight.

Although, when the weather is fine, we enjoy our walk back from the theatre to our house, we do not so much relish our getting into our own rooms from the street door, the lock of which is very stiff. I am considerably developing the muscular strength of my hand by unlocking this door; and when we have achieved this first difficulty, our real disagreeable commences. A hot, close atmosphere meets you; all is perfectly black; there is no light; you feel as if entering an Inferno. It is a sort of sensation to return to in delirium. You grope your way to the wide staircase; you find the balustrade; you mount with careful steps; you feel as though the darkness and blackness weighed on your brain; you perhaps hear some other nightly wanderer tumbling up stairs; you do not know whether it may not be some drunken man; but he can't see you, so you keep yourself quietly in a dark corner till he passes; you can often see who is coming by the glimmering of a burning cigar; but you have nothing to betray you. Well, at length having reached your door, that is say the door of the long, dark passage which shuts in your rooms, you unlock it, and then, in a certain place, you find the third key of your own especial sitting-room door, and which has been hidden by you. And now, thank Goodness, you are in your own dear little home! The light from the street lamp shines in through the four white-curtained windows. On the table stands the candlestick; you strike a light, in the German fashion, by rubbing the match along the floor

or the wall—there's nothing else for it—and your perils are past! Yes, this coming up that dark staircase is not attractive, but we are become quite accustomed to it now. I can now find my way perfectly well. I asked why they had no lamp, but ran the risk every night of breaking a bone;—they said it cost so much. Neither are there any bells in the house, another terrible bore. How Germans can exist, year after year, age after age, without the commonest conveniences of life, is a mystery and a puzzle to me.

A GRAND ASSEMBLY.

Very different to this evening was my visit to the Baroness von —'s. On our return from dinner at the *Meyorischen Garten* yesterday, I was informed that the lady of the — Ambassador had called and enquired for me. I was not in a visiting humour, and the idea of going to those grand people quite alone daunted me. I have courage for most things, I am sure I could travel to China, very easily to America, by myself; but going alone to a ball, or even a little party, among strangers, is my idea of desolation; and this evening I believed there was a grand party at the Ambassador's. I was in despair; it was a wet day and I felt ill, and even if I *did* screw up my courage to a pitch of heroism, how was I to get there? how in all this rain? Where was my carriage!—where even a cab? A cab! yes, that reminded me that I might go and return in a *fiacre*.

When, therefore, on returning home, I found that I could improvise a toilet, and felt, after a cup of tea, really better, and found that, with a deal of trouble and bargaining, a driver of a *fiacre* would *condescend*, for such really was the case, to take me at the late hour of eight o'clock—they leave their stand at seven and go home for the night!—and then bring me back again at ten, and all for the enormous sum of two gulden, and he would not take a kreuzer less. Well, when all this was arranged, I dressed and set out, having of course been inspected by the whole family of the house from doors and windows—father, mother, daughter, little children, Wilhelm, and two apprentices with white rolled-up shirt sleeves. What amusement the idle people could find in seeing one of the English *frankins* walk down stairs in a simple white dress and without her bonnet, and get into a lumbering old coach, I cannot conceive.

After a short wet drive across the *Residenz* and *Odeon Platz* and past the red *Wettbacher Palais*, the palace where now lives the old King Ludwig, and which strange, red, Gothic pile is guarded by two enormous stone lions seated on each side of the gateway, into the *Belgravia* of Munich; we stopped at the house of the Baron von —, a beautiful house. A tall, melancholy-looking footman ushered me in and to my delight I found there was no party. My spirits rose, I like *Madame von* —, and

I knew it would be a charming evening. Having been received by another tall, melancholy servant at the top of the stairs, and conducted through a number of anti-rooms and pretty boudoirs, I found the lady of the house, and a tall aristocratic looking-man, with a very good-tempered German face, a very interesting, elegant young lady, and a lively, pretty little girl, sitting in a comfortable little drawing-room, comfortable though splendid. The walls were hung with pictures and rich velvet draperies; the sofas and chairs were covered with crimson velvet; there was gold everywhere; mirrors and tall vases of Bohemian glass and rich china. All was very costly, but the prints, and books, and pictures, and the pleasant lamp-light, and the kind, beaming faces of the group at the table, made me feel instantly at home and happy. The lovely young lady with the calm brow, like one of Eastlake's women, and those delicate taper fingers loaded with rings, was a relation of the Baroness, and the gentleman was her brother. They had travelled in England and Scotland, and were well read in English literature, of which they were very fond. We had a deal of pleasant talk, not only about old England, but about beautiful and interesting parts of Germany, with which, fortunately, I was acquainted; about books, and pictures, and Kaulbach, whose genius we all agreed in ranking so high.

Then came in tea on a rich silver tray, all so elegant and attractive, and the little cakes were so delicate, and the tea quite strong and fragrant, like English tea. And after our rude, though most poetical life, the calmness and propriety, and elegance, of this aristocratic existence had an unusual charm for me. I loved to look at the glossy hair of the aristocratic little girl, at her round arms—at the delicate hands of the young lady so imprisoned in her rings; they were to my fancy a sort of fairy creatures, who must ever live among gold and rich satin and perfume, and the idea of her ever walking in dust or mud, or in wet or darkness, was like the idea of an angel's wing being splashed with the mud of a London cab-wheel! No, there was an unusual *piquancy* in coming from our free, unconventional life, suddenly into a court-circle.

A CHURCH FESTIVAL.

One day lately, the streets were so gay with people, and the sun shone down into my very heart. I longed to be among trees and fields. I told my companion so; but she was thoroughly tired by her week's work, and preferred remaining at home. But, I thought, Why waste the beautiful day in sleep? And was there not a *Kirchweih* in the Au?—the church-festival of that beautiful church there. And thither I would go. I would not mind going there alone, but would leave my poor tired companion to sleep off her fatigue.

Through the gay streets I accordingly went, crowds of holiday people moving towards the

Isar Gate, and over the bridge, and past the Folk's Theatre.

The Au suburb was all alive with dance, music sounding from the public-houses and gardens; the little balconies were unusually gay with flowers; all the Madonnas had clean cambric pocket-handkerchiefs put into their hands: how comic they looked holding their handkerchiefs like fine ladies at a ball! And by-the-by, in this suburb there are not a few *black virgins*, who are here regarded as peculiarly sacred. Numbers of little stalls were set out covered with *Kirchweih Nudle*, a very good sort of cold pudding. The open space in which the lovely Au church stands, was very gay, and under the acacia-trees, which form an avenue along one side of the square, hundreds of people were congregated.

Two streams of people were ascending and descending the church steps; so great, indeed, was the crowd, that I think I must have stood twenty minutes before I could gain admittance; they were principally peasants. When I did enter the church, it was along with peasant women, in their Tartar fur caps, and with rosary and prayer-book in hand, and with men in red or broad-striped waistcoats, and with long-skirted blue coats. And then how impressive was the sight! The air was heavy with incense; the graceful, slender, white columns rose up like the clustered stems of a palm-grove! The sun shone and glowed through the glorious painted windows. They represent the Virgin, Christ, and the Apostles, moving among groves, or quiet, solemn temples and halls, or relieving themselves against brilliant or pearly skies. In one compartment the Virgin, a child of twelve or thirteen, is taken by her parents to the High Priest. She kneels before him, and Joseph places the ring upon her finger. In another she sits with the infant Christ on her lap on the ass, on the journey towards Egypt. And in another division she is seen ascending to heaven. I knew that these windows were very beautiful, but it was only to-day that their full beauty burst upon me. The exquisite groups stained upon them, with their correct drawing, and rich draperies, are enclosed, as it were, in jewelled shrines; the upper portions of the window being filled with the most exquisite Gothic work of every brilliant colour, like the richest missal pages.

But if the windows excited my first attention, the people attracted my attention in the second place. All the seats were filled with devout peasants, and numbers stood. As the church, however, was large, there was no unpleasant crush. All was silent as death, except, when, from the far end of the church, came the voices of children chaunting, or you caught the murmured words of the priest, as he raised the Host before the High Altar; and then the crowd responded with one deep, sonorous voice, which could alone be compared to the hoarse, monotonous, wild sound of billows, solemnly rolling inward to the shore,

—not when there is a rough sea, but when all is solemn and calm.

After a time, I left the church; and not being inclined to return home, and finding that all the music from the public-houses, and all the eating, and the dancing, were very inharmonious to my then state of mind, I wandered on towards the plain, and feasted my eyes on a view of the Alps, which to-day seemed fairly to have stalked towards Munich, so near did they seem,—of a tender, quiet, blue-grey, but their forms gigantic, stern, Alpine!

A "CELESTIAL" COFFEE-HOUSE.

Another evening, after a day of real hard work, when we were in a particularly cheerful mood, I suggested to my companion that, as all was so sunny and delicious, we would drink our coffee in a picturesque old orchard, which I had discovered in one of my exploratory expeditions through the suburb of St. Anna. It is a pretty walk this, through the suburb to the coffee-house orchard, which joins the English garden. You cross first the corner of a very large field, acres and acres of which are covered with huge heaps of timber—enormous pines, which have been floated down from the Alps. The tall trees of the English garden form a back-ground to the field; and then passing orchards, and cottages, and country houses, you arrive at the coffee-house, a bright white house, with a deal of pale sea-green paint about it, standing high, approached by a flight of steps, and having a kind of a Russian look. The orchard in which it stands, is a grand old orchard, full of old apple-trees, under which are some hundreds of seats. On the former occasions when I passed it, there must have been many hundred people drinking coffee there. On this evening, however, all was deserted,—so much so, in fact, that there was no coffee to be had. After resting, therefore, a few minutes under an apple-tree, we proceeded on our way, when, turning into the English Garden, behold! another coffee-house, a very small one peeping out from under the trees. "Coffee and Wine-house of the Kingdom of Heaven" (*Zum Hifamel-nich*) was painted on an arched sign over the gate. So extraordinary an appellation could not be disregarded, however contrary to our English notions.

"Let us try how coffee tastes in the Kingdom of Heaven," said I; and in we went.

The Kingdom of Heaven, however, was also apparently deserted, except by a pair of lovers,—a young girl in a white dress, and a student in a scarlet cap and black velvet coat, and by a picturesque group of old peasants, men and women, who sat on a bench before the door, and drank beer; the student also drank beer,—the girl took nothing; she sat with her back turned towards him, and evidently looked very unhappy. I think they had just had a quarrel; what a shame to quarrel in the Kingdom of Heaven! I went into the house, and ordered coffee from a woman whom I met

with a huge coffee mill in her hand. She said it should be ready in a minute, capital fresh coffee! So we seated ourselves at the end of a long verandah, which was covered with vines, at the end opposite to where the lovers were, and noticed all around us, to occupy the time till the coffee appeared. Coffee at length made its appearance,—vile coffee and peppery bread; and leaving the lovers still unreconciled, we bade adieu to the "Kingdom of Heaven," and betook ourselves home in the delicious twilight.

A GREAT DAY FOR THE DOCTORS.

THE first of October is a great day for the doctors. The sportsman may look out for the same time, because then pleasant shooting begins; the farmer, because it suggests certain arrangements between malt and hops preliminary to Christmas and the comforts of long winter nights; the lawyer may take October the first as a hint of the gradual death of the long vacation, and the near advent of Term time and November the second—its writs and summonses, judgments and executions; the draper may regard it shrewdly, as affording a good time for a "frightful sacrifice," and an "extensive sale of autumn goods, preparatory to the commencement of the winter season." Each and all of these, and many more may have an interest in the first of October; but their claims are as nothing to that of the doctors. To the medical folks of these three kingdoms—but to those of London more pre-eminently—does the day especially belong. To them, it is the opening of a new year—the commencement of a new activity. On that day the great majority of them commenced their career as students: from that they date the years of preliminary reading, and lecturing, and hospital "walking," to be gone through before the terrible day of examination. Scattered over the globe they may be—and they are so scattered, much more than the men of other professions, the Navy alone excepted—yet the first of October always remains a sort of red-letter day in the mind of the Medicos.

It is a time suggestive of old thoughts and companions, old pranks, and old stories. Such feelings bring most of those who are within reach to the old scenes on the first of October; and hence, on that day, there is at the London medical schools an assemblage of doctors in all stages of growth—from the raw country student in green coat and highlows, to the staid hospital professor in black scholastic gown, through all the intermediate niceties of fast students and slow students, reading students with specs and note-books, and smoking-students with cigar-cases and imperials; the matter-of-fact workkeys of the Borough, and the gentlemanly idlers of St. George's; the country doctor up for the day by rail; the suburban practitioner, who with

many misgivings has left his surgery at Islington or Hackney, in charge of the new apprentice; the West End ditto who drives up to the lecture-room in his trim gig, secure in the certainty that nobody will want him, because "nobody's in town yet;" and the easy dignified possessor of the prizes of medical life, a handsome equipage, and four or five thousands a year, the proceeds of aristocratic practice. All these varieties of the medical genus are drawn together by the subtle influence of this medical day. Not all into one party or one building, because the medical schools of the Metropolis are about a dozen in number; and each school has its set. But still they do congregate, as those who are curious about the matter may prove on any first of October, on any year hereafter.

The introductory lectures are the great signal for assembling; and of these there were delivered on the first of October just past, no less than a dozen. The discourses vary in character, of course; partly under the influence of the locality where delivered; partly in obedience to the calibre of the lecturer; and partly by the circumstances of the institution in which they are given in. Each large London hospital has its medical school; but the hospitals are very differently circumstanced in other respects. Two of them, Guy's and Bartholomew's, are enormously rich, having revenues told in tens of thousands a year arising from landed and other property, and they are therefore entirely independent of public subscriptions. Not many years ago, Guy's Hospital, very wealthy before, received, in one legacy left by a Mr. Hunt, two hundred thousand pounds! Bartholomew's enjoys the rents of houses in important City streets yearly rising in value. St. Thomas's Hospital has likewise extensive property; Middlesex Hospital enjoys endowments, particularly one of considerable extent, for the support of a ward for the reception and maintenance of unfortunate people afflicted with cancer. University College has recently been blessed by many handsome legacies; and St. George's, and Westminster, and the London, have incomes arising from independent property. The rents of the last three, however, are not to be compared with those of the huge institutions of the Borough and Smithfield; and they are compelled, therefore, to rely partly upon the means of support which their still less fortunate competitors at Charing Cross, the Gray's Inn Road, and King's College, have almost wholly to rely upon—the voluntary subscriptions of the charitable section of the public. The first of October in some respects varies in its aspects at these different places. At Bartholomew's, for instance, the audience numbers five or six hundred, or even more; because, after the lecture, the noble hall of that establishment is thrown open for a *séjour*, in which brilliant lights, abundant refreshments, servants, and a full assembly of medical dons, add many of the attractions of an evening party to those

of a friendly scientific conclave, whilst poorer institutions can only offer the less sensual attractions of a discourse on science, and a friendly greeting.

The mental calibre of the various lecturers differs amazingly. Some of them have no higher notion for an "introductory" than a history of medicine, dug up bodily from an ancient edition of "Rees's Cyclopædia." When a teacher of this sort begins his harangue, the older hands among his audience look suspicious and uneasy. They know what is coming—the old threadbare story they have often slept over before about "Hippocrates, the father of Medicine,"—"the errors of the early writers,"—"the immortal labours of Vesalius,"—with a grand climax about the equally immortal John Hunter, and the blessing the students experience in being allowed to follow in the footsteps of that physiological genius. Another almost equally set form for an opening discourse, is when the lecturer thinks it "best to open the dawning session with a rapid glance over what has been done for science since we last met,"—appending a variety of incidental remarks upon men and hospitals at home and abroad; said remarks being invariably laudatory both of doctors in general and of medical institutions in particular. This style is deservedly more popular than the chapter from the Cyclopædia. A third species of discourse takes the sermonising form, and lectures "the young gentlemen we see assembled around us" upon the conduct most proper to be pursued during their career as students—prescribes a close attention to books and lectures, and undeviating attention "at the bedside" in the hospital.

The class of lecturers who adopt this mode are always favourably received if the good advice is supported by the career of the man who gives it, and if he speaks with sincerity and cleverness; but is pooh-poohed, very sincerely, if the speaker is a dummy, or his practice is known not to be in accordance with his precept. The most popular medical speechification of all, however, is that—not very often to be heard—of the eminently successful man who comes from the intensely busy life of full practice, fairly and honourably won, to speak of the opening career of the students whom the first of October calls together. Allowing the occasion to carry his thoughts back to the day when he himself was a young seeker for medical knowledge, such a teacher, feeling young again, lets his feelings out; and, in the confession of his own old thoughts, struggles and final successes, foreshadows what may be the life of any one of the hundreds who listen. The first sanguine anticipations; the growing difficulties; the disappointments; the crushing influence of the day when he is first driven to believe that *finesse* and quackery are constantly reaping the rewards that his sense of right suggests should be the prize of worth, honesty, and science. The struggle with igno-

rance—often with poverty and hope deferred—and then the final gradual triumph of patient desert, and its reward, in distinction, wealth, and the daily opportunities of lessening human pain and saving valuable lives. This happy climax charms all hearers. Each young listener makes the case his own, and, as his high-lows trample down the staircase when the lecture is over, he is thinking of the day when he is to step out of the hall of a sick duchess into a yellow chariot, to be driven round to a host of equally distinguished patients.

At times, but not so often as they might be, these opening medical addresses are enlivened by anecdotic morsels of human experience. One London lecturer who so enlivened his instructions, used to gain the hearts of his young hearers wholesale, especially when he encouraged them by telling how he, now the great hospital light, made blunders to begin with. One day he was describing his first attendance on a grand operation, at which a senior surgeon seeing him stand by, said, "Mr. — see if you can feel the artery." "I put my digit into the wound," confessed the future great operator, "and so probed it, but the examination gave me about as much information as if I had put my finger into the Atlantic to discover America."

But this great day for the doctors in all places at the present time presents a great contrast to things as they were, even in the memory of those who are now active and busy at such meetings; and as the change illustrates the age we live in, it may well be noticed.

Every living being—every man, woman, and child—endures a certain ascertained amount of sickness during life, for the alleviation of which, medical knowledge and skill is required. But medical efficiency in the treatment of disease cannot be gained unless the young doctor bases all his subsequent studies upon a thorough knowledge of the structure of the human body. This information can only be had by the use of the scalpel upon the dead. The very notion is apt to send a thrill through every nerve of those unaccustomed to regard the subject in a philosophical light. But the terms are absolute: no dissection—no knowledge. For generations, such means of information were forbidden to the student; and being denied by law, and abhorrent to popular feeling, the unlucky doctors had to run all sorts of risks, and to resort to all kinds of improper and disagreeable expedients to procure the means of teaching the art of the anatomist. Hence sprung up a race of "resurrection men," as they were called,—men who stole the bodies of the dead, to sell them to anatomical schools for dissection. Their robberies of the grave were carried on at great risks. The public detestation of the crime was so great, that when a clumsy or unlucky follower of it was detected, he had to fight for his life, or sub-

mit to be kicked and beaten, and trampled to death.

But the first of October is no longer preceded by the forays of the "resurrectionist;" no longer clouded by the lack of means for pursuing the branch of study on which the superstructure of medical knowledge must be raised. A population of two millions has ever some members dropping from the ranks solitary and unknown—the waifs and strays of society—without friends to know or to mourn their fate. Almost always paupers, often criminals, though their lives may have been useless, or worse, they seem to make, when the fitful struggle is over, some atonement after death. The wreck of their former selves is offered at the shrine of science for a while, and when thereafter they are gathered to the kindred dust of the graveyard, they may sleep none the less calmly for having contributed no mean help to the advancement of that branch of human knowledge which has its annual ovation on the first of October—the great day for the doctors.

THE GHOST THAT APPEARED TO MRS. WHARTON.

WHEN my mother was a girl, some rumours began to steal through the town where she lived, about something having gone amiss with old Mrs. Wharton: for, if Mrs. Wharton was not known by all the townspeople, she was known and respected by so many, that it was really no trifle when she was seen to have the contracted brow, and the pinched look about the nose that people have when they are in alarm, or living a life of deep anxiety. Nobody could make out what was the matter. It asked, she said she was well. Her sons were understood to be perfectly respectable, and sufficiently prosperous; and there could be no doubt about the health, and the dutifulness, and the cheerfulness, of the unmarried daughter who lived with her. The old lady lived in a house which was her own property; and her income, though not large, was enough for comfort. What could it be that made her suddenly so silent and grave? Her daughter was just the same as ever, except that she was anxious about the change in her mother. It was observed by one or two that the clergyman had nothing to say, when the subject was spoken of in his hearing. He rolled and nodded his head, and he glanced at the ceiling, and then stuck his chin deep into his shirt-frill: but those were things that he was always doing, and they might mean nothing. When inquired of about his opinion of Mrs. Wharton's looks and spirits, he shifted his weight from one foot to the other, as he stood before the fire with his hands behind him, and said, with the sweet voice and winning manner that charmed young and old, that, as far as he knew, Mrs. Wharton's external affairs were all right; and, as for peace of mind, he knew of no one who more deserved

it. If the course of her life, and the temper of her mind did not entitle her to peace within, he did not know who could hope for it. Somebody whispered that it would be dreadful if a shocking mortal disease should be seizing upon her: whereupon he, Mr. Gurney, observed that he thought he should have known if any such thing was to be apprehended. As far as a fit of indigestion went, he believed she suffered occasionally; but she did not herself admit even that. Dr. Robinson, who was present, said that Mrs. Wharton's friends might be quite easy about her health. She was not troubled with indigestion, nor with any other complaint. People could only go on to ask one another what could be the matter. One or two agreed that Mr. Gurney had made very skilful answers, in which he was much assisted by his curious customary gestures; but that he had never said that he did not know of any trouble being on Mrs. Wharton's mind.

Soon after this, a like mysterious change appeared to come over the daughter; but no disasters could be discovered to have happened. No disease, no money losses, no family anxieties were heard of; and, by degrees, both the ladies recovered nearly their former cheerfulness and ease of manner,—nearly, but not altogether. They appeared somewhat subdued, in countenance and bearing; and they kept a solemn silence when some subjects were talked of, which often turn up by the Christmas fireside. It was years before the matter was explained. My mother was married by that time, and removed from her smoky native town, to a much brighter city in the south. She used to tell us, as we grew up, the story of Mrs. Wharton, and what she endured; and we could, if we had not been ashamed, have gone on to say, as if we had still been little children, "tell us again." When we were going into the north to visit our grandparents, it was all very well to tell us of coal-waggons that we should see running without horses, or iron rails laid down in the roads; and of the keelmen rowing their keel-boats in the river, and all at once kicking up their right legs behind them, when they gave the long pull; and of the glass-houses in the town, with fire coming out of the top of the high chimneys; and of the ever-burning mounds near the mouths of the coal-pits, where blue and yellow flames leaped about, all night, through the whole year round. It was all very well to think of seeing these things; but we thought much more of walking past old Mrs. Wharton house, and perhaps inducing Mr. Gurney to tell us, in his way, the story we had so often heard my mother tell in hers.

The story was this.

One Midsummer morning Mrs. Wharton was so absent at breakfast, that her daughter found all attempts at conversation to be in vain. So she quietly filled the coffee-pot,

which her mother had forgotten to do, and in the middle of the forenoon ordered dinner, which she found her mother had also forgotten. They had just such a breakfasting three times more during the next fortnight. Then, on Miss Wharton crossing the hall, she met her mother in bonnet and shawl, about to go out, so early as half-past nine. The circumstance would not have been remarked, but for the mother's confused and abashed way of accounting for going out. She should not be gone long. She had only a little call to make, and so on. The call was on Mr. Gurney. He had hardly done breakfast, when he was told that Mrs. Wharton wished to speak with him alone.

When he entered the study, Mrs. Wharton seemed to be as unready with her words as himself; and when he shook hands with her, he observed that her hand was cold. She said she was well, however. Then came a pause during which the good pastor was shifting from one foot to the other, on the hearth-rug, with his hands behind him, though there was nothing in the grate but shavings. Mrs. Wharton, meantime, was putting her veil up and down, and her gloves on and off. At last, with a constrained and painful smile, she said that she was really ashamed to say what she came to say, but she must say it; and she believed and hoped that Mr. Gurney had known her long enough to be aware that she was not subject to foolish fancies and absurd fears.

"No one further from it," he dropped, and now he fixed his eyes on her face. Her eyes fell under his, when she went on.

"For some time past, I have suffered from a most frightful visitation in the night."

"Visitation! What sort of visitation?"

She turned visibly cold while she answered "It was last Wednesday fortnight that I awoke in the middle of the night—that is between two and three in the morning, when it was getting quite light, and I saw—"

She choked a little, and stopped.

"Well!" said Mr. Gurney, "What did you see?"

"I saw at the bottom of the bed, a most hideous—a most detestable face—gibbering, and making mouths at me."

"A face!"

"Yes; I could see only the face (except, indeed, a hand upon the bedpost), because it peeped round the bedpost from behind the curtain. The curtains are drawn down to the foot of the bed."

She stole a look at Mr. Gurney. He was rolling his head; and there was a working about his mouth before he asked—

"What time did you sup that night?"

"Now," she replied, "you are not going to say, I hope, that it was nightmare. Most people would; but I hoped that you knew me better than to suppose that I eat such suppers as would occasion nightmare, or that I should not know nightmare from reality."

"But, my dear Mrs. Wharton, what else can I say?"

"Perhaps you had better listen further, before you say anything."

He nodded and smiled, as much as to say that was true.

"I have seen the same appearance on three occasions since."

"Indeed!"

"Yes, on three several nights, about the same hour. And, since the first appearance, my supper has been merely a little bread and butter, with a glass of water. I chose to exclude nightmare, as I would exclude anything whatever that could possibly cause an appearance so horrible."

"What sort of face is it?"

"Short and broad;—silly, and yet sly; and the features gibber and work,—Oh! fearfully!"

"Do you hear it come and go?"

"No. When I wake—(and I never used to wake in the night)—it is there; and it disappears—to say the truth—while my eyes are covered; for I cannot meet its eyes. I hear nothing. When I venture a glance, sometimes it is still there; sometimes it is gone."

"Have you missed any property?"

"No; nor found any trace whatever. We have lost nothing; and there is really not a door or window that seems ever to have been touched: not an opening where any one could get in or out."

"And if there were, what could be the object?—What does your daughter say to it?"

"Oh!" said Mrs. Wharton, rising quickly. "she does not, and indeed she must not know a word of it. I ought to have said, at first, that what I am telling you is entirely in confidence. If I told my daughter, it must then go no further. We could not keep our servants a week, if it got out. And if I should want to let my house, I could not find a tenant. The value of the property would go down to nothing; and, in justice to my daughter, I must consider that; for it is to be hers hereafter. And we could never have a guest to stay with us. No one would sleep in the house a single night. Indeed, you must not"

"Well, well: I will not mention it. But I don't see"

He paused; and Mrs. Wharton replied to his thought.

"It is difficult to form conjectures,—to say anything, in such a case, which does not appear too foolish to be uttered. But one must have some thoughts; and perhaps—if one can talk of possibilities—it is possible that this appearance may be meant for me alone; and therefore, if I can conceal it from my daughter till I am convinced whether it is meant for me alone"

"I would soon try that," observed Mr. Gurney. Seeing Mrs. Wharton look wistfully at him, he continued,

"My advice is that you have your daughter

sleep with you, after hearing your story. Try whether she can see this face."

"You do not think she would?"

"I think she would not.—My dear friend, if I were a medical man, I could tell you facts which you are little aware of,—anecdotes of the strange tricks that our nerves play with us;—of delusions so like reality"

"Do you think I have not considered that?" exclaimed the poor lady. "Mr. Gurney, I did not think that you would try to persuade me out of my senses, when I tell you, that four times I have seen in daylight, and when wide awake, and in perfect health, what I have said."

Mr. Gurney was very gentle; but, as he said, what *could* he suggest but indigestion, or some such cause of nervous disturbance? Yet his heart smote him when his old friend laid her forehead against the mantel-piece, and cried heartily.

He did all he could. He tried indefatigably, though in vain, to persuade her to let her daughter share the spectacle; and he went, the same day, when Miss Wharton was out for her walk, and the servants were at dinner, to examine the house. He made no discovery. The gratings of the under-ground cellars were perfect. The attics had no trap-doors; and the house had no parapet. The chimneys were too high and narrow for any one to get in at the top. No window or door was ever found unfastened in the morning. Mrs. Wharton did not think she could engage for courage enough to get out of bed, or to look beyond the curtains. Nor could she promise not to draw her curtains. The face had never appeared within them; and they seemed a sort of protection where there was no other.

Without having made any promises, she went so far as to start up in bed, the next time she saw the face. The eyes winked horribly at her; the head nodded—and was gone. The beating of her heart prevented her hearing anything that time; but once or twice during the autumn she fancied she heard a light and swift footstep in the passage. She always left her room-door open, for the sake of the same sort of feeling of security that most people crave when they shut and bolt theirs. If this was a ghost, bolts would not keep it out; and she could fly the more easily through the open door if her terror should become too great to be endured alone. For the first time, she now burned a night-light in her chamber, as the nights lengthened, and not a dim, flickering rush candle, but a steady wax-light. She knew that her daughter wondered at the strange extravagance; but she could not bear darkness, or a very feeble light, when the thing might be behind the curtain.

Throughout October the visits were almost nightly. In the first week in November they suddenly ceased; and so many weeks passed away without a return, that Mrs. Wharton

began to be a little alarmed about her own wits, and to ask herself whether, after all, it was not possible that this was a trick of the nerves. One night in January, that doubt, at least, was settled; for there, at the same bedpost, was the same face. Mrs. Wharton was now, after this interval, subdued at once. She had borne, for half-a-year, her pastor's suspicions of her digestion and of her wisdom, and now, she really wanted sympathy. She let him tell her daughter (let him, rather than tell it herself, because he could make light of it, and she could not); and she gladly agreed to let her daughter sleep with her. For long, she gained nothing by it. During the whole fortnight that the visits now continued, Miss Wharton never once saw the face. She tried to wake the moment her mother touched her; she tried to keep awake; but she never saw the face: and after that fortnight, it did not come again till April.

One bright May dawn, she saw it. Her mother pulled her wrist, and she waked up to a sight which burned itself in upon her brain. She suppressed a shriek at the moment; but she could not tell Mr. Gurney of it afterwards, without tears. She wanted that day to leave the house immediately; but the thought of her mother's long-suffering with this horror, the consideration of the serious consequences of declaring themselves ghost-seers in the town, and of the disastrous effect upon their property, and of the harmlessness of the ghost, induced her to summon up her courage, and bear on. She did more. When a little inured, she one night sprang out of bed, rushed round the foot of it, and out upon the landing. The stairs were still dim in the dawn; but she was confident that she saw something moving there—passing down to the hall. As soon as she could make the servants attend her, she told them she believed somebody was in the house; and all the four women—two ladies and two maids—went, armed with pokers and shovels, and examined the whole house. They found nothing, neither in the chimneys, nor under the beds, nor in any closet—nothing, from cellar to attic. And when the maids had recovered a little, they agreed what a tiresome and wearying thing it was when ladies took fancies. This was only their first night of disturbance. Miss Wharton called them up three times more; and then she gave the matter up. The servants thought her strangely altered, and wished she might not be going to be ill.

Thus matters went on for some years. The oddest thing was the periodicity of the visits. In winter they were rare; but there was generally a short series in or about January, after which they ceased till the end of March, or the beginning of April. They went on through nearly the whole summer, with one or two intervals of about a fortnight. The servants never suspected even the existence of the mystery. Their ladies never mentioned

it; and no article was ever displaced at night. The ladies became in time so accustomed to the appearance as to bear it almost without uneasiness. It occurred to them sometimes, how odd it was to be living under the weight of such a mystery; and they were silent when ghosts were talked about, and felt and looked very serious when they were laughed at; but their alarm had subsided. The Thing never did them any harm; and they had now got merely to open drowsy eyes, to see if it was there; and to drop asleep the moment it was there no longer. This may seem strange to those who have not (and also to those who have,) seen ghosts; but we none of us know what we may come to; and these two ladies reached the point of turning their heads on their pillows, without much beating of the heart, under the gibbering of a hideous ghost.

One circumstance worth noting is, that the Thing once spoke. After one of its mocking nods, it said, "I come to see you whenever I please." When Mr. Gurney was told this, he asked whether the language was English, and what sort of English it was. It must have been English, as the ladies did not observe anything remarkable. As to the dialect, it had made no particular impression upon them, but when they came to remember and consider, they thought it must have been the broad dialect of the district, which they were accustomed to hear in the kitchen, and in the streets and shops, every day. This was all. Amidst the multitude of nightly visitations, no explanation—no new evidence—occurred for several years. Mr. Gurney was not fond of being puzzled. His plan was to dismiss from his mind what puzzled him. He seldom inquired after the ghost; and when he did, he always received the same answer.

One morning, after this lapse of years, Mr. Gurney called to ask the ladies if they would like to join a party to see a glasshouse. The residents of manufacturing towns cannot intrude in such places at their own pleasure, but (as is well known) take their opportunity when an arrival of strangers, or other such occasion, opens the doors of any manufactory. Mr. Gurney was the first man in the town, in regard to doing the honours of it. All strangers were introduced to him; and the doors of all show-places flew open before him. He was wont to invite his friends in turn to accompany him and his party of strangers to these show-places; and he now invited the Whartons to the glasshouse. Miss Wharton was unavoidably engaged at the school, but her mother went.

When the whole party were standing near one of the furnaces, observing the coarsest kind of glass blowing—that of green-glass bottles—Mrs. Wharton suddenly seized Mr. Gurney's arm with one hand, while with the other she pointed, past the glare, to a figure on the other side of the furnace.

"That's the face!" she exclaimed, in great agitation; "Keep quiet, and pull down your

veil," said Mr. Gurney in her ear. She drew back into the shadow, and let down her veil, feeling scarcely able to stand. Mr. Gurney did not offer her an arm; he had something else to do.

"Who is that man?" he inquired of the foreman, who was showman at the moment. The man inquired about looked scarcely human. He was stunted in figure, large in face, and hideous,—making all allowance for the puffing out of his cheeks, as he blew vigorously at the end of the long pipe he was twirling in his baboon-like hands.

"That poor fellow, sir? His name is Middleton. He is a half-wit,—indeed, very nearly a complete idiot. He is just able to do what you see—blow the coarsest sort of glass."

Mr. Gurney wished to speak with him; and the poor creature was summoned. He came, grinning; and he grinned yet more when he was requested to show the glass-house to the gentleman. Mrs. Wharton, with her veil down, hung on her friend's arm; and they followed the idiot, who was remarkably light-footed (for a wonder), to the place he was most fond of. He took them down to the annealing chamber; and then he observed that it was "a nice warm place o' nights." Being asked how he knew that, he began pointing with his finger at Mrs. Wharton, and peeping under her bonnet. Being advised to look him in the face, she raised her veil; and he sniggered and giggled, and said he had seen her many a time when she was asleep, and many a time when she was awake; and another lady too, who was not there. He hid himself down here when the other men went away—it was so warm! and then he could go when he pleased, and see "her there," and the other, when they were asleep. Mr. Gurney enticed him to whisper how he managed it; and then, with an air of silly cunning, he showed a little square trap-door in the wall, close by the floor, through which he said he passed. It seemed too small for the purpose; but he crept in and out again. On the other side, he declared, was Mrs. Wharton's cellar. It was so. Far distant as the glasshouse seemed from her house, it ran back so far, the cellar running back also, that they met. No time was lost in sending round to the cellar; and, by a conversation held through the trap-door, it was ascertained that when Mrs. Wharton's stock of coals was low, that is, in summer, and before a fresh supply came in in mid-winter, Middleton could get in, and did get in, almost every night. When he did not appear, it was only because the coals covered the trap-door.

Who shall say with what satisfaction the ladies watched the nailing up of the trap-door, and with what a sense of blissful comfort they retired to rest henceforth? Who shall estimate the complacency of the good clergyman at this complete solution of the greatest mystery he had ever encountered?

Who will not honour the courage and fortitude of the ladies, and rejoice that their dwelling escaped the evil reputation of being a Haunted House? Lastly, who will not say that most of the goblin tales extant may, if inquired into, be as easily accounted for as that appertaining to the good Mrs. Wharton; which has this advantage over all other ghost stories:—it is perfectly and literally true.

CHIPS.

A VOICE FROM A "QUIET" STREET.

SIR,—Your article in a recent number, on the subject of street music, was very good as far as it went. But I have this fault to find with it, that it leaves untouched a series of nuisances which are much more awful and heart-rending than those which it attempts to describe. Somebody must start up to be the Cobden of these abuses. Somebody must arise to put them down, or perish in the attempt. I venture to offer myself on the shrine of my suffering country.

Three days ago, Sir, I returned to town with my friend and collaborateur, Jones. We are writing a three act drama of intense and appalling interest; and have, for certain reasons, been spending a fortnight in Paris. On our return to London we agreed to pick out some quiet lodging where, undisturbed by the roaring of cabs and omnibuses, we might continue our work without molestation. For this purpose, we fixed upon one of the streets running from the Strand to the river, which by their quiet air and secluded appearance, invite the attention of the passer-by, and seem to promise an eternal repose. It may not be generally known that in some of these streets—I allude, of course, to Craven Street, Norfolk Street, Cecil Street, and their parallels—grass actually grows. In Cecil Street we secured a convenient two-pair front; and, moving in there with our carpet-bags, indulged in dreams of the success which we were about to achieve. We drew out the career of the ruffian, killed him at the end of the third act, made puns for the comic characters, wept over the suffering heroine, and determining to set to work betimes the next morning, went to bed early.

Well, Sir, no sooner had the breakfast things been cleared away, and we were engaged upon the opening scene—a chorus of Peasants and Peasantesses, I need hardly say—than we were alarmed by a frightful noise outside the window. It was impossible to continue our work while it lasted, so I went to the window to see what was the matter. Will it be believed? Three individuals were standing on each other's heads, and from each of the arms of the topmost, two infants of tender years were suspended. A mob of butcher boys, servant-maids, policemen, and other unemployed persons, were shouting with rapturous applause around them. The imminent peril of our melodrama demanded that we should do

something vigorous. We accordingly sent out the servant-of-all-work, as a deputation, with a shilling, and a request that they would "move on," as there was a gentleman in the house afflicted with lumbago. It had the desired effect—the donative, not the message—and we thought we were free.

Fallacious hope!

We had scarcely set to work again, and had got one of the peasants in the drama upon his knees, offering a rose to his beloved, and pointing to a distant cottage on the Rhine, when a more terrible noise invaded our ears. This time it was a "Punch," to which a retired half-pay officer and his family in the first-floor front are partial, and which had come, by their express orders, to perform in front of the house. The *habitués* of this kind of exhibition, gathered round in dense array to witness their favourite performance, and there we were, stopped again for a full half-hour. But everything must have an end, and the "Punch" at length departed amidst our suppressed maledictions. With difficulty, indeed, was my heroic friend Jones prevented from rushing out and administering a kick to the dog Toby who, with a pipe in his mouth, had added ten-fold to our agony, and contributed to the horror which, for my part, I have always felt for precocious animals.

Well, Sir, we had no sooner congratulated ourselves on the termination of this disgraceful scene, when an individual habited in a Turkish garb came into the street, to swallow a sword and to balance a walking-stick on his copper-coloured nose. Neither sixpences, nor shillings, nor protestations, could get rid of this infernal Oriental, who—in perfectly good English—informed us that he had not been that way for a whole fortnight, and that he really *must* perform. It was in vain that we requested him to retire—if not to his own country, and the smiling babes he had left behind him either in Damascus or in Houndsditch—at all events, lower down the street. He was inexorable, and for full twenty minutes large pebbles and other heavy articles seemed to disappear down his capacious throat, and were brought up again before our reluctant eyes.

He was succeeded by a Hindoo chieftain who danced the national war-dance, howling at the same time the national war-song—upon a deal plank, two feet square.

I shall not prolong this painful subject much further. At half-past one, we had a Fantoccini; at three, a performance of Ethiopian serenaders; at four, a select band of Scottish youths, to execute the fling; interspersed at intervals with barrel-organs, organs upon wheels, brass bands, violinists, flute-players, and every other kind of known and unknown musicians. Now, Sir, just to show you the effect that these accursed artists have had upon one of the most promising dramatic pieces of the season, take this passage as I find it written in my MS. —

Bertram. Beloved Anna, cast not upon me that contemptuous look. The false Ferdinand loves thee not. Oh! say, charmer, wilt thou be mine?
Anna (sobbing tenderly). Curse that Turk!!

I could put up with barrel-organs. I could bring myself to suffer, almost without repining, under "Lucy Long." I could even endure "Trab Trab." But to be molested with these Punches and Eastern performers is too much for me. To watch one of these Aborigines (I suppose I ought to say an Aborigo) tearing his hair and making pretence to munch his enemies; to hear the particulars of the last half-dozen burglaries and murders shouted under my very nose; to listen to a man and six small children bellowing at the tops of their stentorian voices that they have not partaken of food for three days, and are ready to drop down with exhaustion. All this is too much for me. It occasions, in the sensitive mind of a melo-dramatist, a degree of phrenzy that makes him ready to tear his hair, like the Aborigo; to yell, like the whooping Indian; to drop down, like the fatherless and motherless children and their exhausted but strong-voiced parents.

Is there no law, Sir, to protect these unhappy streets from the vagrants who infect them? No international treaty to compel Oriental nations to keep their jugglers and curiosities to themselves? No untenanted patent-theatre where Punch and Judy, and Fantoccini, might find a secure retreat? No policeman lying in ambush in a larder, ready to spring out upon the offenders?

My mind is made up. I shall take a lodging in the most cab-frequented street that I can find, and compose my master-piece there.

Even as I write, and the shades of evening are stealing upon me, I observe an individual advancing slowly out of the Strand with a huge drum and a fife. Two other miscreants are following him, wrapped up in large great-coats. A secret presentiment tells me that the wretches are about to throw off their great-coats and stand upon their heads in front of my window. I can, consequently, write no more, but must remain,

Sir,

Your very obedient and afflicted Servant,

JOHN SMITH, *Dramatic Author.*

Cecil Street, Strand.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 33.]

SATURDAY, NOVEMBER 9, 1850.

[PRICE 2d.]

THE COW WITH THE IRON TAIL.

It was four o'clock in the morning,—and the Cow with the Iron Tail prepared for the duties of the day with her accustomed stolidity. Standing bolt upright, at the end of a dusky court-yard, where day-break found it very difficult to penetrate, she submitted to the seizure of her iron tail by a sturdy Welsh girl, and as it was raised up and down, she spouted forth from her innocent nozzle a conscientious stream of water into the unconscious vessels of Mr. William Yawl, the dairyman, whose neat little shop was situated at a convenient distance. This shop, or dairy, had a low-fronted window, in which were seen several tin cans, ranged round a small slanting board, whereon appeared the portrait of a red and white cow, between whose legs and the window glass was thrust a little basket, containing five eggs and a cobweb. A geranium, with a few dusty leaves and a very red pot, was placed in the background. Over the ledge of the door stood a small field-gate, originally painted white, but being made of tin, it had several stains of rust running down the bars, and had also lost somewhat of its original shape and attitude. Into this door came hurrying a Welsh girl, with two wooden pails, just filled from the Cow with the Iron Tail, standing bolt upright in Pump Court, Skarton's Buildings, High Holborn. The girl was soon followed by a boy, who brought a large pitcher full of water. He jostled the girl in the narrow passage, as she was bustling forth again with her pails for a fresh supply; and this went on until the quantity required had been obtained.

Between the Dairy of Mr. William Yawl and Pump Court, there intervened an alley, a mews, and a narrow street. At the corner of the latter, and commanding a peep down the alley, and a squint round the mews, perched the thin, three-windowed house—one window standing on the top of another—of Mr. Tim Slivers, the barber, whose blue-and-white sign-pole projected from his second window, so as to attract customers at right angles, acute angles, obtuse angles, and from over-the-way. Mr. Yawl's water business being over, he had hurried off to Newgate Market, and was now on his way back, at long strides, with something large and soft, carefully

folded up in a bundle-handkerchief. When, as he was passing the corner just described, out bolted Mr. Tim Slivers upon him—though the shutters of his shop were not down—and seized him by the coat-tail.

"Stop!" said Tim.

"Oh, good morning, Mr. Slivers," said Yawl, much startled and embarrassed; "I did not think you ever got up so soon."

"Never you mind about that," answered Mr. Slivers, keeping his hold on the coat-tail. "I'm up too early for you, it seems;" and he gave a knowing, and rather malicious smiling look at the large, soft bundle under Mr. Yawl's right arm.

"What do you mean?" cried the alarmed dairyman.

"Just this," said Mr. Slivers. "You've left my easy-shaving shop for the oyster-knife scraping of Podgy Green, and I won't stand it. Mark that! One thing more,"—and Mr. Tim Slivers raised his forefinger—"I'll peach!" Uttering this dreadful word, he lowered the tip of his forefinger, and, poking it deep into the surface of the yielding bundle, gave a wicked grin, and ran back into his dark doorway.

The face of Mr. William Yawl turned as pale as one of his own milk-pans, as he stood, staring stupidly at the dark doorway into which Slivers had just skipped out of sight. He next looked down at his bundle, glancing all over it, to see if any aperture had betrayed its contents. No aperture of any kind was visible, and he slowly turned aside, and bent his way to his Dairy with oppressed and anxious feelings. His hatch of milk sent out that morning was a failure: it was more than usual in quantity, but not of its usual good colour, and had, if attentively considered before mixing it in tea or coffee, a very queer, and, to the uninitiated, an inexplicable twang. Apprehension—nervousness—that was the cause of it.

Mr. Yawl was unable to eat any breakfast; and after many hesitations during an hour and a-half, he bent his tremulous steps towards the threatening pole of Mr. Tim Slivers, and entering the shop, announced, with a foolish smile, intended to be easy and cordial, that he had come to be shaved.

"So then, at last, you really do want shaving," said Mr. Slivers, assiduously continuing

his work of stopping a razor, which was effected by means of a long stop, the top of which was nailed half-way up the wall, while he held the other end in his hand, drawing out the leather to the proper angle of tension.

"Yes," replied Mr. Yawl, putting up his hand to his chin, with a weak attempt at understanding the irony of Mr. Slivers in a literal sense, "Yes, Sir; I think I do."

"Oh, you do, do you? Well, then, now I'm ready for you. Sit down. Lean back. Easy, you know, as usual. Don't sit so stiff. There—quite with your back against the back of the shaving-chair. My lather's not hot—don't flinch. So—ah—ahem! Cold morning, this morning—early, I mean." Here he adjusted the white cloth beneath his patient's chin.

"Yes," said Mr. Yawl; "it was rather cold;—not so very, neither."

"Butchers' markets usually is cold," remarked Mr. Slivers, tacking the cloth in round the throat, "specially in the early part of the morning. So much stone, and wet. Ahem! Hope you got a good lot of sheep's brains?"

"Sheep's nonsense! What do you mean, Mr. Slivers?"

"What you had in your bundle, this morning. I felt 'em, you know—poked my finger into the soft plumpness of the handkercher. I know'd it was sheep's brains, directly I saw you."

"No such thing, Sir!" said Mr. Yawl, trying to look bold and offended, and avoiding the advancing hand of his operator.

"Well, bullocks', then."

"No, Mr. Slivers, nor bullocks', neither. Why should I—? There he stopped."

"Then," said Mr. Slivers, with a confident tone, beginning to apply the lather, "it was calves—yes, calves' brains for breakfast, and a good thing too, ain't they?"

"For those who like them," replied Mr. Yawl, guardedly.

"We must learn to like 'em, anyhow," said the persevering barber, "both at breakfast and tea, considering we can't get our milk good without some such thing. Come, I know all about it."

"I don't care what you know," said poor Mr. Yawl, his face becoming as white and quivering as curds and whey; "it's nothing to me what other dairymen do."

"Course not; you can't help what they do. I say so. Hold up your chin! They send to the Cow with the Iron Tail, and they mix a pint at least—some on 'em a pint and a-half, or more—do every quart of milk. Hold up your chin a little higher. Then the milk, you know, looks too thin, so they beats up the brains in a mortar—calves' brains is best, because it comes nearest to the nature of a cow—and when they are well worked up, and mixed with the milk, they give it the thickness it has lost, and restore its colour. Oh, yes—I can't do any good at you, if you

point your nose down at your toe, in that way. Then, there's some as uses chalk; or whiting, to whiten the water they put; and flour, starch, and size, to keep up the substance, and prevent the 'milk' from looking thin; and lastly, they go to a secret doctor's, and buy a set of dusky orange-red balls, made of mysterious stuff, which, being well worked round, melts gradually, and gives the nice yellowish tint what's wanted. And I have heard—I accuse nobody in particular—that when a nice froth is wanted to the top, they sometimes throw in a number of snails, stir them round and round, and then strain them off, so that nobody's none the wiser."

"As I hope to be saved," exclaimed Mr. Yawl, "I never did any such thing; and I'd send away any servant or boy of mine, as hinted at such—that I would." And Mr. Yawl rose to his full height, with the white cloth still close round his throat, and hanging down.

"Don't get up!" cried Mr. Slivers, "seizing his victim by the shoulders, and bumping him down upon the hard, wooden-seated chair, "Why do you get up?"

"Why, have 'nt you done both sides?" inquired Mr. Yawl.

"Yes; to be sure I have;" said Mr. Slivers, wiping his patient's face with a wet towel; "but your hair is in a shocking state—quite neglected—all comes of your leaving me for that infamous quack, Podgy Green, because he took more milk of you. Now, sit still. You must be cut and curled."

Mr. William Yawl groaned inwardly, and repeated to himself a melo-dramatic line he had recently heard at a theatre—"I am—I feel it—in this my power!"

"You, see," pursued Mr. Slivers, applying his large comb with a certain composure, and opening the jaws of his scissors to their full width, as he stood outside in front of his man, "You see, it can't be pure milk as we all drink, and I'll show you how it can't be. Say there's two millions and more of us here in London; and suppose each person, on the average, takes a pint of milk a-day—"

"But they don't do it," interrupted Mr. Yawl, "that's much too much a week. Half-a-pint!—I wish they did."

"And so they do," persisted the unconquerable Slivers; "there's tea and coffee in the morning—good; and there's wine and coffee in the evening—good. But besides this—mind; I said one with another—there's bread-and-milk for breakfast, and paps, and bottles of milk for infants, and there's pies and puddings, and cakes, blue-mince and custards, and soups and sauces, and diet for the sick, and curds and whey, and milk punch, and rum-and-milk—nice thing, you know—and sometimes a bath of milk, for those as can't swallow—milk-bath gets through the pores of the skin, and does much good the joints of the skeleton with the hot steam, and does

tell a great tuft of Mr. William Yawl's hair upon the upper leather of his left boot.

Mr. Yawl looked down at the tuft of hair but said nothing.

"Pray, how many milch cows are there among all the cowkeepers that supply milk for all London?" next demanded Mr. Slivers.

"A great many," replied Yawl, brightening up, "I dare say a matter of twenty thousand."

"Now," proceeded Slivers, again gathering up a still larger tuft of hair to his comb, and expanding the blades of the scissors to their utmost gape, "now, half-a-pint a day for two millions of people amounts to five hundred thousand quarts; to obtain which we must have fifty thousand cows, each producing, on an average, ten quarts a day. So, you see, according to Corker, we're thirty thousand cows short of our proper complement—and the milk of all these has to be supplied by the Cow with the Iron-Tail, my boy!"—and off went the second great tuft of hair, and fell close beside his shorn companion on the boot.

"And pray, where did you learn all this?" enquired Mr. Yawl, in a quailing voice. "Who told you all these things?—though it's nothing to me, you know—I'm not a cow-keeper."

"To be sure you ain't. I know that very—very—very"—(here Mr. Slivers performed a straddle-dance round his victim, operating most vigorously with his comb and scissors)—very—very well, you see. But there's a knowing old fellow comes here to be shaved twice a week, and I was telling him of your leaving me for old Podgy Green, and so we got a talking of milk and cows, and then he blew up the whole concern."

"This was Corker, as you spoke of, I suppose; he'd better have minded his own business," said Mr. Yawl.

"No," retorted Slivers, making his scissors gape up to the very eye, "it was not Corker; it was old Dignum, your landlord, to whom you owe those quarters' rent,"—and clash went the scissors in their final performance.

It was then that Mr. Yawl did owe three quarters; and he seemed moodily speculating on the matter, with pinches, and short ends of hair, and bits scattered around his boots, while he amused himself by twisting up a lock of hair with a pair of hot curling-irons.

"Bliss you," resumed the inexorable barber, "what I have said is a hundredth part of what old Dignum told me. The management of London cows is certainly very curious—said he, dying."

"You know I'm not a cow-keeper!" interrupted Mr. Yawl, with a look of alarm.

"I know you're not," said Mr. Slivers—"don't flinch so;—the thing ain't too hot. I am sure as you don't keep cows, and don't know much of such things as I'm going to tell you, the less ought to know—it's very much your interest to know. Don't flinch so,

I say. First, as to the purchase. Poor, lean, mangy, over-dry, feverish cows are bought cheap at Smithfield. That's bad, to begin with, ain't it? But suppose the cows as are bought, turn out to be decent kind of animals, mark what sort of life they soon have to lead. A great number of the London milch cows live in dark, damp dens, under stone arches near the Thames. In one of these ranges forty or fifty cows are packed, in a space not large enough for a dozen; the shed is fit with gas, which adds to the hot steam of the breath and the hides of the cows; and the ventilation they get is by means of a hole, of less than one foot square, in the wall of the lane that leads to the halfpenny steam-boats. Maybe you don't know where that is?"

"I don't know as I do," murmured poor Mr. Yawl.

"I thought not. Well, that's one of the kind of places they live in. Other cow-keepers have sets of cellars, and other underground places; others pack them in yards, dirty lanes, or any holes and corners, and often in company with swine—and the offensive odours are enough to pyson all the neighbourhood. When cows live in dark dens, or filthy yards, in the worst of company, or else with their smooth, innocent noses close up against dead walls—with all manner of the foulest accumulations, no drainage, and no atom of ventilation—all of which causes diseases, such as mange, and other skin diseases, besides consumption, and a bad foot, so bad, sometimes, that the hoof rots off—what sort of milk are such miserable animals as them likely to perdooce?"

"My cow-keeper's cows don't live in such places," interposed Mr. Yawl, with an effort to rally; "they live in proper sheds, with plenty of air, good drainage, and lots to eat."

"Oh, no doubt—certainly—the milk that comes to you, Mr. Yawl, is quite good—very good indeed—in the first instance—when I—but I was alluding to London cows as they are for the most part. Then, you talk of eating! What sort of food do most of the den-kept, unaired, undrained animals get? If you don't know, I'll tell you. London cows, for the most part, are fed from the offal and sweepings of the London vegetable markets, and of greengrocers' shops, as was discovered by Mr. Hodson Bagg, a intimate friend of Mr. Dignum's. Cabbage-leaves in all colours, half-rotten turnips, carrot-tops, bad potatoes, and such like; and other provender, as will keep, is stowed away in bins, or on shelves just over the cows, so as to absorb all the bad steams and had smells that rise up, which, after a few weeks, don't make very nice eating. 'Steal of nice fresh vegetables, these cow-keepers feed the poor creatures with brewers' and distillers' grains, and distillers' wash; and Mr. Bagg says it's their chief article of food, whereby their livers are very much enlarged, become hard, refuse to perform their natural hepatical duties,

and so the poor beasts get the yellow jaundice, just the same as with men who are always besotting themselves with beer and gin."

"Mister Slivers!" exclaimed Yawl, rising from the large wooden arm-chair—his head covered all over with little, hard, smoking-hot curls,—and the long white cloth, which had been tucked in a ring close round his throat, still hanging down, "Mister Slivers!—it isn't in flesh and blood to endure this any longer! I feel that all this is meant for me—it's said at me—spitefully at me, Mr. Slivers, although you know very well that I am not a cow-keeper, that I never was a cow-keeper, nor none of my family, Sir, nor my father before me,—*con*-found you!"

Mr. Slivers stepped back a pace or two at this unexpected exhibition of spirit in the usually meek Mr. Yawl; but instantly recovering his presence of mind, he applied the tip of his curling irons to one side of his head, which he gently tapped, in a quaint, knowing, insolent, quietly threatening manner, as he softly uttered the words—"Calves' brains!"

Mr. Yawl reeled, and looked ready to faint. He placed one hand languidly upon the top of a wig-block at his side, not seeing what it was, to support himself.

Slowly, and with a serious countenance, the remorseless Slivers advanced towards him; gently untucked and pulled out the cloth from around Mr. Yawl's throat; folded it up; laid it upon a shelf, together with his curling-irons and scissors; went to a little dusty glass case; pushed back a slide; took down a gallipot from the top shelf, and a bottle from a confusion of nicknacks below; and again approached Mr. Yawl.

"Here," said the barber, extending the gallipot, "is some Pomatum de Frenchipostrum, just come from the Tivoli Gardens of Paris. It will cool the skull after the heat induced by curling, and hallay any little soreness from close pinching. It will likewise materially assist the growth of the hair, and give it a gloss. And here is a bottle of Baron von Softersmere's Anti-Pestiferish Wash, which I strongly rekkimend to your use every day, after you have finished the manufaktur of your milk, to perwent the hodours of your work from betraying of your secret."

Scarcely conscious of what was being done, Mr. Yawl allowed the gallipot to be placed in one hand, and the bottle in the other, as he made his way out of the door,—the detestable Slivers whispering as he passed that he trusted he should see him every morning to be shaved—and cut and curled on Sundays.

Such, then, is the result of the discoveries, not only, let us say, of Mr. Dignum and the pertinacious Mr. Tim Slivers, but of the more elaborate Mr. Rugg, who has put forth various papers on the subject of the manufacture of London milk; and, in especial, a pamphlet, wherein he collects all his forces on this important Metropolitan subject.

That there is great truth in Mr. Rugg's statements, we are, in many respects, well aware, having obtained, in person, a knowledge of the same;—that there is another view to be taken of London Milk, we are also prepared to show.

Let the reader accompany us half-a-dozen miles out of town. We pass through Camberwell, through Peckham, and Peckham Rye, and we presently find ourselves in a district that looks uncommonly like "the country," considering how short a time it is since we left the "old smoke" behind us. We alight and walk onwards,—and certainly, if the sight of green fields, and cows, and hedges, and farm-yards, denote the country, we are undoubtedly in some region of the kind.

We pass down a winding road, between high hedges of bush and trees, then climb over a gate into a field; cross it, and then over another gate into a field, from which we commence a gradual ascent, field after field, till finally the green slope leads us to a considerable height. We are on the top of Friern Hill.

It is a bright sunny morning in September, and we behold to perfection the most complete panorama that can be found in the suburban vicinities of London. Standing on the broad green summit of this hill, with the face turned towards Friern Dairy Farm, which is about a mile distant below; you see, on your extreme right, Shooter's Hill, Blackheath, and, on clear days like this, the tops of masts of vessels coming up the river. Then, Greenwich Hospital, with trains on the railway—like little fairy carriages, or magic toys, running alone—coming and going. On a clear day, also, you may generally see, as now, the mast-head, containing the lantern, of the Nore Light-Boat. Next, Deptford, with the masts and sails of ships gliding onward, beyond and above fields and house-tops,—in the strangest manner, even though we know how it all is. Deptford Dockyard, Limehouse Church, and, still following on the circle, the Tower of London. Next comes the Monument, between which and the hill where we are standing, we descry below in the meadows the Dairy Farm of Friern Manor. But let your eye again ascend to move along the panoramic circle, as before. There you see the grand sombre dome of St. Paul's; and, on the highest ground, as you move onwards, Highgate Church; further onwards, the next great object that arrests you is Westminster Abbey. Then, Harrow Hill, Richmond, Thurlow Park, (we are moving round, remember,) and Dulwich College. Below this, you see Norwood Hill and Cemetery, then Dulwich Wood. We are working our way into good field-sport grounds. There is Forest Hill; fields; scrub; patches of furze, lying dark and colourless, with here and there a streak of bright light; and, again, Shooter's Hill, from which point we started, thus completing a circle, comprising an extraordinary

number of important objects, all seen from a green hill, as yet, we believe, unknown to our landscape painters.

But what has this panorama and this green hill, to do with London milk? Step down with us to yonder hedge, a little below the spot where we have been standing. We approach the hedge—we get over a gate, and we suddenly find ourselves on the upper part of an enormous green sloping pasture, covered all over with cows. The red cow, the white cow, the brown cow, the brindled cow, the colley cow, the dappled cow, the streaked cow, the spotted cow, the liver-and-white cow, the strawberry cow, the mulberry cow, the chesnut cow, the grey speckled cow, the clouded cow, the black cow,—the short-horned cow, the long-horned cow, the up-curling horn, the down-curling horn, the straight-horned cow, and the cow with the crumpled horn—all are here—between two and three hundred—spread all over the broad, downward sloping pasture, feeding, ruminating, standing, lying, gazing with mild earnestness, reclining in characteristic thoughtfulness, sleeping, or wandering hither and thither. A soft gleam of golden sunshine spreads over the pasture, and falls upon many of the cows with a lovely, picturesque effect.

And what cows they are, as we approach and pass amongst them! Studies for a Morland, a Gainsborough, a Constable. We had never before thought there were any such cows out of their pictures. That they were highly useful, amiable, estimable creatures, who continually, at the best, appeared to be muzzling grass in a recumbent position, and composing a sonnet, we never doubted; but that they were ever likely to be admired for their beauty, especially when beheld, as many as these were, from a disadvantageous point of view, as to their position, we never for a moment suspected. Such, however, is the case. We have lived to see beauty in the form of a cow—a natural, modern, milch cow, and no descendant from any Ovidian metamorphosis.

We will now descend this broad and populous slope, and pay a visit to Friern Manor Dairy Farm, to which all these acres—some two hundred and fifty—belong, together with all these “horned beauties.” We find them all very docile, and undisturbed by our presence, though their looks evidently denote that they recognise a stranger. But those who are reclining do not rise, and none of them decline to be caressed by the hand, or seem indifferent to the compliments addressed to them. In passing through the cows, we were specially presented to the cow queen, or “master cow,” as she is called. This lady has been recognised during twelve years as the sovereign ruler over all the rest. No one, however large, disputes her supremacy. She is a short-horned, short-legged cow, looking at first sight rather small, but on closer examination you will find that she is sturdily and solidly built, though graceful withal. “She is

very sweet-tempered,” observed the head keeper, “but when a new-comer doubts about who is the master, her eye becomes dreadful. Don’t signify how big the other cow is—she must give in to the master cow. It’s not her size, nor strength, bless you, it’s her spirit. As soon as the question is once settled, she’s as mild as a lamb again. Gives us eighteen quarts of milk a day.”

We were surprised to hear of so great a quantity, but this was something abated by a consideration of the rich, varied, and abundant supply of food afforded to these cows, besides the air, attendance, and other favourable circumstances. For their food they have mangold-wurtzel, both the long red and the orange globe sorts, parsnips, turnips, and kohlrabi (Jewish cabbage), a curious kind of green turnip, with cabbage leaves sprouting out of the top all round, like the feathery arms of the Prince of Wales. Of this last mentioned vegetable the cows often eat greedily; and sometimes endeavouring to bolt too large a piece, it sticks in their throats and threatens strangulation. On these occasions, one of the watchful keepers rushes to the rescue with a thing called a *probang* (in fact, a cow’s throat ramrod), with which he rams down the obstructive morsel. But besides these articles of food, there is the unlimited eating of grass in the pastures, so that the yield of a large quantity of milk seems only a matter of course, though we were not prepared to hear of its averaging from twelve to eighteen and twenty quarts of milk a day, from each of these two or three hundred cows. Four-and-twenty quarts a day is not an unusual occurrence from some of the cows; and one of them, we were assured by several of the keepers, once yielded the enormous quantity of twenty-eight quarts a day during six or seven weeks. The poor cow, however, suffered for this munificence, for she was taken very ill with a fever, and her life was given over by the doctor. Mr. Wright, the proprietor, told us that he sat up two nights with her himself, he had such a respect for the cow; and in the morning of the second night after she was given over, when the butcher came for her, he couldn’t find it in his heart to let him have her. “No, butcher,” said he, “she’s been a good friend to me, and I’ll let her die a quiet, natural death.” She hung her head, and her horns felt very cold, and so she lay for some time longer; but he nursed her, and was rewarded, for she recovered; and there she stands—the strawberry Durham short-horn—and yields him again from sixteen to eighteen quarts of milk a day.

Reverting to the “master cow” we enquired whether her supremacy in the case of new comers was established “mesmerically,” by a glance—or how? The eye we were assured had a great deal to do with it. The stranger cow *read* it; and trembled. But sometimes there was a contest; and a cow-fight, with such fresh strong creatures as these,—

all used to their full liberty, and able to run or leap, was a serious affair. If no keeper was at hand to separate them, and the fight got serious, so that one of them fell wounded, it was a chance but the whole herd would surround the fallen cow, and kill her. This was not out of wickedness, but something in the whole affair that put them beside themselves, and they couldn't bear the horrid sight, and so tried to get rid of their feelings, as well as the unfortunate object, by this wild violence. The effect was the same if the herd did not witness the fight, but came suddenly to the discovery of blood that had been spilt. They would stare at it, and glare at it, and sniff down at it, and sniff up at it, and prow round it—and get more and more excited, till at last the whole herd would begin to rush about the field bellowing and mad, and make nothing at last of leaping clean over hedges, fences, and five-barred gates. But strange to say—if the blood they found had not been spilt by violence, but only from some cause which the "horned beauties" understood, such as a sister or aunt having been bled by the doctor—then no effect of the sort occurred. They took no notice of it.

We found that besides beauty, cows possessed some imagination, and were moreover very susceptible. The above excitement and mad panic sometimes occurs from other causes. Once some boys brought a great kite into the field, with a pantomime face painted upon it; and directly this began to rise over the field, and the cows looked up at it, and saw the great glass eyes of the face looking down at them—than Oh! Oh! what a bellowing!—and away they rushed over each other, quite frantic. On another occasion some experimental gentlemen of science brought a fire balloon near the pasturage one night after dark. It rose. Up started all the cows in a panic, and round and round they rushed, till finally the whole herd made a charge at one of the high fences—tore down and overleaped everything—burst into the lanes, and made their way into the high road, and seemed to intend to leave their owners for some other state of existence where fire-balloons and horrid men of science were alike unknown.

Instead of proceeding directly down the sloping fields towards the Dairy Farm, we made a detour of about half a mile, and passed through a field well enclosed, in which were about a dozen cows, attended by one man, who sat beneath a tree. This was the Quarantine ground. All newly purchased cows, however healthy they may appear, are first placed in this field during four or five weeks, and the man who milks or attends upon them is not permitted to touch, nor indeed to come near, any of the cows in the great pasture. Such is the susceptibility of a cow to the least contamination, that if one who had any slight disease were admitted among the herd, in a very short time the whole of them would be

affected. When the proprietor has been to purchase fresh stock, and been such among strange cows, especially at Smithfield, he invariably changes all his clothes, and generally takes a bath before he ventures among his own herd.

From what has already been seen, the reader will not be astonished on his arrival with us at the Dairy Farm, to find every arrangement in accordance with the fine condition of the cows, and the enviable (to all other cows) circumstances in which they live. The cow-sheds are divided into fifty stalls, each and the appearance presented reminded one of the neatness and order of cavalry stables. Each stall is marked with a number; a corresponding number is marked on one horn of the cow to whom it belongs; and in winter time, or any inclement season (for they all sleep out in fine weather) each cow deliberately finds out, and walks into her own stall. No. 173 once got into the stall of No. 15; but in a few minutes No. 15 arrived, and "showed her the difference." In winter, when the cows are kept very much in-doors, they are all regularly groomed with currycombs. By the side of one of these sheds there is a cottage where the keepers live—milkers and attendants—each with little iron bedsteads, all in orderly soldier fashion, the foreman's wife acting as the housekeeper.

These men lead a comfortable life, but they work hard. The first "milking" begins at eleven o'clock at night; and the second at half-past one in the morning. It takes a long time, for each cow insists upon being milked in her own pail—i.e. a pail to herself, containing no milk of any other cow—or, if she sees it, she is very likely to kick it over. She will not allow of any mixture. In this there would seem a strange instinct, accordant with her extreme susceptibility to contamination.

The milk is all passed through several strainers, and then placed in great tin cans, barred across the top, and sealed. They are deposited in a van, which starts from the Farm about three in the morning, and arrives at the Dairy in Farringdon Street between three and four. The seals are then carefully examined, and taken off by a clerk. In come the carriers, commonly called "milkmen," all wearing the badge of Friern Farm Dairy; their tin pails are filled, fastened at top, and sealed as before, and away they go on their early rounds, to be in time for the early breakfast-people. The late-breakfasts are provided by a second set of men.

Such are the facts we have ascertained with regard to one of the largest, of the great Dairy Farms near London; so that from this, and other farms similarly conducted, it is quite clear that by taking a little pains to ascertain where, a Londoner may, if he chooses, obtain pure, rich, milk—as it comes from the cow." That the previous accounts we have given of the adulterations of London milk are equally true, we are, to be

great extent, convinced, though we must, in fairness, add that some of the statements of Mr. Ragy border on exaggeration—for if not, we wonder how half the children in London escape being poisoned. That the adulterations, however, are great, and a common practice we know; and even while we are concluding this article one of the mysterious doctor's "milk-balls" with which Mr. Tim Slivers taunted poor Mr. Yawl, has been brought to us. As to the "mystery," the thing itself turns out to be *annatto*, which is harmless enough, and used commonly to colour cheese. But as for the aid it gives, with few exceptions, to the London dairyman, here is the simple recipe, derived from the best authority:—Wrap the ball up in a piece of flannel; then take a quart of water for every two quarts of milk, and dipping the ball in the water, whirl it round and round (as you would use a blue-bag) until the water becomes the colour of pale ale; then pour it into the milk, and stir the whole together until the milk-and-water assumes the rich, soft, yellowish, creamy consistency required. Our fat friend, the Hippopotamus, found out the deception in a very few days, and communicated his discovery to Hamet Sadi Cannana, in his peculiar way. He insisted on double his former quantity of milk, yet manifested a distaste for it. So Hamet went to the Secretary, and with oriental simplicity, spoke thus: "I think, Sir, we had better keep our own cow. The milk we get within, we know:—but the outside milk, we don't know."

A LUNATIC ASYLUM IN PALERMO.

THE ancient mode of treating the insane, which showed that the keepers of old were as mad as their patients, has, happily, been cured. Esquirol and Pinel commenced the humane system in France, and it has been followed with the best effects, not only in Great Britain, but throughout Europe.

The recent improvements in the treatment of lunatics in this country, have been widely reported to the public in many ways by the press; and only lately an account has appeared in the newspaper of a hall at St. Luke's—formerly a stronghold of severity and restraint—in which the patients joined. Not so much, however, is known by the English public of the progress of this excellent cause in the South of Europe. We are, therefore, glad to give a translation of an interesting account of a visit to the *Casa dei Matti*, in Sicily.

Several years ago Count Pisani, a Sicilian nobleman, whilst on a tour through Europe, directed his attention to the condition of the receptacles for lunatics in some of the principal continental cities. Deeply impressed by the injudicious and often cruel treatment to which the unhappy inmates of those establishments were subject, he determined on re-

turning, to convert his beautiful villa near Palermo into a Lunatic Asylum, which received the name of the *Casa dei Matti*; and withdrawing to a more humble place of abode, he devoted his fortune and energies to the purpose of carrying out his philanthropic scheme.

Count Pisani himself offered to conduct me over the establishment. After a short walk we arrived in front of a spacious mansion, the exterior aspect of which presented nothing differing from that of a handsome private residence. The windows, it is true, were grated; but the gratings were so ingeniously contrived that had not my attention been particularly directed to them, I should not have discovered their existence. Some represented vine leaves, tendrils, or bunches of grapes; others were fashioned like the long leaves and blue flowers of the convolvulus. Foliage, fruit, and flowers were all painted in natural colours, and it was only from a very near point of view that the artifice could be detected.

The gate was opened by a man, who, instead of carrying a huge stick or a bunch of keys, (the usual insignia of the porter of a mad house,) had a fine nosegay stuck in the breast of his coat, and in one hand he held a flute, on which he had apparently been playing when interrupted by our summons at the gate.

We entered the building, and were proceeding along the corridor on the ground-floor, when we met a man whom I took to be a servant or messenger of the establishment, as he was carrying some bundles of fire-wood. On perceiving us, he laid down his burden, and advancing to Count Pisani, respectfully kissed his hand. The Count enquired why he was not in the garden enjoying the fresh air and amusing himself with his companions. "Because," replied the man, "winter is fast coming, and I have no time to lose. I shall have enough to do to bring down all the wood from the loft, and stow it away in the cellar." The Count commended his forethought, and the man, taking up his fagots, bowed, and went his way.

This man, the Count informed me, was the owner of large estates in Castelvelerino; but owing to a natural inactivity of mind, and the absence of any exciting or useful occupation, he sank into a state of mental torpor, which terminated in insanity. When he was brought to the *Casa dei Matti*, Count Pisani drew him aside, under the pretence of having a most important communication to make to him. The Count informed him that he had been changed at nurse, that he was not the rightful owner of the wealth he had heretofore enjoyed; and that the fact having become known, he was dispossessed of his wealth, and must therefore work for his maintenance. The madman believed the tale, but showed no disposition to rouse himself from the state of indolence which had been the primary cause of his mental aberration. He

folded his arms, and sat down, doubtless expecting that in due time a servant would enter as usual to inform him that dinner was ready. But in this he was deceived.

Dinner hour arrived, and no servant appeared. He waited patiently for some time; but at length the pangs of hunger roused him from his listlessness, and he began to call out loudly for something to eat. No one answered him; and he passed the whole night in knocking on the walls of his apartment, and ordering his servants to bring him his dinner.

About nine o'clock next morning, one of the keepers entered the apartment of the new patient, who, starting up with more energy than he usually manifested, imperiously ordered his breakfast to be prepared. The keeper offered to go into the town to purchase something for his breakfast, if he would give him the money to pay for it. The hungry man eagerly thrust his hands into his pocket, and to his dismay, having discovered that he had no money, he implored the keeper to go and procure him some breakfast on credit.

"Credit!" exclaimed the keeper, who had received the requisite instructions from Count Pisani. "Credit, indeed! No doubt you might easily have obtained credit to any amount, when you were living at Castelveneruno, and everyone believed you to be the rightful lord of those fine domains. But now that the truth has come out, who do you think will give credit to a pauper?"

The lunatic immediately recollected what Count Pisani had told him respecting his altered position in life, and the necessity of working for his daily bread. He remained for a few moments as if absorbed in profound reflection; then, turning to the keeper, he asked whether he would point out to him some mode by which he could earn a little money to save himself from starvation.

The keeper replied that if he would help him to carry up to the loft the fagots of firewood which were in the cellar, he would willingly pay him for his work. The proposal was readily accepted; and after carrying up twelve loads of wood, the labourer received his hire, consisting of a little money just sufficient to purchase a loaf of bread, which he devoured with a keener appetite than he ever remembered to have felt throughout the whole previous course of his life.

He then set to work to earn his dinner as he had earned his breakfast; but instead of twelve, he carried up thirty-six loads of wood. For this he was paid three times as much as he had received in the morning, and his dinner was proportionably better and more abundant than his breakfast.

Thenceforward the business proceeded with the most undeviating regularity; and the patient at last conceived such a liking for his occupation, that when all the wood had been carried from the cellar to the loft, he began

of his own voluntary accord to carry it down from the loft to the cellar, and vice versa.

When I saw this lunatic, he had been employed in this manner for about a year. The morbid character of his madness had completely disappeared, and his bodily health, previously bad, was now re-established. Count Pisani informed me that he intended soon to try the experiment of telling him that there was some reason to doubt the accuracy of the statements which had caused him to lose the property he once enjoyed; and that he (the Count) was in quest of certain papers which might, perhaps, prove after all, that he was no changeling, but the rightful heir to the estates of which he had been deprived. "But," added the Count, when he told me this, "however complete this man's recovery may at any time seem to be, I will not allow him to quit this place unless he gives me a solemn promise that he will every day, where-soever he may be, carry twelve loads of wood from the cellar to the garret, and twelve loads down from the garret to the cellar. On that condition alone, shall I feel any security against the risk of his relapse. Want of occupation is well known to be one of the most frequent causes of insanity."

Each patient had a separate apartment, and several of these little rooms were furnished and decorated in the most capricious style, according to the claims of their occupants. One, who believed himself to be the son of the Emperor of China, had his walls hung with silk banners, on which were painted dragons and serpents, whilst all sorts of ornaments cut out in gold paper, lay scattered about the room. This lunatic was good-tempered and cheerful, and Count Pisani had devised a scheme which he hoped might have some effect in mitigating the delusions under which he laboured. He proposed to print a copy of a newspaper, and to insert in it a paragraph announcing that the Emperor of China had been dethroned, and had renounced the sovereignty on the part of his son and his descendants. Another patient, whose hallucination consisted in believing himself to be dead, had his room hung with black crape, and his bed constructed in the form of a bier. Whenever he arose from his bed, he was either wrapped in a winding sheet, or in some sort of drapery which he conceived to be the proper costume for a ghost. This appeared to me to be a very desperate case, and I asked Count Pisani whether he thought there was any chance of curing the victim of so extraordinary a delusion. The Count shook his head doubtfully, and observed that his only hope rested on a scheme he meant shortly to try; which was to endeavour to persuade the lunatic that the day of judgment had arrived.

As we were quitting this chamber, we heard a loud roaring in another patient's apartment near at hand. The Count asked me whether I had any wish to see how he

managed raving madmen! "None whatever," I replied, "unless you guarantee my personal safety!" He assured me there was nothing to fear, and, taking a key from the hand of one of the keepers, he led the way into a padded chamber. In one corner of the room was a bed, and stretched upon it lay a man, wearing a strait-waistcoat, which confined his arms to his sides, and fastened him by the middle of his body to the bed. I was informed that a quarter of an hour previously, this man had been seized with such a frightful fit of raving mania that the keepers were obliged to have recourse to restraint, very rarely resorted to in that establishment. He appeared to be about thirty years of age, was exceedingly handsome; he had fine dark eyes, and features of the antique mould, with the figure of a Hercules. On hearing the door open, he roared out in a voice of thunder, uttering threats and imprecations; but, on looking round, his eyes met those of the Count, and his anger softened down into expressions of grief and lamentation. Count Pisani approached the bed, and, in a mild tone of voice, asked the patient what he had been doing to render it necessary to place him under such restraint. "They have taken away my Angelica," replied the maniac; "they have torn her from me, and I am resolved to be avenged on Medora!" The unfortunate man imagined himself to be Orlando Furioso, and, as may readily be supposed, his madness was of the wildest and most extravagant character.

Count Pisani endeavoured to soothe his violence by assuring him that Angelica had been carried off by force, and that she would doubtless seize the first opportunity of escaping from the hands of her captors and rejoining her lover. This assurance, repeated earnestly but gently, speedily had the effect of calming the fury of the maniac, who, after a little time, requested that the Count would unfasten his strait-waistcoat. This Count Pisani agreed to do, on condition of the patient pledging his word of honour that he would not profit by his liberty to make any attempt to pursue Angelica. This sympathy for imaginary misfortune had a good effect. The patient did not attempt to quit his bed, but merely raised himself up. He had been a year in the establishment, and, notwithstanding the deep grief into which his fancied misfortunes plunged him, he had never been known to shed tears. Count Pisani had several times endeavoured to make him weep, but without success. He proposed soon to try the experiment of announcing to him the death of Angelica. He intended to dress up a figure in funeral garments and to prevail on the heart-broken Orlando to be present at the interment. This scene, it was expected, would have the effect of drawing tears from the eyes of the sufferer; and if so, Count Pisani declared he should not despair of his recovery.

In an apartment facing that of Orlando Furioso, there was another man raving mad.

When we entered his room he was swinging in a hammock, in which he was fastened down, for biting his keeper. Through the gratings of his window he could perceive his comrades strolling about and amusing themselves in the garden. He wished to be among them, but was not allowed to go, because, on a recent occasion, he had made a very violent attack on a poor harmless creature, suffering from melancholy madness. The offender was in consequence condemned to be tied down in his hammock, which is the secondary punishment resorted to in the establishment. The first and most severe penalty being imprisonment; and the third the strait-waistcoat.—"What is the matter?" said Count Pisani. "What have you been doing to-day?" The lunatic looked at the Count, and then began whining like a peevish child. "They will not let me go out to play," said he, looking out of the window where several of his companions were enjoying the air in the garden. "I am tired of lying here;" and he began rocking himself impatiently in his hammock.—"Well, I doubt not it is wearisome," said the Count, "suppose I release you;" and, with those words, he unfastened the ligatures.

The lunatic joyfully leapt out of his hammock, exclaiming, "Now I may go into the garden!"—"Stay," said the Count; "suppose before you go you dance the Tarantella."—"Oh, yes!" exclaimed the lunatic, in a tone which showed that he received the proposal as the greatest possible indulgence; "I shall be delighted to dance the Tarantella." "Go and fetch Teresa and Gaetano," said the Count to one of the keepers; then turning to me, he said; "Teresa is also one of our violent patients, and she sometimes gives us a great deal of trouble. Gaetano was a teacher of the guitar, and some time ago he became deranged. He is the minstrel of our establishment." In a few minutes, Teresa, a pretty-looking young woman about twenty years of age, was conducted into the room by two men, who held her by the arms, whilst she struggled to escape, and endeavoured to strike them. Gaetano, with his guitar slung round his neck, followed gravely, but without being held, for his madness was of a perfectly harmless kind.

No sooner did Teresa perceive Count Pisani, than, by a violent effort disengaging herself from the keepers, she flew to him, and drawing him aside into a corner of the room, she began to tell him a long story about some ill-treatment to which she alleged she had been subjected. "I know it. I have heard of it," said the Count; "and, therefore, I think it just to make you some amends. For this reason I have sent for you, that you may dance the Tarantella." Teresa was delighted at hearing this, and immediately took her place in front of her intended partner. "Now Gaetano, *presto! presto!*" said the Count, and the musician struck up the air of the Tarantella in very spirited style.

I have frequently witnessed the magical effect which this air never fails to produce on the Sicilians; but I never could have conceived anything like the change it wrought upon these two lunatics. The musician began to play the air in the time in which it is usually performed; but the dancers urged him to play it more and more quickly, till at length the measure became indescribably rapid. The dancers marked the tune with the most perfect precision by snapping their fingers. After keeping up this rapid movement with surprising energy for a quarter of an hour, they began to show some symptoms of fatigue. The man was the first to give in, and, overcome by the exertion, he threw himself on a bench which stood on one side of the room. Teresa, however, kept up a very animated *pas seul* for several minutes after the loss of her partner; but at length she also found herself compelled to stop. The man was placed on his bed, and the woman was conducted to her apartment. Both were so completely overcome by the violence of their exertions, that Count Pisani observed he would answer for their remaining quiet for twenty-four hours to come. As to the gaiterist, he was allowed to go into the garden to play to his companions.

I was next conducted into a large hall, in which the patients walk and amuse themselves, when wet weather prevents them from going out. This place was adorned with a profusion of flowers, growing in pots and vases, and the walls were covered with fresco paintings, representing humorous subjects. The hall contained embroidery frames, spinning-wheels, and even weavers' looms; all presented traces of the work on which the lunatics had been engaged. Having passed through the great hall, I was conducted to the garden, which was tastefully laid out, shaded by large spreading trees and watered by fresh fountains. I was informed that, during the hours allotted to recreation, most of the patients may be seen wandering about the garden separately, and without holding any communication one with another, each following the bent of his or her own particular humour, some noisy and others silent. One of the most decided characteristics of madness is the desire of solitude. It seldom happens that two lunatics enter into conversation with each other; or, if they do so, each merely gives utterance to his own train of thought, without any regard to what is said by his interlocutor. It is different when they converse with the strangers who occasionally visit them. They then attend to any observations addressed to them, and not unfrequently make very rational and shrewd replies.

The first patient we met on entering the garden, was a young man apparently about six or eight and twenty years of age. Before he lost his senses, he was one of the most distinguished advocates in Catania. One evening, at the theatre, he got involved in

some dispute with a Neapolitan, who, instead of quietly putting into his pocket the earl which Lucca (as I shall call him) slipped into his hand, went out and made a complaint to the guard. This guard was composed of Neapolitan soldiers, one of whom gladly availing himself of the opportunity of exercising authority over a Sicilian, seized him by the collar, whereupon Lucca struck his assailant. The other soldiers came to the aid of their comrade, and a violent struggle ensued, in the course of which Lucca received a blow on the head which felled him to the ground. He was conveyed to prison in a state of insensibility and placed in a cell, where he was left for the night. Next morning, when it was intended to conduct him before the judge for examination, he was found to be perfectly insane.

This young man's madness had taken a very poetic turn. Sometimes he fancied himself to be Tasso; at another time Shakspeare or Chateaubriand. At the time of my visit to the asylum, he was deeply impressed with the delusion of imagining himself to be Dante. When we approached him, he was pacing up and down an alley in the garden, pleasantly shaded by trees. He held in one hand a pencil, and in the other some slips of paper, and he was busily engaged in composing the thirty-third Canto of his *Inferno*. At intervals he rubbed his forehead, as if to collect his scattered thoughts, and then he would note down some lines of the poem.

Profiting by a pause, during which he seemed to emerge from his profound abstraction, I stepped up to him, saying, "I understand, Sir, that I have the honour of addressing myself to Dante."

"That is my name," replied Lucca. "What have you to say to me?"

"To assure you how much pleasure I shall feel in making your acquaintance. I proceeded to Florence, in the hope of finding you there, but you had left that city."

"Then," said Lucca, with that sharp, quick sort of utterance often observable in insane persons, "Then, it seems, you were not aware of my having been driven from Florence, and that they charged me with having stolen the money of the Republic? Dante accused of robbery, forsooth! I slung my sword at my side, and having collected the first seven Cantos of my poem, I departed."

This strange hallucination excited my interest, and, pursuing the conversation, I said, "I hoped to have overtaken you between Fette and Montefeltro."

"Oh! I staid only a very short time there," said he. "Why did you not go to Ravenna?"

"I did go there, and found only your tomb!"

"But I was not in it," observed he. "Do you know how I escaped?"

I replied in the negative.

"I have discovered a mode of restoring one's life."

"Is it a secret?"

"No; I will tell it you. When I feel that I am dying, I order a grave to be dug,—a very deep grave. You are aware that in the centre of the earth there is an immense lake, full of red water—and—and—"

Count Pisani, who had overheard the latter part of this conversation, here suddenly interrupted Lucca, saying, "Signor Dante, these people are very anxious to have a dance. Will you indulge them by playing a quadrille?"

He then hurriedly dispatched one of the attendants for a violin, on which instrument, he informed me, Lucca was a masterly performer.

The violin being brought, the Count handed it to Lucca, who began to tune it. Meanwhile, the Count, drawing me aside, said, "I interrupted your conversation, just now, somewhat abruptly; because I observed that Lucca was beginning to wander into some of his metaphysical delusions, and I never allow him to talk on such subjects. These metaphysical lunatics are always very difficult to cure.

"But yonder comes one who will never be cured!" pursued the Count, shaking his head, sorrowfully, whilst he directed my notice to a young female, who was advancing from another part of the garden, attended by a female servant or nurse. By this time the dancers had begun to range themselves in their places, and the young lady's attendant was drawing her forward, with the view of inducing her to take part in the quadrille.

The young lady, whose dress and general elegance of appearance seemed to denote that she was a person of superior rank, was disinclined to dance; and as the attendant persisted in urging her forward, she struggled to escape, and at length fell into a paroxysm of grief.

"Let her alone! Let her alone!" said Count Pisani to the attendant. "It is useless to contend with her. Poor girl! I fear she will never endure to see dancing, or to hear music, without this violent agitation. 'Come hither, Costanza,' said he, beckoning kindly to her. "Tell me what is the matter?"

"Oh, Albano! Albano!" shrieked the poor maniac. "They are going to kill Albano!"

And then, overcome by her emotion, she sank, exhausted, into the arms of her attendant, who carried her away.

Meanwhile, the sound of the violin had drawn together, from various parts of the garden, a number of patients, male and female, and the quadrille was formed. Among the most conspicuous figures in the group were the son of the Emperor of China, and the man who believed himself to be dead. The former wore on his head a splendid crown, made of gilt paper; and the latter, who was enveloped in a white sheet, stalked about with the grave and solemn air which he conceived to be common to a ghost. A melancholy madman, who evidently shared in the

festivity with reluctance and regret, and who was, from time to time, urged on by his keepers, and a woman, who fancied herself to be Saint Catherine, and was subject to strange fits of ecstasy and improvisation, were also conspicuous among the dancers. Lucca, who played the violin with extraordinary spirit, every now and then marked the time by stamping his foot on the ground, whilst, in a stentorian voice, he called out the figures, to which, however, the dancers paid not the slightest attention. The scene was indescribable. It was like one of those fantastic visions which are sometimes conjured up in a dream.

As we were passing through the court yard, on our way out, I espied Costanza, the young lady who had so determinedly refused to join in the dance. She was now kneeling down on the edge of a fountain, and intently gazing on her own countenance, which was reflected from the limpid water as from a mirror.

I asked the Count what had caused the insanity of this interesting patient. "Alas!" replied he, "it is a melancholy story of romantic *vendetta*, which might almost figure in a work of fiction." Costanza's husband had been murdered on her bridal day by a rival.

When Costanza was first brought to the establishment, her madness was of a very violent character; but, by degrees, it had softened down into a placid melancholy. Nevertheless, her case was one which admitted of no hope.

Some time after my visit to Palermo, I met Lucca in Paris. He was then, to all appearance, perfectly himself. He conversed very rationally, and even appeared to recollect having seen and conversed with me before. I enquired after poor Costanza; but he shook his head sorrowfully. The Count's prediction was fully verified. Lucca had recovered his senses; but Costanza was still an inmate of the *Casa dei Matti*.

POISON SOLD HERE!

Two centuries ago poisoning was a science; now, thanks to a sluggish and "never-minding" legislature, the art may be safely practised by the meanest capacity. The exciting extent to which murder has been recently done by poison fills a column of every newspaper and furnishes a topic for general conversation. Nor is it a new thing. A parliamentary return states, that, in the ten years which ended with 1849—putting aside accidental poisonings, which were countless—the appalling number of two hundred and fifty nine persons were murdered by poison (chiefly by arsenic), yet the practical difficulties of detection were so great that no more than eighty-five convictions took place: thus out of every three poisoners one only could be detected. So easy is murder by poison and so difficult is detection! The mystery is easy of solution; as we shall soon show.

A sporting friend writes to us, that, having shot away all his powder, the other day, he had occasion to go into a rural grocer's shop for more. While he was being served, there came in a little girl, who ended a long order for tea, sugar, soap, currants, red-herrings, and flour, with the remarkable demand—"and two ounces of arsenic." No comment whatever was made by the shopkeeper; who pulled a small blue paper of poison, out of its proper compartment in a drawer, with the same composure as he handed over the packages of tea, sugar, currants, and flour. The little girl jumbled them all into her apron, and went her way. "Perhaps," remarked our friend, "some of those ingredients are for a pudding."

"Loikely," answered the huxter, with a strong Derbyshire accent.

"And should the blue paper burst, or a little mistake be made by the cook, the whole family will be poisoned."

"They should moind what they're at."

This was the only life-preserver which occurred to the chandler's mind—"They should mind what they're at!" His conscience was not concerned in the transaction; but if its dictates had been awakened, they would have been perfectly satisfied by his knowledge of the fact that his customers were troubled with rats; and he enquired no further. The sportsman mentioned the several cases of poisoning which had recently occurred in various parts of the country; some accidental; some wilful; but the grocer could get no further than—"They should moind what they're at."

It must occur, however, to everyone, that while poisons are allowed to be sold as unrestrictedly as bread, the public—especially the humbler portion of it—even supposing them to be "minding what they're at" with unceasing vigilance, are never wholly free from the danger of having the doom to which they sentence vermin, transferred to themselves, either by accident or by vicious design.

In country places life's-bane is procurable more easily than many of its necessities. The inscription over every chandler's door, says that he must be "licensed" to sell tea, coffee, tobacco, and snuff; but he may sell arsenic without the smallest restriction. In spring and summer seasons, tons and tons of that deadly material pass over the counters of general dealers in the agricultural districts, to be used either to prevent smut in wheat, to cure sheep of scabies, or to kill vermin. Hence arsenic becomes as much a part of the stores of a farmer's, shepherd's, or cottager's cupboard, as his family's food. It is by no means uncommon to see a provincial druggist's apprentice "weighing up" two-ounce packets of arsenic, and dispensing medicines over the same counter—perhaps with the same scales! When the innumerable huxters are busy at the same work at one

end of a counter, their wives are often serving out groceries to customers at the other. In this way, it has been asserted by medical practitioners, that minute doses of poison get mixed with food or medicine oftener than is imagined. The partakers of such food fall ill, and the only pathology they can arrive at is, that "they have eaten something that has disagreed with them," though they never know what.

After the poison has left the shop, the risks increase a hundred-fold. Take the cottar's case. He lives in a small cottage; his single cupboard (at once the receptacle of food and physic) contains in a broken jug at the top-shelf a packet of arsenic. The label, if ever there was one, is torn away, or, if there, unintelligible to the unlearned cottar's family. This is the remains of the arsenic he used in summer for his sheep, or in spring to steep wheat-seed. It is put away, unknown by his family and forgotten by himself. His child some day falls ill; he is at work; the wife "fancies she has some cream of tartar somewhere, and that is good for a fever." She goes to the fatal jug, deals out the poison, and innocently kills her offspring. At the inquest a verdict of Accidental Death is returned. This poor woman, throughout her embittered life, is the victim to the want of legislative enactments to prevent such catastrophes. Her neighbours look on her for a time with a strange mixture of pity and superstitious undefined suspicion.

For the criminal, arsenic is the most deadly of all drugs to their victim, while it is the safest to themselves. Besides the numberless feasible excuses they can frame for having it in their possession, it can be administered with the least fear of detection. Oxalic acid disgusts the palate with a sweet acid taste; and, to be murderously effectual, must be administered in large quantities. Not only the taste, but the colour and smell of laudanum betray its secret at once. The favourite, because most efficient, of the three poisons of unscientific murderers—arsenic—is colourless, flavourless, and inodorous. Hence, in all recent cases of wilful poisoning, arsenic has been the poisoner's drug; for he has art enough to know, without reading blue-books, that the chances are two to one in his favour.

While the legislature refrains from administering some check to the sale of drugs destructive of life, in every other European country, no person is allowed to sell poison without a license and a guarantee, that he is fully alive to the precautions necessary, not only to its sale, but to properly storing it. In, however, imposing a necessary restriction in this country, it must not be forgotten that, legitimately employed, arsenic, in particular, is a most useful drug, and the liberty of the farmer and the manufacturer to obtain it should not be shackled. To compel, therefore, an agriculturist to scour the country to obtain a magistrate's or surgeon's signa-

ture before he could get his ten pounds of arsenic, as some have suggested, is unquestionably inexpedient; for besides the inconvenience of the plan to the purchaser, it tends to identify the magistrates or the doctor with any improper use which might be made of the mineral; and these gentlemen would strongly resist such a use of their names.

The best of all safeguards is that of confining the sale of poison to those only who are qualified by education, to exercise wholesome care, and to use a sound judgment in dispensing it; and thus be the subject of an inexpensive license.

Minor precautions might also be added. The plan of forcing vendors of poisons to sell it in bottles of particular shapes, or in papers of a certain colour, could not always be adhered to, in spite of threatened pains of fine and forfeiture. Of this class of preventive, the best we have seen is the sympathetic powder, which Mr. Slade Davies proposes should be added to arsenic, in the proportion of one per cent. When brought in contact with liquid or other aliment, it immediately changes colour so as to ensure detection.

THE TWO BLACKBIRDS.

A BLACKBIRD in a wicker cage,
That hung and swung 'mid fruits and flowers,
Had learnt the song-charm, to assuage
The dreariness of its wingless hours.

And ever when the song was heard,
From trees around the grassy plot
Frisk'd another glossy bird,—
Whose mate not long ago was shot.

Not to console its own wild smart,
But, with a kindlin', instinct strong,
The novel feeling of its heart
Beats for the captive bird of song.

And when those mellow notes are still,
It hops from off its choral perch,
O'er path and sward, with busy bill,
All grateful gifts to peck and search.

Store of ouzel dainties choicest
To those white swinging bars it brings;
And with a low consoling voice,
It talks between its fluttering wings.

Deeply in their bitter grief
Those sufferers reciprocate,
The one sings for its winged life,—
The other for its murder'd mate.

But deeper doth the secret prove,
Uniting those sad creatures so;
Humanity's great link of love,
The common sympathy of woe.

Well divined from day to day,
Is the swift speech between them twain;
For when the bird is scared away,
The captive bursts to song again.

Yet daily with its flattering voice,
Talking amid its fluttering wings,
Store of ouzel dainties choicest,
With busy bill the poor bird brings.

And shall I say, till weak with age
Down from its drowsy branch it drops,
It will not leave that captive cage,
Nor cease those busy searching hops!

Ah, no! the moral will not strain;
Another sense will make it range,
Another mate will soothe its pain,
Another season work a change.

But, through the live-long summer, tried—
A pure devotion we may see;
The ebb and flow of nature's tide—
A pitying, loving sympathy.

THE "FRESHMAN'S" PROGRESS.

URGENT business demanding my presence at Yarmouth, some few weeks ago, I was induced to entrust my life and limbs to the care of the Eastern Counties Railway Company. It happened to be about the time of the commencement of Term at Cambridge University, and the remaining compartments of the carriage in which I found a place, were filled with *Freshmen*—young men who, as the term implies, are about to make their first experience of the pleasures and advantages, the perils and temptations, of a college life. These are among the many for whose advantage and welfare the Royal Commission to inquire into the Condition of the Universities, was nominally appointed. Will the result of its labours eventually descend to the freshman undergraduate—to, in short, my fellow-travellers?

Youth is proverbially open-hearted and communicative. There is seldom much to think upon, beyond the passing object of the hour. There is no unquiet turning of the mind to visions of a sick family at home, falling funds abroad, or foundering ships at sea, which stamp moodiness on the brow, and an air of absence on the replies, of older travellers. Before we had reached Bournemouth, we were all perfectly well acquainted. One was going up to Trinity, a second to St. John's, a third to Christ's. The hopes and anticipations of each were rather suffered to ooze out, than given in so many words; but they were not, on that account, the less easily to be perceived. It was clear that one had set his mind on academic honours, and would commence his career with the determination—or fancying that he felt the determination—to win a high place by his exertions. A second seemed to be filled with an anticipation of the pleasures rather than the advantages held out by a college course. While a third appeared, to have merged every other sensation, in one of unmitigated delight at his escape from school—from the bullying tutor, the eleven o'clock lesson, Poets Græci, and the block.

My young friends got out at the Cambridge Station; and when, after a vain attempt to drink down a boiling cup of tea and snatch a hurried bun, I again threw myself unrefreshed into my seat, I found that I was alone. A feeble attempt at a lamp, let in through the

roof of the carriage, seemed, by its flickering rays, to attest, rather than to dispel, the presence of night. A thick fog rolled over the already darkened fields, and pressed against the closed windows. I could not help thinking of the light-hearted companions from whom I had just parted; I thought—shall I own it—with regret upon my own college career; I thought upon the Universities themselves, not as some do with a feeling akin to contempt, as though they were Augean stables which none but a Hercules could cleanse; nor as others, who gaze upon them with rapture, as if beholding an embodied perfection; but rather with a sense of regret as of something noble, which has been diverted from its right use. It appeared to me—and the circumstances of time, scene, and place, will account for, if they do not excuse the poor metaphor—that I saw two fine engines torn from the iron road of progress, and drawn slowly along the great highway of learning by a pair of broken-winded, ill-conditioned old mules, Sloth and Bigotry.

Those young men too, the current of whose lives had been ordained for a few moments to mingle with mine, in what light would they look back upon this very evening, if it arose, in after years, to haunt them on a lonely journey, or in a sick chamber? They would contemplate it, no doubt, as a new era in their existence, but an era of what kind? Of more earnest perseverance, of increased usefulness, of nobler aims and aspirations? Or of feverish excitement, unreal pleasure, dissipation and debt? Would the University, upon whose books their names were enrolled, put forth all her mighty energies, employ all her resources, to urge them on in the one path, and to keep them from the other? Or would these be left to their own choice? Such fancies mingled with the bitter experience of past years, and with a faint hope for the future, raised by the reflection that the public were getting impatient of the rusty teaching and lax training of the two ancient seats of learning. This stream of thought flowed on until it seemed to assume a definite form, and out of it I shaped a picture for myself, not like that of poets and dreamers, drawing its colours from an unseen and unreal world, but needing, alas! only the framework of name and individuality to become a true representation of what is taking place every year—yes, every year, that Mr. Christie rises to demand a reform in our Universities, and that Sir Robert Inglis sounds the alarm at his post to save the Academic Capitol from invaders, which have at last made a small and polished breach, through which, in ample state, the Royal Commission is about to enter.

I pictured to myself a young man, of eighteen or nineteen, leaving home for the first time. His father, the good old clergyman, is in the hall beside the corded trunks. His mother and his sisters stand around him. A moment more and the trunks are on the

fly. A tender farewell is waved to him from the hands of the assembled family. Little scraps of advice and affection are wasted to him on their latest breath. Crack goes the whip, the wheels go round, the green garden-gate opens with a creaking sound—as if it too had its share in the general solicitude—and a new world lies before him.

While this young man—call him what you please—is hurrying onwards towards a scene of which he has hitherto had no experience, let us pause for a moment and consider his true position, as well as that of hundreds of others who are similarly situated. Divesting him of the fictitious interest, with which the time and circumstances may, in the opinion of some, appear to invest him—losing sight for a minute of the fact that he is about to “walk in the shades of Academe,” or “to breathe the spirit of Mithras,” or “to stray on the banks of the argent Cam,” or “to become a bulwark of our glorious Collegiate institutions,”—let us calculate some of the difficulties which will first present themselves in his future course, and how he is prepared to guard against them.

He has been educated at home, perhaps, strictly under the parental eye—for I know many parents who think this kind of education the surest protection against future temptation. He has not been suffered to learn what vice is. He has been guarded from the society of the profligate Smiths and Joneses of the neighbourhood. His reading has been superintended in the same careful manner. His “Hume’s History of England” is a “Mitchell’s Hume” with the sceptical passages left out. He has never heard of Don Juan, or been inside a theatre. The races take place twice every year within a mile of the vicarage, but he has never been to them. He has never been down in the morning later than half-past seven o’clock, or been out of bed by ten at night. He waters the mignonette beds with his sisters after breakfast, and listens to the touching English ballads which they sing of an evening. A youth, so brought up, is surely—if any one can be—secure from harm.

In a word, he has been kept as a child up to the very moment of his becoming a man. With the thoughts of a child, and the feelings of a child, and the strength of a child, he is of a sudden to be brought in contact with the world of Cambridge or Oxford, which, though on a smaller scale, is still a faithful representation—it is a daguerrotype, not a miniature—of the great world beyond. He may, of course, stand the ordeal—in very many cases, he does—but it will be in spite of his early training, not by means of it.

I would not, however, be perfectly sure that the youth whom we are picturing to ourselves is so innocent as his friends give him credit for. To the deepest dungeon and the most secluded hermitage some whispers of the world will float, of that world which, perhaps,

we only plunge into the more deeply, the more we fancy that we have shut it out from our view. There is no lock sufficiently strong to keep out vicious propensities, any more than the Hellespont could part Hero from her Leander, or Bishop Hatto's Rhenish tower preserve him from the avenging rats. The boy whom you so fondly cherish, may have imbibed the first rudiments of pipe-smoking from the labourer who works in your garden; he may have drunk out of the spirit-flask of my lord's gamekeeper, whom he meets in his walks, when you are not by; he may have learned to ogle the girls of the village, and you none the wiser. Things not in themselves, perhaps, particularly vicious or criminal, but here are the materials ready laid; and let but the spark of college temptation be applied, and they may burn up all the fiercer and brighter for having lain dry so long.

But, under any circumstances, and supposing him to have already undergone the ordeal of a school, or a private tutor's establishment—I wish to be understood as speaking of the middling classes—there are some peculiar trials to be noted, which now, more particularly than at any other period of his life, will assail our young friend. He has never in his life before been entrusted with a larger sum than five pounds, and here he is with fifty pounds in his pocket and (though he may not yet be aware of the fact by bitter experience) credit to an unlimited extent. He has never in his life purchased for himself an article of greater value and importance than a cricket-bat or a fishing-rod; yet here he is about to provide himself with all the articles of a bachelor's establishment, without the remotest idea of their market price—without knowing whether the sum he gives for each will be twenty-five per cent., or fifty per cent., or a hundred per cent. above its proper value. If his socks have waited darning at home, one of the maid-servants has darned them accordingly; new shirts and new flannel waistcoats have succeeded to the senior portion of his linen by an easy and imperceptible process, by his mother's watchful care, without his paying any attention to the matter. He remembers that to have helped himself to a third glass of port wine after dinner, would have called a frown to the face of his father; now, he can drink champagne or hock for his breakfast, if he feels so disposed. To be out after ten o'clock at night would assuredly have required some explanation at the Vicarage; now, he is not required to be in his College till midnight—within those precincts he can go where he chooses, and spend the whole night at a roystering party, if he has a mind to do so. If he run into debt, the discovery will not, in all probability, be made for three years and a quarter, till he takes his degree. Youth is sanguine—by that time his father's rich fifth cousin may have dropped off, leaving him a fortune. A thousand things may have happened. Nor should it be forgotten that—

paradoxical as it may seem—the temptations to which a Freshman is exposed are tenfold greater at Cambridge or Oxford than if he could be permitted, at the same time of life, and with the same views, to take lodgings in London, and read for his degree in the metropolis itself. In the latter case, surrounded by virtuous companions, and with persons older than himself to overlook his conduct, he might be protected from evil by the very magnitude of the place in which he resides. It would start up before him like a phantom in the gas-lighted street, it would vindicate its existence in the columns of the newspaper, but it would not be a dweller in the same college, in the same quadrangle, on the same staircase, perhaps in the very next room. For the smaller the field in which the monster Vice has to work, the more frequently will he obtrude himself upon our daily walks and occupations, and I am not one of those who believe that he is always hated as soon as seen.

In the midst of all this, at the period of all others when he most requires advice and assistance, what will his Tutor—his College Tutor—do for him? Is that functionary really what he is presumed to be—the guardian of youth, the overseer of his pupils, their adviser, their reprover, their comforter, their friend?—or does the multiplicity of his engagements, and the number of his pupils (about one hundred and fifty to each tutor, at Trinity) prevent him from being anything but a far-off and half-fabulous being, a kind of myth grown out of the old legends that haunt the banks of the Cam, and still cherished from a love of antiquity, or—to speak the plain, sober truth—a person seen, at most, once at the beginning and once at the end of every Term, on hurried visits of ceremony? Will the Fellows do anything for him—the Fellows, whose salaries were originally accorded to them, on the ground that they should act as tutors to the undergraduates? Or is the original intention of the Founder adhered to in those cases only where it is clearly unsuited to the present day? Are the greater part of the Fellows residing elsewhere, and still receiving their stipends? Are the Universities to continue, like the Pyramids, immutable and unchangeable in our land of change and mutability? Will the Royal Commission report on these things?

I am not, however, the Royal Commission—if I were, I would found my report on other evidence than that of the Dignitaries and Fellows, who will, of course, have their views as to what reforms are necessary—I would seek evidence that would reveal the rottenness of the system which urges the young friend whom I pictured departing from the door of a poor Vicarage, amidst the adieus of his affectionate and anxious friends, into a career of debt and vice.

I went on picturing to myself this young man after a residence at College of a few days.

He has furnished his rooms; he has got together his crockery and his glass. He has spent all the money which he brought with him for his outfit, (with the exception of a few pounds which he reserves to meet the current expenses of the Term,) and still fresh wants are continually springing up. He could not have imagined that so many things were necessary to fit up two small rooms,—coals, candles, candlesticks, brushes of every size and make, for the insatiable bed-maker. There are still some articles which he must absolutely procure: what is he to do? He has faithfully promised to pay ready-money on all occasions; yet he is disinclined to write home so soon for a further supply. He feels that his ignorance may have led him to pay too high a price for his tables and chairs, or to purchase some articles, (a sofa and arm-chair, for instance, pressed upon him by the winning ways of the upholsterer,) which were not absolutely needed; the money ought, no doubt, to have gone further. A thought strikes him. He knows that bills can be sent in "through the tutor." They will be sent home at the end of Term, and paid by his father, together with the College expenses. This is not running into debt. He sallies forth, and finds a shop of the kind that he requires. The necessary articles are selected; he requests the tradesman to send in the bill for them to the College Tutor. The tradesman hesitates. "Why, is it not done every day?" The tradesman hesitates still further. "Where is the objection?" "Well, the articles are not of any very great value,—perhaps the gentleman will pay for them next Term." "Yes; but why not send in the bill to the Tutor?" The tradesman looks cautiously round the shop. The fact is—he would not wish it to go any further—but if the bill is sent in to the College Tutor, he shall not, perhaps, get his money for a couple of years. For such a trifling article it is not worth his while. He would rather trust to the young gentleman,—he would indeed. He may be stepping that way next Term, and then be able to pay for them. Perhaps he may be wanting something else, too, before that time. The articles shall be sent to his rooms forthwith.

There is no resisting this argument. As for the articles themselves, they may be of the most trifling value,—a pair of brass candlesticks, a basin and jug, an eight-day clock; but the principle is the same, and, whatever they be, our young friend leaves the shop, for the first time in his life, *IN DEBT*.

The scene changes. He has been up a Term or two by this time, and has acquired a little experience. He has a few debts, but still they mount up to a trifling sum only. He has found out that his College does very little for him, and his private tutor (whom he pays out of his own pocket) everything. The two rudimentary lectures which he was at first forced to attend, are now pressed less earnestly

upon his notice. In fact, he can almost entirely "cut" them, if he likes, and does cut them accordingly, as a waste of time. His College, possibly, has only two tutors, both mathematicians; so that one of them is forced to lecture upon classical subjects. The mistakes which this lecturer makes would disgrace a boy in the third form of a grammar school. It is to his private tutors, or "coaches," that he looks for instruction. They are costing his poor father a heavy sum; and as he turns to his trigonometry with a sigh, he thinks that he might just as profitably be reading at New York or Ispahan, and coming up at the end of three years to take his degree. The fire is burning low in the grate. How he wishes that he had his sisters by him now. Dear, dear, how lonely it feels!

Suddenly, through an opening door, convivial sounds burst upon his ear. They come from the opposite rooms—the rooms of Smith, the good-humoured man, whom he meets sometimes and speaks to, on the staircase. It is his turn to entertain his Boat Club with a supper, and he is doing so right merrily. Presently Smith himself dashes in, his hair standing up on end, his utterance thick, his face more good-humoured than ever. Has he got a saucepan? For the love of Heaven, has he got a saucepan? It is a new discovery, a culinary era, an epoch in the annals of drinks! They are about to concoct something wonderful with whisky, and eggs, and beer, if they could only find a saucepan. Heaven be praised, here is one! A thousand thanks! But won't he step in and join them? Supper is quite over. He must be lonely there. Well, it is lonely, and he thinks there would be no harm in joining them, for half an hour or so, just to see what it is like.

For a moment or two he can only hear discordant noises; he sees nothing. Twenty London fogs are rolled into one before him. His eyes begin to water, and his head to ache. Presently, as the mist dispels, he beholds a large party of youths seated in ungraceful attitudes round a table, cigars in their mouths, oaths on their lips, glasses of steaming liquid before them. He is introduced and made welcome. Let me see, wasn't he from Guttleborough School? It was by a Guttleborough man that the Club was founded. No? Ah, then, it must be some one else very like him. Would he not wish to be a member of the Club? He is confused, and scarcely knows what to say. Ah, well, he shall be proposed. He is accommodated with a jorum of milk-punch, and is induced to make his first attempt at a cigar. The mirth grows more furious; everything provokes roars of laughter. To stick a pin into a neighbour's leg is considered very droll. To tumble off a chair, establishes at once a character for facetiousness. He feels no longer lonely, but indulges in more punch. Emboldened by its effects, he repeats a bad pun which he remembers to have met with in the speech of some great statesman;

it is received with frantic applause. But, silence! silence for a song!

A gentleman with a husky voice carols forth a ditty. It has no wit in it, and very few rhymes, but treats on a subject in which all feel an interest. An individual with an un-euphonious name—Huggins, or Noggins, or Buggins,—“went up to London one day, fol de rol, diddle dol, diddle dol dee; And met with a beautiful actress, de diddle de day.

But the youth hears no more! Cigars, smoke, broken glasses, bent caps, tattered gowns, pale faces, all fade from his view. He sinks from his chair insensible; and, to the delight of the spectators, in a most convenient and corkable position. His face is corked accordingly; and an hour afterwards he snores heavily upon his bed, with the effigy of a gallows on his forehead, and a beard and mustache that a German patriot might envy.

But, Oh, the morning! He has never felt so before. How he curses his folly and wickedness! What is he to do? Smith, who drops in at about two o'clock, says, “Drink pale ale!” He drinks it, and feels somewhat refreshed. “Never mind,” says Smith, “one good thing has come of your last night’s pardonable weakness. A meeting has been held this morning, and you are elected a member of the HERO AND LEANDER CLUB.”

Long vacation has commenced. He has pulled in a good many matches by this time, and won “pewters,” and drunk out of the pewters which he has won. He has added a little to his debts, too. Five months at the Vicarage becomes rather a dreary prospect. What should he be doing with himself all that time? Besides, he really must be reading. At least, so he says in his letter to his father, who consents, upon the recommendation of his College Tutor, that he should form one of the reading-party who are going with Mr. Orbilius to the beautiful town of Pluckville.

What a neighbourhood is that of Pluckville! What a lovely lake to row upon! What an admirable and convivial cricket-club attached to the town! What splendid fishing! What enchanting rides and drives! What slap-up shooting to look forward to, as the month of September comes on! No wonder it is a favourite resort of reading-parties. There are one or two other parties in the vicinity now, besides that of Mr. Orbilius. All the young men lodge in the town. They fraternise. There is an ordinary for those who choose to join, at half-past six punctual, at the Medusa’s Head. There is not, perhaps, very much reading going on of a morning; but Mr. Orbilius does not fall ill on that account. He is a philosopher, and knows how to put up with these kind of things.

If this little paper could be enlarged into a transcendent work of fiction destined to live

in every age and clime, this might be fixed upon by the critics as the identical place where the hero should fall in love. A beautiful heiress takes a fancy to him and admits him to her *château*. This brings him into collision with a haughty duke. They fight, and so on.

For my part, I should prefer him to fall in love with one of the doctor’s pretty nieces, who are good amiable girls, or even with the attorney’s black-eyed daughter. Such an affair of the heart would bring him into immediate collision, not with a duke, but with some of the ideas which have of late taken possession of his mind. It would sober and steady him. His companions—except the utterly profligate, would respect the scruples of a man who grew more particular in his conduct, on the plea that he was engaged. However, to tell the truth, love did not intrude upon the picture that I was drawing out for myself; except the maternal love—deep, unspeakable—which encircled and overshadowed the boy, when at the close of the vacation I thought I saw him return, not much improved in any respect by his READING PARTY.

Perhaps all this is tedious. Well, life itself is tedious. We cannot all of us be earls and princes, carry off our lady-loves on milk-white palfreys, or be stabbed in midnight encounters. Most of us will live on in this dull tedious kind of way, without any extraordinary piece of good luck turning up at the end of the third volume. Here he is, after another Term or two, in chapel. It is a cold winter morning as he sits on the hard oak benches of the College chapel. He remembers when Divine Service called up feelings of devotion in his youthful mind. The organ, as it sounded, thrilled through his frame. He now thinks upon going to chapel as he would think about going to the dentist’s. He has been deluged and drenched with chapel. He is even now sitting there, as a punishment! “As you have failed to *make up your number* of chapels the two last weeks,” such are the very words of the Dean, “you will, if you please, *keep* every chapel till the end of Term.” How can he reverence that which he is taught to look upon as a penalty attached to a crime? “All they appear to require of you here,” he thinks disconsolately to himself, “is to eat dinners, and to go to chapel. Lectures are, comparatively, of no importance. Can this be called an University edu—?” But the service is at an end. The pompous, red-faced Master stalks on, bowing to the two young noblemen undergraduates who walk beside him. Then follow the other dignitaries. And last of all the vulgar herd of students, many with their great coats buttoned up over their night-gowns, and their hair unbrushed, having been called forth by the ring of the bell, to come and sleep on the chapel benches, instead of continuing to sleep in bed.

What is this scene which strikes, upon his eye, as he hurries into the street, his surplice dragging in the mud, to purchase something (on "tick") for his breakfast? A party of young men riding through the town in hunting costume, cracking their whips. Others following behind in dog-carts, their legs muffled up from the cold in thick railway rugs. The meet is, a long way off to-day. They are starting betimes to go to cover.

Why should he not go out himself, and have a day's enjoyment? He has been penned in and cooped up quite enough of late. He used to follow the hounds, on his pony, sometimes at home, on the sly. He can get across country as well as some of them. To-morrow the meet is quite close. Ah! but then there is evening chapel; suppose he should not get back in time for that? He is now compelled to attend every one. A lucky thought; he will get an "egrotal," or medical, certificate of illness. He knows Dr. Lifepill. Dr. Lifepill will give him one in a moment. He knocks at the Doctor's door. He has a bad cold—rheumatism—he must lie up for a day or two. All right, it shall go in. He is off to the stable and orders his horse.

I fancied a young man so situated, looking around him after a while, and finding his expenses increasing on every side, his debts gathering as they run on. Then there are fines for everything. Everything is pecuniary. A fine for being out after dark without his cap and gown—a fine for coming in after a certain hour at night—a fine for walking across the grass-plots of his College—a fine for every time he misses chapel—a fine for coming in late to an examination—a fine (I have been credibly informed, and have never heard it contradicted) for not taking the *Lord's Supper*. Then the charges at the kitchen of his College are enormous, and he must have his provisions from thence. He has acquired, besides, luxurious tastes, and feels that he must gratify them. I can fancy (indeed it does not require a great stretch of imagination) a young man, under these circumstances, going to a money-lender, either at Cambridge or in London. But imagination followed no further than the fearful door of the usurer, and what passed inside formed no part of my picture, simply because I have never, myself, had the good luck to be acquainted with a money-lender, either in his own hospitable mansion, or in society. Neither do I fancy the ruin and the misery which follow fast upon an introduction to the good man. These are not fancies, but dire realities which we have all of us witnessed, somewhere or other, in our time.

There is one more scene that requires our attention. It is his last Term at College. It is now so long since he has made a practice of study, that he must set to work in earnest in order to gain an ordinary degree—a sad descent from the high honours that his father hoped and almost felt sure that he would

take! He applies to Mr. Crammer. Mr. Crammer is a celebrated "coach" for lazy and stupid men, and has a system of his own which has met with decided success. He knows his customers perfectly well; he is aware that, taken from their pipes and their beer, they are like fish on dry ground; the element in which they luxuriate being, indeed, tobacco-smoke, and such little faculties as they may still have remaining, oozing away when submitted to the action of any other atmosphere. They accordingly all sit round a table at which Mr. Crammer himself officiates as chairman. Every one calls for his favourite drink, and his favourite tobacco. A "gyp" is in attendance to take the orders. Each one, in his turn, construes the lesson or demonstrates the proposition appointed for the day. No other sound is allowed, save and except the calls for liquor. No one is allowed to leave the room, or to discontinue smoking and drinking till the lesson has, in this way, gone the round of the whole company assembled. At the conclusion, the young votaries of learning under difficulties rise astonished to find how much information they have acquired and how quickly the time has passed by.

But even Mr. Crammer is like a physician called in to a hopeless case, and he is PLUCKED!

So many great writers have exhausted their pathos upon this fatal event and its consequences, our book-cases contain so many afflicting *tableaux* of frantic duns and desperate shifts, of weeping parents and contrite sons, of the agonies of unsettled debt weighing upon the mind, and haunting the midnight pillow, dwelling side by side with the law-student in his lonely chambers, standing by the preacher in his pulpit, getting up like black Care behind the horseman, that I am unwilling that the picture which I conjured up in my own imagination, should suffer by the contrast, and—like the works of one not an academician—be stuck away out of sight, as it were, amidst these great works of art. Experience will supply a better representation than any daub of mine.

Let it not be supposed, however, by those unacquainted with College life, that the career which I have indicated above, is that of the majority of young men, or even of more than a small,—I wish I could add, an insignificant minority. There are degrees, too, in these matters; and what would be a lawful expense in the case of one, would be an unpardonable act of extravagance in another. If, however, only half-a-dozen such cases occurred in a year, it would be time to ask whether the authorities are doing all that they can to guard their youthful charges from the evils and temptations which assail them. Let us hope that the University Commission will answer this question; and if there be really any unsoundness in the Collegiate System, propose an efficient remedy.

Meanwhile, one passing observation may be made. The change from school to college, from the restraints of boyhood to the liberty of the full-grown man is, as matters now stand, surely too marked and rapid. I remember in my own case—but that is many years ago it is true—that I was flogged for not saying my lessons, not many weeks before I came up to College, and that the transition from toffee to mulled claret was immediate, and almost imperceptible. The period, too, which those who are not intending to read for Honours are required to stop there, seems to me too long. Most of them could, in their first Term, pass satisfactorily, and with perfect ease, the rudimentary examination which they have ultimately to go through, in order to obtain the Bachelor of Arts degree. For these, two years (according to the suggestion of the present tutor of Trinity Hall) would be amply sufficient. And in that case, matters might be so arranged, that the young man should take his degree as nearly as possible at the period of his coming of age. But I have said enough. As my old tutor used to remark to me—poor man! he lived to such an extreme age in single blessedness, that there are now none left to weep over him but the marble cherubim which the executors caused to be carved out, and, I believe, never paid for—as my old tutor used to say, "Wait till you are yourself a Fellow, before you talk of University reform." So that it is of the Fellows that you must ask whether the Fellows have not too little work to do. Wait till you are a Fellow yourself, before you presume to say whether the Fellows must be made to reside in Cambridge. Meanwhile you and I, reader, are not to have an opinion about the matter.

By this time the train was stopping. The town of Yarmouth was in sight, and I stepped out to exchange the dream of by-gone days, and the thick-coming fancies of the mind, for the realities of homely, plodding, every-day life.

CHIPS.

"SLOPED FOR TEXAS."

THIS is an answer given in some of the States of America when a gentleman has decamped from his wife, from his creditors, or from any other responsibility which he finds it troublesome to meet or to support. Among the curious instances of the application of this phrase is an adventure which happened to myself.

It is the boast of the bloods of the State of Backinneck, in Arkansas, that they are born with skins like alligators, and with strength like bears. They work hard, and they play hard. Gaming is the recreation most indulged in, and the gaming-houses of the western part of Arkansas have branded it with an unenviable notoriety.

One dark summer night, I lounged, as a

mere spectator, the different rooms, watching the various games of hazard that were being played. Some of the players seemed to have set their very souls upon the stakes: their eyes were bloodshot, and fixed, from beneath their wrinkled brows, on the table, as if their everlasting weal or woe depended there upon the turning of the dice; whilst others—the finished blacklegs—assumed an indifferent and careless look, though a kind of sardonic smile playing round their lips, but too plainly revealed a sort of habitual desperation. Three of the players looked the very counterparts of each other, not only in face, but expression; both the physical and moral likeness was indeed striking. The other player was a young man, a stranger, whom they call a "green one," in this and many other parts of the world. His eyes, his nose, his whole physiognomy, seemed to project, and to be capable of growing even still longer.

"Fifty dollars more," he exclaimed, with a deep-drawn breath, as he threw down the stake.

Each of his opponents turned up his cards coolly and confidently; but the long-visaged hero laid his stake before them, and, to the astonishment of the three professionals, won.

"Hurrah! the luck has turned, and I crow!" he cried out in an ecstasy, and pocketed the cash.

The worthy trio smiled at this, and recommenced play. The green young man displayed a broad but silent grin at his good fortune, and often took out his money to count it over, and see if each piece was good.

"Here are a hundred dollars more," cried the sylvan youth, "and I crow."

"I take them," said one of the trio. The youth won again, and "crowed" louder this time than he did the first.

On went the game; stakes were lost and won. Gradually the rouleaus of the "crower" dwindled down to a three or four of dollars, or so. It was clear that the gentlemen in black had been luring him on by that best of decoys, success at first.

"Let me see something for my money." Here's a stake of two dollars, and I crow!" But he spoke now in a very faint treble indeed, and looked penitently at the cards.

Again the cards were shuffled, cut, and dealt, and the "plucked pigeon" staked his last dollar upon them.

"The last button on Gabe's coat, and I cr—cr—; no, I'll be hamstrung if I do!"

He lost this too, and, with as deep a curse as I ever heard, he rose from the green board.

The apartment was very spacious, and on the ground floor. There was only this one gaming table in it, and not many lookers-on besides myself. Thinking the gaming was over, I turned to go out, but found the door locked, and the key gone. There was evidently something in the wind. At all events, I reflected, in case of need, the windows are not very far to the ground. I returned, and

saw the winners dividing the spoil, and the poor ghora "greenhorn," leaning over the back of their chairs, staring intently at the money.

The notes were deliberately spread out, one after another. Those which the loser had staked were new, fresh from the press, he said, and they were sorted into a heap distinct from the rest. They were two-dollar, three-dollar, and five-dollar notes, from the Indiana Bank, and the Bank of Columbus, in Ohio.

"I say, Ned, I don't think these notes are good," said one of the winners, and examined them.

"I wish they were 'nt, and I'd crow," cried out the loser, very chop-fallen, at his elbow.

This simple speech lulled the suspicions of the counter, and he resumed his counting. At last, as he took up the last note, and eyeing it keenly, he exclaimed, in a most emphatic manner, "I'll be hanged if they are genuine! They are forged!"

"No, they an't!" replied the loser, quite as emphatically.

A very opprobrious epithet was now hurled at the latter. He, without more ado, knocked down the speaker at a blow, capsize the table, which put out the lights, and, in the next instant, darted out of the window, whilst a bullet, fired from a pistol, cracked the pane of glass over his head. He had leaped into the small court-yard, with a wooden paling round it. The winners dashed towards the door, but found that the "green one" had secured it.

When the three worthies were convinced that the door would not yield to their efforts, and when they heard their "*victim*" galloping away, they gave a laugh at the trick played them, and returned to the table.

"Strike a light, Bill, and let's pick up what notes have fallen. I have nearly the whole lot in my pocket."

The light soon made its appearance.

"What! None on the floor? Capital; I think I must have them all in my pocket, then," saying which, he drew out the notes, and laid them on the table.

"Fire and Furies! These are the forged notes! The rascal has whipped up the other heap!"

While all this was going on I stepped towards the window, but had not stood there long, before I heard the clanking hoofs of a horse beyond the paling, and a shout wafted into the room—"Sloped for Texas!"

The worst part of the story remains to be told: it was my horse on which the rogue was now galloping off.

RIO DE JANEIRO AND ITS FEATHER-FLOWERS.

We derive the following Chip from the manuscript journal of a traveller:—

On we rustled, steadily passing and answering the hail from the forts that crown the rock, and emerged into San Sebastian Bay.

What a scene! never shall I forget it. An inland lake, some sixty miles in circumference, stretched before me, studded with ships of every clime. Amid the Stripes and Stars of the Great Republic; the Tricolor of the royal sailor, Joinville; my heart warmed to the British Union Jack beneath the broad pendant of an admiral. Hundreds of canoes manned by negroes in scanty costume, glided swiftly over the placid waters, plying between the ships and shore; in front rose the white city of Rio de Janeiro. Churches and convents, and tall warehouses, backed up by mountains, all covered with the richest tropical vegetation, save where the bare peak of Corovado towered above all. A sky of that clear intense blue only seen in the tropics, framed this matchless panorama. The quarantine boat, pulled by twelve negroes in white canvas shirts without sleeves, and drawers reaching to the knee only, first reached and examined us.

On landing, it was impossible not to be struck by the crowds of black boatmen, childish, submissive, and gay; the Europeans with ghastly white faces, white broad-brimmed Panama hats, white jackets, shirts, and trousers, hurrying about rapidly and earnestly among the languid deliberation of the tawny Brazilians.

Threading my way through a wilderness of hogsheads of sugar, and bags of coffee, I entered a long street of lofty white houses and green jalousés, undrained, ill-paved, and never cleaned. Before I had gone many yards, I was startled by a strange compound of sounds of rattling, singing, and groaning; from a cross street, prancing round the corner, came a hideous half-naked black; in his hand he held aloft a sort of gigantic wicker hour-glass full of stones, shaking and waving this, like a drum-major in front of his regiment, in regular time to a song, part words, part grunts, part groans: he led the way capering, fifty negroes followed in single file, some more hideous, barbarous, and unearthly than any I ever before beheld; each carried on his back a huge bag of coffee, and all joined in an unearthly chorus. I stood transfixed with amazement until they disappeared like a procession in a pantomime; surprise, disgust, horror, pity for these poor beasts of burden, overcame me. Next I encountered an enormous negress, a perfect mountain of black flesh, in a blue cotton robe, with a red and yellow cotton handkerchief round her head, garnished with large-headed gilt pins and strings of many-coloured beads as a necklace. She carried a basket full of tempting fruit. Smiling the good-humoured smile peculiar to Africans, she invited me by signs to select something from a stock of oranges and bananas. Oh, after a sea-voyage, salt meat and no fresh vegetable for many weeks, what a treat it was! The oranges, full of juice, and cold as ice, were more delicious than any thing I ever before tasted;

but whether it was the appetite or the fruit that was so superior, I know not.

The fruits, the flowers, the birds exposed for sale, were all magnificent; but the city of Rio is much dirtier than, and very inferior to Bordeaux, Havre, or Marseilles.

On the following day after a very bad dinner on steaks, which it would be a libel to compare with English horseflesh, I went to the celebrated Madame Finot's for some of her feather flowers, one of the few manufactures established in Brazil. In a long lofty room, opening on a verandah, I found the mistress of the establishment, a well-dressed, coquettish Frenchwoman, seated in the midst of at least forty girls, of all ages, from ten to twenty, and of all colours, from jet black to the palest shade of mixed blood; some of them extremely pretty, and all attired in very becoming costumes. Baskets full of feathers, each of some colour and shade of the richest dyes, were arranged down the centre of the room. From these their nimble fingers were engaged in fashioning exact representations of the most gorgeous tropical flowers, as well as roses, carnations, tulips, camellias, and all the garden favourites of Europe. Beside the baskets of feathers, all around hung perches and cages containing parrots and other birds of great value even in Brazil; numbers flew about the room like tame pigeons, and every now and then there was a regular chase and flutter, when the little mulattoes had to pluck some feather from a living subject to finish the wreath of a queen or a princess. In a detestable country, Madame Finot's bright birds and merry girls are almost my only pleasant recollection.

"CAPE" SKETCHES.

THERE is an old Cape proverb which is not at all encouraging to new comers. It pronounces it to be a land of "flowers without scent, birds without song, and rivers without water." It is indeed true that the indigenous flowers, varied and beautiful as they are, are almost destitute of odour; though of course those which have been transplanted from other climes retain their original perfume. The varieties of birds of lovely plumage and of every size, are almost innumerable; but while their chirping is incessant, not a song is ever heard in a Cape wood. With regard to rivers, immense channels are to be seen in all parts of the country, which, if filled with water, would form noble streams navigable for hundreds of miles, yet many of them have never a drop of water in them (except what may collect from the rain in hollows), and others are mere bubbling brooks at ordinary times, though enormous roaring torrents after a thunder storm in the distant mountains, from whence they take their rise.

We, in England, have not much to boast of in the way of navigable streams; but we know little of the want of water for agricul-

tural or manufacturing purposes. "A never-failing spring" of water on a Cape farm is a great attraction in an auctioneer's advertisement, and though, probably, the said spring may be a miserable little affair, it will at least double the value of the farm that possesses it. Artesian wells are much talked of, but I never knew of one being sunk. Even common wells are rare, though in almost every place water is found, when bored for, at no great depth below the surface. On a great proportion of farms, the stock and their master depend entirely on the supply of water from the clouds, collected in the "vleys," or ponds dug on their farms. A glass of this water is exactly the colour of pea-soup, and if you are "a freshman" in the colony, you will feel considerable hesitation in putting it to your lips; yet, when you come to travel much in the land, you will often have to long in vain for the luxury of such a draught.

I was travelling over towards the north-east of the colony, and for eighteen hours my oxen had tasted no water. The poor brutes were, consequently, so faint and weary, that I began to fear for their lives. Still it was necessary to urge them on that we might come to some oasis in the desert. Suddenly, the whole span of a dozen set up a roar, threw their tails straight up, and dashed along with the waggon at a gallop. My first thought was "a lion," and I seized my double-barrelled gun to make ready, but in a few seconds my fears were allayed, for right a-head of me lay a large "vley" of water, to which the cattle were making at their best speed, and into which they dragged the wagon, and slacked their thirst without waiting for the ceremony of being outspanned. They had scented the water long before they could see it. We had previously passed several empty "vleys," dried up from the long drought.

A compensating provision of nature gives to the part of the colony most exposed to drought, a succulent little birch, growing in tufts, like the knots of hair on a negro's head. It is called "Karoo," and is a substitute for grass. Cattle which feed on this herb, scarcely require water: but animals coming from the grass country do not relish it, and will not touch it for a long time. I have lost cattle in consequence of this want of education on their part.

THE PRICE OF LAND varies in different parts of the colony according to its situation in reference to the markets. Perhaps the average price may be stated at about eight to ten shillings per acre. Thus, a farm of two thousand acres is worth from eight hundred to one thousand pounds. It is generally sold at a credit of one, two, and three years—the purchase-money in the meantime bearing interest at six per cent (the legal interest of the colony). Farms are seldom of a less extent than two thousand acres: occasionally they are much larger. They may also be

rented; but you would probably have to pay one hundred and thirty pounds a year for a farm, which you might purchase for a thousand pounds—so valuable is capital. Some districts are well adapted for cattle, some for sheep, and many for both. But there are many districts in which sheep do not thrive so well; for example, it is almost impossible to grow good wool on farms bordering on the sea. The character of a farm is always well known; so that by making proper enquiries, a purchaser may always avoid being deceived. Newly arrived colonists are very apt to be attracted by pretty scenery, and the park-like appearance of many parts of the colony; but it frequently happens that the spots most destitute of natural beauties feed the best stock. Some farmers find it necessary to have the farms at a considerable distance from each other, in order to afford their stock a change of pasture. This is occasionally necessary, for another reason. It often happens that a farm whereon sheep thrive admirably, and produce beautifully fine wool, is situate in so dry a district, that in the heat of summer there is not sufficient pasturage for the stock.

A farm of two thousand acres will support about the same number of sheep, and a hundred head of cattle, horses, &c., which is a fair farming stock. Probably the owner would lay out about thirty or forty acres in garden ground and agriculture.

The PRICE OF SHEEP entirely depends on the breed to which they belong. The original Cape Sheep is a perfect curiosity to a stranger, and is, in fact, gradually becoming scarce in the Colony. Woolled sheep vary in price from five shillings to twenty-five shillings each, according to the quality of their wool. A fair average price for good woolled sheep of the Merino breed is about ten shillings each. Thorough-bred rams are very valuable, many of them being worth from thirty to fifty guineas each.

There is not much variation in the PRICES OF CATTLE. They cost about two pounds ten shillings, or three pounds each for cows and working oxen; about four pounds to four pounds ten shillings for fat slaughter oxen. The cows, however, do not yield nearly one half the quantity of milk that is obtained from them in England; nor do the oxen furnish, by any means, such fine or rich beef.

Horses are very cheap. For all ordinary purposes you may purchase excellent horses for seven pounds, ten pounds, or twelve pounds each. If you wish to have something smart, well groomed, and in first-rate condition, you may have to pay twenty pounds to twenty-five pounds. But all above fifteen pounds may be regarded as mere fancy prices. They are wonderfully strong and hardy, and their powers of endurance are immense. Sixty miles in a day, with no other food than grass and water, is a very ordinary journey for a

horse to carry his rider. I once started on a journey with four horses—one of them ridden by myself, another led by me, a third ridden by my servant, and the fourth (carrying my saddle-bags) led by him. I was very much pressed for time, and had two hundred and thirty-five miles to accomplish. I completed the journey, with the same horses (changing the saddles from one to another) in four days; and not one of the four nags was nearly so fatigued when I reached my destination, as I have generally found my hunter, in England, after a ten or twelve miles burst across the country with the hounds. I must observe, however, that I obtained good forage for them every day. Not one of them had cost me ten pounds, and the hardest of the lot only four pounds ten shillings! The favourite travelling pace is a kind of easy amble, and, with an occasional walk, averages little more than six miles an hour.

I could not advise any one to commence SHEEP FARMING in South Africa with less than one thousand five hundred pounds capital, unless he is prepared to undergo very great privations. With that capital he might make a very fair start; of course, only hiring a farm at first. No man should commence without six months' experience in the Colony, which time he should employ in visiting farmers, who are always delighted to receive him, frequenting the markets, studying the character of the natives, and picking up bad Dutch. He should then be very careful in his selection of a farm, taking care to visit it in the driest season. He had better not purchase the most expensive quality of sheep, as any loss, from mismanagement or otherwise, would fall too heavily on a beginner. Let him be content to give seven shillings and sixpence to ten shillings a-piece for them; and buy a few rams at ten pounds each. A wagon will cost him seventy or eighty pounds; and a span of oxen thirty-five pounds; a horse, saddle, and bridle, about eighteen pounds; and beyond this he will only require a plough and two or three agricultural implements, which he will find cheap enough. If he is a bachelor his domestic furniture will cost him something infinitesimally small. If he is a married man he will, if wise, take what he requires with him from England.

I shall conclude these sketches with such observations as my experience suggests to be useful to SETTLERS. Let me commence by saying, that there is scarcely a trade, or an art, a knowledge of which is not useful to a colonial settler; above all things, let him know how to handle carpenter's tools, for he will often find such knowledge put him in possession of a dozen little comforts which he would not otherwise enjoy.

It is remarkable that some of the most successful farmers in South Africa are men who were originally "Cockneys." On the

other hand, many who were farmers in England have failed to equal the townsmen in their success. Perhaps the cause of this apparent anomaly is, that the former, being utterly ignorant of the agricultural or pastoral arts, before arriving in the Colony, have studied them as practised in the country they dwell in; while the others fancy they know all about them beforehand, pursue their own system, and find that what answered in England fails in Africa.

Stock of all kinds feed on grass alone all the year round. Sheep are turned out of the fold (the "kraal" it is called) about ten or eleven in the morning, and are driven to their pasture ground by the herdsman, who remains with them all day, driving them home again a little before sunset. Except counting them out and counting them into the kraal morning and evening, the sheep-farmer has no trouble at all with his stock; unless during the shearing or lambing season. The consequence is, that the young gentleman is apt to get exceedingly lazy, and to fall into other bad habits, instead of cultivating his mind and a garden, and raising goodly fruit in both. Servants follow the example of their master, and become good for nothing.

Many farmers fall into such indolent habits of mind and body, that they have not even the energy to amuse themselves, or to improve their daily fare, by shooting some of the game with which their farms abound.

Fortunate is the settler who takes with him some good English servants, who are sufficiently attached to his person to remain with him after his arrival in the colony. I have known many instances where men have brought out their own servants, supplying them with good outfits, and paying their passage money, and have been deserted by them within two months of their reaching the Cape—the servants fancying they could "better themselves," or speculate on their own account. The consequences have generally been annoyance and disappointment to the master, and no good to the servant.

Servants and labourers of all classes (both male and female) are constantly spoiled by their evil associations and their bad management on board emigrant ships. I once sailed in one myself, and a viler conglomeration of laziness and immorality I never beheld even in St. Giles's, or any neighbourhood where curiosity has tempted me to search for such scenes. This subject is too extensive for me to enter upon here; but there is one suggestion I would make—that every emigrant on board ship should have some daily task to perform, and only receive his rations on condition of its being done properly.

There is one comfort wherewith every intending emigrant should provide himself. He may be sure that he will take nothing else with him so valuable to him in every sense. Should he live fifty miles from his neighbours; should his affairs prove occasionally less pro-

perous than his hopes; should his servants desert him, and he be obliged to work with his own hands—in a word, whatever of good or ill may befall him, he will find this the most valuable of all his possessions—a Wife!

WHY PEOPLE LET LODGINGS.

THE contrivances and struggles of what the vulgar call "gentility" to make two hundred pounds a-year pass for five hundred per annum, rank with the tragedies of large towns. Starvation for a month, and a sumptuous festival four times a year: a white satin dress for the mother of ragged children: a bone of mutton for the family, and grouse and truffles for visitors: hired plate for state occasions, and Britannia metal for ordinary service. Such are among the shifts and contrivances of "poor, but genteel" establishments. The cold mutton is contentedly swallowed, when seasoned with the comforting conviction that the Tomkinsons over the way believe three courses and a dessert, are the daily comforters of the family. The genteel do everything for other people. They never see with their own eyes, but through those of their neighbours. When Mrs. Jones surveys her best carpet, it is not with her own sight, but with that of the Prescotts next door, and the rest of her habitual visitors. "Insatiate vanity" and a foolish fear of the world are the mis-springs of this miserably false condition of things. It is one of the worst results of an adoration of gold:—it is a consequence of that stigma which is too generally attached to poverty in this country. It is a result of that tendency of money-worshippers to look at a man's waistcoat rather than his actions—to his material possessions rather than to his moral worth. He is a more considerable person in the esteem of the world who possesses fifty estates, than he who is a pattern of fifty virtues. This being so, we do not wonder when we detect the existence of an universal system of hypocrisy on the subject of riches; and a wish to appear well before the world—whatever the world's standard of excellence may be—will always form a marked trait in the national characteristics.

There is a fashion in virtue as in dress, and now, unhappily, the virtue in vogue is—wealth. To be fashionable in this respect a thousand sacrifices are daily made; glossy clothes are lined with sackcloth. Everything is made for show—to counterfeit wealth. It is a race to escape from the stigma of poverty; and, in the crowd, the millionaire is not distinguishable from the begging-letter writer. The advertising columns of the daily papers are crowded with painful instances of domestic suffering; but in no part of these columns do we find such unequivocal symptoms of the struggles of poor "gentility," as in that where people who let lodgings advertise the attractions of their respective households.

It is observable, that not two in a hundred of the people who let lodgings, receive lodgers for the sake of adding to their income. They scorn such a mercenary consideration. Their house is too large for them; they are anxious to add "a few companions to their social circle;"—or they let their apartments, "not for the sake of emolument, but to meet with a respectable tenant." People who let lodgings are invariably accustomed to the highest society, and can give the most impressive references. The attractions they offer are overwhelming: Elysium can be nothing in comparison with the comforts to be had in an Islington first-floor, at fifteen shillings per week. The most fastidious must speedily be accommodated. It must be a real pleasure to appropriate one's first-floor to a genteel tenant, since emolument is never sought by "people of the highest respectability."

How happy people in lodgings must be! They may be "surrounded with all the comforts of home without its cares" at a nominal rate of payment; they are at liberty to join "a cheerful musical circle," where "rent is a minor consideration;" they may direct their luggage to a serene establishment "where there are no children, or any other nuisances," upon promising to pay "the quiet and serious lady of the house" no more than the mere weekly sum of twelve shillings; and it is their own fault if they do not catch at "an opportunity which seldom occurs" of ensconcing themselves in a family where there are "no other lodgers, and where a man-servant is kept."

People who let lodgings, in addition to their high respectability and carelessness as to the payment of rent, are frequently prodigies of learning. Conceive the cultivated state of that circle whence our native language is banished, and "French is the tongue daily spoken at table." Lodgings may not unfrequently be secured in a house that is attended by the best professors of every distinct branch of learning, where lessons in Hebrew and Greek—together with boot-cleaning—are included in the unusually low terms of one guinea per week. This magnificent offer is usually made for the sake of securing "a fellow-student for the advertiser's son;" of course, the guinea per week is merely a nominal matter.

Some let lodgings only to present advantages to happy bachelors and maidens "deprived of a home." For thirty shillings weekly, it is possible to rent a first floor in a highly respectable neighbourhood, of parties whose "religious principles are in strict conformity with the Established Church." The beatitude of occupying parlours underneath High Church people, is too evident to need a syllable of elucidation. There are also lodging-letting widows, whose only wish is to lift the responsibility of housekeeping off the shoulders of "a respectable bachelor or widower," and with a touching self-sacrifice to place the burden upon their own back;

benevolent housekeepers, who devote their entire attention to their lodgers, to the exclusion of every other earthly consideration; and mothers, at the lowest possible charge, for respectable young ladies "of limited income."

Words cannot adequately describe the splendour and the beauty of some of these homes. "They are offered to a homeless public because, being furnished in the handsomest manner, with particular regard to comfort," they are too good for the occupant, who is too well off, and benevolently wishes to share his domestic bliss with a less fortunate individual, "whose references will bear the strictest investigation." Such domiciles often command extensive and varied scenery; they are, without exception, in the most fashionable locality; they are lofty and well ventilated; they have all been recently fitted up; omnibuses pass the door every five minutes; and they are throughout scrupulously clean. They are Utopias of elegance, comfort, learning, morality, and respectability. No wonder marriages are on the decrease in a country where a bachelor may hire a paradise, kitchen fire included, for a mere trifle.

What a devoted, self-sacrificial race must the lodging-house keepers of London be! Their virtues defy computation. They offer splendour, the highest respectability, morality, music, French, and natural solicitude, at the lowest possible figure; for "money is no object." They are too genteel—too easy in their circumstances for cash to be to them of the slightest consequence. No, they advertise their virtues and their splendour, for the Samaritan pleasure of admitting strangers to be partakers of their good fortune.

We have gathered this little history of people who let lodgings from their own modest autobiographies, as we find them in the advertising columns of the morning papers. It may, perhaps, vindicate that maligned class of persons from certain prejudices very generally entertained against them. People to whom rent is no object, will not purloin port; a serious family will not appropriate a lodger's pomatum; no cheerful musical circle can entertain a particular regard for their lodger's lumps of sugar; no High Church family would peep into their lodger's tea-caddy; and certainly no housewife whose maternal solicitude can be had a bargain, would think it proper to appropriate her adopted child's bread-and-butter. Therefore the calumnies circulated to the prejudice of people who let lodgings should be exposed, and the authors of them be held up to public obloquy. People who give and exchange the highest references, and who let their best rooms for the pleasure of living in the kitchen, and not with any idea of emolument, would not stoop to petty thefts of the above mean and detestable description.

Thus the cause of people who let lodgings may be vindicated. Their lodgings are let, and their gentility is not compromised.

"Familiar in their Mouths as **HOUSEHOLD WORDS**."—*BRADBURY*.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 34.]

SATURDAY, NOVEMBER 16, 1850.

[PRICE 2d.

VIEWS OF THE COUNTRY.

WILL you be saved or ruined? asks Tom Dolorous, who has a theory on the condition of the country. Tom with a portentous look carries his hands behind him, and asks Great Britain which hand she will have; in one he carries ruin, in the other salvation; both very much at her service. "Poor mouldy creature," Tom cries to his country, "there you go, like the botanist who tells of himself in the moist valley of Nepal: a walking frame for Mucedinea. There's one variety of mould upon your hat, another on your shirt, another on your coat, one on your knapsack, another on your boots (yea, one upon the upper-leather of your boots and quite another on the soles); and, if you take your telescope to get a sight abroad, there's a new species of mould upon the glass to hinder you. O, my poor country, suffer me to clear these growths away!"

Tom's measures of salvation are extremely mild, and go no farther than the scraping of the nation's outward man. Now Bob Slash is quite a different reformer. How sweet are larks, Bob meditates, and who can turn away from oysters. Here is a nation with rude institutions calling itself civilised, but it admits of vast improvements. Permit me, if you please, to take in hand this rude hog of the state, and, after Roman fashion, I will make a Trojan Pig of it. Casting away its vulgar entrails I will have it stuffed with thrushes, larks, beccaficos, oysters, nightingales, and other pleasant things; I will have it bathed with wine and unctuous gravy. Bob becomes enthusiastic in dilating upon the advantages of his reform. Whereas, Will Perfect says it is incomplete. It will not do, he says, to scrape the outside of a nation that requires to be reformed, or to neglect the outside while we tear out the mistakes which lie within. He would compare Great Britain to a pippin. In the first place, we must peel the pippin, and then we must cut out the core.

But we put no faith in any man who says we must be saved or ruined. In our humble opinion that noble animal who (in company with the small end of a wedge) is so well known to British audiences, the British Lion, is a worthy beast, with many faults, but, on the whole, magnanimous. Let us discuss this

question quietly, and with our feet upon the sander.

Perhaps there is no better guarantee of peace and progress to this country than the freedom of the Press. Opinion is King of England, and Victoria is Queen. Every phase of opinion speaks through some book or journal, and is repeated widely in proportion to the hold it takes upon the public. Government is the representative of whatever opinions prevail; if it prove too perverse it falls,—ministers change, without a revolution. Then too, when every man's tongue is free, we are accustomed to hear all manner of wild suggestions. Fresh paint does not soon dazzle us; we are like children lavishly supplied with toys, who receive new gifts tranquilly enough.

Is King Opinion an honest ruler? Yes. For the English people speak unreservedly their thoughts on public matters, and are open, though it be with honourable slowness, to all new convictions. We must add, however, as a drawback, that the uneducated class amounts to a distressing number in this country in proportion to the whole. It forms, as long as it is ignorant, a source of profit to designing speculators. Nonsense is put into the mouths of men who mean no evil, but who sincerely desire their own improvement. Truth is murdered, and her dress is worn by knaves who burlesque sympathy with working-men for selfish purposes. The poor man's sincere advocate, at last, cannot speak truth without incurring the suspicion of some treasonable purpose against honesty or common sense. The very language necessary to be used in advocating just rights sometimes becomes as a pure stream befouled by those who have misused it.

Therefore, in England, the uneducated classes arrive slowly at the privileges which they must acquire. They are impeded by false friends; but, even false friends are not able to delude them beyond a certain point. Among us, for example, even the most ignorant well know that there is no field for a vulgar revolution against such a monarch as Opinion makes. Arguments must be used for barricades, and we must knock our neighbours on the head with facts; we must fire newspaper articles instead of cannon-balls, and use colloquial baster for our small shot. In all disputes an English citizen has, for his

last and sole appeal, Opinion; as a citizen of Rome had Cæsar.

The Government which puts its hand upon a nation's mouth and thinks to stifle what it has to say, will be inevitably kicked and bitten. The nation will, some day, get liberty and make amends for every minute of restraint with lusty shouting. Among the continental states which suffered from the Revolutions of 1848, were some in which the people had less of social evil to complain of than we have in England; but they were fretted by political restrictions, by a system of espial which tabooed all conversation upon public matters before any stranger, and they were glad enough to get their tongues at liberty. Adam, the old traditions say, was made of eight pounds:—a pound of earth, his flesh; a pound of fire, his blood; a pound of cloud, his instability; a pound of grace (how that was weighed the legend sayeth not) his stature; a pound of blossom, his eyes; a pound of dew, his sweat; a pound of salt, his tears; and, finally, a pound of wind, his breath. Now Governments which don't allow each man his pound of wind, get themselves, sooner or later, into certain trouble; for, when the wind does come at last (which it is sure to do), it comes in a storm.

The freedom and the power of Opinion in England, have given an importance to the press which is attached to it, as a direct agent in producing social reforms, in no other European country. The journalist lays every day a mass of facts before all people capable of thought; the adult who has learnt only to write and read, acquires his remaining education—often not despicable in amount—from his weekly paper. Jeremy Bentham, speaking of those old superstitious rites by which it was intended to exorcise evil spirits, says very truly, "In our days, and in our country, the same object is obtained, and beyond comparison more effectually, by so cheap an instrument as a common newspaper. Before this talisman, not only devils but ghosts, vampires, witches, and all their kindred tribes, are driven out of the land, never to return again! The touch of Holy Water is not so intolerable to them as the bare smell of Printer's Ink."

What can a man learn by skimming the newspapers and journals of the day? Why, in the northern seas there floats a very little film of oil, where whales or seals have been. So thin a film, no bird could separate from any wave, yet there are birds who become grossly fat on no other nourishment. The storm petrel, or, in the Faroese phrase, Mother Carey's chicken, skims the surface of the troubled water, till the feathers of its breast are charged with oil; and then feeds heartily on the provision so collected. A vast number of her Majesty's subjects dart over the debator and the discussor of the newspaper, like storm petrels, and thrive upon what skimmings they retain.

Since the press in England has been actually free (and many of us can remember when it was not so), one fact has become every year more prominent amidst the din of parties. We have begun to see that, however much we are convinced of any one thing, those are not all and always fools who think the opposite. We get a strong suspicion of our individual fallibility; new facts come out, and display old opinions in an unexpected light. We respect our opponents, when they deserve respect, and on the whole are teachable.

Of course, our views in politics are often guided by our sense of private interest, but there is nothing very wonderful in that; nature intends man to cry out, when a shoe pinches him. But, there is now abroad, concerning social questions, a desire to hear all that can be said about them; to tolerate, if not to respect, conclusions that oppose our own; a readiness to seek for the right course, and a desire to follow it.

Into religion, unhappily, this spirit of toleration has not yet extended, for tolerance has made a clog of what ought to be a spur to our exertion, so that, of late years, it has become necessary to teach even such Christian doctrines as charity and the first elements of our religion, by the direct voice of the newspaper. The free press has strength to destroy sectarian pride, as it has already destroyed the bigotry of party. That is a work of time; at present we may be content to know how much work has been done. There is a readiness in politics to find out and to follow right, there is an active spirit of enquiry, pumping up daily a large flood of information, which is not poured out in vain. Therefore, we tranquilly content ourselves with the continual progress which this country makes, and have no faith in any man who tells us that it must be saved or ruined. There is a picture in the *Navis Stultorum*, of some men who go out fowling, each with a goose upon his wrist. The gentlemen who sport these ruin-or-salvation crotchets, fowl with the wrong bird also, we imagine.

Hence, we have no fear about the country; we know very well that great reforms are needed, but we believe, also, that after each necessity has been well talked about, and become fully comprehended, the reforms will come. The most pressing want of our community is education. There are eight millions of us who can neither read nor write; and more than half our children are now growing up to manhood and womanhood without assistance from the school. Of those among us, who can read and write, a large number are taught, by the education they have had, to do nothing more. Even our wealthy classes cannot secure, very easily, for their own children more than a comparatively useless training, since four out of five schools are conducted on a system fashionable in the middle-ages, and ignore the greater part of what has since become the wisdom of the world.

It is a great pity that any quarrel about indoctrination into creeds, should impede education for our poor. Everybody who has intercourse with children, knows that they are incapable of understanding theologic subtleties. We may put into their mouths and make them roll about, a form of words, as we may get them to suck pebbles; but they can no more extract sense out of the words than savour from the stones; nor are we able to compel them so to do. Nor have we any need to engage in the hopeless trial; with the record of the life and lessons of Christ lying ready to our hands, and His own Prayer, an eternal model to us in its grand simplicity.

But there is something else which may be worth considering.

Before the French Revolution of 1789, the feudal system prevailed throughout Europe. All land was the property of great proprietors who were the lords of a landless peasantry. In France, the Revolution overset that state of things; and land was made attainable by people of all classes. Napoleon in conquering some continental nations gave, as a boon, to please the masses of the conquered, this free-trade in land. Others willingly and deliberately adopted the new principle as an advance upon the feudal system. So, the Prussian Government, under two Prussian Peels, the ministers Stein and Hardenburg, introduced the system of small properties in 1811, and laid the foundation of a social fabric, the strength and excellence of which, we are, just now, beginning to comprehend. Thus it happens, that since the great French Revolution, the feudal system of ownership in land, has been superseded in France, Germany, Holland, Switzerland, Lombardy, the Tyrol, Denmark, Norway, Belgium, a great part of Italy and America. It is retained only by England, Russia, and some of the worst governed portions of the Austrian Empire. Let us consider whether we have not here touched upon another drawback to the improvements upon which Englishmen have just right to congratulate their country.

*Sir William Manor is a large landed proprietor, whose estate is his own, to do with every acre of it as he pleases; that is to say, he holds in fee-simple. He has no children; but, to preserve the glory of his house, he makes a settlement, before he dies, in favour of two nephews, Montague Johnes, aged twenty-three, and Villiers Wilkinson, aged six. Montague Johnes is to be heir to his estate, which Montague Johnes is to use during his lifetime, to let and have subletted, to mortgage or sell, but not to alienate from the family, because it has been entailed. When Montague Johnes dies, Villiers Wilkinson becomes successor to the whole. Into a variety of complicated relations Villiers Wilkinson may enter,—he may sell the land, but his power of sale ends with his life; the whole estate must pass, when he is dead, without the diminution of an acre, unto Hugh Tombobbean.

Hugh Tombobbean was a lusty child of one year old when the entail was settled, and he was made the third man in the list. Hugh Tombobbean reigns after Villiers Wilkinson, and must have all the land, but must not alienate it until he shall have a son who shall attain the age of twenty-one. In the adult son of Hugh Tombobbean, one entail expires, and the estate may then be sold, if Hugh Tombobbean's son desire, and if all other persons named in the entail be willing, and if no other person named in the first settlement, (and being dead), has left behind him a bequest which shall provide for the continuance of this most interesting game. If any die without a settlement, the property goes undivided to the nearest heir. Each individual in an entail may bargain with his property to the extent of his own right: and so there arises a great legal game of hide and seek, a mass of laws, and contingencies, and possibilities, and impossibilities, and shades of title to a park or a potato ground, which nobody can fathom but a lawyer who has made such matters his especial study—and, very often, not even he. So, people buy land at a risk, who buy it on the word of a seller: the seller himself may not know what claims and rights beyond his own can be established on it. So, great estates are kept together, by a system obviously unjust. If great estates be worth preserving in this country, as we believe they are, in the hands of solvent proprietors, they may remain for ever, or by married men they may be got together. But, it is pretty certain that they are hardly worth maintaining by a system so little in unison with the politics or morals of the nineteenth century.

Land differs from other property only inasmuch as we know the utmost possible extent of it. Flocks can increase—more gold can be collected and be coined—more wares can be manufactured; but after we have turned to use our millions of waste acreage, and have reclaimed a few flore acres from the sea, there is no more land to be got, and, therefore, it is all the more essential that no portion of the soil we have, should be placed out of the reach of human dealings. It would be less mischievous to entail forks and spoons than poles and furlongs.

Let us suppose Mr. Walkingame, a shop-keeper, aided by law on the entail principle, in an attempt to perpetuate the family respectability. He settles his furniture and ninety pounds on Jones and Wilkinson. Jones may be idle and extravagant; but, his furniture is entailed, and no bailiff can seize it. He may spend every farthing of his money; but, at his death ninety pounds have to come back to Wilkinson. Why need we pursue the parallel? Laws of this kind may give to the fortunes of individuals a sickly buoyancy, but they are, in fact, injurious to all whom they affect (except, the myrmidons of law); like the unwholesome waters of the Dead Sea,

they sustain a swimmer on the surface, they make sinking difficult; but, a clear lake of the unsophisticated element is much to be preferred.

These drawbacks, we have indicated in no ill-humoured or disheartened spirit. Growth must be gradual, we know, and England has not, for a long time past, been standing still. In our own time, we may see schools plentiful in villages and towns; we may see land ceasing to be spell-bound, saleable by those who cannot make a use of it, and purchasable by their friends who can—we may get titles to land registered and proved for half-a-crown. We, or our children, shall see Chancery abuses fall among the ghastly legends of the past. Every new attainment, points, and will always point, to something else beyond. We shall go on and prosper, so long as we are in earnest; and to-day we are in earnest. The civilised world has not, in all past history, a period upon which to look back, so full of human hope arising from the thoughts and deeds of nations, as our own. Men have begun to understand each other; and they quarrel, therefore, less. Let us, in England, do our part; let us find out our faults and mend them, while we are modestly conscious of our merits. No theory will save us or ruin us, but "precept must be upon precept, precept upon precept; line upon line, line upon line; here a little and there a little." We may then go upon our way, advancing, with quiet confidence.

WHAT A LONDON CURATE CAN DO IF HE TRIES.

THE payment of sixpence at the London station of the Blackwall Railway secures not only a first-class ticket for the Shadwell station, but the privilege of looking from the carriage window into the apartments of all the upper-floor inhabitants between Fenchurch Street and the station in St. George's-in-the-East; the Railway, as every Blackwall sailor and every Blackwall whitebait-eater knows, running, like a giant brick-and-mortar wall, straight through the buildings, on a level with many of their roofs, and permitting the passenger to look, like a *curate*, into the dingy tenements of this Eastern region. A few minutes suffice for the journey, and stepping from the train, the passenger descends a stone stair, to find himself in the parish of St. George's-in-the-East, a district which could not be more full of contrasts to its namesake at the other extremity of the modern Babylon—St. George's, Hanover Square—if it were forty instead of four miles distant. The houses in the Eastern St. George's are almost all small, and the streets and alleys form a sort of labyrinth—a tangled web of dingy structures—ins and outs, and twisted meshes of lane and alley, having only the one feature in common, that feature telling of poverty—not always

squalid, for many show the struggle of decency for appearances by a polished brass plate or door-handle, with here and there bright symptoms of green paint portal and a whitened door-stone—but ever displaying the presence of a population of the humblest means. Round the outside of the district there may be found a street or two, containing the shops of the chief traders of the place, in which signs of more affluence may be detected; but within this crust lies one mass of almost unredeemed poverty—a population of very many thousand souls, located upon a very few acres of ground. Scores of houses, of six rooms, holding six families; scores of houses, of five rooms, holding five families; hundreds of houses, of four rooms, holding four families each. "Time was," said an old inhabitant of the spot, when the people could get two rooms—one to live in, one to sleep in. But the evictions at the west-end, and other circumstances, have so increased the numbers, that rents have risen, and the people can afford but one room.

Such a spot offers so few attractions to the class who are able to choose a location for themselves, that there are no resident gentry in the place. Those who own the property, live away from it. There are no large good houses offering a contrast to the surrounding poverty; no wealthy people who may be asked to lend a little help to their poorer neighbours. One in every fourteen of the whole population of the parish are paupers. Surely such a spot offers few inducements for its selection as a place of permanent abode. Yet here, some years since, came a hopeful, zealous, hard-working man, who seeing and feeling the wants of the neighbourhood, went single-handed to work to see what good intentions, backed by perseverance, could do in a hand to hand fight with poverty, ignorance, dirt, neglect, and crime.

Twenty years ago, the then rector of St. George's-in-the-East, was a Doctor of Divinity of the old school, whose pride it was to leave the world at large, and his own parish in particular, just where he found it. The dust and the modes of past times should, he thought, be preserved inviolate, and hence, though ignorance stalked through his parish unchallenged, save by the feeble efforts of one small charity school, he lived quietly on, untroubled by any idea that popular knowledge should be promoted among the flock of a London rector. The patronage of the living was the gift of his college, and with him it was a religious duty to leave things as they were. The world let him live quietly, why should he disturb the world?

One fine day the rector found himself without a curate, and as the close courts and poverty stricken streets of his parish sent every year many hundred tenants for the parish grave-yard; and as the young men and women, notwithstanding their poverty, would be young men and women, and made up amongst them scores of matrimonial matches

in the twelve-month; and as, moreover, innumerable little pledges of affection had to be christened in each similar space of time, the curate must needs be "a working man." The friends of the rector passed from one to another the demand, "Wanted—a Curate;" but curates seemed to know what sort of a place St. George's-in-the-East must be, and the attractions of one hundred and fifty pounds a year as the reward for burying a little army of dead, marrying no end of "happy couples," and christening hundreds of young cockneys, did not secure a crowd of applicants for the vacant post. Days ran into weeks, and the rector felt desperate. The grave-yard was dank and clayey, and air blew coldly through the masts and rigging of the shipping moored in the Thames and the docks, and amongst the smoky chimneys all round about. The perpetual iteration of the services was more laborious than chimed with the idea of the rector, and "Wanted—a Curate" became day by day a more pressing necessity of his case. At last a stray letter, explaining the reverend gentleman's necessities, found its way into an out-of-the-way Wiltshire parish, in which there was a young curate who had distinguished himself by zeal in getting up schools and clubs for the poor. These humble establishments in their quiet way had done much good, and had obtained for their promoter and superintendent, the curate, quite a reputation in their locality; but he had got them into good trim, and as they worked well and there were no more difficulties to be encountered, the curate felt a longing for a wider sphere. His patron, the parish clergyman, had often said that London was the place for a mind so active as his, and when the intelligence came that a curacy might be had "in St. George's, London," the proper moment seemed to have arrived for moving the curate to his natural sphere of usefulness. A friend was found to do temporary duty in the church, to "give an eye to the schools, and to look after the sick," and off set the curate to ascertain if he could secure the vacant post in the modern Babylon.

Arrived in town, his first duty was to call upon the writer of the letter that had induced him to quit the country in search of a new field for his labours. His reception was cordial and encouraging. The post was still vacant; indeed the reverend gentleman in whose gift it was had kept it specially for our young friend, for he had heard of the Wiltshire schools, and of the industry displayed by their promoter, and was sure he was just the man to encounter the labour of a metropolitan cure of souls. After much more of such conversation, it was proposed that they should go together to the rector, to settle the affair, and few minutes more found them on their way.

They passed street after street, but they were all city streets; and one after the other they grew dirtier and dirtier, until at last a

climax of abominations greeted eye and nostril and well-polished shoe as they threaded Rag Fair.

"Surely," interposed the curate, "this cannot be the way to St. George's?"

"Certainly it is," was the reply; "and this very place is in the district you are to take charge of."

"This!" gasped the curate with astonishment. And he stood still as he spoke, half shuddering amidst the crowd of Jews, thieves, rags, filth, foul smells, and wretchedness, as his mind and spirit flew back to the country scenes and country friends, he had that morning left.

"Here! I could never live here. The air seems thick with impurity. I thought St. George's meant St. George's, Hanover Square."

His companion laughed. "You longed for fashion, did you? You wanted to live amongst lofty people; to change the rural sounds of Wilt for the clatter of dashing vehicles, and to marry and bury lords and ladies! No, no. St. George's-in-the-East it is that wants a curer of souls, and believe me you are just the man for the place."

Forward they went in silence, until they reached the rector's door.

"I cannot undertake it," repeated the country curate. "The smells, and sights, and noises, are frightful. I could not live in this atmosphere, I'm sure."

"But the rector has kept the place vacant for you," was the response; and as he spoke, they were ushered into the presence of that dignitary himself.

More friendly greetings and kind speeches. The curate was the thing; he would soon be used to the neighbourhood. He firmly declared his repugnance. But what was he, the rector, to do? He had been waiting for the curate. He should be greatly put out of his way if he were to be disappointed at this critical moment. Indeed he was very ill. He really hoped he should not hear of anything like refusal. And a great deal of talk resulted in an arrangement that the curate should try for a month, whilst the rector sought for another to succeed him.

In a little old house close by, some little rooms were selected as a cheap temporary lodging, and there our country friend soon located himself. The occasional funeral duty of the country was changed for the constant day by day, week by week, repetitions of a gorged London grave-yard. Work, work, work, was become the order of his life, and work too without knowing the people for whom he was ministering, and in a half so vast that there seemed little chance of his ever gaining a knowledge of the souls now under his spiritual charge. Whilst yet astonished at the change, and whilst longing for the day that should release him for his return, a letter reached him, saying the incumbent of his Wiltshire parish was—dead! Ease and abun-

dance had been succeeded by the demon that follows in their trains, Apoplexy—a scene of confusion and distress—hurrying for doctors, who came only to use lancets and shake their heads—and the curtain fell, leaving a widow to mourn, a preferment to delight some long expectant, and a curate out of place. This fatal termination of his old patron's career came at a critical moment. Wiltshire no longer beckoned our humble hero back. St. George's-in-the-East had him in its clutches, and the one hundred and fifty pounds a year, and a field for usefulness, was better than throwing himself adrift upon the world; and the upshot was that, instead of leaving his small lodging at the end of the month, he lived there for many years.

And how were these years passed? The work of the place—the clerical work—was amply sufficient to fill up his time, but the curate had desires, and felt he had a duty beyond that routine, laborious though it might be. The rector, true to his creed, would hear nothing about schools, or societies. There was the one charity school when he came to the living, and there should be the one charity school only, when he left it, and all the curate's thoughts and plans had to be kept to himself. But still he went on *trying*, and kept steadily on, making himself acquainted with the needs of the neighbourhood; visiting the sick, advising the idle and the improvident, and comforting the afflicted, till the people round about began to find that "a parson" might be a very comfortable person to know, if, as they said, he was "one of the right sort."

Years rolled on, and the day arrived when the Bishop of the diocese made a grand appeal to the public for help in the building of new churches; and so readily was the request responded to, that a sum of two hundred thousand pounds accumulated in the hands of the bankers to the fund. The impossibility of one rector—supposing him to be an active man, and not, as our rector was, a kind of 'clerical sleeping partner,' with one curate (though a curate of treble curate power)—ever grasping the spiritual needs of such a parish as St. George's-in-the-East, with its forty thousand inhabitants, must long have struck the church reformers of London; and when our friend the one curate made up his mind to write to the Bishop, pointing out certain strong reasons why a portion of the two hundred thousand pounds should be spent in his part of the world, the letter could scarcely fail to receive attention. In due time, an answer came from the episcopal dispenser of the building fund, stating that a grant was in abeyance for the building of a church in the most neglected part of the parish, but there was a difficulty in obtaining a site. This was hint enough. To work went our curate, to try what could be done. A failure on one spot only led him on to search for another, and at length he was

directed to a small street, from the back windows of which, it was said, a large unused stone-yard could be seen. It had been for years shut up behind small, poverty-stricken tenements, that few people knew of its existence; but there it was, sure enough, grown over by weeds, and strewed with the dirt and refuse that poverty, and London cats, and London smoke, somehow bring together whenever a spot remains unoccupied. Scraps of stone were scattered about it—fragments too small, or too ugly for door-steps or tomb-stones, yet too heavy for trespassing boys to throw at one another, or to toss through the windows of the neighbouring empty houses, and of no value per pound at the marine store dealers'. And there they lay, uncared-for for years, until the eye of the curate fell upon the spot, and straightway they reared themselves, in his mental vision, one upon another, into a tall church filled with worshippers, with the curate himself ministering there. But dreaming was no use. The curate went forth to try what he could do. Work, work, work; talk, talk, talk, to one and to another; letters here, explanations there, until at length, the site was secured; until the building was begun, continued, and furnished. The chosen plan was one that would secure the largest amount of accommodation for the sum to be spent; and the day arrived when church-room was ready for sixteen hundred people, within a substantial building, in a district set apart for it, and christened "Christ Church." But still, there were no fittings; no stoves; no organ; no preacher's house; no preacher's pay; no preacher.

The curate who had worked so long and so satisfactorily in the parish, was naturally the man who should occupy the church he had contributed to rear; but having by this time been the sole working clergyman of the mother church for twelve years, and having still only his one hundred and fifty pounds a-year to rely upon, he hesitated to give up that. Nobody was willing to take the empty church—the bare walls—the shell—without even an income sufficient to feed the legendary mice supposed to be a part of every parish. Still, after a while, he thought he'd try.

The terms he made with the old rector were (and the said old rector had very, very serious doubts about all these new-fangled church-buildings; but being quite an old gentleman, he thought it very much the bishop's affair)—the curate's terms, we say, were that he would accept the incumbency of the new district upon condition of continuing to receive his stipend, out of which he would pay a curate to perform duty at the old church, whilst he himself went to labour with the new.

He began his labours in a very business-like way. He took stock of his new district, counted his flock, estimated their

quality as it were, and found that upon the sixty-three acres committed to his clerical charge, there were seventy-seven streets and courts, containing upwards of two thousand six hundred houses, holding more than seventeen thousand men, women, and children. For every four buildings that might, in the conventional sense, be called "respectable private houses," he found there was on an average one public-house, or beer shop, and that more than half of the total number of houses were essentially the dwellings of the very poor. These very poor numbered fifteen thousand out of the total inhabitants, and the ranks of this army of poverty were described as being filled with "sailors and men dependent upon the uncertain labour of the docks;" the women being generally "seamstresses, working for the slop-shops, which abound in the neighbourhood;—poor creatures belonging to the class now so well known as 'distressed needlewomen.'" The average rental of the houses—houses in London be it remembered—was only eight pounds ten shillings a year!

Such a locality could not be supposed to afford much in the shape of pew-rents, but on pew-rents alone must the preacher depend, as there was no endowment. So, giving six hundred free-seats for those unable or unwilling to contribute, our curate began his ministrations in the new church. His zeal and excellence of purpose and conduct, had secured him friends and sympathisers—and those qualities now soon began to bring him a congregation. In his vestry he kept an alphabetical index of the poor, in which was noted what help had been given to each applicant—who had received a ticket for free baptism; who a letter for the dispensary or the hospital; who had been attended by the district visitors; who had been helped by the blanket loan society; whose children ought to be got into the National or the Sunday School; and so on. Some of the warmest and best of the free-seats were supplied with books, in large type, suitable for aged eyes—and soon it was found that old folks began to congregate, in numbers, in front of the church doors long before they opened, that they might secure these best seats, where they could see and hear, and have a large-sized Prayer-book.

The kindly sympathies which enlisted the poor did more than that. Amongst the richer people friends were found. The pews filled; a subscription in the parish paid for gas-fittings and other needful appointments; and though, the first year, the curate's gains, after he had paid his curate at the mother church, were *nil*, yet the next year he found himself with an income, small, yet something. And now another event took place. The old rector died—and the curate thanked his stars he had taken the empty church, without fittings and without pay though it was—for new rectors being new curates. He had

tried his best; striven with the difficulties of a high duty; and had again not gone altogether unrewarded.

The church was a very great step; but schools were all-important—he must have schools. Having no funds for school-buildings, he bethought him of the Blackwall Railway arches. He set to work to try what could be done in that and in other directions to meet the many wants of his parish. He addressed letters to clergymen with good benefices; and to wealthy laymen; and then he, with the aid of a curate and a scripture-reader, begged his parish through from door to door. They were more than a fortnight going from house to house, "when great anxiety (says a report of this experiment) for the establishment of the school was expressed by the poor people, but the amount collected was only eighteen pounds, fifteen shillings—a large portion of which was in pence." Larger sums ultimately came from other quarters to aid the work, and first one school and then another was got into operation. Amidst all this toil the curate—or we must now call him the incumbent, for we have followed him into his own church—had found a wife amongst his flock, and had become a father. His children were enlisted in the work in hand. They folded circulars and helped to seal them; and one Christmas Eve there was a great feat accomplished,—for on that day there went from the door of the house of clerical industry two cabs filled with letters which the post would deliver on the Christmas morning upon the breakfast tables of the wealthy, telling how on that day of Christian rejoicing one parish of the Great London had thousands of people who knew no church, with thousands of children who knew no school. And those Christmas holidays were gladdened by a noble response from the charity of this English nation. Hundreds of pounds were subscribed towards the works our clergyman had now in hand; and still greater gladness was there in his household, when an old man walked one day into his church to see what was being done, and asking what was wanted, and being told the organ was in debt, put into the parson's hand, as they left the building together, a piece of paper, with a request that no name be mentioned. It was a cheque for a hundred pounds, and next Sunday the organ poured forth a strain more than ever beautiful in that preacher's ear—for the debt was gone,—wiped out by the benevolence that asks no blazonry in return.

And higher and higher still rose the gladness of the parson's home, when one day he returned from a country dinner, to which he had been bidden by a rich old physician, who was spending his last years in a quiet rural neighbourhood. A day-ticket had carried the visitor to the old man's house. They had chatted, and dined, and talked of many things, but never of money; and as the time drew on when the last train left for

London, they strolled together towards the station. The whiz and the bustle of the stopping train, the slamming of carriage-doors, and the hurry of guards, were just over as the parson took his seat, when his host, the kind old ex-physician, said, "Use that in your good works, but never mention my name." As he spoke he gave the parson a paper, as he shook hands with him. The engine was off. Let his astonishment be imagined, when he opened the slip of paper in his hand, and found it a cheque for one thousand pounds!

The donor was the same old man who had released the organ from its difficulties. He is since dead; but his gifts towards the needs of a poor London parish stand a lasting record of unobtrusive charity in the list of donations to Christ Church, St. George's-in-the-East, where his offering figures thus:—

A Family Fund . . . £1100 0 0

Just below it on the list, is another large donation, also made by one of the really charitable, who ask no advertisement in return. Two words tell the story:—

Anonymous . . . £700 0 0

Monuments enough, these, to prove the existence, if proof were needed, of true charity in England, and of the virtue of "I'll try." But more remains yet to be told.

Encouraged by success, the plans of our incumbent became bolder and bolder. Here is the substance of one of his appeals;—a list, in fact, of what was wanted to meet the spiritual and educational destitution of his district.

1. A parsonage for the minister of the present church, estimated, including the site, at one thousand four hundred pounds.

2. Three new schools, for six hundred children, with three residences, estimated at about two thousand four hundred pounds.

3. A fund for the support of the schools.

4. A new church, of stone, plain but substantial, for one thousand persons (of which, if a sufficient endowment can be obtained, all the seats will be free), estimated, with site, at five thousand pounds.

5. A parsonage for the minister of the new church, one thousand two hundred pounds.

6. Endowment.

At first blush this might seem too much to hope for; but, by hard work, by hopeful, never ceasing endeavour—by again and again recurring to the cheerful effort that follows the determination to try—much, nay, nearly all, of that which was once a project are now facts.

At the time we write, the incumbent has a comfortable parsonage, the arches of the Blackwall Railway hold three of his schools;—an infant school, a boy's school, and a girl's

school. In the same place he has a pence bank, to which the poor of the neighbourhood bring their savings, now amounting to nearly a thousand pounds a year, and a library and reading room, in which, for a penny a week, the poor have light, and warmth, and newspapers, and instructive and amusing books. More than six thousand readers have attended the place within the past year. He has likewise a Ragged School, in which the very poorest are taught to read and write. The fine large schools he once hoped for to hold six hundred children, with residences for masters and mistresses, have been raised, and are occupied. Altogether, he has now a thousand children at school! He has, moreover, secured a second church for the neighbourhood—the church of stone he hoped for—to hold a thousand persons. He got money to buy a site, when a peer who heard of the efforts he was making, stepped forward and built, and endowed the church, at a cost of ten thousand pounds!

Thus far successful beyond what were once his wildest hopes, he is still striving on. He is at this moment trying for Baths and Washhouses, and for a Sailor's Home—to cleanse the poor, and to save the seamen from plunder by crimps. With him, to begin is to go on, and to go on is to succeed; but if any like to help or imitate him, let them take, in Fenchurch Street, one of the sixpenny railway tickets we spoke of at the opening of this paper, and stopping at the Shadwell Station, ask for the incumbent of Christ Church, in whom they will soon recognise the living hero of this true story of *I'll try*.

THE MYSTERIES OF A TEA-KETTLE.

At one of Mr. Bagges's small scientific tea-parties, Mr. Harry Wilkinson delivered to the worthy gentleman a lecture, based principally on reminiscences of the Royal Institution, and of a series of lectures delivered there, by PROFESSOR FARADAY addressed to children and young people. For it is not the least of the merits of that famous chemist and great man, PROFESSOR FARADAY, that he delights to make the mightiest subject clear to the simplest capacity; and that he shows his mastery of Nature in nothing more than in being thoroughly imbued with the spirit of her goodness and simplicity.

This particular Lecture was on Natural Philosophy in its bearings on a kettle. The entertainment of a "Night with Mr. Bagges" was usually extemporaneous. It was so on this occasion. The footman brought in the tea-kettle. "Does it boil?" demanded Mr. Bagges.

"It have biled, Sir," answered the domestic.

"Have biled, Sir!" repeated Mr. Bagges. "Have biled! And what if it has 'biled, or boiled, as I desire you will say in future? What is that to the purpose? Water may be

frozen, you simpleton, notwithstanding it *has* boiled. Was it boiling, Sir, eh? when you took it off the fire? That is the question, Sir."

"Yes, Sir, that was what I mean to say, Sir," replied Thomas.

"Mean to say, Sir! Then why didn't you say it, Sir? Eh? There—no, don't put it on, Sir; hold it still. Harry, reach me the thermometer," said Mr. Bagges, putting on his spectacles. "Let me see. The boiling point of water is two hundred and—what?"

"Two hundred and twelve, Fahrenheit," answered Master Wilkinson, "if commonly pure, and boiled in a metallic vessel, and under a pressure of the atmosphere amounting to fifteen pounds on every square inch of surface, or when the barometer stands at thirty inches."

"Gracious, what a memory that boy has!" exclaimed his uncle. "Well; now this water in the kettle—eh?—why, this is not above one hundred and fifty degrees. There, Sir, now set it on the fire, and don't bring me up cold water to make tea with again; or else," added Mr. Bagges, making a vague attempt at a joke, "or else—eh?—you will get yourself into hot water."

Mr. Thomas was seized with a convulsion in the chest, which he checked by suddenly applying his open hand to his mouth, the effort distending his cheeks and causing his eyes to protrude in a very ridiculous manner, whilst Mr. Bagges disguised his enjoyment of the effects of his wit in a cough.

"Now let me see," said the old gentleman, musingly contemplating the vessel simmering on the fire; "how is it, eh, Harry, you said the other day that a kettle boils!"

"La!" interrupted Mrs. Wilkinson, who was of the party, "why, of course, by the heat of the coals, and by blowing the fire, if it is not hot enough."

"Ala!" cried her brother, "that's not the way we account for things, Harry, my boy, eh? Now, convince your mother; explain the boiling of a kettle to her: come."

"A kettle boils," said Harry, "by means of the action of currents."

"What are you talking about? Boiling a plum-pudding in a tea-kettle!" exclaimed the mystified mamma.

"Currents of heated particles—of particles of hot water," Harry explained. "Suppose you put your fire on your kettle—on the lid of it—instead of your kettle on your fire,—what then?"

"You would be a goose," said his mother.

"Exactly so—or a gosling,"—rejoined her son; "the kettle would not boil. Water is a bad conductor of heat. Heat passes through the substance of water with very great difficulty. Therefore, it would have a hard matter to get from the top of a kettle of water to the bottom. Then how does it so easily get from the bottom to the top?"

"Ah!" sighed Mr. Bagges. "In my young days we should have said, because the heat

riser, but that won't do now. What is all that about the—eh—what—law of ex—what?—panion—eh?"

"The law of expansion of fluids and gases by heat. This makes the currents that I spoke of just now, mamma; and I should have spelt the word to explain to you that I didn't mean plums. You know what a draught is?"

"I am sorry to say I do," Mr. Bagges declared with much seriousness, instinctively carrying his hand to the region of the human body from the Latin for which is derived the term, Lumbago.

"Well," pursued Harry, "a draught is a current of air. Such currents are now passing up the chimney, and simply owing to that trifling circumstance, we are able to sit here now without being stifled and poisoned."

"Goodness!" ejaculated Mrs. Wilkinson.

"To be sure. The fire, in burning, turns into gases, which are rank poison—carbonic acid, for one; sulphurous acid, for another. Hold your nose over a shovelful of hot cinders if you doubt the fact. The gases produced by the fire expand; they increase in bulk without getting heavier, so much so that they become lighter in proportion than the air, and then they rise, and this rising of hot air is what is meant by heat going upwards. The currents of hot air that go up the chimney in this way have currents of cold air rushing after them to supply their place. When you heat water, currents are formed just as when you heat gas or air. The heated portion of water rises, and some colder water comes down in its place; and these movements of the water keep going on till the whole bulk of it is equally hot throughout."

"Well, now," interrupted Mr. Bagges, "I dare say this is all very true, but how do you prove it?"

"Prove that water is heated by the rising and falling of hot currents? Get a long, slender glass jar. Put a little water, coloured with indigo, or anything you like, into the bottom of it. Pour clear water upon the coloured, gently, so as not to mix the two, and yet nearly to fill the jar. Float a little spirit of wine on the top of the water, and set fire to it. Let it blaze away as long as you like; the coloured water will remain steady at the bottom of the jar. But hold the flame of a spirit-lamp under the jar, and the coloured water will rise and mix with the clear, in very little time longer than it would take you to say Harry Wilkinson."

"Ah! So the water gets coloured throughout for the same reason that it gets heated throughout," Mr. Bagges observed, "and when it gets thoroughly hot—what then?"

"Then it boils. And what is boiling?"

"Bubbling," suggested the young philosopher's mamma.

"Yes; but ginger-beer bubbles," said Harry, "but you wouldn't exactly call that boiling."

Boiling is the escaping of steam. That causes the bubbling; so the bubbling of water over the fire is only the sign that the water boils. But what occasions the escape of the steam?"

"The heat, of course—the what is the right word?—the caloric," answered Mr. Bagges.

"True; but what heat? Why, the excess of heat over two hundred and twelve degrees—taking that as the average boiling point of water. You can heat water up to that point, and it remains water; but every degree of heat you cause to pass into it above that, turns a quantity of the water into steam; and flies off in the steam, unless the steam is hindered from escaping by extraordinary pressure. Blow the fire under that kettle as much as you will, and you will make the water boil faster, but you won't make it a bit hotter than two hundred and twelve degrees."

"Well, to be sure!" Mrs. Wilkinson exclaimed.

"If water," continued Harry, "could keep on getting hotter and hotter above the boiling point, why, we might have our potatoes charred in the pot, or our mutton boiled to a clinder. When water is confined in a strong vessel—and strong it must be to prevent a tremendous blow-up—confined, I say, so that no steam can escape, it may be heated almost red-hot; and there is a vessel made for heating water under pressure, called Papin's Digestor, which will digest almost anything."

"What an enviable apparatus!" exclaimed Mr. Bagges.

"Well," resumed Harry; "so the boiling point of water depends on the degree of force which the air or what not is pressing on its surface with. The higher the spot on which you boil your water, the lower the point it boils at. Therefore, water boiling at the top of a mountain is not so hot as water boiling at the mountain's base. The boiling point of water on the summit of Mont Blanc, is as low as one hundred and eighty-four degrees. So, if water must be at two hundred and twelve degrees, to make good tea, don't choose too high a hill to build a temperance hall on. The heavier, also, the air is, from the quantity of moisture in it, the hotter water becomes before it boils. If the atmosphere were carbonic acid gas, water would get much hotter without boiling than it can under"—

"Present arrangements," interposed Mr. Bagges.

"Consisting of a mixture of nitrogen and oxygen," continued Harry. "Water requires only a very low heat to make it boil in an exhausted receiver, out of which the air has been pumped, so as to leave none to press upon its surface. Owing to boiling depending upon pressure, you can actually make water boil by means of cold."

"What next?" sighed Mrs. Wilkinson.

"You can, indeed. Put a kettle boiling

water in a salad-oil flask; so that the flask may be a quarter full, say. Cork the flask tightly. The boiling stops; and the upper three-fourths of the flask are full of vapour. Squirt a jet of ice-cold water upon the flask, above where the water is, and the water below will instantly begin to boil. The reason why, is this. The vapour in the flask presses on the surface of the hot water. The cold condenses the vapour—turns it back to water. That takes off the pressure for the time; and then the hot water directly flies into vapour, and boils, and so on, till it cools down too low to boil any longer. What reduces the boiling point of water on a hill or a mountain is, that the pressure of the atmosphere decreases as you ascend. A rise of five hundred and thirty feet in height above the level of the sea, makes a difference of one degree; so, give me a kettle of water and a thermometer, and I'll tell you exactly how near the moon we are."

"I shouldn't think one could make good hot mixed punch up in a balloon, now," observed Mr. Bagges, reflectively.

"Then," Harry proceeded, "it requires more heat to make water boil in a glass vessel than it does in a metal one. A metal vessel's inner surface is made up of very small points and dents. Scratching the inside of the glass so as to give it a roughness something like what the metal has, makes the boiling point lower; and a few iron filings thrown into water boiling in glass at two hundred and fourteen degrees, will bring it down to two hundred and twelve. The filings, and the roughness of the glass, are so many more points for the heat to pass into the water from, and form steam, and the water does not cling to them so hard as it clings to a smooth surface. Throw a lot of hay into a pan of hot water, and it makes a quantity of steam rise directly; and I have heard a doctor say that some poor people are in the habit of giving themselves cheap steam-baths by this means."

"A very good thing for rheumatic pains, I should think; certainly a much more rational remedy than patent medicines or Government poison," Mr. Bagges remarked.

"There are some salts," continued Harry, "which, if dissolved in water, will prevent it from boiling till it is heated to two hundred and sixty-four degrees, as if they held the water back from flying into steam. So, then, the boiling of water may be hindered, more or less, by pressure from without, and attraction from within. The boiling point of water depends on another important fact which the kettle always mentions before it boils, although we don't all of us understand the kettle's language. The singing of the kettle tells us"—

"That the water is going to boil," interrupted mamma.

"Yes, and that water contains air. The singing of the kettle is the noise made by the

escape of the air, which is driven off by the heat. The air sticks and hangs in the water, till the heat expands it and makes it rise. Put a glass of water under the receiver of an air-pump, and exhaust the receiver. As you pump, the water begins to bubble, as if it were boiling; but the bubbles are the air contained in the water, being pumped out. The air-bubbles act like wedges between the little invisible drops that make up the whole water. If it were not for them, the water would be a mass which would hold together so hard that it would not go into steam, or boil, till it was heated to two hundred and seventy degrees, as may be proved by boiling some water quite deprived of air. And not only that, but when it did boil, it would boil all at once, and blow up with a tremendous explosion; which would be a still greater inconvenience in boiling a kettle."

"A pretty kettle of fish, indeed!" Mr. Bagges observed.

"So," said Harry, "strictly pure water would not be quite so great a blessing to us as you might think. Of course, you know, uncle, I don't mean to say that there is any advantage in the impurity of such water as the Thames, except when used for the purpose of fertilising the earth. I am speaking of water so pure as to contain no air. Water of such severe purity would be very unmanageable stuff. No fishes could live in it, for one thing. I have already given you one good reason why it would be unsuitable to our kettle; and another is, that it would not be good to drink. Then water, as we find it in the world, has a very useful and accommodating disposition to find its own level. Pump all the air out of water, however, and it loses this obliging character in a great measure. Suppose I take a bent glass tube, and fill one arm of it with airless water. Then I turn the tube mouth upwards, and if the water were common water, it would instantly run from one arm into the other, and stand at the same level in both. But if the water has been exhausted of its air, it remains, most of it, in the one arm, and won't run till I give the tube a smart rap, and shake it. So, but for the air contained in water, we could not make the water run up and down hill as we do. If water were deprived of air, London would be almost deprived of water."

"And water," observed Mr. Bagges, "would be robbed of a very valuable property."

"Good again," uncle. "Now, if we could see through this kettle, we should be able to observe the water boiling in it, which is a curious sight when looked into. To examine water boiling, we must boil the water in a glass vessel—a long tube is the best—heated with a spirit lamp. Then first you see the water in motion, and the air bubbles being driven off by the heat. As the water gets hotter, other bubbles appear, rising from the bottom of the tube. They go up for a little

way, and then they shrink, and by the time they get to the top of the water, you can hardly distinguish them. These are bubbles of steam, and they get smaller as they rise, because at first the water is colder above than below in proportion to the distance from the flame, and the cold gradually condenses the bubbles. But when the water gets thoroughly hot, the bubbles grow larger and rise quicker, and go of the same size right up to the top of the water, and there escape—if you choose to let them. And steam was allowed to escape so for many many ages, wasn't it uncle, before it was set to work to spin cotton for the world, and take us to America within a fortnight, and whirl us over the ground as the crow flies, and almost at a crow's pace."

"For all which," remarked Mr. Bagges, "we have principally to thank what's his name."

"Watt was his name, I believe, uncle. Well; heat turns water into steam, and I dare say I need not tell you that a quantity of water becoming steam, fills an immense deal more space than it did as mere water. Cold turns the steam back into water, and the water fills the same space as it did before. Water, in swelling into steam and shrinking back into water again, moves, of course, twice, and mighty motions these are, and mighty uses are made of them, I should rather think."

"I believe you, my boy," said Mr. Bagges.

"And now," asked Harry, "have you any idea of what a deal of heat there is in steam?"

"It is hot enough to scald you," answered his mamma, "I know that."

"Yes; and hot enough, too, to cook potatoes. But there is much more heat in it than that comes to. Take a kettle of cold water. See at what degree the thermometer stands in the water. Put the kettle on the fire and observe how long it takes to boil. It will boil at two hundred and twelve degrees; and therefore, during the time it has taken to boil, there has gone into it the difference of heat between two hundred and twelve degrees and the degree it stood at when first put on the fire. Keep up the same strength of fire, so that the heat may continue to go into the water at the same rate. Let the water boil quite away, and note how long it is in doing so. You can then calculate how much heat has gone into the water while the water has been boiling away. You will find that quantity of heat great enough to have made the water red-hot, if all the water, and all the heat, had remained in the kettle. But the water in your kettle will have continued at two hundred and twelve degrees to the last drop, and all the steam that is has turned into will not have been hotter—according to the thermometer—than two hundred and twelve degrees; whereas a red heat is one thousand degrees. The difference between two hundred

and twelve degrees and one thousand degrees; is seven hundred and eighty-eight degrees; and what has become of all this heat? Why, it is entirely contained in the steam, though it does not make the steam hotter. It lies hid in the steam, and therefore it is called latent heat. When the steam is condensed, all that latent heat comes out of it, and can be felt, and the quantity of it can be measured by a thermometer. The warmth that issues from steam-pipes used to warm a house, is the latent heat of the steam that escapes as the steam turns back to water."

"Latent heat! latent heat!" repeated Mr. Bagges, scratching his head. "Eh? Now, that latent heat always puzzles me. Latent, lying hid. But how can you hide heat? When the zany in the pantomime hides the red-hot poker in his pocket, he cauterises his person. How—eh?—how can heat be latent?"

"Why, the word heat has two meanings, uncle. In the first place, it means hotness. Hotness cannot be latent, as the clown finds when he pockets the poker. In the second place, heat means a something the nature of which we don't know, which is the cause of hotness, and also the cause of another effect. Whilst it is causing that other effect, it does not cause hotness. That other effect which heat causes in the instance of steam, is keeping water in the form of steam. The heat that there is in steam, over and above two hundred and twelve degrees, is employed in this way. It is wholly occupied in preserving the water in an expanded state, and can't cause the mercury in the thermometer to expand and rise as well. For the same reason, it could give you no feeling of hotness above what boiling water would—if you had the nerve to test it. Whilst it is making steam continue to be steam, it is latent. When the steam becomes water again, it has no longer that work to do, and is set free. Free heat is what is commonly understood by heat. This is the heat which cooks our victuals, the heat we feel, the heat that singes Mr. Merriman. Latent heat is heat that doesn't warm, singe, or cook, because it is otherwise engaged. If you press gas suddenly into a fluid, the latent heat of the gas is set free. You seem to squeeze it out. Indeed, the same thing happens, if you violently force any substance into a closer form all at once. Everything appears to have more or less latent heat in it, between its little particles, keeping them at certain distances from each other. Compress the particles within a smaller compass, and a part of the latent heat escapes, as if it were no longer wanted. When a substance in a compressed state expands on a sudden, it draws in heat, on the other hand. When a lady bathes her forehead with eau-de-Cologne to cure a headache, the heat of the head enters the eau-de-Cologne, and becomes latent in it whilst it evaporates. If you make steam under high pressure, you can heat it much above

two hundred and twelve degrees. Suppose you let off steam, so compressed and heated, by a wide hole, from the boiler, and put your hand into it as it rushes out"—

"What? Why, you'd scald your hand off!" cried Mr. Bagges.

"No, you wouldn't. The steam rushes out tremendously hot, but it expands instantly so very much, that the heat in it directly becomes latent in a great measure; which cools it down sufficiently to allow you to hold your hand in it without its hurting you. But then you would have to mind where you held your hand; because where the steam began to condense again, it would be boiling hot."

"I had rather take your word for the experiment than try it, young gentleman," Mr. Bagges observed.

"Another very curious thing," proceeded Harry, "in regard to boiling, has been discovered lately. A kettle might be too hot to boil water in. Take a little bar of silver, heated very highly; dip it into water. At first, you have no boiling, and you don't have any at all till the silver has cooled some degrees. Put a drop of water into a platinum dish, heated in the same way, and it will run about without boiling till the heat diminishes; and then it bursts into steam. M. Boutigny, the French chemist, made this discovery. Vapour forms between the drop of water and the red-hot metal, and, being a bad conductor of heat, keeps the heat of the metal for some time from flowing into the water. Owing to this, water, and mercury even, may be frozen in a red-hot vessel if the experiment is managed cleverly. A little more than a couple of centuries ago, this would have been thought witchcraft."

"And the philosopher," added Mr. Bagges, "would have been fried instead of his water-drop. Let me see—eh?—what do they call this singular state of water?"

"The spheroidal state," answered Harry. "However, that is a state that water does not get into in a kettle, because kettles are not allowed to become red hot, except when they are put carelessly on the fire with no water in them, or suffered to remain there after the water has boiled quite away!"

"Which is ruination to kettles," Mrs. Wilkinson observed.

"Of course it is, mamma, because at a red heat iron begins to unite with oxygen, or to rust. Another thing that injures kettles is the fur that collects in them. All water in common use contains more or less of earthy and other salts. In boiling, these things separate from the water, and gradually form a fur or crust inside the kettle or boiler."

"And a nice job it is to get rid of it," said his mamma.

"Well; chemistry has lessened that difficulty," replied Harry. "The fur is mostly carbonate of lime. In that case, all you have

to do is to boil some sal-ammoniac—otherwise muriate, or more properly hydrochlorate of ammonia—in the furred vessel. The hydrochloric acid unites with the lime, and the carbonic acid goes to the ammonia. Both the compounds formed in this way dissolve and wash away; and so you may clean the foulest boiler or kettle. This is a rather important discovery; for the effect of fur in a kettle is to oppose the passage of heat, and therefore to occasion the more fuel to be required to boil water in it, which is a serious waste and expense when you have a large steam-boiler to deal with. Dr. Faraday mentions the case of a Government steamer that went to Trieste, and during the voyage had so much fur formed in her boiler as to oblige all her coal to be consumed, and then the engineers were forced to burn spars, rigging, bulk-heads, and even chopped cables, and to use up every shaving of spare timber in the ship. Soot underneath the kettle, as well as fur inside it, is a hindrance to boiling, as it is a bad conductor; and that is the reason why one can bear to hold a kettle of hot water, which is very sooty on its under surface, on the flat of the hand. So a black kettle doesn't give out its heat readily to what touches it, and so far it is good to keep water hot; but it gets rid of heat in another way; as I dare say you know, uncle."

"Eh?" said Mr. Bagges, "why, what?—no—I did know something about it the other day—but I've such a memory!—and—eh?—no—I've quite forgotten it."

"By radiation, you know. All warm bodies are constantly giving off rays of heat, as shining ones are giving off rays of light, although the heat-rays are invisible."

"How do we know that?" asked Mr. Bagges.

"Get a couple of concave mirrors—a sort of copper basins, polished inside. Stand them face to face, some yards apart. Put a hot iron ball—not red hot—in the focus of one mirror. Put a bit of phosphorus in the focus of the other. The phosphorus will take fire; though without the mirrors you might place it much nearer the hot iron, and yet it would not burn. So we know that there are rays of heat, because we can reflect them as we can rays of light. Some things radiate better than others. Those that have bright metal surfaces radiate worst, though such are what are used for reflectors. If their surfaces are blackened or roughened, they radiate better. A bright kettle gives off fewer rays of heat than a black one, and so far, is better to keep water hot in. But then, on the other hand, it yields more heat to the air, or the hob or hearth that it stands upon—if colder than itself. The bright kettle gives off heat in one way and the black in another. I don't know at what comparative rate exactly."

"Six of one, and half-a-dozen of the other," Mr. Bagges suggested.

"Now look at the wonderful relations of the kettle, uncle!"

"Relations?—Eh?—what the pot and the saucepan?" said Mr. Bagges.

"Oh, oh, uncle! No; its relations to the pressure of the atmosphere and every cause that affects it—to the conveyance, and conduction and radiation of heat—to latent heat or caloric, to the properties of water, to chemical decomposition—and to steam and its astonishing marvels, present and to come!"

"Well," said Mr. Bagges, it is wonderful; and the kettle certainly is very respectably connected. Eh? And I hope to profit by the subject of our conversation; and so, I say, pour me out a cup of tea."

WAYCONNELL TOWER.

THE tangling wealth by June amassed
Left rock and run vaguely seen:
Thick ivy-cables held them fast;
Light boughs descended, floating green.

Slow turned the stairs, a breathless height;
And far above they set me free,
When all the fans of golden light
Were closing down into the sea.

A window half way up the wall
They led to; yet so high was that,
The tallest trees were but so tall
As just to reach to where I sat.

Aloft within the mouldered tower
Dark ivy fringed its round of sky;
Where slowly in the deepening hour
The first new stars unveiled on high.

The rustling of the foliage dim,
The murmur of the cool grey tide,—
With tears that trembled on the brim,
An echo sad to these I sighed.

O earth, I sighed, full strange it seems,
I weep to feel how fair thou art!
O heaven, instinct with tender beams,
It is thy mildness wrings my heart!

O tide, no smallest wave there runs
In dying ripples round thy shore,
But murmurs, "What thou owned'st once,
Is lost, and lost for evermore!"

Most faintly falls thy ceaseless tune;
The cloud along the sunset sleep;
The phantom of the golden moon
Is kindled in thy quivering deeps.

Meseems a magic term I fill,
Fixed in this ruin-window strange;
Through years of sadness watching still
A moon, a sea, that never change.

And yet the moon is mounting slow;
And yet the sea is ebbing fast;
And from the dusky niche I go;
And this, like former dreams, is past.

And other clearer voices call
To towers that are not builded yet;
And, stepping from the perished wall,
My feet on steadfast earth I set.

THE WELL OF PEN-MORFA.

IN TWO CHAPTERS.—CHAPTER I.

Or a hundred travellers who spend a night at Trê-Madoc, in North Wales, there is not one, perhaps, who goes to the neighbouring village of Pen-Morfa. The new town, built by Mr. Maddocks, Shelley's friend, has taken away all the importance of the ancient village—formerly, as its name imports, "the head of the marsh;" that marsh which Mr. Maddocks drained and dyked, and reclaimed from the Traeth Mawr, till Pen-Morfa, against the walls of whose cottages the winter tides lashed in former days, has come to stand high and dry, three miles from the sea, on a disused road to Caernarvon. I do not think there has been a new cottage built in Pen-Morfa this hundred years; and many an old one has dates in some obscure corner which tell of the fifteenth century. The joists of timber, where they meet overhead, are blackened with the smoke of centuries. There is one large room, round which the beds are built like cupboards, with wooden doors to open and shut; somewhat in the old Scotch fashion, I imagine; and below the bed (at least, in one instance I can testify that this was the case, and I was told it was not uncommon,) is a great wide wooden drawer, which contained the oat-cake baked for some months' consumption by the family. They call the promontory of Llyn (the point at the end of Caernarvonshire), *Welsh* Wales; I think they might call Pen-Morfa a *Welsh* Welsh village; it is so national in its ways, and buildings, and inhabitants, and so different from the towns and hamlets into which the English throng in summer. How these said inhabitants of Pen-Morfa ever are distinguished by their names, I, uninitiated, cannot tell. I only know for a fact, that in a family there with which I am acquainted, the eldest son's name is John Jones, because his father's was John Thomas; that the second son, is called David Williams, because his grandfather was William Wynn, and that the girls are called indiscriminately by the names of Thomas and Jones. I have heard some of the Welsh chuckle over the way in which they have baffled the barristers at Caernarvon Assizes, denying the name under which they had been subpoenaed to give evidence, if they were unwilling witnesses. I could tell you of a great deal which is peculiar and wild in these true Welsh people, who are what I suppose we English were a century ago; but I must hasten on to my tale.

I have received great, true, beautiful kindness from one of the members of the family of whom I just now spoke as living at Pen-Morfa; and when I found that they wished me to drink tea with them, I gladly did so, though my friend was the only one in the house, who could speak English at all fluently. After tea, I went with them to see some of their friends; and it was then, I saw the interiors

of the houses of which I have spoken. It was an autumn evening; we left mellow sunset-light in the open air when we entered the houses, in which all seemed dark save in the ruddy sphere of the firelight, for the windows were very small, and deep set in the thick walls. Here were an old couple, who welcomed me in Welsh, and brought forth milk and oat-cake with patriarchal hospitality. Sons and daughters had married away from them; they lived alone; he was blind, or nearly so; and they sat one on each side of the fire, so old and so still (till we went in and broke the silence) that they seemed to be listening for Death. At another house, lived a woman stern and severe-looking. She was busy hiving a swarm of bees, alone and unassisted. I do not think my companion would have chosen to speak to her, but seeing her out in her hill-side garden, she made some enquiry in Welsh, which was answered in the most mournful tone I ever heard in my life; a voice of which the freshness and "timbre" had been choked up by tears long years ago. I asked who she was. I dare say the story is common enough, but the sight of the woman, and her few words had impressed me. She had been the beauty of Pen-Morfa; had been in service; had been taken to London by the family whom she served; had come down, in a year or so, back to Pen-Morfa, her beauty gone into that sad, wild, despairing look which I saw; and she about to become a mother. Her father had died during her absence, and left her a very little money; and after her child was born she took the little cottage where I saw her, and made a scanty living by the produce of her bees. She associated with no one. One event had made her savage and distrustful to her kind. She kept so much aloof that it was some time before it became known that her child was deformed, and had lost the use of its lower limbs. Poor thing! when I saw the mother, it had been for fifteen years bedridden; but go past when you would, in the night, you saw a light burning; it was often that of the watching mother, solitary and friendless, soothing the moaning child; or you might hear her crooning some old Welsh air, in hopes to still the pain with the loud, monotonous music. Her sorrow was so dignified, and her mute endurance and her patient love won her such respect, that the neighbours would fain have been friends; but she kept alone and solitary. This is a most true story. I hope that woman and her child are dead now, and their souls above.

Another story which I heard of these old primitive dwellings I mean to tell at somewhat greater length:—

There are rocks high above Pen-Morfa; they are the same that hang over Trê-Madoc, but near Pen-Morfa they sweep away, and are lost in the plain. Everywhere they are beautiful. The great sharp ledges which would otherwise look hard and cold, are adorned with the brightest-coloured moss, and the golden lichen.

Close to, you see the scarlet leaves of the crane's-bill, and the tufts of purple heather, which fill up every cleft and cranny; but in the distance you see only the general effect of infinite richness of colour, broken here and there by great masses of ivy. At the foot of these rocks come a rich verdant meadow or two; and then you are at Pen-Morfa. The village well is sharp down under the rocks. There are one or two large sloping pieces of stone in that last field, on the road leading to the well, which are always slippery; slippery in the summer's heat, almost as much as in the frost of winter, when some little glassy stream that runs over them is turned into a thin sheet of ice. Many, many years back—a lifetime ago—there lived in Pen-Morfa a widow and her daughter. Very little is required in those out-of-the-way Welsh villages. The wants of the people are very simple. Shelter, fire, a little oat-cake and buttermilk, and garden produce; perhaps some pork and bacon from the pig in winter; clothing, which is principally of home manufacture, and of the most enduring kind: these take very little money to purchase, especially in a district into which the large capitalists have not yet come, to buy up two or three acres of the peasants; and nearly every man about Pen-Morfa owned, at the time of which I speak, his dwelling and some land beside.

Eleanor Gwynn inherited the cottage (by the road-side, on the left hand as you go from Tré-Madoc to Pen-Morfa), in which she and her husband had lived all their married life, and a small garden sloping southwards, in which her bees lingered before winging their way to the more distant heather. She took rank among her neighbours as the possessor of a moderate independence—not rich, and not poor. But the young men of Pen-Morfa thought her very rich in the possession of a most lovely daughter. Most of us know how very pretty Welsh women are; but from all accounts, Nest Gwynn (Nest, or Nesta, is the Welsh for Agnes) was more regularly beautiful than any one for miles around. The Welsh are still fond of trials, and “as beautiful as a summer's morning at sun-rise, as a white sea-gull on the green sea-wave, and as Nest Gwynn,” is yet a saying in that district. Nest knew she was beautiful, and delighted in it. Her mother sometimes checked her in her happy pride, and sometimes reminded her that beauty was a great gift of God (for the Welsh are a very pious people); but when she began her little homily, Nest came dancing to her, and knelt down before her and put her face up to be kissed, and so with a sweet interruption she stopped her mother's lips. Her high spirits made some few shake their heads, and some called her a flirt and a coquette; for she could not help trying to please all, both old and young, both men and women. A very little from Nest sufficed for this; a sweet glittering smile, a word of kindness, a merry glance, or a little sympathy, all

these pleased and attracted; she was like the fairy-gifted child, and dropped inestimable gifts. But some, who had interpreted her smiles and kind words rather as their wishes led them than as they were really warranted, found that the beautiful, beaming Nest could be decided and saucy enough, and so they revenged themselves by calling her a flirt. Her mother heard it and sighed; but Nest only laughed.

It was her work to fetch water for the day's use from the well I told you about. Old people say it was the prettiest sight in the world to see her come stepping lightly and gingerly over the stones, with the pail of water balanced on her head; she was too adroit to need to steady it with her hand. They say, now that they can afford to be charitable and speak the truth, that in all her changes to other people, there never was a better daughter to a widowed mother than Nest. There is a picturesque old farm-house under Moel Gwynn, on the road from Tré-Madoc to Criccieth, called by some Welsh name which I now forget; but its meaning in English is “The End of Time;” a strange, boding, ominous name. Perhaps the builder meant his work to endure till the end of time. I do not know; but there the old house stands, and will stand for many a year. When Nest was young, it belonged to one Edward Williams; his mother was dead, and people said he was on the look-out for a wife. They told Nest so, but she tossed her head and reddened, and said she thought he might look long before he got one; so it was not strange that one morning when she went to the well, one autumn morning when the dew lay heavy on the grass, and the thrushes were busy among the mountain-ash berries, Edward Williams happened to be there on his way to the coursing match near, and somehow his greyhounds threw her pail of water over in their romping play, and she was very long in tilling it again; and when she came home she threw her arms round her mother's neck, and in a passion of joyous tears told her that Edward Williams of The End of Time, had asked her to marry him, and that she had said “Yes.”

Eleanor Gwynn shed her tears too; but they fell quietly when she was alone. She was thankful Nest had found a protector—one suitable in age and apparent character, and above her in fortune; but she knew she should miss her sweet daughter in a thousand household ways; miss her in the evenings by the fire-side; miss her when at night she wakened up with a start from a dream of her youth, and saw her fair face lying calm in the moonlight, pillowed by her side. Then she forgot her dream, and blessed her child, and slept again. But who could be so selfish as to be sad when Nest was so supremely happy? She danced and sang more than ever; and then sat silent, and smiled to herself: if spoken to, she started and came

back to the present with a scarlet blush, which told what she had been thinking of.

That was a sunny, happy, enchanted autumn. But the winter was high at hand; and with it came sorrow. One fine frosty morning, Nest went out with her lover—she to the well, he to some farming business, which was to be transacted at the little inn of Pen-Morfa. He was late for his appointment; so he left her at the entrance of the village, and hastened to the inn; and she, in her best cloak and new hat (put on against her mother's advice; but they were a recent purchase, and very becoming,) went through the *Dol Mawr*, radiant with love and happiness. One who lived until lately, met her going down towards the well, that morning; and said he turned round to look after her, she seemed unusually lovely. He wondered at the time at her wearing her Sunday clothes; for the pretty, hooded blue-cloth cloak is kept among the Welsh women as a church and market garment, and not commonly used even on the coldest days of winter for such household errands as fetching water from the well. However, as he said, "It was not possible to look in her face, and 'fault' anything she wore." Down the sloping-stones the girl went blithely with her pail. She filled it at the well; and then she took off her hat, tied the strings together, and slung it over her arm; she lifted the heavy pail and balanced it on her head. But alas! in going up the smooth, slippery, treacherous rock, the encumbrance of her cloak—it might be such a trifle as her slung hat—something, at any rate, took away her evenness of poise; the freshest had frozen on the slanting stone, and was one coat of ice; poor Nest fell, and put out her hip. No more flushing rosy colour on that sweet face—no more look of beaming innocent happiness;—instead, there was deadly pallor, and filmy eyes, over which dark shades seemed to chase each other as the shoots of agony grew more and more intense. She screamed once or twice; but the exertion (involuntary, and forced out of her by excessive pain) overcame her, and she fainted. A child coming an hour or so afterwards on the same errand, saw her lying there, ice-glued to the stone, and thought she was dead. It flew crying back.

"Nest Gwynn is dead! Nest Gwynn is dead!" and, crazy with fear, it did not stop until it had hid its head in its mother's lap. The village was alarmed, and all who were able went in haste towards the well. Poor Nest had often thought she was dying in that dreary hour; had taken fainting for death, and struggled against it; and prayed that God would keep her alive till she could see her lover's face once more; and when she did see it, white with terror, bending over her, she gave a feeble smile, and let herself faint away into unconsciousness.

Many a month she lay on her bed unable to move. Sometimes she was delirious, some-

times work-out into the deepest depression. Through all, her mother watched her with tenderest care. The neighbours would come and offer help. They would bring presents of country dainties; and I do not suppose that there was a better dinner than ordinary cooked in any household in Pen-Morfa parish, but a portion of it was sent to Eleanor Gwynn, if not for her sick daughter, to try and tempt her herself to eat and be strengthened; for to no one would she delegate the duty of watching over her child. Edward Williams was for a long time most assiduous in his inquiries and attentions; but by-and-by (ah! you see the dark fate of poor Nest now), he slackened, so little at first that Eleanor blamed herself for her jealousy on her daughter's behalf, and chid her suspicious heart. But as spring ripened into summer, and Nest was still bed-ridden, Edward's coolness was visible to more than the poor mother. The neighbours would have spoken to her about it, but she shrunk from the subject as if they were probing a wound. "At any rate," thought she, "Nest shall be strong before she is told about it. I will tell lies—I shall be forgiven—but I must save my child; and when she is stronger perhaps I may be able to comfort her. Oh! I wish she would not speak to him so tenderly and trustfully, when she is delirious. I could curse him when she does." And then Nest would call for her mother, and Eleanor would go, and invent some strange story about the summonses Edward had had to Caernarvon assizes, or to Harlech cattle market. But at last she was driven to her wits' end; it was three weeks since he had even stopped at the door to enquire, and Eleanor, mad with anxiety about her child, who was silently pining off to death for want of tidings of her lover, put on her cloak, when she had lulled her daughter to sleep one fine June evening, and set off to "The End of Time." The great plain which stretches out like an amphitheatre, in the half-circle of hills formed by the ranges of *Moel Gwynn* and the *Tŷ Madoc* flocks, was all golden-green in the mellow light of sunset. To Eleanor it might have been black with winter frost, she never noticed outward thing till she reached The End of Time; and there, in the little farm-yard, she was brought to a sense of her present hour and errand by seeing Edward. He was examining some hay, newly stacked; the air was scented by its fragrance, and by the lingering sweetness of the breath of the cows. When Edward turned round at the footstep and saw Eleanor, he coloured and looked confused; however, he came forward to meet her in a cordial manner enough.

"It's a fine evening," said he. "How is Nest? But, indeed, you're being here is a sign she is better. Won't you come in and sit down!" He spoke hurriedly, as if affecting a welcome which he did not feel.

"Thank you. I'll just take this milking-

stool and sit down here. The open air is like balm after being shut up so long."

"It is a long time," he replied, "more than five months."

Mrs. Gwynn was trembling at heart. She felt an anger which she did not wish to show; for, if by any manifestations of temper or resentment she lessened or broke the waning thread of attachment which bound him to her daughter, she felt she should never forgive herself. She kept inwardly saying, "Patience, patience! he may be true and love her yet;" but her indignant convictions gave her words the lie.

"It's a long time, Edward Williams, since you've been near us to ask after Nest;" said she. "She may be better, or she may be worse, for aught you know." She looked up at him reproachfully, but spoke in a gentle quiet tone.

"I—you see the hay has been a long piece of work. The weather has been fustions—and a master's eye is needed. Besides," said he, as if he had found the reason for which he sought to account for his absence, "I have heard of her from Rowland Jones. I was at the surgery for some horse-medicine—he told me about her;" and a shade came over his face, as he remembered what the doctor had said. Did he think that shade would escape the mother's eye?

"You saw Rowland Jones! Oh, man-alive, tell me what he said of my girl! He'll say nothing to me, but just hems and haws the more I pray him. But you will tell me. You must tell me." She stood up and spoke in a tone of command, which his feeling of independence, weakened just then by an accusing conscience, did not enable him to resist. He strove to evade the question, however.

"It was an unlucky day that ever she went to the well!"

"Tell me what the doctor said of my child," repeated Mrs. Gwynn. "Will she live, or will she die?" He did not dare to disobey the imperious tone in which this question was put.

"Oh, she will live, don't be afraid. The doctor said she would live." He did not mean to lay any peculiar emphasis on the word "live," but somehow he did, and she, whose every nerve vibrated with anxiety, caught the word.

"She will live!" repeated she. "But there is something behind. Tell me for I will know. If you won't say, I'll go to Rowland Jones to-night and make him tell me what he has said to you."

There had passed something in this conversation between himself and the doctor, which Edward did not wish to have known; and Mrs. Gwynn's threat had the desired effect. But he looked vexed and irritated.

"You have such impatient ways with you, Mrs. Gwynn," he remonstrated.

"I am a mother asking news of my sick

child," said she. "Go on. What did he say? She'll live—"as if giving the clue.

"She'll live, he has no doubt of that. But he thinks—now don't clench your hands so—I can't tell you if you look in that way; you are enough to frighten a man."

"I'm not speaking," said she in a low husky tone. "Never mind my looks: she'll live—"

"But she'll be a cripple for life.—There! you would have it out," said he, sulkily.

"A cripple for life," repeated she, slowly. "And I'm one-and-twenty years older than she is!" She sighed heavily.

"And, as we're about it, I'll just tell you what is in my mind," said he, hurried and confused. "I've a deal of cattle; and the farm makes heavy work, as much as an able healthy woman can do. So you see—" He stopped, wishing her to understand his meaning without words. But she would not. She fixed her dark eyes on him, as if reading his soul, till he flinched under her gaze.

"Well," said she, at length, "say on. Remember I've a deal of work in me yet, and what strength is mine is my daughter's."

"You're very good. But, altogether, you must be aware, Nest will never be the same as she was."

"And you've not yet sworn in the face of God to take her for better, for worse; and, as she is worse"—she looked in his face, caught her breath, and went on—"as she is worse, why, you cast her off, not being church-tied to her. Though her body may be crippled, her poor heart is the same—alas!—and full of love for you. Edward, you don't mean to break it off because of our sorrows. You're only trying me, I know," said she, as if begging him to assure her that her fears were false. "But, you see, I'm a foolish woman—a poor foolish woman—and ready to take fright at a few words." She smiled up in his face; but it was a forced doubting smile, and his face still retained its sullen dogged aspect.

"Nay, Mrs. Gwynn," said he, "you spoke truth at first. Your own good sense told you Nest would never be fit to be any man's wife—unless, indeed, she could catch Mr. Griffiths of Tynwntyrbywlch; he might keep her a carriage, may-be." Edward really did not mean to be unfeeling; but he was obtuse, and wished to carry off his embarrassment by a kind of friendly joke which he had no idea would sting the poor mother as it did. He was startled at her manner.

"Put it in words like a man. Whatever you mean by my child, say it for yourself, and don't speak as if my good sense had told me anything. I stand here, doubting my own thoughts, cursing my own fears. Don't be a coward. I ask you whether you and Nest are troth-plight?"

"I am not a coward. Since you ask me, I answer, Nest and I were troth-plight; but we are not. I cannot—no one would expect me

to wed a cripple. It's your own doing I've told you now; I had made up my mind, but I should have waited a bit before telling you."

"Very well," said she, and she turned to go away; but her wrath burst the flood-gates, and swept away discretion and forethought. She moved and stood in the gateway. Her lips parted, but no sound came; with an hysterical motion she threw her arms suddenly up to heaven, as if bringing down lightning towards the grey old house to which she pointed as they fell, and then she spoke:—

"The widow's child is unfriended. As surely as the Saviour brought the son of a widow from death to life, for her tears and cries, so surely will God and His angels watch over my Nest, and avenge her cruel wrongs." She turned away weeping, and wringing her hands.

Edward went in-doors; he had no more desire to reckon his stores; he sat by the fire, looking gloomily at the red ashes. He might have been there half-an-hour or more, when some one knocked at the door. He would not speak. He wanted no one's company. Another knock sharp and loud. He did not speak. Then the visitor opened the door; and, to his surprise—almost to his affright—Eleanor Gwynn came in.

"I knew you were here. I knew you could not go out into the clear, holy night, as if nothing had happened. Oh! did I curse you? If I did, I beg you to forgive me; and I will try and ask the Almighty to bless you, if you will but have a little mercy—a very little. It will kill my Nest if she knows the truth now—she is so very weak. Why, she cannot feed herself, she is so low and feeble. You would not wish to kill her, I think, Edward?" She looked at him as if expecting an answer; but he did not speak. She went down on her knees on the flags by him.

"You will give me a little time, Edward, to get her strong, won't you, now? I ask it on my bended knees! Perhaps, if I promise never to curse you again, you will come sometimes to see her, till she is well enough to know how all is over, and her heart's hopes crushed. Only say you'll come for a month, or so, as if you still loved her—the poor cripple—forsorn of the world. I'll get her strong, and not tax you long." Her tears fell too fast for her to go on.

"Get up, Mrs. Gwynn," Edward said. "Don't kneel to me. I have no objection to come and see Nest, now and then, so that all is clear between you and me. Poor thing! I'm sorry, as it happens, she's so taken up with the thought of me."

"It was likely, was not it? and you to have been her husband before this time, if—Oh, miserable me! to let my child go and dim her bright life! But you'll forgive me, and come sometimes, just for a little quarter of an hour, once or twice a week. Perhaps she'll be asleep sometimes when you fall, and then,

you know, you need not come in. If she were not so ill, I'd never ask you."

So low and humble was the poor widow brought, through her exceeding love for her daughter.

CHIPS.

LIEUTENANT WAGHORN AND HIS WIDOW.

FACTS have come to our knowledge since the publication of "The Life and Labours of Lieutenant Waghorn,"* which tend very much to absolve the Government and the East India Company from the imputation of not having duly rewarded Mr. Waghorn for his services, nor adequately pensioned his widow.

It appears, beyond all doubt, that besides having been promoted to the rank of Lieutenant in the Navy, solely for his energy in opening the Overland Route (for Mr. Waghorn had not been, during some time, actively employed in Her Majesty's service), he received during his career large sums, both from the Treasury Board and from the East India Company. The question of his disbursements in opening the Trieste route, was one for both these Boards. His claim was six thousand pounds, but each Board awarded to the Lieutenant no more than two thousand pounds: four thousand pounds were accordingly paid into his hands for that special service. This disappointment was not, however, without subsequent compensation.

When the question of Lieutenant Waghorn's general services was brought forward, the Government proposed in Parliament a grant of fifteen hundred pounds; expressing at the same time a wish that the East India Company would come forward with the like sum. The Directors, however, preferred converting the grant into a life annuity, and fixed it at two hundred a year. Nor was this all. Mr. Waghorn's name was afterwards placed on the Civil List by order of the Queen, for two hundred per annum. The state of the fund was, however, such, that the pension could not then (1848) be formally granted; but in order that Lieutenant Waghorn should sustain no loss from this circumstance, a payment was made during the first year of two hundred pounds out of the Royal Bounty.

The account, therefore, as between Lieutenant Waghorn and the Ministry, and East India Company, stood thus in 1849, when his career unhappily closed:—Besides having been paid four thousand pounds for disbursements in opening the Trieste route, Lieutenant Waghorn had obtained a gratuity of fifteen hundred pounds, and a life pension of two hundred a year, together with the first payment of another life pension for the like amount.

We, in common with many of our contemporaries, appear to have certainly overrated (on authority we could not at that time doubt)

the "extreme destitution" of Mrs. Waghorn. Mr. Waghorn had but recently married; and when at his death a pension was asked for his widow, only forty pounds of the small annual fund at the disposal of the Government applicable for such a purpose, remained unappropriated. To grant the whole of this, while Mrs. Waghorn was already in the receipt of fifty pounds a-year, as the widow of a navy lieutenant, and fifty pounds per annum besides from the East India Company, was thought hardly just. Consequently, only twenty-five pounds per annum of that balance was at first promised; but, when the pension year was nearly at an end, the other fifteen pounds were added. Even Mrs. Waghorn's friends thought this enough, and she now stands on that list for forty pounds per annum, her entire income being thus made up to one hundred and forty pounds a-year.

We venture this explanatory and not very amusing "Chip," because we feel bound to state—and we regret that the foregoing facts were not sooner within our knowledge—that, however opinion may differ as to who was in the right in reference to the constant disputes between Mr. Waghorn and the authorities during his life—his widow has not been unjustly dealt with since his death.

"HOUSEHOLD WORDS" AND ENGLISH WILLS.

THE disclosures which have appeared in this publication, under the head of "The Doom of English Wills," have been designated, by some of our correspondents, as "a little bit of fact, expanded by a good deal of fancy."

We must remove these charitable misgivings. The evidence in our hands, of the material facts, is full and complete: there is nothing fictitious beyond the manner of telling the story. The tale itself is as correct as arithmetic.

But, one of the Registrars of York, ("Cathedral number two") desires us, in a very temperate and courteous letter, to state, on his express authority, that his official income is only one-fifth of the amount mentioned in our article. This statement we willingly make. We must, however, add, for the further information of our readers, that the late Archbishop of York divided the offices of "Registrar-Chancellor" and "Registrar-Scribe" between his two sons, of whom one was, at the time of such division, a minor. In connection with the York Will Office, there is a Deputy-Registrar besides. Although we fully believe our correspondent's statement as to his own share of the gross receipts, we have no new reason whatever to suppose that our estimate of the total is exaggerated.

In the same article we surmised that the public would be glad to know what had been done towards the better preservation of the documents in the Registry of the Will Office at York, since 1833. Our correspondent sup-

plies the information. A rent of one hundred pounds per annum has been paid by the Registrars since 1839, for additional buildings; and a sum of one hundred and fifty pounds was expended "for fittings, &c."

These are our correspondent's corrections; and we present them to our readers without any comment.

LETTERS OF INTRODUCTION TO SYDNEY.

EVERY man who emigrates has a large packet of letters of introduction. To expend a few minutes and a sheet of paper in writing a few words signifying nothing, is a cheap mode of paying off obligations or offering politeness. I (says the Contributor of this "Chip") had about thirty; many of them displayed the admirable manner in which geography is taught in our schools. There were letters to persons residing in South Australia, Van Dieman's Land, and New Zealand, as if these had been suburbs or districts within an easy distance of Sydney, instead of as far off as Marseilles from London. Selecting one addressed to the manager of a joint stock bank, I set out with the rest in my pocket. The gentleman received me graciously, read my letter deliberately, asked me every conceivable question about my birth, parentage, education, expectations, relatives, pursuits, and intentions, amount of capital in hand and in prospects, and ending by observing that no doubt I should find something to suit me; in the mean time, the best thing I could do was to lay out my money in shares in his bank; luckily, I did not take his advice. Having answered all his questions, I put my packet of letters into his hands and inquired their value.

"Oh," said he, "mere sham bank notes I suspect; however, let us sort them. In the first place, understand, young gentleman, we are divided into at least three sets, but you have only to do with two, the Free Colonists and the Emancipists. Many of the latter are wealthy, educated, and personally respectable; but if you mean to associate with the other party, you must avoid the Emancipists (freed convicts), except in mere trade transactions, in the same way as you would a black bear in New York. If you visit one, you cannot visit the other. There are half a dozen of your letters good. I see you have the bishop and the judge, but as everybody brings letters to these gentlemen, unless you were a warm personal friend, and he was a warm personal friend of the parties addressed, you must not count on much use from them. Of this batch I know nothing; and as to these, which are addressed to wealthy people, but quite out of the pale of society, I should recommend you to burn them."

I thanked the banker for his advice, which was all I got from him, although Australia is the most hospitable country in the world.

The topping citizens of Sydney very much resemble the same gentlemen in Manchester; they are so busy making money, that unless you have a large letter of credit they have not time to be hospitable to you; in fact, they can't afford it. The writers of my letters had led me to expect a very different reception.

At the period I speak of—it was before the great crash of 1843—the streets of Sydney were particularly brilliant; landaus, gigs, phaetons, carriages, and even four-in-hands swarmed, as well as all kinds of quiet carriages, and ladies and gentlemen on horseback; and then, as now, there were great numbers of both sexes who delighted to adorn themselves after the exact pattern of the book of fashions; the Government clerks and the sons of wealthy Emancipists were particularly brilliant. Amid all this glare and glitter, it is impossible to describe how lonely, how miserable I felt; ten thousand times more lonely than if in a desert, for trees are to a solitary man more soothing objects than plate glass, and cattle feeding more companionable than busy stranger crowds. However, among all my letters, I found two useful, and several very civil. But it was astonishing how every one had something to sell me, an extraordinary bargain. One had a farm; another, a lot of sheep; and a third, a famous mob of cattle; and all were ready to take part cash and part on my bill at a long date. Having firmly made up my mind to buy nothing, there was no harm done; but it was amusing to find, by comparing notes, that the farm had no water, the sheep had the scab, and the cattle were so wild that they had not been mustered within the memory of man. Even the official and Government clerks cannot refrain from doing a bit of trading. These gentlemen fancy they fill the place of an aristocracy, their moustachios, tips, and patent boots, their airs and graces, would do credit to Downing-street or Somerset House. Each carries, I heard a Bushman once observe, a ramrod in his spine, and an eye-glass in his eye, and the sons of radical coal-merchants, transplanted to a foreign climate, become the heroes of silver-fork novels; but still the influence of the place sets them to make money as well as debts, and all my well-dressed acquaintances had something to sell me—a gun, a saddle, a fishing rod of wonderful and totally useless perfection. When they found I would not bite, their eyesight failed them.

Sometimes I joined pic-nic parties to the oyster-beds, which lie about four miles out in the bay; sometimes I rode and drove with new made friends in the Government domain, a splendid park, extending to the water's edge, laid out in gardens of European and Tropical flowers and shrubs, with a drive for carriages, which is always crowded in an evening. There used to appear an Emancipist auctioneer, whose life and death was a romance, in a low open phaeton, drawn by four splendid ponies, ridden

by postilions in livery; himself grandly leaning on a gold headed cane. There too, an old man, of Holywell-street origin, who could neither read nor write, dashed along in a perfectly appointed tandem, with a lovely girl beside him. He was reputed worth a hundred thousand pounds. And others of all ranks, in scores, displaying luxury without refinement; of whom, now there are few left. There is a bathing establishment, in a retired part of the Promontory on which the park is formed, and from the heights the fair Australians may often be seen, in becoming costumes, stretching across the waters of the bay with all the agility of mermaids.

A strong contrast to the belles and beaux of the park, was the widow of Sam Terry, the convict, who died worth a million sterling; she was pointed out to me scrubbing her own door step one morning, in a woollen gown and shabby black silk bonnet. On another occasion, I saw Greenacre's friend, Sarah Gale, very calmly engaged in cutting up boiled beef in a cook-shop she had established.

Altogether Sydney would be a delightful place if the men in trade could be inoculated with a few honourable principles, and the men of leisure and wealth with a love of refined and literary occupations; if there were a greater demand for works of history, philosophy, and poetry, for pictures and engravings, and less for port wine and French brandy. It is not in Colonial towns the emigrant will find peace, happiness, innocence, or contentment.

CROTCHETS OF A PLAYGOER.

TURNING over, the other day, some old dramatic journals and magazines, we met with a curious speculation touching the best means of indicating the merits of stage-professors. The method proposed was purely of a commercial character—it was, indeed, simply to adapt the language of the Stock-Exchange to the exigencies of theatrical adventure. The indefinite terms used in newspaper reports, it was urged, are unsatisfactory; but the technics of Lloyds, it was suggested, would be more eligible as more decided. The "satirical rogues" insisted that by their adoption dramatic criticism might be rendered indubitably explicit and intelligible. The information given would be most precise. Who would think of saying, at Lloyd's, that Omnium had risen considerably in the course of the day? Not the most incorrigible block-head. He would state distinctly that it left off at seven and three quarters, or some other figure. The merits of plays and players, the wag thought, might be similarly described. We might say, of Buskin that he began at fifty-eight three quarters, progressed to sixty-five and a half, and has again declined full eight per cent. Mr. Sock might be quoted at seventy; Mr. Floot at sixty-seven and a quarter; Mr. Tag at sixty-one.

We know not how the gentlemen on the stage might like this mode of appraisement; but we suspect that the ladies would esteem it in the same odious light as declarations of their age. The figures look awfully unpolite. Miss A would scarcely like to see herself quoted as fifty-two three-eighths; Miss B, fifty-eight three-quarters; Mrs. C as sixty; Mrs. D as sixty-five; Mrs. E as sixty-seven and a half; and Miss F as seventy-nine three-eighths. Authors, on the contrary, might like the mode of announcement; as it might be mistaken to indicate the number of nights during which a piece had run, instead of its factitious value in the managerial market. Nothing, frequently, is more different than the appreciation of the same drama behind the scenes, and before them.

One sees at once that a notion of this kind is a whimsical crotchet, and employed with a satiric aim. But such crotchets are sometimes unconsciously adopted;—by none more than by members of the histrionic profession. They are, in fact, a crotchety people. Many of them, for instance, have a strong and strange impression that they are far greater and wiser than the authors whose words they recite. In their estimation the poet is a mere accidental appendage to a theatre. Nor is this whim the caprice of the modern player or the peculiar stigma of the English stage. We read that, in France, Mayret, the predecessor and rival of Corneille, was paid by the Company to which he was attached at the rate of three crowns for each piece, and was required to beat a drum at the door of the theatre to assemble an audience. This, however, is only a primitive illustration of the rank awarded in the Green-room to the most favoured poet. He is still expected, though under another form, to beat a drum for the actors. Not until a new part becomes needful to sustain the position of the favourite performer is he resorted to; until then he is held at arm's length; and, like the constituent of a member of Parliament, made to feel himself an intruder on the precincts sacred to his representative. Mayret, moreover, was more necessary to the stage for which he worked than any living author can now be.

To the Theatre, the whole body of our dramatic literature has been handed over, for the actor's exclusive benefit. The revival of an old play costs nothing for the authorship. The actor stands in the shoes of Massinger, Ben Jonson, Beaumont and Fletcher, Shakspeare, and all other dramatists, preceding the passing of Sir Edward Lytton Bulwer's Act, and wields the mighty power thus lodged in his hands by the dead, against the living poet. That the latter has any chance at all, is owing entirely to the accident that performers and managers have not, usually, intelligence commensurate with the forces at their disposal. But for this evil there is an obvious remedy. Theatres, under private

management, should be required to pay into a Public Fund a fee for every performance of an old drama; and this same fund should be applied to the maintenance of a National Theatre, under a properly constituted directorship for the encouragement of authors and actors of the highest genius. A simple legislative enactment of this nature, would again give dignity to the stage, and make it worth the while of the true poet to labour hard in a dramatic apprenticeship, for the sake of the ultimate "sootrun away and masterdom" to be achieved.*

Individual freaks of humour are numerous with histrionic professors. Some of the highest have had strange empirical notions of the means of study. Garrick was not exempt from this infirmity; nay, in him it even looks like a special vanity. The actor should imitate nature. Granted. Garrick, however, sought to create opportunities of imitation. It is related of him that he had a trick of attracting attention in the crowd, in order to observe the attitudes of the bystanders. One day in the city, Garrick separated from his companions, and walking into the middle of the road, turned his gaze upwards, and, in a posture of thought and admiration, exclaimed, "I never saw two before." Attracted by his manner, multitudes gathered round him, curious what could be the object of his attention, while Garrick continued to excite their conjectures by repeating the same mysterious words—"I never saw two before!" "Two what?" "Two storks, perhaps," said one, "for it would be strange to see more than one stork at a time." Nobody, however, had seen a single stork. Still Garrick kept his secret; and meanwhile, was careful and diligent to watch the different attitudes with which the common feeling was expressed by different individuals. For the sake of this experience, he pretended to have practised the *ruce*; but the mode of procedure it is evident, was altogether a whim—a mere piece of vanity; though by some of his friends and admirers considered an ingenious contrivance for inducing a number of persons to become the unconscious models, for the nonce, of a celebrated artist. We suspect, however, that if any one should deliberately resolve on making himself a great actor, by projecting *ruces* of this kind, he would find himself grievously disappointed. A little consideration will serve to show, that the artistic qualification precedes the trick; and that Garrick's success was owing to the histrionic skill that he already possessed. He had merely descended from the stage to the street, and, for the gratification of his personal vanity, exhibited gratuitously to the crowd what his audience had paid for in the theatre. Such things are among the "pitiful ambitions" which Shakspeare would have as readily condemned in a Garrick as in a Tarleton.

* This is the individual Play-goer's "Crotchet." We doubt its efficacy, and do not adopt it.

We fear that long since "the days of Tarleton and of Kempe," the stage has retained traces of ancient barbarism. What is called "gagging"—adding to or substituting the text—not only our clowns, but actors of higher pretensions have been guilty of from the earliest dawn to a very recent period, if indeed, the practice be yet altogether abandoned. The purity of the poet's text should, above all things, be preserved in stage-representations. In Shakspeare, the alteration of a word will spoil a passage; yet some actors are foolish enough to think that they may show originality by interpolation. On the contrary, true genius, on the actor's part, is shown by his making the most of the text as it stands; all beyond this is the poet's province. As this feeling spreads—and we are happy to be able to bear testimony that among our best performers it is spreading—the integrity of the text will come to be as seriously considered as its purity. The public will then cease to be content with mutilated performances. We trust and believe that the time is hastening, when the background to Shakspeare's "Hamlet" will be restored to the stage; when we shall again have Fortinbras and his army, together with Hamlet's account of the manner in which he had circumvented the king's tools on his voyage to England, and other particulars now omitted, which, "as necessary questions of the play," deserve respectful attention, and without which the conduct of the piece wants coherence and stability. The prayer, too, of the usurping uncle should be restored; nay, with the exception of two rather coarse lines, the entire text should be delivered. The sole objection to this proposal is the length of the tragedy; an objection, however, at once obviated, by having one piece only performed in an evening. Such a National Theatre, indeed, as that we have above proposed, should be established on this specific principle—the exclusive exhibition each evening of one five-act play, whether tragedy or comedy, performed by the best and most mature actors under a competent director, and supported as far as necessary by the state.

The Elizabethan drama grew up under the patronage of the court. The Victoria drama would grow up with that of the people at large, were but the popular will organised and regulated by parliamentary sanction, as it might be by the establishment of one National Theatre under the highest control, without interfering with the conduct of other houses.

A standard of taste and merit would be thus created, and a competition excited, which would soon develop all the histrionic and dramatic talent in the country. The recent legislative enlargement of the theatrical arena has already done much good; the liberty of the stage, as the condition of progress, is an invaluable boon. More, nevertheless, is re-

quired to be done. Erect, in addition, a standard of good authorship and good acting, and we shall ere long find ourselves in possession of a modern drama, illustrative of the new thoughts and feelings which have supervened upon the improved and more intricate combinations of an advanced society. Mighty is the work that yet remains for the dramatic poet to do; but not greater than the genius which may reasonably be believed to exist for the adequate accomplishment of the task proposed.

LIFE IN AN ESTANCIA.

FIRST PART.

A VERY interesting series of letters has been put into our hands, addressed to his relations in England by a son and brother, who has been many years settled in South America. For the last four years he has been the majordomo, or active manager, of one of those vast establishments in the Pampas of Buenos Ayres, called "Estancias," where oxen, horses, and sheep are multiplied to an extent which makes our island notions of flocks and herds almost contemptible. Sir Francis Head's "Scamper across the Pampas," and other Travels, have presented us vivid pictures of thousands of oxen and horses, running wild over interminable plains; but we are not aware of any published account of a residence in an Estancia—of that life of solitude and adventure which combines so much of the excitement of the hunter with the provident arrangements of the man of commerce. The condition of our stout Northumbrian in these wilds is altogether a remarkable one. The passages which we shall give from his letters will retain his own words; our concern with them will be confined to selection and arrangement.

The word "Estancia," as given in the Spanish dictionary, simply means a private apartment or dormitory in a dwelling-house, and it is difficult to account for its being applied to establishments dedicated to the breeding of cattle. In all probability when the first settlers from old Spain erected their huts, dwellings, or Estancias, for the purpose of domesticating the wild cattle, the name of the dwelling in course of time, became the name of the establishment, and has continued to be so down to the present day. I am led to this conclusion from the fact that other names have undergone similar changes quite foreign to their original application in the Spanish language.

Lakes, affording a permanent supply of water, are absolutely necessary for an Estancia. Next in importance to water is good pasture and dry campo—these generally go together. When the natural formation of the land is broken into ridges, or is low and marshy, the quality of the grass partakes of the nature of the soil, harsh, and

possessing but little nourishment. Cattle breed well enough upon such land, but they seldom—except in very favourable years—fatten.

In this hemisphere the climate between the latitudes of twenty-eight and forty degrees, seems to be the best calculated for estancias. Out of that line it appears to be either too hot or too cold. In the hot climate the insects goad the animals to death in the summer; and beyond the latitude of forty degrees, the snow in winter lies upon the ground, and cattle then cannot be confined to limits, and in great measure cease to be of any value to their owners.

In the present day, when a new Estancia is to be formed upon land the property of the state, the purchase being made, the land measured, and possession given, the proprietor proceeds to erect his homesteads, which at the first, are not such as to occupy much time or capital. The principal building consists of a room for himself or his *Capitán*, and a kitchen for his *peons* to eat and sleep in. They are for the most part built of mud, or bricks dried in the sun, and thatched with bullrushes, or the reeds which grow in the lakes and marshes. The Estancia is then surrounded with a deep fosse, a single plank serving as a drawbridge. His next care is to make an enclosure to shut up his cattle at night. These are, for the most part, in a circular form, varying from one hundred and fifty to two hundred yards in diameter, surrounded by a deep ditch, having a doorway about ten yards in width to admit the entrance and exit of the cattle. He now only requires a Corral, which is also formed of posts placed perpendicular, and so close together, that four of them do not occupy more space than a yard, and are bound together with short thongs cut from the hide of a bull; the Corral (in Dutch, at the Cape, called *kral*) is generally made circular, and about thirty or forty yards in diameter; this is to enclose the *macadas* or mares, when he wants to catch his saddle-horses, or occasionally to shut up a troop of cattle when he sells them for the market. These, with a well to supply the house with fresh water, and a few posts for the men to tie their horses to, form all that is necessary for the commencement of an Estancia, as far as the homestead is concerned.

At a convenient distance from the house, a piece of rising ground is selected in which a post is deeply fixed to serve as a mark for the cattle. This is called the *Rodío*, and I must explain its use. It is to the cattle precisely what the parade ground is to the soldier. Here the herd is assembled daily, and taught to remain as long as may be required. When the *Rosero*, or drover, comes to part off the cattle purchased for the market, the herd is assembled in the *Rodío*; when our neighbours come to part their stray cattle, it is done in the *Rodío*; and on every

occasion that it is necessary to assemble the herd, the animals know by custom; as soon as the herdsmen appear with the dogs, that they are wanted in the *Rodío*, and thither they bend their way. Upon the maintenance of this discipline their value mainly depends; and I believe the increase, too, is greater than when they are permitted, through neglect, to run wild in the Campo.

I rise at three o'clock in the morning. Would you could see me seated round the fire on the kitchen floor, surrounded by the herdsmen and shepherds! The uncouth appearance of the men—their moustachios and black beards—their long knives stuck in their girdles; the kitchen jet-black with smoke; it looks just like one of those scenes, and the men look like those banditti, which old Farley used to introduce in his melo-dramas, such as the "Miller and his Men." Yet they are an inoffensive race of people, and I feel quite as secure as I should do in England. How could you know me in my present dress! Except my white planter's hat, I have adopted all the clothing in use among the *paisanos* of the Pampas. Mine is a life on horse-back. The ground I have to ride over is fifteen miles by twelve in extent, and contains about thirty to forty thousand head of horned cattle, five thousand horses and mares, and about twelve thousand sheep, besides donkeys and mules. I enjoy excellent health; the air is pure and bracing. The herdsman's diet suits the hunter's appetite; plenty of roast beef, and a drink of water to wash it down—no ale or porter in the Pampas—beef in its natural state, fresh from the plains, and no stint. If the men eat a whole ox at breakfast, they will kill another for supper. The hide and tallow are worth nearly as much as the living animal, so that the cost of maintaining the men is but little. No bread is allowed, a little Indian corn or pumpkin at certain seasons is all that we have to accompany the meat. When at home at the principal residence, I generally keep tea, sugar, and biscuit; but when from home, at the distant stations, I live as the herdsmen do, eat roast beef, and roast beef to it. I am stout, but not fat, my weight from fourteen to fifteen stone; yet I can stoop, and tie my shoe-string with as much ease as I could when ten years of age.

I live quite alone; not a soul sleeps in the house with me. According to the custom of the *Campes*, the people live apart from the *patron* or *majordomo*, as I am styled. You may think, therefore, that in winter I am very dull in the evenings. My library is reduced to the Bible and Prayer-Book, "Nicolson's Mathematics," "Don Quixote," and "Smith's Wealth of Nations."

Eighteen out of the twenty-four hours are devoted by me to active duties, either in the counting-house, or in the field. I have now thirty-five thousand head of cattle under process of drill, at pasture all day and inclosed at

night. Those that remain yet in a wild state, will for the most part have to be taken with the lazo, and sold to the drovers in troops of five, hundred each. They are principally oxen, and three-year-old cows. This work of the lazo is both hard and very dangerous for those that are engaged in it, and I heartily wish that it was concluded; the men, when once heated, pursue it with great animation, with all the ardour of the fox-hunter; but it is a description of riding which would make the boldest of our steeple-chasers quail. When a peon once catches a five-year-old ox by the horns, and he turns out a *tartar*, after a few ineffectual shakes of the head, to throw off the lazo, he directly darts at the horse, who immediately ~~comes off~~, as the reins direct him, at full speed, the foaming ox close at his heels, and fast to the saddle with twenty-five yards of lazo. The rider, in the meantime, has his attention divided, to direct the reins, and with the other hand to hold the lazo, so as to prevent it from becoming entangled with the legs of the horse. The horse must take all that comes in his way; patches of long grass that reach up the stirrups, to the burrows of the viscachas, and every other obstacle. There is no course but to go on, until he reaches his companions, and they arrive to his assistance. Should the ox give up the chase suddenly, the rider must immediately check the speed of his horse, otherwise the jerk would break the lazo, or what is worse, it would draw the saddle back to the flanks of the horse, or break the girths made of vaco hide; in which case the man would be brought to the ground and be at the mercy of the furious animal, still with the lazo on his horns but no longer fast to the horse. They who have seen the countenance of the fox-hunter when rising to a dangerous leap, or the jockey when he is approaching the winning post with the nose of the second horse at his girths, may equally imagine the anxiety of the herdsman of the Pampas in such a situation, with nothing short of his own life depending upon the issue of the race.

You will like to know something of the people by whom I am surrounded. The first and most numerous class is that of the simple *peasano*, the herdsman and shepherd; the hired servants of the Estanciero. Upon them devolves the duty of looking after the cattle and horses, under the direction of the Capitaz in charge of the herd, either at the Estancia or at the *Puestos*. A herd of five thousand head requires a Capitaz and three peons to take care of them. The shepherds are hired by the month, and their business is entirely confined to taking care of their respective flocks. Next these already named comes the husbandman, the grower of wheat, Indian corn, &c. Their farms are called *Chacras*, and *Chacareros*, the agriculturists of the Pampas. In general, they are not breeders of cattle, and keep no more than merely the oxen and horses necessary for the cultivation

of the soil. Connected with the business of the estancias, and next in order, is the *Resero*, or driver. They are pretty numerous, and require to be matriculated, and licensed by the department of Police, being also compelled to give security to the chief for their good conduct. As their place of abode is uncertain, constantly moving from Estancia to Estancia, they are exempt from military service. Their business is to receive the cattle purchased by the owners of the *saladeros*, or salting establishments, from the estancieros. They bring with them peons and horses to part the cattle from the *rodios*, or herds, and drive them to town. They are paid so much per head by their employers, and are responsible for losses on the road; they pay their assistants so much per trip, and these, again, find their own horses. These men occasionally assist the estanciero, when he requires extra hands to get through the work of particular seasons; they are then hired by the day, and work with their own horses.

There are a few men employed in driving troops of carts drawn by bullocks, for the conveyance of produce, hides, grain, &c., &c., to the city, and from thence bringing what is required for the use of the country. There still remains to notice the wandering *gaucho*. A few years have produced a great change in this class. He was the gipsy of the Pampas, literally, as the name implies, a man without a home; an idler, without any fixed abode or occupation. He passed his days in riding from estancia to estancia. He was sometimes useful as a friend, always to be avoided as an enemy. Both considerations ensured him food and shelter; and he would occasionally work a few days on horseback to purchase cigars and clothing. Some of these men were perfectly inoffensive in their habits and dispositions; but the majority of them were dangerous characters, men capable of committing any crime, however atrocious. The race is now all but extinct. The excellent regulations of the police, under the present Government, have effectually put down these Bedouins of the Pampas. All men now who are found without occupation are sent to the encampment near Buenos Ayres, and are there disposed of, according to their demerits.

Large estancias presently render an immense tract of land to a certain extent productive; but they are not favourable to population—indeed they are almost incompatible with each other; cattle must have room, and the less they are disturbed, the better; the whole number of souls upon the estate, men, women and children, does not amount to fifty! and yet the number is equal to the care of forty thousand head of horned cattle, fifteen thousand sheep, and four thousand horses and mares, with leisure to build and keep in repair their cottages, as well as to cultivate Indian corn, pumpkins, water-melons, &c., for the use of themselves and their families.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 35.]

SATURDAY, NOVEMBER 23, 1850.

[Price 2d.]

A CRISIS IN THE AFFAIRS OF MR. JOHN BULL.

AS RELATED BY MRS. BULL TO THE CHILDREN.

MRS. BULL and her rising family were seated round the fire, one November evening at dusk, when all was mud, mist, and darkness, out of doors, and a good deal of fog had even got into the family parlor. To say the truth, the parlor was on no occasion fog-proof, and had, at divers notable times, been so misty as to cause the whole Bull family to grope about, in a most confused manner, and make the strangest mistakes. But, there was an excellent ventilator over the family fire-place (not one of Dr. Arnott's, though it was of the same class, being an excellent invention, called Common Sense), and hence, though the fog was apt to get into the parlor through a variety of chinks, it soon got out again, and left the Bulls at liberty to see what o'clock it was, by the solid, steady-going, family time-piece: which went remarkably well in the long run, though it was apt, at times, to be a trifle too slow.

Mr. Bull was dozing in his easy chair, with his pocket-handkerchief drawn over his head. Mrs. Bull, always industrious, was hard at work, knitting. The children were grouped in various attitudes around the blazing fire. Master C. J. London (called after his God-father), who had been rather late at his exercise, sat with his chin resting, in something of a thoughtful and penitential manner, on his slate, and his slate resting on his knees. Young Jonathan—a cousin of the little Bulls, and a noisy, overgrown lad—was making a tremendous uproar across the yard, with a new plaything. Occasionally, when his noise reached the ears of Mr. Bull, the good gentleman moved impatiently in his chair, and muttered "Con—found that boy in the stripes, I wish he wouldn't make such a fool of himself!"

"He'll quarrel with his new toy soon, I know," observed the discreet Mrs. Bull, "and then he'll begin to knock it about. But we mustn't expect to find old heads on young shoulders."

"That can't be, Ma," said Master C. J. London, who was a sleek, shining-faced boy.

"And why, then, did you expect to find an

old head on Young England's shoulders?" retorted Mrs. Bull, turning quickly on him.

"I didn't expect to find an old head on Young England's shoulders!" cried Master C. J. London, putting his left-hand knuckles to his right eye.

"You didn't expect it, you naughty boy!" said Mrs. Bull.

"No!" whimpered Master C. J. London. "I am sure I never did. Oh, oh, oh!"

"Don't go on in that way, don't!" said Mrs. Bull, "but behave better in future. What did you mean by playing with Young England at all?"

"I didn't mean any harm!" cried Master C. J. London, applying, in his increased distress, the knuckles of his right hand to his right eye, and the knuckles of his left hand to his left eye.

"I dare say you didn't!" returned Mrs. Bull. "Hadh't you had warning enough, about playing with candles and candlesticks? How often had you been told that your poor father's house, long before you were born, was in danger of being reduced to ashes by candles and candlesticks? And when Young England and his companions began to put their shirts on, over their clothes, and to play all sorts of fantastic tricks in them, why didn't you come and tell your poor father and me, like a dutiful C. J. London?"

"Because the rubric—" Master C. J. London was beginning, when Mrs. Bull took him up short.

"Don't talk to me about the Rubric, or you'll make it worse!" said Mrs. Bull, shaking her head at him. "Just exactly what the Rubric meant then, it means now; and just exactly what it didn't mean then, it don't mean now. You are taught to act, according to the spirit, not the letter; and you know what its spirit must be, or you wouldn't be. No, C. J. London!" said Mrs. Bull, emphatically. "If there were any candles or candlesticks in the spirit of your lesson-book, Master Wiseman would have been my boy, and not you!"

Here, Master C. J. London fell a crying more grievously than before, sobbing, "Oh, Ma! Master Wiseman with his red legs, your boy! Oh, oh, oh!"

"Will you be quiet," returned Mrs. Bull, "and let your poor father rest? I am ashamed

of you. You to go and play with a parcel of sentimental girls, and dandy boys! Is that your bringing up?"

"I didn't know they were fond of Master Wiseman," protested Master C. J. London, still crying.

"You didn't know, Sir!" retorted Mrs. Bull. "Don't tell me! Then you ought to have known. Other people knew. You were told often enough, at the time, what it would come to. You didn't want a ghost, I suppose, to warn you that when they got to candlesticks, they'd get to candles; and that when they got to candles, they'd get to lighting 'em; and that when they began to put their shirts on outside, and to play at monks and friars, it was as natural that Master Wiseman should be encouraged to put on a pair of red-stockings, and a red hat, and to commit I don't know what other Tom-fooleries and make a perfect Guy Fawkes of himself in more ways than one. Is it because you are a Bull, that you are not to be roused till they shake scarlet close to your very eyes?" said Mrs. Bull indignantly.

Master C. J. London still repeating "Oh, oh, oh!" in a very plaintive manner, screwed his knuckles into his eyes until there appeared considerable danger of his screwing his eyes out of his head. But, little John (who though of a spare figure was a very spirited boy), started up from the little bench on which he sat; gave Master C. J. London a hearty pat on the back (accompanied, however, with a slight poke in the ribs); and told him that if Master Wiseman, or Young England, or any of those fellows, wanted anything for himself, he (little John) was the boy to give it him. Hereupon, Mrs. Bull, who was always proud of the child, and always had been, since his measure was first taken for an entirely new suit of clothes to wear in Common, could not refrain from catching him up on her knee and kissing him with great affection, while the whole family expressed their delight in various significant ways.

"You are a noble boy, little John," said Mrs. Bull, with a mother's pride, "and that's the fact, after everything is said and done!"

"I don't know about that, Ma;" quoth little John, whose blood was evidently up; "but if these chaps and their backers, the Bulls of Rome—"

Here Mr. Bull, who was only half asleep, kicked out in such an alarming manner, that for some seconds, his boots gyrated fitfully all over the family hearth, filling the whole circle with consternation. For, when Mr. Bull *did* kick, his kick was tremendous. And he always kicked, when the Bulls of Rome were mentioned.

Mrs. Bull holding up her finger as an injunction to the children to keep quiet, sagely observed Mr. Bull from the opposite side of the fireplace, until he calmly dozed again, when she recalled the scattered family to their former positions, and spoke in a low tone.

"You must be very careful," said the worthy lady, "how you mention that name; for, your poor father has so many unpleasant experiences of those Bulls of Rome—Bless the man! he'll do somebody a mischief."

Mr. Bull, lashing out again more violently than before, upset the fender, knocked down the fire-irons, kicked over the brass footman, and, whisking his silk handkerchief off his head, chased the Pussy on the rug clean out of the room into the passage, and so out of the street-door into the night; the Pussy having, (as was well known to the children in general,) originally strayed from the Bulls of Rome into Mr. Bull's assembled family. After the achievement of this crowning feat, Mr. Bull came back, and in a highly excited state performed a sort of war-dance in his top-boots, all over the parlor. Finally, he sank into his arm-chair, and covered himself up again.

Master C. J. London, who was by no means sure that Mr. Bull in his heat would not come down upon him for the lateness of his exercise, took refuge behind his slate and behind little John, who was a perfect game-cock. But, Mr. Bull having concluded his war-dance without injury to any one, the boy crept out, with the rest of the family, to the knees of Mrs. Bull, who thus addressed them, taking little John into her lap before she began:

"The B's of R.," said Mrs. Bull, getting, by this prudent device, over the obnoxious words, "caused your poor father a world of trouble, before any one of you were born. They pretended to be related to us, and to have some influence in our family; but it can't be allowed for a single moment—nothing will ever induce your poor father to hear of it; let them disguise or constrain themselves now and then, as they will, they are, by nature, an insolent, audacious, oppressive, intolerable race."

Here little John doubled his fists, and began squaring at the Bulls of Rome, as he saw those pretenders with his mind's eye. Master C. J. London, after some considerable reflection, made a show of squaring, likewise.

"In the days of your great, great, great, grandfather," said Mrs. Bull, dropping her voice still lower, as she glanced at Mr. Bull in his repose, "the Bulls of Rome were not so utterly hateful to our family as they are at present. We didn't know them so well, and our family were very ignorant and low in the world. But, we have gone on advancing in every generation since then; and now we are taught, by all our family history and experience, and by the most limited exercise of our rational faculties, That our knowledge, liberty, progress, social welfare and happiness, are wholly irreconcilable and inconsistent with them. That the Bulls of Rome are not only the enemies of our family, but of the whole human race. That wherever they go, they perpetuate misery, oppression, darkness, and ignorance. That they are easily made

the tools of the worst of men for the worst of purposes; and that they *cannot* be endured by your poor father, or by any man, woman, or child, of common sense, who has the least connexion with us."

Little John, who had gradually left off squaring, looked hard at his aunt, Miss Eringobragh, Mr. Bull's sister, who was grovelling on the ground, with her head in the ashes. This unfortunate lady had been, for a length of time, in a horrible condition of mind and body, and presented a most lamentable spectacle of disease, dirt, rags, superstition, and degradation.

Mrs. Bull, observing the direction of the child's glance, smoothed little John's hair, and directed her next observations to him.

"Ah! You may well look at the poor thing, John!" said Mrs. Bull; "for the Bulls of Rome have had far too much to do with her present state. There have been many other causes at work to destroy the strength of her constitution, but the Bulls of Rome have been at the bottom of it; and, depend upon it, wherever you see a condition at all resembling hers, you will find, on inquiry, that the sufferer has allowed herself to be dealt with by the Bulls of Rome. The cases of squallor and ignorance, in all the world most like your aunt's, are to be found in their own household; on the steps of their doors; in the heart of their homes. In Switzerland, you may cross a line, no broader than a bridge or a hedge, and know, in an instant, where the Bulls of Rome have been received, by the condition of the family. Wherever the Bulls of Rome have the most influence, the family is sure to be the most abject. Put your trust in those Bulls, John, and it's in the inevitable order and sequence of things, that you must come to be something like your Aunt, sooner or later."

"I thought the Bulls of Rome had got into difficulties, and run away, Ma!" said little John, looking up into his mother's face enquiringly.

"Why, so they did get into difficulties, to be sure, John," returned Mrs. Bull, "and so they did run away; but, even the Italians, who had got thoroughly used to them, found them out, and they were obliged to go and hide in a cupboard, where they still taked big through the key-hole, and presented one of the most contemptible and ridiculous exhibitions that ever were seen on earth. However, they were taken out of the cupboard by some friends of theirs—friends, indeed! who care as much about them as I do for the serpent; but who happened, at the moment, to find it necessary to play at soldiers, to amuse their fretful children, who didn't know what they wanted, and, what was worse, would have it—and so the Bulls got back to Rome. And at Rome they are anything but safe to stay, as you'll find, my dear, one of these odd mornings."

"Then, if they are so unsafe, and so found out, Ma," said Master C. J. London, "how come they to interfere with us, now?"

"Oh, C. J. London!" returned Mrs. Bull, "what a sleepy child you must be, to put such a question! Don't you know that the more they are found out, and the weaker they are, the more important it must be to them to impose upon the ignorant people near them, by pretending to be closely connected with a person so much looked up to as your poor father!"

"Why, of course!" cried little John to his brother. "Oh, you stupid!"

"And I am ashamed to have to repeat, C. J. London," said Mrs. Bull, "that, but for your friend, Young England, and the encouragement you gave to that mewling little Pussy, when it strayed here—don't say you didn't, you naughty boy, for you did!"—

"You know you did!" said little John.

Master C. J. London began to cry again.

"Don't do that," said Mrs. Bull, sharply, "but be a better boy in future! I say, ~~from~~ ashamed to have to repeat, that, but for that, the Bulls of Rome would never have had the audacity to call their connexion, Master Wiseman, your poor father's child, and to appoint him, with his red hat and stockings, and his mummery and hummery, to a portion of your father's estates—though, for the matter of that, there is nothing to prevent their appointing him to the Moon, except the difficulty of getting him there! And so, your poor father's affairs have been brought to this crisis; that he has to deal with an insult which is perfectly absurd, and yet which he must, for the sake of his family, in all time to come, decisively and seriously deal with, in order to detach himself, once and for ever, from those Bulls of Rome; and show how impotent they are. There's difficulty and vexation, you have helped to bring upon your father, you bad child!"

"Oh, oh, oh!" cried Master C. J. London. "Oh, I never went to do it. Oh, oh, oh!"

"Hold your tongue!" said Mrs. Bull, "and do a good exercise! Now that your father has turned that Pussy out of doors, go on with your exercise, like a man; and let us have no more playing with any one connected with those Bulls of Rome; between whom and you there is a great gulf fixed, as you ought to have known in the beginning. Take your fingers out of your eyes, Sir, and do your exercise!"

"—Or I'll come and pinch you!" said little John.

"John," said Mrs. Bull, "you leave him alone. Keep your eye upon him, and, if you find him relapsing, tell your father."

"Oh, won't I neither!" cried little John.

"Don't be vulgar," said Mrs. Bull. "Now, John, I can trust you. Whatever you do, I know you won't wake your father unnecessarily. You are a bold, brave child, and I highly approve of your erecting yourself against Master Wiseman and all that bad set. But, be wary, John; and, as you have, and deserve to have, great influence with your

father, I am sure you will be careful how you wake him. If he was to make a wild rush, and begin to dance about, on the Platform in the Hall, I don't know where he'd stop."

Little John, getting on his legs, began buttoning his jacket with great firmness and vigor, preparatory to action. Master C. J. London, with a dejected aspect and an occasional sob, went on with his exercise.

THE JOLLY BURGLARS.

In the back lanes of a village, some two-and-twenty miles from London, there stands, or rather lurks, a hedge alehouse, called the *Overthrown Cart*. From an abrupt corner of ruined barns and pig-sties, on one side, and a stagnant pool on the other, in the high road through the village, a lane opens its ragged, bushy mouth, and runs straggling away for a couple of miles, when it widens out into a barren common. These two lonely miles are enclosed on both sides by squalid hedges, broken fences, the end of a neglected garden wall, a dry ditch, and a turnip-field. At the right hand side of the garden-wall stood an old summer-house built of brick, like a little tower, the upper story being intended as a place to sit in, and enjoy the prospect of seven green fields, and a cowshed, with nothing particular in the distance. This ruined summer-house was now overgrown with ivy, and had become the delightful abode of owls and bats. By the side of this part of the garden-wall, a pathway through down-trodden thistles and nettles ran sloping and winding till it opened into a narrow lane between dark high hedges, amidst which—and standing rather back—is the little alehouse known to its frequenters as the *Cart*. It looks just like the ugly half-hidden nest of some strange bird of prey.

The alehouse stood back, in a gap between the two high ends of the hedge. A ditch ran along the hedge, over which a dirty board was placed by way of a bridge. The alehouse was built of old boards and worn-out timbers; it was thatched, and in colour as black as dirt and smoke, and rottenness from the rains and damp, could make it. On a little piece of board had been painted a cart turned topside turvy, which was nailed up close under the projecting thatch, by way of a "sign." In front of the lower window was an open space between the house and the hedge, of some eight or nine feet distance, where a flat board nailed on a tressel, served for a table, and a plank on two low posts, as a seat. A three-legged stool, and an inverted washing-tub, afforded accommodation for two more visitors, if needed.

On this plank, and this stool, sat three men each with a pipe in his mouth. A brown jug with a broken nose, was upon the table, two pewter pint-pots, and a tall white mug. The men—three well-known fellows—James Humble, John Crick, and Eber-

nezer Pye, commonly called Lanky Co. As their persons are not likely to be so familiar to the reader, as they are to the country magistrates, before whom they have often been brought to little purpose, we will give a sketch of each of them.

James Humble is a man of about two-and-forty, and rather short of stature, but of great breadth of shoulders, with a deep chest, and large arms, and thick muscular legs. He is a very powerful man, and of more activity than would be expected from so thick a frame. His features are heavy, and he has the look of a lowering bull. But sometimes while he speaks, the whole face lights up with a most malevolent and daring expression, as though he was ready to commit some ruthless act of violence. He has very short, thick, poodle-dog hair, a sunburnt complexion, and the two front teeth gone.

John Crick is about thirty-five years of age, and of the middle height. He is narrow-shouldered and stoops. His legs are well made, from hip to heel; but his arms seem rather deformed. He has red hair, thin red whiskers, a speckled complexion, a sharp turned-up nose, very small and piercing grey eyes, and a large mouth, with very large yellow teeth. His hands are small, and the fingers thin, bony, and in a continual fidget.

Ebenezer Pye is fifty-two years of age. He sits like a very short man; but when he stands upright he is six feet two; his height being all in his legs. As he walks, his stride is immense, and he has a gaunt strange look, like that of some antediluvian bird. His face is very sallow, and his large hands are as yellow as a kite's foot. He has a quiet, grave, rather thoughtful expression, and habitually gazes down his knees when he speaks to you. He has a bad cast in one eye, and has lost the forefinger of his right hand. He is continually occupied in blowing a sort of inward whistling to himself as he sits looking on the ground.

The dress of these three men, except that Crick wore a fashionably cut drab frock-coat, with a large blotch of grease in the middle of the back, was of the most blackguard kind, from top to toe, and still worse in its filthy neglect. It was evident they had been sleeping in their clothes for weeks, without once taking them off, or even washing their hands and faces.

These three fellows were burglars, and they were now engaged in settling the immediate operations of a burglary which they had been planning for some weeks past.

"And she told you this?" said Humble, uplifting his lowering gaze, and staring in Crick's face, half interrogatively, and partly repeating his words, in order to be sure.

"And she told me this," repeated Crick, as if put on his oath, and resolved not to contradict himself.

"Kitchen-maid, is she?" proceeded Humble.

"Scully-girl, I said," rejoined Crick, in correction of the inaccuracy.

"Well then," said Humble, after a pause, "I suppose she knows."

"Course she does," said Crick; "and more nor that, she told me what they was a-going to have for dinner. Pig's fry and a goose, and three biled fowls, and a knuckle o' ham, pidgeon pye, and roast beef, and soup, and cheese, and a salmon, and wedgables—all sorts—and custards and roast weal, and a pint o' s'rump sarree; besides lots o' wine and ale, and grapes, and nuts, and plum-puddens, to be putt on the side-board, ready."

At the conclusion of this inventory, which, except as to the order of the "serving," did considerable credit to the retentive memory of the speaker, the three men's eyes all met, in a common centre, and the faces all gave a strange grin of greedy delight, quickly relapsing into a kind of morose gravity and self-restraint, as though, from the consideration that "work" was to be done before play.

The house they had planned to break into and rob, belonged to a tolerably wealthy family, named Frampton, with whom the "squire's" son was to dine to-day. The squire was a rich man, and there were three unmarried daughters in the family he was to visit, so that the parents, on both sides, thought a match would be a very suitable thing—no matter which daughter he chose.

There were only three large houses in the village, and these were at a considerable distance apart. The squire's house was at the southernmost end; the house of the clergyman, who was also the magistrate, was at the northernmost end, three miles distant; and the house of the Framptons stood just between. It lay back half a mile from the high-road, approachable by a long carriage-drive of bright gravel, and was surrounded by lofty trees.

Opposite the white gates that opened out into the high-road, were the remains of a fourth large house in the village, which, having been the subject of an apparently interminable law-suit, had been suffered, meantime, to fall into utter decay, so that it could be of no earthly use to the winner. One wing of it had fallen down, and every windy night it was expected the whole would come to the ground. There was a large lawn at the back, over-grown with rank weeds, and then a great desolate garden of considerable length, terminating with an old vine-wall and a summer-house, now thickly over-grown with ivy. On the other side of this ran the narrow pathway, through wet nettles and thistles, that led to the ugly little hedge ale-house, bearing the sign of the "Overthrown Cart," in front of which the three burglars were now seated in conference.

The totally unprotected condition of the rural populations, in respect of police, is a fact little considered, or indeed known, by the

inhabitants of our cities and towns. The country "gentry" are very well aware of it; but most of them seldom think much about it, except when some neighbouring house is robbed; and the rest content themselves with relying upon their men-servants, door-bolts, and window-bells, a loaded gun hanging up in the cloak-and-boot room, and a large dog in the yard. Not only is there no rural police, but no continuous or combined efforts are made to obtain one.

True, there is a mounted patrol. He is very valuable in the prevention of highway robberies. But his "beat" is confined to the high roads, and does not, and cannot, unless there are several, extend through the bye-ways and back-lanes of a village, and still less can he exercise any watchfulness over houses lying half a mile out of the high road. Hence, he is no protection against burglary to residences thus situated.

Are there, then, no other means provided by the parish for the protection of the inhabitants of a village, and the due enforcement of the law? Yes, there is the constable. The village of which we are now speaking, has a very good constable. There he sits!

On a little bench, painted blue, beside a small blue table, at the left-hand side of the doorway of the "Royal George," is now seated Matthew Pringle, cobbler and sworn constable of the village. Being a constable, he is, as he ought, to be, in the prime of life, and a strong-built man; and being a cobbler, he is, of course, short of stature, with bent knobby knees, hunched shoulders, thick-tipped griny black fingers, a thoughtful face, and a bald head.

Matthew Pringle had an empty bright pewter pint pot standing before him on the table. His arms were folded, and he was leaning back against the blue rail of the bench, looking up at a large sign of his late lamented Majesty, George the Fourth, attired in coronation robes of scarlet and green, trimmed with a profusion of rabbits' fur, and wearing several oyster-shells, one of them with an oyster in it (though not meant for that) hanging round his neck, or stuck upon his ample chest. The sign slowly swung to and fro in the wind, as if graciously acknowledging the homage which, it took it for granted, the mind of the contemplative cobbler was loyally offering to the memory of its august original.

But it was not so. The mind of Matthew Pringle was at this moment occupied with the memory of James Humble, the burglar. What association had suddenly brought him into the head of the constable at this time it is impossible to say—unless, indeed, it was seeing the Vicar's man go by, with a brace of hares, for almost immediately he bethought him that he had lost sight of James Humble these last six months. He wondered where he was gone. If he had been hanged or transported, Pringle would have heard of it.

At any rate, it was a good thing the parish was rid of him.

The last time he had to do with Humble was in a poaching business. The squire's gamekeeper came and knocked him up one night, to go with him to look after three men who had got into the preserve. They hurried off—found nobody in the preserve—but saw three men lurking outside the palings. The men ran off, on seeing them, but one of them slipped on the grass, and fell. So they seized him, on suspicion. This was James Humble. He said he was a innocent man, and refused to go to the lock-up. Accordingly, they had to force him all the way to the lock-up, which was close against the magistrate's house, full three miles off. It took them all night to get him there—from eleven o'clock at night till four in the morning. While they were thus engaged, "somebody" went into the preserve, and deliberately bagged half the game that was there. Nothing could be proved against Humble, and the reverend magistrate was obliged to let him go, with a severe reprimand, and a solemn warning to take care what he was about—which Humble promised to do.

We have now described two "festive boards;" the third, and greatest, is yet to come.

The family of the Framptons comprised old Mr. Frampton, who was a retired tea-merchant; his wife; his son Frank, a country youth, of nineteen, devoted to dogs and a duck-gun; three marriageable daughters; two housemaids; a good plain cook; an old gardener, who sometimes drove the chaise, and waited at table when there was a dinner-party; and a boy, who looked after the horse, cleaned knives and boots, took letters to the post-office, &c.

At the hospitable table of the Framptons' was now seated Mr. Pine, a dashing young silver-smith from London, and young Peter Tatman, only son and heir of Squire Tatman, of the Hall. Young Tatman was proud of all field sports; a capital shot, a first-rate cricketer, could run, or leap with any one in the county; was a merry companion, and would have been a favoured guest at most of the houses within ten miles round, but for his intemperate wine-bibbing. He never dined anywhere that he did not get drunk.

It was now ten o'clock, and still young Tatman sat drinking port wine, and Mr. Frampton who was scrupulous in his old-fashioned notions of hospitality, sat stupidly passing the decanters from himself to the image of his son (this sportive youth having fallen back asleep in his chair, where he was now dreaming of past exploits with his duck-gun), and thence to the side of the plate of Mr. Pine who had vanished, not to tea and coffee with the ladies, but under the table. From this futile position of the decanter, young Tatman withdrew it at arm's length—

filled—and passed it again to Mr. Frampton. It was clear that Mr. Peter Tatman had an intention of seeing his host under the mahogany by the side of the dashing young silver-smith, before he took his leave.

But the worthy tea-merchant was a well-seasoned, steady, port-wine drinker of the old school, and Mr. Peter Tatman, beginning to find about eleven o'clock, by certain sensations in his brain that the tables were likely to be turned upon himself, made a virtue of that discovery, and swearing he would not take any more wine, rose to depart. Before he went, however, he insisted on helping to draw Mr. Pine from beneath the table, and merrily lent his aid in leading him up to bed, followed by young Frank Frampton, whose sleep at an early period of the engagement had saved him from the future effects to which the dashing young silver-smith had fallen a victim.

The ladies had all retired to bed, Mrs. Frampton having left strict injunctions to Margy, the elder house-maid to collect all the plate, and lock it up in the china closet adjoining her bed-room, and opening by a second door into Mr. Frampton's dressing-room. After this, they were to put all the glass and china on the side-board, till the morning; carry down to the cellar all bottles that were uncorked; lock the cellar, and then go round the house, rake all fires out, see all fast, and go to bed.

Margy was a very careful middle-aged woman, and duly performed the task in all its branches. She was even more than usually particular in attaching bells, and fastening window-shutters and doors. This done, she sat herself down alone in the dining-room to rest a minute.

All a-bed and a-sleep, mused the house-maid. How silent the house was after all the noise, and eating, and drinking, and rattling of plates, and laughing, and getting young men up to bed;—and that Peter Tatman too, what a noise he made with his laughing and foolery as he went reeling out at the front door, and fumbling his way along the dark gravel walk. Ah—he was not like some young men she had seen—and one young man in particular—when she was just two-and-twenty. Here poor Margy raised her apron to her eyes, and with a deep sigh rose, and went up stairs to bed.

The beds and their occupants were distributed at the Framptons', in the following manner,—which it is important to a right understanding of what is to happen before daybreak, to note carefully.

To begin below: the old gardener slept in a room opening into a passage to the back area, leading up steps to the garden. The boy slept on a little horse-bedstead in a small dark room, close to the lumber-room, near the back kitchen. There were three rooms on the drawing-room floor, one of which was used as a "spare" bed-room; and here Mr.

Pine, the overcome silversmith, was now soundly sleeping. In the front second-floor room, lay Mr. and Mrs. Frampton. In the larger of the back rooms, two of the young ladies, and Master Frank in the smaller one. The youngest daughter occupied the front room above; the cook, another back room, with the scullery-maid in a closet opening out of it; Margy, and the other housemaid, the third back room. And now it is twelve o'clock, and all of them are fast asleep.

It is a dark night in the latter end of October. The day has been very mild, but it has rained hard since eleven o'clock. The rain has now ceased, and the wind has risen. The boughs of the trees round the house shake and swing about; showers of leaves fall; dry bits of stick are sometimes blown against the windows; the doors and shutters, and window frames, rattle; and other strange sounds are made in the house, as well as outside, by the weather.

But in the pauses of the wind, other noises, of a different kind from all the rest, might have been heard, had anybody on the ground-floor been awake. The burglars had arrived, and having selected their point to effect an entrance, were now steadily at work.

It is an axiom in the science of fortification, that a fortress is no stronger than its weakest point. Lanky Go having been round to all the lower windows, and found them properly fastened, with bells affixed—so he said—as well as the doors—which they had hardly expected, after so convivial a party—they then held consultation, and unanimously fixed upon the pantry window as the most eligible means of breaking into the house.

The pantry window looked out upon a side lawn, where the clothes were hung out to dry. It was six feet from the ground, but there was no area between the wall and the lawn. The window was without glass, and covered with a frame-work of perforated zinc. It was moreover protected by two iron bars, and as the window itself was narrow, the body even of a boy could not have squeezed through between them.

Lanky Go, being much the tallest, accordingly proceeded to effect his part of the task. He placed himself close against the wall, and with a keen file began to cut through one of the iron bars. He worked quickly, and without noise.

Humble and Crick, meantime, silently took out their several implements, and arranged them for use. They had with them a powerful jemmy (a stout crow-bar), a centre-bit, screw-driver, chisel, files, a pair of iron pliers of a peculiar shape (made to pass through a hole and turn a corner), and a large knife, with several tools in it, such as a small saw, two gimlets, a hook, a pick, and a cork-screw. To this armoury was added a brace of pistols, three bludgeons, a dark lantern, and three masks—a green one, made of an old veil, a white one, made of cartridge-paper, and a

black one of the usual masquerade manufacture, though much bent and maltreated.

One bar being announced, by a sign, as cut through, Crick advanced, and, with the jemmy, adroitly smashed and clawed out half a brick from the wall, about thirteen inches below the sill of the window. He then placed himself close beside Lanky Go, each bending his back, with his elbows placed flat against the wall, and his head pressed upon his arms. Upon their backs Humble now mounted. He then seized the lower end of the iron bar, just above the place where it had been cut through, and planting his left toe in the niche where the piece of brick had been torn out, he thus obtained a good "purchase," and by main strength bent the bar upwards and aslant. He now leaped softly down, and made a back for Crick, who went to work at the sheet of perforated zinc, which, in a few minutes, he opened all down one side, and folded back. He then thrust his head and shoulders in at the pantry window, and listened.

"Go along," hoarsely whispered Humble. Twisting his legs round at this exhortation, Crick dangled them down into the pantry. His crunched-up head and shoulders faced his friends below for a moment, and then disappeared. But presently his hands reappeared, and the fingers twisted impatiently in the air.

Lanky Go instantly skipped up beneath the window with the centre-bit and special pincers, which he deposited in the hands, and they immediately vanished in the darkness.

Humble and Lanky, after waiting a few minutes, till certain sounds within indicated that Crick had effected his entrance, moved slowly round to the area at the back, facing the garden. Lanky pointed to one of the lower windows, interrogatively. Humble shook his head. "Somebody asleep there," whispered he,—"gardener or boy;" and then pointed to the back-door down in the area. They descended the stone steps, and Humble applied his ear to the key-hole, while Lanky applied his to a crack in the top square of the door-panel.

In the course of ten minutes' suspense, they heard the gradual grating noise of the slow withdrawal of rusty bolts,—the gliding back of the tongue of the lock—and the lifting up and laying aside of a chain. The door then slowly opened—and the muzzle of a duck-gun was protruded! It came out longer and longer, with steady, hostile advance—and behind it appeared, not the adroit collie, John Crick,—but the hobbledehoy figure of Master Frank, in his shirt.

"Rascals!" cried he, "take that!"—with which words he fired manfully about three yards over their heads, and struck the top of an ornamental pigeon-house in the middle of the lawn. Humble and Lanky were retiring precipitately, when out dashed Crick, and in an instant pinioned the valiant young duck-

sportsman from behind. He began to bawl "Thieves! robbers! murder!" but Crick's fingers grasped his throat, and he was thrown down, with a knee thrust deep into the pit of his stomach, which effectually silenced him.

Humble and Lanky Go, who had rushed into one of the side shrubberies, finding that the cries had been abruptly stopped, conjectured what the turn was that had taken place in affairs, and emerging from the shrubberies, met Crick, who explained in a word what had occurred. "Go on!" said Humble, with an oath—savage at the momentary check. They returned to where the young man was left; and thinking he might be troublesome if he came to himself, Humble dragged him into the passage, intending to lock him up in one of the cellars. But as he was searching about, a door opened, and the gardener coming into the passage, cried out, "Who's there?"

"Nobody!" said Humble, ferociously, and striking him a blow with his fist that sent the old man reeling back into the middle of the room, he swung the insensible body of poor Frank along the floor, and Crick, taking out the key from the inside, closed the door, and locked it. Two of the male inhabitants of the house were thus safely provided for. They gave a hasty look round with the dark lanthorn for the boy, but he was no where to be seen. Humble said they must waste no more time, but go to work up stairs at once, for he heard them moving.

The three burglars now hastily put on their masks, and hurried to the foot of the stairs, seizing cloaks and capes from the pegs in the passage, with which they assisted the disguise of their persons. Humble led the way with a pistol in his left-hand; Crick followed closely with the other pistol; and Lanky Go brought up the rear with the dark lanthorn in one hand, and a bludgeon in the other—all according to previous arrangement.

They heard the door of Mr. Frampton's bed-room open, and his voice call out, "Frank! Frank!—didn't you hear a gun go off just this minute?" This was instantly followed by a scream from Mrs. Frampton, who cried out, "They're breaking into the house!—I'm sure they are!"

The words were still on her lips, when Mr. Frampton, who had been standing on the landing-place, rushed back into the room, followed by three men in masks. He had not even time to close the door. Mrs. Frampton, with a loud scream, hid her head beneath the clothes, and fainted away, while her husband ran to one of the windows, and began to throw it up, but was instantly seized from behind by the foremost of the men, and flung violently backwards upon the carpet near the bed. A pistol was then held to his head, while the ruffian, with horrible imprecations, threatened instantly to blow his brains out, if he did not give up all his keys, and tell where his money and plate were deposited.

While this was doing, Crick ran down stairs with Lanky, and entered the room in which Mr. Pine had been deposited. The noise and scuffling had awoke him, and he had just got out of bed, and was standing in the middle of the room with an owlish stare, when the two men burst in upon him. He instantly staggered forward, demanding in thick accents, and a tone of authority,—"What's o'clock?" He was answered by a blow from Crick's bludgeon, which laid him prostrate, and, if possible, more senseless than before, while Lanky hastily possessed himself of a gold watch and chain, which he put in his pocket. They then left the room.

Loud screams from above now attracted their attention. The two Miss Framptons, who slept on the second floor, had issued from their room, and seeing their father lying upon his back, with a man in a mask standing over him, had flown up stairs to alarm the maid-servants and their sister,—and immediately three windows were flung open, and they all began screaming, "Thieves! Murder! Fire!"—to how little purpose when there was no house within a mile of them! But Margy ran down to the assistance of her master, and darting upon Humble, who was stooping over him, tying his hands, tore him away. She was almost instantaneously seized by Crick and Lanky, who tied a handkerchief round her mouth and throat so tightly as almost to cause strangulation, and in this state thrust her into a closet in the bed-room, and locked her in. Humble, meantime, had rushed up stairs among the screaming women, whom he seized and struck in the most savage manner, dragging them away from the open windows; and being presently joined by his colleagues, they forced all of them into the room of the youngest Miss Frampton, whom they threatened with instant death—presenting a pistol at her head, and a knife to her throat—if she did not keep all the rest quiet. Lanky then took a gold watch and some trinkets from a toilet-table, and they left the room, promising to return, and make good their threats, if any one again uttered a cry, or opened a window.

The three burglars now descended, and entered the china-closet, where they gathered up all the plate. Mr. Frampton was lying quite helpless on the floor, bound hand and foot. As to the screams from the windows, they had been stopped, as matter of caution, but without much apprehension of results, as the house, as previously explained, lay back half a mile from the high-road, and no other dwelling was near. The burglars, therefore, proceeded systematically to plunder the house. Lanky Go kept guard, by walking up stairs, and uttering threats, and then descending to the bottom of the house. This he continued to do while Humble and Crick brought down the plate, and, entering the different rooms, carried off every small article of value they could find. They even swept

the whole of the nicknacks from the drawing-room chimneypieces, and threw them into the sack with the spoons and teapots.

It will be recollected that young Frank Frampton had been laid senseless by a half-throttling process, on the first entrance of the burglars, and that the old gardener had also been knocked down. The old man, however, after a time, recovered himself sufficiently to rise, and availing himself of the absence of the watchful guard, Lanky, when he was up stairs, threatening the screaming women, he opened his window (his door having been locked from the outside) and let himself down into the area, which was only four feet below. He then cautiously entered the house, and went straight to the little room where the boy slept. The boy was gone. A thought struck the gardener, and he hurried to the coal-cellar, and there he found him hidden. The boy knew his voice, and crawled out, and they ran from the house across the lawn, and into one of the shrubberies, and so along the dark filbert walk, till they reached the arbour, and here they stopped to take breath.

The gardener then told the boy to make the best of his way into the highroad, and find the patrol, and tell him what was going on, while he would hasten by another way up into the village, by a lane that would bring him out just opposite to the house of Matthew Pringle, the constable, whom he would knock up.

It will now be requisite to revert to the departure of young Squire Tatman from the convivial board of this unfortunate country family, and to bear in mind the peculiar condition in which he sallied forth into the dark night, refusing, with a flourish, all companionship of boy or lantern to guide his unsteady steps.

He had not gone far along the gravel walk before a heavy shower of rain came on, and to obtain some shelter, he stepped aside among the trees of a plantation, through which he made his way onwards towards the high road. It so happened, however, that he emerged very much further off than he had intended, and being near to a little road-side inn, he commenced a battery against the shutters, which compelled the landlady to appear at the window, and then, having ascertained his "quality," to come down, and let him in. He remained for an hour or more drinking brandy-and-water,—on account, as he pretended, of being wet through and through. At last she got rid of him.

The young squire again sallied forth into the night in a yet more "unaccountable" state than before, and after a time arrived in the main street of the village. Here he recollected the house of two old maiden ladies, who kept five cats, through whom he had got a whipping when a school-boy, for fastening a cracker to one of their tails on the fifth of November. He stopped—looked up at the bed-room windows—then down at the dining-

room shutters, and finished his vague contemplation by picking up a large stone, and commencing a loud hammering against the shutters,—and wound up by discharging the stone through one of the bed-room windows, while he set up a strange howl. He had the greater pleasure in doing this, because the house was within two doors of the little shop of Matthew Pringle, the constable.

This nocturnal outrage quickly brought forth the poor maiden ladies to the windows of their several rooms, which they threw up, and began to scream, "Constable! Constable! Thieves! Thieves! Mr. Pringle! Mr. Pringle—ingle!"

Another stone through the bed-room window of the personage thus summoned, instantly brought that invaluable functionary to his window,—opening which he heard a similar salute paid to another window further on; it therefore became a clear case that he must hurry off to capture the offender before all the glass in the village was demolished. He commenced putting on some clothes with the utmost haste.

Meantime the merry young gentleman had moved on till he found himself abreast of the principal inn of the village, viz., the "Royal George." The one faint lamp of the main street was just over the way, and shed a dim light on the benign aspect of the gentlemanly monarch above, which young Tatman found quite irresistible. So, he swarmed up the sign-post, and first lifted one hook out of its eye, and then the other, and down fell the great sign-board edgeways in the road.

Down slid the pleasant young gentleman, and taking up his Majesty on his back, with the face turned outwards, and looking benignly on all behind,—moved onwards with his burthen, staggering, yet secure on his legs, and at a good pace.

It was a cold wet night, and Matthew Pringle had thought it advisable to put on most of his clothes before he issued forth on duty. He was out soon enough to observe a figure going up the main street at no great distance. He hailed him, and then quickened his pace. As he got nearer, he saw it was a man walking off with some booty—a great square box, as it seemed! He summoned him to stop in the Queen's name!—but the midnight robber only quickened his pace. Pringle quickened his. The figure began to run. Pringle gave chase; and away went the figure along the high-road, beyond the village, and presently turned down a deep lane, and ran scrambling through the darkness with a slushy sound;—Matthew Pringle after him.

But the house of the poor Framptons, which is being plundered all this time, with poor Mr. Frampton lying on his back, bound hand and foot!—as any country gentleman may be, at any time, by burglars—and his wife and family, and servants all in momentary terror of their lives! What is to become

of them? A boy had been despatched by the old gardener, to run as fast as his legs would carry him, up into the high-road, and try and find the horse patrol, while he himself made his way to the constable's house.

Both of these were, to a certain extent, successful. The boy was lucky enough to get sight of the horse patrol. Being unable to contain himself after his recent excitement, the little fellow instantly began to cry out "Patrol! patrol! Thieves! O Thieves!"

The guardian of the high-way pulled up his horse, but before the boy could reach him the patrol heard the sound of footsteps of men running along the road through the village. Making sure these were the thieves the boy meant, who were now effecting their escape, he set spurs to his horse, and galloped after the sound of the retreating footsteps.

The old gardener, "dead beat" from loss of breath, arrived at the constable's house. Here he was met by Mrs. Pringle, in her huge night-cap, who informed him that her husband had gone out after some villains who were breaking all the windmills in the village, and that the horse-patrol had gone after them too—but they would soon be back, she hoped.

The chase of Pringle, however, was not destined so soon to come to a close. Down the long straggling back lanes did the robber, with the great box, run most vigorously, and the constable after him, panting and gasping, and with one hand pressed to his side. And now the sound of a horse's hoofs is behind them,—and on it comes, but not very fast, as the lane is so dark and slippery, and down hill. The patrol's bull's eye lantern is very useful. It casts a great stream of light before them. He soon finds out that the first man he comes up with, is Pringle—but what is that which retreats! It is a large majestic figure attired in coloured robes, with a smiling countenance, and a fine high-curved wig,—and running down the lane backwards!

The lane suddenly becomes yet more precipitous—and alas! for human powers, even in a promising young squire, down falls the figure flat;—and flatly lies, but still looks up with a courteous smile—the august semblance of His Majesty George the Fourth!

They picked up the strange complexity of man and sign; and by this time, the man was almost in an insensible condition of being. Finding it was young Squire Tatman, the two parish authorities did what they thought best "under their difficult circumstances." They helped him up—wiped the mud off his face—placed him on the horse, the patrol walking by the side, to hold him up, and the constable walking behind, humbly carrying the sign. In this way they escorted the young gentleman to his own house—good four miles from the place where they found him.

How has it fared all this time with the burglars at the Framptons? Excellently well. They have collected all the plates, all the watches, chains, rings, and trinkets; all

the money in the house, and all the light, portable valuables; and they have brought all down to the kitchen, where Humble is placing them in a couple of small sacks, and a canvas bag, while Crick is setting out the table with the remains of the beef, and veal, and goose and ham, &c. He has also found bread and cheese, and cold salmon, and a preserved gooseberry tart; and he is now going with a candle to the cellar for a dozen of wine.

Lanky Go has issued forth into the lawn at the back of the house—passed through one of the side shrubberies, and approached a hedge. He gives a low, smothered whistle. The hedge is pushed aside,—and a rough, dirty-muzzled dog-like face with a red nose, and red projecting lips, is thrust through the aperture. The head has a little grey carter's hat upon it, and the thick red lips are sucking the brass-headed handle of a whip, while the eyes seem to listen as much as the ears.

Lanky bent forward—"Give her the rest o' the corn." With this brief order, which at once showed the driver that all had gone well, the brute's face was withdrawn from the hole in the hedge, and Lanky returned to his friends.

The table was, by this time, well covered with "all the dainties of the season," and with a squadron of black bottles, fresh from the wine-cellar. Crick was digging out a pigeon-pie, and Humble was lying back in a chair, wiping his forehead with his sleeve.

They had worked hard in one way, and now they fell to work in another. The execution they did upon the various contents of the table, in the course of a quarter of an hour, nobody but a jolly burglar would believe. They swallowed mouthfuls that would have done credit to a Clown in a pantomime, and drank port wine (Mr. Frampton's finest old port—*Bin D. 2*) in beer tumblers. As for champagne, they knocked the necks off the bottles, and let the wine spout down their throats. At length, Lanky Go, filling his tumbler with a bumper of Madeira, took it in his right hand, and slowly rising, thus addressed the company:—

"Gentlemen, schoolfellows, and friends!" said he,—“I rise, at this early hour of the evening, in virtue of my being the boldest among you, and therefore most qualified to state a moral proverb like this—as it's good to be merry—and wise. We have done our duties to-night—our carriage and orse and coachman are a-waiting for us under a dark hedge close by. Let us therefore take up our little property, and go our ways. But afore we go, I beg to presume to give you a lyall toast. Here's to the elth and appyness of her most gracious Queen Wictory, and her wise Members of Parliament, who will not allow the country gentry to have a Rural Police to look arter them, and destroy our trade. And in this toast I beg to include the name of our worthy host, Mr. Frampton,

up-stairs, and to christen and denominate this house in future as the Sign o' the Jolly Bugglers!"

Need we add—knowing how usefully the one horse patrol of the highway, and the remotely dwelling constable, were employed, at this time—need we add, that these unmitigated rascals got safely off with their plunder?

THE DOOM OF ENGLISH WILLS. CATHEDRAL NUMBER FOUR.

AN antiquary cannot approach the city of Chester from London, even in an express railway train, without emotions more lively than that class of observers generally have credit for. Despite a sensation akin to that of being fired off in a rocket, and a pardonable fancy that the hedges are endless bands of green ribbon in eternal motion, that the houses, and cottages, and churches, and trees, and villages, as they dart past the confines of the carriage window, are huge missiles shot across fields which are subjected to a rapid dispensation of distorted perspective; yet these mighty evidences of the Present do not dull his mind to the Past. He remembers, with wonder, that two thousand years ago, it was over this identical line of country that the legions of Suetonius lagged along after they had blunted the scythes of Boadicea, routed her hordes, and driven her to suicide. Nor, when his propulsion per steam is ended at a station to which five iron "lines" converge, does he fail to recal the curious coincidence that he stands on the ancient meeting-place of the five great Mercian roads, cut by those Stephensons and Brunels of old—Suetonius and Agricola. Though he is not slow to recognise the utter modernness of the booking-offices, the refreshment-rooms, the omnibuses, the mackintoshes, and of every other object that meets his gaze; yet the awful retrospection possesses him that he moves within the precincts of the most important fortified camp in Britain, and he almost feels himself a Roman in spite of his hat.

We will not say that our own fellow of the Society of Antiquaries, Mr. William Wallace, retrojected his imagination so far into the past while crossing the Chester platform with his carpet-bag, because we are led to believe, from his report to us, that his views were immediately directed to the more modern times of St. Werburgh, who founded the Abbey of Chester (once the most splendid in England); seeing that it is in the still-standing gateway of that obsolete establishment, that the objects of Mr. Wallace's especial solicitude are now, and always have been deposited, since Henry the Eighth erected Chester into a diocese.

His hopes of success in seeking out certain facts from the testamentary records of this see, were more slender than they had been while entering upon his errand at the other three cathedrals. He had written to the bishop for that permission to

search which had been by other prelates so readily granted, but which had been rendered by the respective Registrars so utterly nugatory, and had received no answer. Awkward reminiscences of the state of this Registry, as disclosed before the last Parliamentary Committee on the Ecclesiastical Courts, fell like a dark shadow over his hopes. Up to the year 1832, the gateway where the wills are kept was, upon the Deputy Registrar's own showing, neither "fire-proof, sufficiently large, nor absolutely free from plunder." The searching-office was a part of the gateway; and was as inadequate as other searching offices. The Chief Registrar in 1837 was a sinecurist in the *seventieth* year of office, and was verging towards the hundredth of his age; having received, in his time, not less than three hundred and fifty thousand pounds of the public money for doing nothing. The fees for searches and extracts were heavy, and nobody was allowed, as in most other Registries, to see how the wills were kept.

Such were the gloomy prepossessions of Mr. William Wallace, as he approached the archway which held the testamentary treasures of Diocese Number Four. He sought the searching office in vain, and at length was fain to address himself to the first passenger—a burly blacksmith—who, at once, in answer to his inquiry, pointed to a handsome new stone building, that stood within the Abbey Square. Was the blacksmith sure that that spacious edifice, which looked like a substantial bank or a commodious Sessions House, was the Will Office?—Quite sure.

Mr. William Wallace ascended the steps doubtfully; and when he found himself in the wide passage of an evidently well-planned public office—so contrary was the whole aspect of the place to his preconceptions of it, and to his previous experience of other ecclesiastical Registries—that he would have retired, had not the words, "Searching Office," as plain as paint and capitals could make them, stared him full in the face from a door on his right. This he boldly opened, and beheld a handsome apartment, so mounted with desks, counters, and every appurtenance for public convenience, as to put him in mind of the interior of a flourishing assurance office. "The room," says Mr. William Wallace, in his report to us, "is furnished with a counter of ample size, extending round it, on which you examine the indexes. On calling for one or two modern wills, the clerks brought me a substantial, well-bound book, in which he informed me all modern wills have been, since the appointment of the present Registrar, enrolled at length, in a round text, so distinct and plain, that illiterate persons might read them; and not engrossed, so as to become a source of revenue, as at Doctor's Commons, where the unlearned, in what is called 'court-hand,' are obliged to call in the aid of a clerk, and disburse a fee for the

wills to be read to them. I was informed that I could see the originals on giving a satisfactory reason to the Registrar, or, in his absence, to a principal clerk. So promptly is business done here, that I found the wills which had been received from Manchester and other places that day, had been already indexed—very different to York, where wills are sometimes not indexed for six or eight months, and, consequently, often not at all. I next inquired for some earlier wills, and stated that I might probably want to have two or three days' research, for a literary purpose. On hearing this, the clerk informed me that the Registrar made no charge under such circumstances, except for the clerks' time. I then called for about six early wills, and only one of the six could not be found. Afterwards I asked for the returns of several Parish Registers; each set of which are well and substantially bound in a separate volume; for this a fee of three shillings and eight-pence is demanded; at York, for the production of a similar quantity of records, fifteen pounds is the price, without clerks' fees; and at Lincoln it would be impossible to collect them at all, many having been used to bind up modern wills, and for other such purposes."

Mr. William Wallace, pleasantly surprised at the contrast this Registry Number Four, presented to others he had visited and where he had been so egregiously snubbed, determined to learn and see as much respecting it as possible. With this view, he applied, without any other introduction than his card, to the Registrar; whose excellent custom it was, he understood, to be in attendance daily for several hours. At that time he was examining witnesses in a case for the Ecclesiastical Court, and handed the card to the bishop's secretary, who was also in official attendance. "That gentleman," says Mr. Wallace, "immediately came down, and informed me that the Bishop had written to me, in answer to my application, two days before, giving me permission to search, at reasonable hours, and that the Registrar, as was his usual custom, had not the slightest objection. I then asked to be shown the various parts of the building, the modes of preserving the records, which request was granted without the smallest hesitation."

Our informant then goes on to say that he found the building—which was raised solely at the expense of the present Registrar, since his appointment in 1837—conveniently divided into different departments like the best of the Government offices,—each department legibly indicated for the benefit of the inquirer, on the different doors.

On the first-floor are the private offices of the Registrar, of the bishop's secretary, and of other officials usually connected with the Registry. That story is however chiefly occupied by a spacious room for the examination of wit-

nesses. Besides principals, thirteen clerks are employed in the building; whose civility and patience were great enough to redeem the rudeness and grasping impatience experienced at the other three Cathedral Registries.

The manner in which the records are preserved at this Cathedral Number Four, is spoken of by our friend with satisfaction. His report to us is silent on rats, wet, mildew, smoke, broken windows, torn testaments, and illegible calendars. "Modern wills," he repeats, "are copied at length into volumes, by the present Registrar, a practice which I regret is not adopted at York, Lincoln, Lichfield, Winchester, and other places I have visited. If wills of an earlier date than that of the enrolment books are required to be taken out of the office for production in any Court of Law, &c., an examined copy made for the purpose, is deposited in its place during its temporary removal from the Registry. The principal portion of the wills are deposited in a dry, but not a fire-proof building, in good repair, called the Abbey Gateway; where, during the office hours, two clerks are constantly kept at work in copying wills that come in. These are kept in boxes, arranged upon shelves with just sufficient space to admit them, like drawers; and upon the top of the wills is a sheet of pasteboard fitting the box, as a further protection from dust. The wills are alphabetically arranged in the boxes, which are of uniform size, and contain more or less letters; the first box for 1835, for instance, contains the wills of testators whose names commence with A. or B. The wills of each letter are placed separately, and are divided into packets of one month each, so that the exact date of Probate being known, the will is found immediately. The wills are not rolled up as was formerly the case, but are kept flat, those on brief paper being only once more folded in the centre, so as to form a foolscap sheet. I think the plan well calculated to secure preservation for any length of time.—The Registrar performs the duties of his office in person—the income of which, as stated in the 'Times' is about ten thousand a-year,—and attends regularly."

In this case the Registrar-in-Chief is his own deputy, and although his income is large—even after the great expense it has been his duty to incur, for suitable public accommodation, and the loss he has voluntarily sustained by reducing the fees—yet it must not be wholly grudged to a gentleman who fulfils his office with assiduity.

Before the period of its renovation, the Registry of Chester was as inefficient and exacting as the other three we have described. To whom the merit of the change and the contrast is really due, is not easily to be ascertained, although the present incumbent of the office must necessarily have the largest share of credit for it. We suspect, however, that the proximate impetus of the reform can be traced to the geographical position of the

see. It includes the busiest of the manufacturing towns, and the most business-like, practical, and hard-handed examples of the English character. The thorough-going Manchester or Liverpool legatee would not endure, beyond a certain point and a certain time, the impositions, delays, destructions, and muddling confusion of the will offices in the more easy-going districts. Time with him is cash. What he wants he must have at once, especially if he pays for it. He may be put off once or twice with a rotten, illegible index, or a "Come again to-morrow;" but when he once sees that these may be obviated, he takes care to let there be no delay on his part, and agitates immediately. To engage a Free Trade Hall, and get up a public meeting, is with him a matter of no more consideration than scolding his clerk, or bringing a creditor to book. He has discarded the maxim that "talking is not doing;" and a constant iteration of pertinent speeches, ending with stinging "resolutions," has been found to do greater feats, to perform much greater wonders than setting ecclesiastical registries in order. It is possible, therefore, that the lay authorities of the Chester Registry, having the dread of an unpromising community before their eyes, saw their safety in renovation; and, like sensible men, made it, without that whining sophistication, that grim tenacity, with which abuses are excused and clung to, in exact proportion to their absurdity, profitableness, and injustice.

THE DUMB CHILD.

SHE is my only girl:
I ask'd for her as some most precious thing,
For all unfinished was Love's jewell'd ring,
Till set with this soft pearl;
The shade that Time brought forth I could not see;
How pure, how perfect seem'd the gift to me!

Oh, many a soft old tune
I used to sing unto that deaden'd ear,
And suffer'd not the lightest footstep near,
Lest she might wake too soon;
And hushed her brothers' laughter while she lay—
Ah, needless care! I might have let them play!

'Twas long ere I believed
That this one daughter might not speak to me;
Waited and watch'd God knows how patiently!
How willingly deceived:
Vain Love was long the untiring nurse of Faith,
And tended Hope until it starved to death.

"Oh! if she could but hear
For one short hour, till I her tongue might teach
To call me mother, in the broken speech
That thrills the mother's ear!
Alas! those seal'd lips never may be stirr'd
To the deep music of that lovely word."

My heart it sorely tries
To see her kneel, with such a reverent air,
Beside her brothers at their evening prayer;
Or lift those earnest eyes
To watch our lips, as though our words she knew,—
Then moves her own, as she were speaking too.

I've watch'd her looking up
To the bright wonder of a sunset sky,
With such a depth of meaning in her eye,
That I could almost hope
The struggling soul *would* burst its binding cords,
And the long pent-up thoughts flow forth in words.

The song of bird and bee,
The chorus of the breezes, streams, and groves,
All the grand music to which Nature moves,
Are wasted melody
To her; the world of sound a tuneless void;
While even *Silence* hath its charm destroy'd.

Her face is very fair;
Her blue eye beautiful; of finest mould
The soft white brow, o'er which, in waves of gold,
Kipples her shining hair.
Alas! this lovely temple closed must be,
For He who made it keeps the master-key.

Will's He the mind within
Should from earth's babel-clamour be kept free.
Even that *His* still small voice and step might be
Heard at its inner shrine,
Through that deep hush of soul, with clearer thrill!
Then should I grieve!—O murmuring heart be still!

She seems to have a sense
Of quiet gladness in her noiseless play.
She hath a pleasant smile, a gentle way,
Whose voiceless eloquence
Touches all hearts, though I had once the fear
That even *her father* would not care for her.

Thank God it is not so!
And when his sons are playing merrily,
She comes and leans her head upon his knee.
Oh! at such times I know—
By his full eye and tones subdued and mild—
How his heart yearns over his silent child,

Not of *all* gifts bereft,
Even now. How could I say she did not speak!
What real language lights her eye and cheek.
And renders thanks to Him who left
Unto her soul yet open avenues
For joy to enter, and for love to use.

And God in love doth give
To her defect a beauty of its own.
And we a deeper tenderness have known
Through that for which we grieve.
Yet shall the soul be melted from her ear,
Yea, and *my* voice shall fill it—but *not* *here*.

When that new sense is given,
What rapture will its first experience be,
That never woke to meaner melody,
Than the rich songs of heaven.—
To hear the full-toned anthem swelling round.
While angels teach the ecstasies of sound!

THE WELL OF PEN-MORFA.

IN TWO CHAPTERS.—CHAPTER II.

NEST revived during the warm summer weather. Edward came to see her, and stayed the allotted quarter of an hour; but he dared not look her in the face. She was indeed a cripple: one leg was much shorter than the other, and she halted on a crutch. Her face, formerly so brilliant in colour, was wan and pale with suffering: the bright roses were gone, never to return. Her large eyes were

sunk deep down in their hollow, cavernous sockets; but the light was in them still, when Edward came. Her mother dreaded her returning strength—dreaded, yet desired it; for the heavy burden of her secret was most oppressive at times, and she thought Edward was beginning to weary of his enforced attentions. One October evening she told her the truth. She even compelled her rebellious heart to take the cold, reasoning side of the question; and she told her child that her disabled frame was a disqualification for ever becoming a farmer's wife. She spoke hardly, because her inner agony and sympathy was such, she dared not trust herself to express the feelings that were rending her. But Nest turned away from cold reason; she revolted from her mother; she revolted from the world. She bound her sorrow tight up in her breast, to corrode and fester there.

Night after night, her mother heard her cries and moans—more pitiful, by far, than those wrung from her by bodily pain a year before; and, night after night, if her mother spoke to soothe, she proudly denied the existence of any pain but what was physical, and consequent upon her accident.

"If she would but open her sore heart to me—to me, her mother," Eleanor wailed forth in prayer to God, "I would be content. Once it was enough to have my Nest all my own. Then came love, and I knew it would never be as before; and then I thought the grief I felt, when Edward spoke to me, was as sharp a sorrow as could be; but this present grief, Oh Lord, my God, is worst of all; and Thou only, Thou, canst help!"

When Nest grew as strong as she was ever likely to be on earth, she was anxious to have as much labour as she could bear. She would not allow her mother to spare her anything. Hard work—bodily fatigue—she seemed to crave. She was glad when she was stunned by exhaustion into a dull insensibility of feeling. She was almost fierce when her mother, in those first months of convalescence, performed the household tasks which had formerly been hers; but she shrank from going out of doors. Her mother thought that she was unwilling to expose her changed appearance to the neighbours' remarks; but Nest was not afraid of that; she was afraid of their pity, as being one deserted and cast off. If Eleanor gave way before her daughter's imperiousness, and sat by while Nest "tore" about her work with the vehemence of a bitter heart, Eleanor could have cried, but she durst not; tears, or any mark of commiseration, irritated the crippled girl so much, she even drew away from carresses. Everything was to go on as it had been before she had known Edward; and so it did, outwardly; but they trod carefully, as if the ground on which they moved was hollow—deceptive. There was no more careless ease; every word was guarded, and every action planned. It was a dreary life to both. Once, Eleanor

brought in a little baby, a neighbour's child, to try and tempt Nest out of herself, by her old love of children. Nest's pale face flushed as she saw the innocent child in her mother's arms; and, for a moment, she made as if she would have taken it; but then, she turned away, and hid her face behind her apron, and murmured, "I shall never have a child to lie in my breast, and call me mother!" In a minute she arose, with compressed and tightened lips, and went about her household work, without her noticing the cooing baby again, till Mrs. Gwynn, heart-sick at the failure of her little plan, took it back to its parents.

One day the news ran through Pen-Morfa that Edward Williams was about to be married. Eleanor had long expected this intelligence. It came upon her like no new thing; but it was the filling-up of her cup of woe. She could not tell Nest. She sat listlessly in the house, and dreaded that each neighbour who came in would speak about the village news. At last, some one did. Nest looked round from her employment, and talked of the event with a kind of cheerful curiosity as to the particulars, which made her informant go away, and tell others that Nest had quite left off caring for Edward Williams. But when the door was shut, and Eleanor and she were left alone, Nest came and stood before her weeping mother like a stern accuser.

"Mother, why did not you let me die? Why did you keep me alive for this?" Eleanor could not speak, but she put her arms out towards her girl. Nest turned away, and Eleanor cried aloud in her soreness of spirit. Nest came again.

"Mother, I was wrong. You did your best. I don't know how it is I am so hard and cold. I wish I had died when I was a girl, and had a feeling heart."

"Don't speak so, my child. God has afflicted you sore, and your hardness of heart is but for a time. Wait a little. Don't reproach yourself, my poor Nest. I understand your ways. I don't mind them, love. The feeling heart will come back to you in time. Anyways, don't think you're grieving me, because, love, that may sting you when I'm gone; and I'm not grieved, my darling. Most times we're very cheerful, I think."

After this, mother and child were drawn more together. But Eleanor had received her death from these sorrowful, hurrying events. She did not conceal the truth from herself; nor did she pray to live, as some months ago she had done, for her child's sake; she had found out that she had no power to console the poor wounded heart. It seemed to her as if her prayers had been of no avail; and then she blamed herself for this thought.

There are many Methodist preachers in this part of Wales. There was a certain old man, named David Hughes, who was held in peculiar reverence because he had known the

great John Wesley. He had been captain of a Caernarvon slate-vessel; he had traded in the Mediterranean, and had seen strange sights. In those early days (to use his own expression) he had lived without God in the world; but he went to mock John Wesley, and was converted by the white-haired patriarch, and remained to pray. Afterwards, he became one of the earnest, self-denying, much-abused band of itinerant preachers, who went forth under Wesley's direction to spread abroad a more earnest and practical spirit of religion. His rambles and travels were of use to him. They extended his knowledge of the circumstances in which men are sometimes placed, and enlarged his sympathy with the tried and tempted. His sympathy, combined with the thoughtful experience of fourscore years, made him cognisant of many of the strange secrets of humanity; and when younger preachers upbraided the hard hearts they met with, and despaired of the sinners, he "suffered long, and was kind."

When Eleanor Gwynn lay low on her death-bed, David Hughes came to Pen-Morfa. He knew her history, and sought her out. To him she imparted the feelings I have described.

"I have lost my faith, David. The tempter has come, and I have yielded. I doubt if my prayers have been heard. Day and night have I prayed that I might comfort my child in her great sorrow; but God has not heard me. She has turned away from me, and refused my poor love. I wish to die now; but I have lost my faith, and have no more pleasure in the thought of going to God. What must I do, David?"

She hung upon his answer; and it was long in coming.

"I am weary of earth," said she, mournfully, "and can I find rest in death even, leaving my child desolate and broken-hearted?"

"Eleanor," said David, "where you go, all things will be made clear; and you will learn to thank God for the end of what now seems grievous and heavy to be borne. Do you think your agony has been greater than the awful agony in the Garden—or your prayers more earnest than that which He prayed in that hour when the great drops of blood ran down his face like sweat? We know that God heard Him, although no answer came to Him through the dread silence of that night. God's times are not our times. I have lived eighty and one years, and never yet have I known an earnest prayer fall to the ground unheeded. In an unknown way, and when no one looked for it, may be, the answer came; a fuller, more satisfying answer than heart could conceive of, although it might be different to what was expected. Sister, you are going where in His light you will see light; you will learn there that in very faithfulness he has afflicted you!"

"Go on—you strengthen me," said she.

After David Hughes left that day, Eleanor was calm as one already dead, and past mortal strife. Nest was awed by the change. No more passionate weeping—no more sorrow in the voice; though it was low and weak, it sounded with a sweet composure. Her last look was a smile; her last word a blessing.

Nest, tearless, streaked the poor worn body. She laid a plate with salt upon it on the breast, and lighted tandles for the head and feet. It was an old Welsh custom; but when David Hughes came in, the sight carried him back to the time when he had seen the chapels in some old Catholic cathedral. Nest sat gazing on the dead with dry, hot eyes.

"She is dead," said David, solemnly, "she died in Christ. Let us bless God, my child. He giveth and He taketh away!"

"She is dead," said Nest, "my mother is dead. No one loves me now."

She spoke as if she were thinking aloud, for she did not look at David, or ask him to be seated.

"No one loves you now? No human creature, you mean. You are not yet fit to be spoken to concerning God's infinite love. I, like you, will speak of love for human creatures. I tell you, if no one loves you, it is time for you to begin to love." He spoke almost severely (if David Hughes ever did); for, to tell the truth, he was repelled by her hard rejection of her mother's tenderness, about which the neighbours had told him.

"Begin to love!" said she, her eyes flashing. "Have I not loved? Old man, you are dim and worn-out. You do not remember what love is." She spoke with a scornful kind of pitying endurance. "I will tell you how I have loved, by telling you the change it has wrought in me. I was once the beautiful Nest Gwynn; I am now a cripple, a poor, wan-faced cripple, old before my time. That is a change; at least people think so." She paused, and then spoke lower. "I tell you, David Hughes, that outward change is as nothing compared to the change in my nature caused by the love I have felt—and have had rejected. I was gentle once, and if you spoke a tender word, my heart came towards you as natural as a little child goes to its mammy. I never spoke roughly, even to the dumb creatures, for I had a kind feeling for all. Of late (since I loved, old man), I have been cruel in my thoughts to every one. I have turned away from tenderness with bitter indifference. Listen!" she spoke in a hoarse whisper. "I will own it. I have spoken hardly to her," pointing towards the corpse. "Her who was ever patient, and full of love for me. She did not know," she muttered, "she is gone to the grave without knowing, how I loved her—I had such strange, mad, stubborn pride in me."

"Come back, mother! Come back," said she, crying wildly to the still, solemn corpse;

"come back as a spirit or a ghost—only come back, that I may tell you how I have loved you."

But the dead never come back.

The passionate adjuration ended in tears—the first she had shed. When they ceased, or were absorbed into long quivering sobs, David knelt down. Nest did not kneel, but bowed her head. He prayed, while his own tears fell fast. He rose up. They were both calm.

"Nest," said he, "your love has been the love of youth; passionate, wild, natural to youth. Henceforward you must love like Christ; without thought of self, or wish for return. You must take the sick and the weary to your heart and love them. That love will lift you up above the storms of the world into God's own peace. The very vehemence of your nature proves that you are capable of this. I do not pity you. You do not require pity. You are powerful enough to trample down your own sorrows into a blessing for others; and to others you will be a blessing; I see it before you; I see it in the answer to your mother's prayer."

The old man's dim eyes glittered as if they saw a vision; the fire-light sprang up and glinted on his long white hair. Nest was awed as if she saw a prophet, and a prophet he was to her.

When next David Hughes came to Pen-Morfa, he asked about Nest Gwynn, with a hovering doubt as to the answer. The inn-folk told him she was living still in the cottage, which was now her own.

"But would you believe it, David," said Mrs. Thomas, "she has gone and taken Mary Williams to live with her? You remember Mary Williams, I'm sure."

No! David Hughes remembered no Mary Williams at Pen-Morfa.

"You must have seen her, for I know you've called at Thomas Griffiths', where the parish boarded her?"

"You don't mean the half-witted-woman—the poor crazy creature?"

"But I do!" said Mrs. Thomas.

"I have seen her sure enough, but I never thought of learning her name. And Nest Gwynn has taken her to live with her."

"Yes! I thought I should surprise you. She might have had many a decent girl for companion. My own niece, her that is an orphan, would have gone and been thankful. Besides, Mary Williams is a regular savage at times; John Griffiths says there were days when he used to beat her till she howled again, and yet she would not do as he told her. Nay, once, he says, if he had not seen her eyes glare like a wild beast, from under the shadow of the table where she had taken shelter, and got pretty quickly out of her way, she would have flown upon him and throttled him. He gave Nest fair warning of what she must expect, and he thinks some day she will be found murdered."

David Hughes thought awhile. "How

came Nest to take her to live with her?" asked he.

"Well! Folk say John Griffiths did; not give her enough to eat. Half-wits, they tell me, take more to feed them than others, and Eleanor Gwynn had given her oat-cake and porridge a time or two, and most likely spoken kindly to her (you know Eleanor spoke kind to all), so some months ago, when John Griffiths had been beating her, and keeping her without food to try and tame her, she ran away and came to Nest's cottage in the dead of night, all shivering and starved, for she did not know Eleanor was dead, and thought to meet with kindness from her. I've no doubt; and Nest remembered how her mother used to feed and comfort the poor idiot, and made her some gruel, and wrapped her up by the fire. And in the morning when John Griffiths came in search of Mary, he found her with Nest, and Mary wailed so piteously at the sight of him, that Nest went to the parish officers and offered to take her to board with her for the same money they gave to him. John says he was right glad to be off his bargain."

David Hughes knew there was a kind of remorse which sought relief in the performance of the most difficult and repugnant tasks. He thought he could understand how, in her bitter repentance for her conduct towards her mother, Nest had taken in the first helpless creature that came seeking shelter in her name. It was not what he would have chosen, but he knew it was God that had sent the poor wandering idiot there.

He went to see Nest the next morning. As he drew near the cottage—it was summer time, and the doors and windows were all open—he heard an angry, passionate kind of sound that was scarcely human. That sound prevented his approach from being heard; and standing at the threshold, he saw poor Mary Williams pacing backwards and forwards in some wild mood. Nest, cripple as she was, was walking with her, speaking low soothing words, till the pace was slackened, and time and breathing was given to put her arm around the crazy woman's neck, and soothe her by this tender caress into the quiet luxury of tears; tears which give the hot brain relief. Then David Hughes came in. His first words, as he took off his hat, standing on the lintel, were—"The peace of God be upon this house." Neither he nor Nest recurred to the past; though solemn recollections filled their minds. Before he went, all three knelt and prayed; for, as Nest told him, some mysterious influence of peace came over the poor half-wit's mind when she heard the holy words of prayer; and often when she felt a paroxysm coming on, she would kneel and repeat a homily rapidly over, as if it were a charm to scare away the Demon in possession; sometimes, indeed, the control over herself requisite for this effort was enough to dispel the

fluttering burst. When David rose up to go, he drew Nest to the door.

"You are not afraid, my child?" asked he.

"No," she replied. "She is often very good and quiet. When she is not, I can bear it."

"I shall see your face on earth no more;" said he. "God bless you!" He went on his way. Not many weeks after, David Hughes was borne to his grave.

The doors of Nest's heart were opened—opened wide by the love she grew to feel for crazy Mary, so helpless, so friendless, so dependent upon her. Mary loved her back again, as a dumb animal loves its blind master. It was happiness enough to be near her. In general she was only too glad to do what she was bidden by Nest. But there were times when Mary was overpowered by the glooms and fancies of her poor disordered brain. Fearful times! No one knew how fearful. On those days, Nest warned the little children who loved to come and play around her, that they must not visit the house. The signal was a piece of white linen hung out of a side-window. On those days the sorrowful and sick waited in vain for the sound of Nest's lame approach. But what she had to endure was only known to God, for she never complained. If she had given up the charge of Mary, or if the neighbours had risen out of love and care for her life, to compel such a step, she knew what hard curses and blows—what starvation and misery, would await the poor creature.

She told of Mary's docility, and her affection, and her innocent little sayings; but she never told the details of the occasional days of wild disorder, and driving insanity.

Nest grew old before her time, in consequence of her accident. She knew that she was as old at fifty as many are at seventy. She knew it partly by the vividness with which the remembrance of the days of her youth came back to her mind, while the events of yesterday were dim and forgotten. She dreamt of her girlhood and youth. In sleep she was once more the beautiful Nest Gwynn, the admired of all beholders, the light-hearted girl, beloved by her mother. Little circumstances connected with those early days, forgotten since the very time when they occurred, came back to her mind, in her waking hours. She had a scar on the palm of her left hand, occasioned by the fall of a branch of a tree, when she was a child; it had not pained her since the first two days after the accident; but now it began to hurt her slightly; and clear in her ears was the crackling sound of the treacherous, rending wood; distinct before her rose the presence of her mother tenderly binding up the wound. With these remembrances came a longing desire to see the beautiful fatal well, once more before her death. She had never gone so far since the day when, by her fall there, she lost love, and hope, and her bright glad

youth. She yearned to look upon its waters once again. This desire waxed as her life waxed. She told it to poor crazy Mary.

"Mary!" said she, "I want to go to the Rock Well. If you will help me, I can manage it. There used to be many a stone in the Dol Mawr on which I could sit and rest. We will go to-morrow morning before folks are astir."

Mary answered briskly, "Up, up! To the Rock Well! Mary will go. Mary will go." All day long she kept muttering to herself, "Mary will go."

Nest had the happiest dream that night. Her mother stood beside her—not in the flesh, but in the bright glory of a blessed spirit. And Nest was no longer young—neither was she old—they reckon not by days, nor years where she was gone to dwell; and her mother stretched out her arms to her with a calm glad look of welcome. She awoke; the woodlark was singing in the near copse—the little birds were astir, and rustling in their leafy nests. Nest arose, and called Mary. The two set out through the quiet lane. They went along slowly and silently. With many a pause they crossed the broad Dol Mawr; and carefully descended the sloping stones, on which no trace remained of the hundreds of feet that had passed over them since Nest was last there. The clear water sparkled and quivered in the early sun-light, the shadows of the birch-leaves were stirred on the ground; the ferns—Nest could have believed that they were the very same ferns which she had seen thirty years before, hung wet and dripping where the water over-flowed—a thrush chanted matins from a holly bush near—and the running stream made a low, soft, sweet accompaniment. All was the same; Nature was as fresh and young as ever. It might have been yesterday that Edward Williams had overtaken her, and told her his love—the thought of his words—his handsome looks—he was a grey hard-featured man by this time, and then she recalled the fatal wintry morning when joy and youth had fled; and as she remembered that faintness of pain, a new, a real faintness—no echo of the memory—came over her. She leant her back against a rock, without a moan or sigh, and died! She found immortality by the well side, instead of her fragile perishing youth. She was so calm and placid that Mary (who had been dipping her fingers in the well, to see the waters drop off in the gleaming sun-light), thought she was asleep, and for some time continued her amusement in silence. At last she turned, and said,

"Mary is tired. Mary wants to go home." Nest did not speak, though the idiot repeated her plaintive words. She stood and looked till a strange terror came over her—a terror too mysterious to be borne.

"Mistress, wake! Mistress, wake!" she said, wildly, shaking the form.

But Nest did not awake. And the first

person who came to the well that morning found crazy Mary sitting, awe-struck, by the poor dead Nest. They had to get the poor creature away by force, before they could remove the body.

Mary is in Tré-Madoc workhouse; they treat her pretty kindly, and in general she is good and tractable. Occasionally the old paroxysms come on; and for a time she is unmanageable. But some one thought of speaking to her about Nest. She stood arrested at the name; and since then, it is astonishing to see what efforts she makes to curb her insanity; and when the dread time is past, she creeps up to the matron, and says, "Mary has tried to be good. Will God let her go to Nest now?"

CHIPS.

THE SUNDAY QUESTION IN THE LAST CENTURY.

WE slice the following "Chip" out of the "Universal Magazine" for 1775. It illustrates the condition of the Sabbath question in Boston, America, about that time:—

Some years ago, a Commander of one of his Majesty's ships of war, being stationed at this place, had orders to cruise, from time to time, in order to protect our trade, and distress the enemy. It happened unluckily that he returned from one of his cruises on a Sunday; and, as he had left his lady at Boston, the moment she had heard of the ship's arrival, she hastened down to the water's side, in order to receive him. The Captain, on landing, embraced her with tenderness and affection: this, as there were many spectators by, gave great offence, and was considered as an act of indecency and a flagrant profanation of the Sabbath. The next day, therefore, he was summoned before the Magistrates, who, with many severe rebukes and pious exhortations, ordered him to be publicly whipped. The Captain stifled his indignation and resentment as much as possible; and, as the punishment, from the frequency of it, was not attended with any great degree of ignominy or disgrace, he mixed with the best company, was well received by them, and they were apparently good friends. At length the time of the station expired, and he was recalled. He went, therefore, with seeming concern, to take leave of his worthy friends; and, that they might spend one happy day together before their final separation, he invited the principal Magistrates and select men to dine with him on board his ship upon the day of his departure. They accepted the invitation, and nothing could be more joyous and convivial than the entertainment which he gave them. At length the fatal moment arrived that was to separate them: the anchor was a-peak, the sails were unfurled, and nothing was wanting but the signal to get under way. The Captain, after

taking an affectionate leave of his worthy friends, accompanied them upon deck, where the boatswain and crew were in readiness to receive them. He there thanked them afresh for the civilities they had shown him, of which, he said, he should retain an eternal remembrance, and to which he wished it had been in his power to have made a more adequate return. One point of civility only remained to be adjusted between them, which, as it was in his power, so he meant most justly to recompense to them. He then reminded them of what had passed, and, ordering the crew to pinion them, had them brought one by one to the gang-way, where the Boatswain with a cat of nine tails, laid on the back of each forty stripes save one. They were then, amidst the shouts and acclamations of the crew, shoved into their boats; and the Captain, immediately getting under way, sailed for England.

LIFE IN AN ESTANCA.

PART THE SECOND.

I AM as thoroughly cut off from my kindred, in this Buenos Ayrean Estancia, as it is well possible for me to be; and living as it were alone among a set of beings, whose language, manners, and features are so different from those with whom I was wont to associate in my youth when I looked back to thirty years ago, I could almost fancy myself translated to another world. My dress too, differing in quality only from that of the herdsmen and shepherds, in fashion is quite the same. Were I to accompany the High-Sheriff on Assize Saturday, I should attract more notice than either the Sheriff or the Judge. With my silver spurs, weighing between two and three pounds, my saddle accoutrements, so different to an English gentleman's, my cotton trousers made wide as those of the Cossacks, my waist-cloth and riding-belt, my long knife, twelve inches in the blade, should I present myself in our old town, the Antiquarian Society would clap me into the castle, and say that I had come over with William the Conqueror.

This is Easter Sunday, and I suppose at the Forth, the stalls and shows will be all set out; the roundabouts, the lads with their dyed eggs, and the Gavedy men with their baskets full of gingerbread, all in motion. When shall I see the old place again, is a question I cannot answer. It is quite as uncertain when I shall see Buenos Ayres. I am so happy in the Pampas, and enjoy such excellent health, that even the wish to leave them seldom enters into my mind. In my rides my dogs accompany me, and afford me plenty of sport; they chase the fox, deer, and all the wild animals that cross their path. One brings me an armadillo in her mouth, and if I am armadillo hungry, I carry it with me and eat it for supper. Sometimes they come upon the scent of a panther, or the

puma; but to these I give a wide berth, and press onward. My dogs are of all breeds and sizes. I have Lion, Wolf, and Hector, Robert Tyke, and Richard Turpin. The females are Juno, Vixen, Rose, and Bess, the others are all Spanish names. The viscachas that burrow in the earth, the nutua that inhabit the lake, all come in for their share with the tykes. The old bulls that have retired from the cares of the world, and sought some sequestered part of the estate to wind up a "youth of labour with an age of ease," afford especial amusement to the scamps, surrounding him on all sides; one holding on by the tail, three or four at his head, and the others at his heels, he has no chance but to take to the water, and stand in the lake until they are compelled to retire, and leave him alone in his solitude. They know where to find these old gentlemen, and they scour along to cut the bull from the lake, and assail him, as the men call it, "*de retro guardin*," or, in plain English, from the rear.

There are many incidents occurring here to relieve what you may think the monotony of my life. I will describe one:—

In the spring of last year I started from the Vigilante, where I had passed the night. It was about sunrise, and at that hour the Pampas are delightful. In a favourable season, the scented trefoil reaches to the horse's knees. Covered with its yellow flowers, and laden with the dew of the morning, it reminds me of the clover fields of cultivated England. The animals all far; the land covered with cattle; hundreds of young calves by the side of their mothers; the gambols of the sportive foals in the *manadas*; all scents health, increase, and contentment. As I rode towards the Estancia, I approached two herds of mares, the leaders of which appeared to be in conference, and I was induced to think there was discord between them. They now joined their nostrils close together, then separated; and, from the position of their ears, I judged that no arrangement had been come to. They were both what we call *mandados alzados* (wild), and both herds, they had founded their own families by cutting off young mares from other herds. Neither of them was known to me, and consequently had not been "regularly appointed;" on a sudden one of the horses bolted into the other herd (he was a jet black) and, with his ears aback, and nose to the ground, he singled out a young mare, and carried her off. In a moment to the rescue off went the other horse, and a fierce contest was the result. First fastening with their teeth upon the crest of the neck or the withers; now, both, as it were, in the air, on their hind-legs; then the heavy blows upon the ribs, given with both heels; they were presently bleeding from the neck to the shoulders, the sweat running from them as if a pail of water had been thrown over them. Whilst this was going on, one of the *mandados* had been taken

off, unobserved by the black horse, and was out of sight before he discovered his loss. He immediately quitted the combat, and started off in search of his family. He came in the direction I was passing, and my horse immediately winced, and showed symptoms of alarm, so much so that I dismounted and held him by the reins. The stallion passed at full speed, at the distance of about twenty yards from us. When he was gone my horse appeared satisfied; I remounted him, and was proceeding at an easy gallop, when the frantic animal again made his appearance, his long mane flying out, and the white foam in flashes breaking from his mouth and haunches. Ever and anon, he would lower his head to the ground, as if upon a scent, and in this way he was coming up, hand over hand. My horse again became alarmed, and I let him go at his own speed. The black, however, was fast gaining upon us, when, as I approached a lake, I observed some animals amongst the high bulrushes. I drove them out. They proved to be the missing herd, and the horse regained his family. He quickly collected them into a group, and drove them in the direction where I had met with them; I have no doubt the combat would be renewed; but I had seen quite enough.

In the winter I am very much exposed to the weather, especially at night; but as soon as the cock crows in the morning, all our cares are over. Seated round the fire in the kitchen we take our *maté*, and at sunrise we mount our horses, and forth to the country. A ride of four leagues brings me home to breakfast, and the bracing air of the Pampas, with horseback exercise, makes me enjoy my roast beef and cup of coffee as much as if I were to breakfast with a City alderman.

When the hard, dry *pampero* wind is blowing, my house lets it in at every chink. On it comes from the south-west with nothing to arrest its progress. The Pampas are like the ocean. As far as the eye can reach, we only see a lonely cottage, as we see a ship in the Atlantic. The wind dies away at sunset, and next morning a hoar frost, which vanishes an hour after sunrise. This is all the winter we feel in the Pampas; but the wind from the south-west makes a clear passage through poncho, jacket, ribs and all; and the want of comfort in the house, and proper clothing, makes us feel more cold here than in the hardest winter at home. Yet we seldom catch cold, and in general we all enjoy excellent health, which in itself is a comfort beyond all price.

I breakfast in the morning at seven o'clock; by that time my horse is saddled, and waiting for me. I then proceed to one or other of the distant cottages, and sleep there, or return home at sunset, dine, and at eight o'clock in winter, and nine o'clock in summer, retire to bed, and at three o'clock am again in the *sacias*, with my herdsmen and shepherds. Seated on small blocks of wood, or dried

bullocks' heads, before a hearth enclosed with shank bones stuck into the ground—a fire of cow's dung and tallow sending forth a flickering light over the jet-black walls—behold me and my men. Elevated a little above his fellows sits the major-domo, arranging the duties of the day, or listening to their conversation of feats with the lazo. Few of them can read; they know of no other world than the Pampas; "their wants are few, their wishes all confined." Like uneducated men in all parts of the world, they are everlasting beggars. No sooner do my little stores arrive, than they all fall sick; one wants a little biscuit, another a little sugar, and a third a little coffee. "*Para remedio*," they cry. I verily believe if I were to receive a consignment of prussic acid, they would try a little "*para remedio*."

I have got my Estancia into prosperous condition. I found it on my return, in 1846, a complete wreck. It was a work of infinite labour and anxiety to bring the establishment into good working order. Forty thousand head of horned cattle, four thousand mares, and fifteen thousand sheep now overstock the ground. I have three thousand oxen apart and at pasture from three years upwards, and two thousand more in the herd, which we now collect as formerly, and bring them to the *rodio* as tame as milch cows at an English farm. We consider here two thousand head per league as many cattle as the ground will fatten and maintain all the year round: this gives about two and a-half acres per head; our stock is above that, as we do not possess more than one hundred thousand acres including the lakes, which will measure at least one thousand acres, besides the River Flores, which runs the whole length of the estate, or five and a half leagues.

The spring months are always busy ones in the Pampas. The sheep are all to wash and shear; the wool is all to be packed into bags; the ox and cow-hides collected during the winter, together with the tallow, fat, horse-hair, sheep-skins, &c., &c., have all to be sent to market. The lambs are then to be selected according to their fineness, and their ears cut, both to denote their quality, and to show to whom they belong, in case they should mix with any other flocks. All these duties occupy us during the months of November and December, and then we obtain a little rest until the middle of January, when the delivery of cattle for the market commences. This summer our labours have been materially augmented by a drought, which has been felt all over the southern part of the Pampas. A drought is to this country what a murrain is to the cattle in others. About the end of December our water failed in all the lakes, and then it was heart-rending to see the poor animals wandering about, unwilling to leave their homes. As I rode through them, the cows looked at me, as if to ask the *major-domo* if he could not procure them water to drink;

the tender calves, trotting by their mothers' sides, seemed to feel, in the diminished quantity of milk, that they, as well as their mothers, shared in the general calamity. The cow clings with great affection to the spot where she has borne her calves; but what feeling can resist the impulse of thirst? Onward they move in search of water, and whilst their owner sees, with grief of heart, his cattle leave his ground, his neighbour, whose lakes still hold out, beholds with consternation his land invaded with blackening herds of cattle, that come, like the locust, to eat up his herbage, and consume his water. That being consumed, onward they move, and carry all his cattle with them. This has no remedy until a fall of rain replenishes the empty lakes. The cattle seem instinctively to know when this has taken place, and they gradually return home, bringing with them many of their new-formed acquaintances. Their owners then come to part them off, and we send out to bring home such stragglers as have remained behind.

In March, we have to mark the calves of the year's produce, about eight thousand; in April to mark the foals, and cut the manes and tails of the mares, and that will finish the work of autumn. The last is hard work for the men and horses. We have to catch the mares with the lazo, and when inclosed, men on foot throw them down by entangling their forelegs, and when down the hair is cut away, and carefully tied up, packed, and sent to town, for exportation to England.

My farm-yard boasts of plenty of fowls, at least two hundred, with English ducks, Muscovy ducks, turkeys, &c., all in abundance. My dogs accompany me everywhere. At home they sleep at my door. When from home, and sleeping outside "*al fresco*," covered with my poncho, they form a circle round me, and then none dare approach me. My house is surrounded with weeping willows, very lofty; in these the fowls roost. I have a little garden, in which I grow onions, peas, pumpkins, and potatoes, some fruit for the summer, melons, water-melons, &c. There are plenty of tame cows for milk, eggs by the bushel. My house, or thatched cottage, has three rooms, and my country house has a spare bed for the stranger.

In the early part of April 1840, having sold all the *bovillos* (oxen) from two-and-a-half years old and upwards, and all the *fat vacas* (cows) from three years and upwards, we assembled at San Carlos to commence the delivery. For this purpose we hired twenty men by the day to do the work on their own horses, and we drafted ten more from the different *puestos*, to assist in the secondary operations. The whole were placed under the orders of my *capataz mayor*. I merely attended to overlook the duty, and to be at hand in case any unforeseen difficulty might arise.

All the preliminary arrangements being

completed, two peons were appointed to take charge of the horses, with orders to keep near the *sennelo*.* The cavalcade moved forwards, taking with them twelve tame oxen, the lads with the horses (two hundred and fifty in number) bringing up the rear.

As soon as we approached the first herd of cattle, which we found grazing, the party halted, and each *capataz*, taking with him ten men, proceeded slowly forwards, with a view to surround them. They advanced in two lines, each taking a circuit, and proceeded cautiously, so as not to alarm the cattle, and cause them to disperse too soon. The other peons were left with the tame bullocks, to receive and guard the captured animals as they were brought in.

Having approached as near as possible, the men are directed each to single out an animal of the age and condition required, and to drive it down to the place where the men with the tame oxen are waiting to receive them; in case they cannot do that, they have their lazos ready to *cidazar* the animal before he gets to a distance.

Each *capataz* now proceeded forwards at a gallop, and as soon as he had advanced one hundred and fifty yards, the man nearest to him followed at the same pace, and when he had gained his distance, the other followed in the same order, until they had formed a cordon round the cattle. The animals, seeing themselves surrounded now, try to escape; but the men head them at every point. They then disperse, and break through every opening, and it is then that the men single out the animals, and either drive them down to the *sennelo*, or catch them with the lazos.

The scene is now animated in the extreme, cows followed by their calves, yearlings, two-year old bulls, and oxen, all flying over the plain at the top of their speed; the horsemen intermixed; some lunging down their oxen, others with the noose of the lazo twirling over their heads, and not unfrequently a horse, which has stumbled, is seen without his rider making the best of his way in the *mélée*.

When the heat of the work is over, for the present, such of the men as have delivered their cattle, adjust their saddles and brace up their girths, or, if necessary, change horses, and go to the assistance of those who have caught animals that will neither be led nor driven. If at a distance, we move the *sennelo* near to them, and in succession remove the lazos, and let them mix with those already captured. The first *corrido* was thus finished.

The men now prepared to surround a second herd, with much the same success as before; and we went on like keen sportsmen, until night approached, and caught us on the very edge of our boundary line, and at too great a distance to return to San Carlos. We directed our steps to the *puesto* of a neighbour, and shut up the cattle in the corral for

the night. The peons now unsaddled and let go their horses, and each of them caught a fresh one, which he tethered for the duty of the following morning.

Previous to closing the entrance of the corral, the *capataz* ordered two of the peons to enter and, with their lazos, to bring out two of the fattest cows for the evening meal; others of the men were gathering the dry bones of the animals previously killed, in order to make the fires necessary to cook the supper. These were piled in heaps, which appeared like rudely constructed altars upon which they were about to offer up sacrifice; six of the men had undertaken this duty, the others were occupied in slaughtering and cutting up the animals, to be cooked as *carne con cuero*, or beef with the hide on.

By this time night had set fairly in; thick volumes of smoke arose from the fires, and the lurid glare cast a demonish hue upon the swarthy faces of the men now gathered round. They were of all complexions, from the jet black to the ruddy hue of the English yeoman; Indians of the Pampas, and natives of the interior provinces, with their long black hair, which in texture vies with the manes of their horses. Yet there was much good-nature in their conversation as they, like the fox-hunter, ran over the fortunes of the day, naming the horse which had carried his rider well through danger, when pressed by the furious ox. The men who had thrown a good lazo came in for their share of praise, and those who had suffered mishaps, were subject to pity or ridicule as their case might present. All came in for their share of criticism, and their loud laughs made the Pampas ring.

When the meat was cooked nothing could appear more uninviting. The different parts presented a black mass, apparently burnt to a cinder. My *peon de mano* now came to announce that supper was ready. I was seated on the green sward, at a short distance from the fires. He brought a cake of dried cow's dung, and placed it before me; over this he threw part of the web of fat which incloses the intestines, to serve in the absence of a table-cloth; he then brought part of the roasted meat, and, after carefully removing the charred ribs, he placed it on the uninviting table, the hide serving as a plate. When thus dished up few Commanders-in-Chief, after a hard fought day, would have quarrelled with their supper. The meat was delicately white and tender, a little salt sprinkled over it made the gravy flow like a stream as I scraped the meat from the shell. Having satisfied my hunger, a drink of water, out of a cow's horn, completed the feast.

Next morning, soon as the cock from the ridge of the neighbouring cottage announced the approach of day, the *capataz* and early risers of the party shook the dew from their ponchos, and commenced their toilet. The fires of the preceding night were rekindled, and the *mati* handed round. When the

* Tame animals, used as a decoy.

"saffron morn" began to dawn the capataz gave the sweeping order for "*todo el mundo*," to saddle. The gates were then unbarred, and the cattle let forth, the men forming in a crescent to stop the rush from the corral. After a few minutes allowed for them to settle, the whole moved forward, and, as soon as we came to the herds, the men got ready their lazos. The scenes of the former day were renewed; night arrived; and we supped as before. At the end of four days we made up five hundred head of horned cattle, and thus finished the labour of making *tropa a campo*.

RATS!

THERE is nothing like being in earnest when one begins a good work. So, evidently, thinks the author of a blue covered pamphlet just issued, with a title page headed by three words and nine notes of exclamation—Rat!!! Rat!!! Rat!!! The object of the writer is no less than to alarm the whole nation by showing what we lose every year by the animals against whom he has made such a dead set. Not content with dilating on this fact in the body of his work, he puts what he calls "a startling fact," upon the blue wrapper. "One pair of rats," he says, "with their progeny, will produce in three years no less a number than six hundred and forty-six thousand eight hundred and eight rats! which will consume, day by day, as much food as sixty-four thousand six hundred and eighty men; leaving eight rats to starve." This, it must be admitted, is startling enough, but any one who has a cellar, or a corn-bin, will be inclined to believe almost any tale, however strong, or to applaud any abuse however severe, which may be heaped upon that convicted thief Rat. Midnight burglaries, undetected by the new police, sink into insignificance compared with the ravages of rats of the London sewers, which steal and destroy more, in one week than the value of all the robberies of plate that blaze away in the newspapers from year's end to year's end. And yet the plunderers go on almost unmolested. They are too knowing for traps, and arsenic seems to be more fatal to human, than to quadrupedal victims. The French Journals, the other day, described a grand battue in the sewers of Paris, when thousands of rats were captured and killed, and we heard of large sums cleared by the sale of their skins—for these thieves go about like swell mobsters—very well clad. But the example of our French brethren was not imitated in the modern Babylon. We neither spill blood on barricades above ground, nor in sewers beneath it. So Mr. Rat still carries on his plunder with impunity, to the great horror and indignation of good housewives in general, and of the writer we have just referred to in particular. Protection is with him no explanation of national distress. He says it is

all owing to rats: "The farmers have been eaten out of house and home; bread kept up to a starvation price, to the misery, poverty, and crime of our manufacturing and agricultural population. Men seldom think of rats, because they seldom see them; but are they less destructive because they carry on their ravages in the dark? Certainly not."

In another place he declares "there is not a farmer in the British dominions but would, if he at present had all the rats have deprived him of within the last ten years, this moment declare himself a wealthy man." If the real truth could be found out, it would be a safe speculation to back the statements of the rat-hater against the statistics of the Protectionists.

The question then suggests itself, what should be done to save this waste—to stop the plunder—to banish the thieves! and we turn to the little blue book for information. The naturalists are said to give a very clear notion of what the rat is, but what he *does* they describe very imperfectly. Rats are modest creatures; they live and labour in the dark; they shun the approach of man. Go into a barn or granary, where hundreds are living, and you shall not see one; go to a rick that may be one living mass within (a thing very common, adds our writer), and there shall not be one visible; or dive into a cellar, that may be perfectly infested with them, rats you shall not see, so much as a tip of a tail, unless it be that of a stray one "popping across for a more safe retreat." As men seldom see them they seldom think of them. "But this I say," goes on our author, "that if rats could by any means be made to live on the surface of the earth, instead of holes and corners, and feed and run about the streets and fields in the open day, like dogs and sheep, the whole nation would be horror-stricken, and ultimately there would not be a man, woman, or child able to brandish a stick, but would have a dog, stick, or gun for their destruction wherever they met with them. And are we to suppose, because they carry on their ravages in the dark, that they are less destructive? Certainly not; and my object in making this appeal to the nation, and supplying it with calculations from the most experienced individuals and naturalists, is for the purpose of rousing it up to one universal warfare against these midnight marauders and common enemies of mankind, inasmuch as they devour the food, to the starvation of our fellow-creatures." He does not altogether ignore the argument of the friends of the rat—for even the rat has found friends amongst naturalists, ready to argue in his favour, and in print too—that these vermin destroy, in the sewers, much matter that would otherwise give out poisonous gases. Sewer rats, he admits, are not the very worst of the race, but even they should be slain wherever they may be caught. But the

rats of the cellar, the warehouse, the barn, the rick-yard, the granary, and the corn-field, are the grand destroyers against whom war to the terrier, the trap, and the ferret is proclaimed.

Do not let any reader suppose that the *Ratsbane* put forth in the guise of a blue pamphlet, is a mere tasteless dose of useful knowledge on the rat genus. It is no such thing. The author gives a passage or two of politics, and then a page or so of rats. He is an honest hater, such as Dr. Johnson would have admired; nor is his hatred confined to four-legged adversaries. He evidently dislikes Communists and Socialists, as sincerely as he does rats. "Communism, Socialism, and Ratism," he says, "are terms synonymous;" but this is not the part of his book we have to deal with, so let us pass on from what he hates to what he admires. "Now," he says, "for the prolific disposition of rats;" and here takes an opportunity of saying the best word he can for his friends the rat-catchers—the rat-killers—the Napoleons of the vermin war—the exterminators of the catchable rats—the Nimrods of the hunting grounds to be found in sewers and cellars, and under barn floors. The passage looks very like an advertisement; but since it is characteristic, and as the statements are curious, and really not without importance, they shall be here quoted:—

"Now for their prolific disposition! In this respect I have been most ably assisted by the renowned James Shaw, of rat-killing celebrity, landlord of the Blue Anchor Tavern, Bunhill Row, St. Luke's, and of whom I cannot speak too highly for the civil, straightforward and animated way in which he communicated every information I desired. Curiosity prompted me to make inquiries respecting him, and I find him to be a man universally respected for his manly bearing and refined sentiments of honour, consequently, a man whose testimony can be relied upon. I have also been supplied with similar information from Mr. Sabin, of rat-killing renown, residing in Broad Street, St. Giles's. These men destroy between eight and nine thousand each annually, averaging seventeen thousand between them. We will now proceed with the calculations. In the first place, my informants tell me that rats will have six, seven, and eight nests of young in the year, and that for three and four years together; secondly, that they will have from twelve to twenty-three at a litter, and that the young ones will breed at three months old; thirdly, that there are more females than males, at an average of about ten to six. Now, I propose to lay down my calculations at something less than one-half. In the first place, I say four litters in the year, beginning and ending with a litter, so making thirteen litters in three years; secondly, to have eight young ones at a birth, half male and half female; thirdly, the young ones to have a litter at six months old. At this calculation, I will take one pair of rats; and at the expiration of three years what do you suppose will be the amount of living rats? Why, no less a number than SIX HUNDRED AND FORTY-SIX THOUSAND, EIGHT HUNDRED AND EIGHT! Mr.

Shaw's little dog 'Tiny,' under six pounds weight, has destroyed TWO THOUSAND FIVE HUNDRED AND TWENTY-FIVE pairs of rats, which, had they been permitted to live, would, at the same calculation, and in the same time, have produced ONE THOUSAND SIX HUNDRED AND THIRTY-THREE MILLIONS, ONE HUNDRED AND NINETY THOUSAND, TWO HUNDRED, living rats! And the rats destroyed by Messrs. Shaw and Sabin in two years, amounting to SEVENTEEN THOUSAND pairs, would, had they been permitted to live, have produced, at the above calculation, and in the same time, no less a number than TEN THOUSAND NINE HUNDRED AND NINETY-FIVE MILLIONS, SEVEN HUNDRED AND THIRTY-SIX THOUSAND, living rats! Now, let us calculate the amount of human food that they would destroy. In the first place, my informants tell me that six rats will consume day by day as much food as a man; secondly, that the thing has been tested, and that the estimate given was, that eight rats would consume more than an ordinary man. Now, I—to place the thing beyond the smallest shadow of a doubt—will set down ten rats to eat as much as a man, not a child; nor will I say anything about what rats waste. And what shall we find to be the alarming result? Why, that the first pair of rats, with their three years' progeny, would consume in the next more food than SIXTY-FOUR THOUSAND SIX HUNDRED AND EIGHTY men the year round, and leaving eight rats to spare! And the rats destroyed by the little wonder 'Tiny,' had they been permitted to live, would, at the same calculation, with their three years' progeny, have consumed as much food as ONE HUNDRED AND SIXTY-THREE MILLIONS, THREE HUNDRED AND NINETEEN THOUSAND AND TWENTY men; above two-thirds the population of Europe!!"

Here we come to the great glory of our author's thoughts. After its master, the rat-catcher of "manly bearing and refined sentiments of honour," "Tiny" is his true hero. Eclipse might lord it at Epsom or Newmarket; Tom Thumb might trot to renown at sixteen miles an hour, but what was that compared with the triumphs of Tiny!—the killer of rats who might have had a family capable of eating (if they had found it) as much victuals or more than one hundred and sixty millions of men? Our writer proposes a solid gold collar testimonial for the "good" dog Tiny, to be raised by public subscription. But that would be a paltry return for such great services. Tiny's renown lifts him above such mercenary rewards.

More wonders are in store:—

"Now for the vermin destroyed by Messrs. Shaw and Sabin. Taken at the same calculation, with their three years' progeny—can you believe it!—they would consume more food than the whole population of the earth. Yes, if Omnipotence would raise up ONE HUNDRED AND TWENTY-NINE MILLIONS FIVE HUNDRED AND SEVENTY-THREE THOUSAND SIX HUNDRED more people, these rats would consume as much food as them all!! You may wonder, but I will prove it to you."

A calculation—like that which has made Tiny immortal—is given, and then the reflection succeeds, "Is it not a most appalling thing

to think that there are at the present time in the British empire, thousands, nay millions, in a state of starvation, whilst rats are consuming that which would place them and their families in a state of affluence and comfort! I ask this simple question (emphatically continues our Rat Hater), "Has not Parliament, ere now, been summoned upon matters of far less importance to the Empire? *I think it has.*"

A fine opening this for an oratorical patriot, whose themes are worn out. An agitation for protection against rats would inevitably secure the hearty support of the agricultural interest.

Enough has surely been said to show the great importance of rats, but it would be wrong to leave the little book which has suggested this article, without gleaming from it a few rat-catching statistics, and without pointing out the moral of the whole, by giving the writer's proposition for relieving us from the scourge he describes. It seems that one rat-catcher has frequently from one thousand five hundred to two thousand rats in his cages at one time—it is not stated, but we suppose—ready to be killed by "Tiny." It is averred that these are all brought up from the country—all "fair barn rats"—and that "it would not pay to breed them"—a question probably open to doubt. The natural enemies of the rat are thus mustered—the ferret, polecat, stoat, weasel, cat, dog, and man. The ferret's powers of destruction are estimated very lightly; the polecats are very rare, prefer game when it can be had, and do little against the rat; the weasel also prefers a chicken or a duckling "to fighting with a rat for a meal." Hence the farmers destroy them, and they do little against the rats. Cats, as a rule, prefer hearth-rugs; and traps, *unless quite new*, and consequently sweet and free from the smell of rats, are useless. No! There is nothing in Nature capable of saving the nation from rats, but "Tinies."

"I do not know of any quadruped equal to a well-bred London terrier for sagacity, courage, fidelity, colour, symmetry, general beauty, and economy: in a word, he seems in every respect formed by nature for man's companion and protector."

With a fine burst of eloquence, the author asks—

"Are rats a calamity to be deplored, or are they not? The voices of religion and patriotism cry with stentorian lungs, 'Yes!'—the voice of philanthropy cries, 'Down with them! down with every barrier and annihilate them!'—the fainting stomachs of thousands of our starving fellow-creatures at home and in the sister-country, with the agonised bowels of their withered offspring writhing beneath the ruthless fangs of hunger, shriek forth with horrid yells for their extermination!!

Our friend then takes a higher flight, and discourses, with equal fervour and more notes of admiration, the question whether—on theological grounds—man has a right to kill

these creatures, even though they be rats. But he soars into such altitudes of rhetorical theology, that we dare not follow him. He dismisses, in the same paragraph, several remedies for rats, with a brevity almost savouring of contempt; gliding gracefully from theology to arsenic and other poisons he returns, with a gush of enthusiasm, to his old refrain, "Tiny."

The breed of small terriers of the Tiny breed must be increased. "I do not mean," he says, "the little pigmy, dwarf terrier; they are tantamount to useless, even where they are well bred, not having strength enough for hunting. A dog, to be of sound service, ought to be from six to sixteen pounds weight; I would not recommend them over that, as they become too large and unwieldy for the purpose, and too expensive keeping; besides, little dogs will kill mice as well as rats, and that is a great recommendation. I would also recommend, above all others, the London rat-killing terrier; he is as hard as steel, courageous as a lion, and as handsome as a racehorse: the village dogs, on the other hand, are, generally, speaking, too large, too coarse, and too soft. You ought to be as particular about breeding terriers as they are with racehorses."

The writer suggests the abolition of the duty upon rat-catching terriers of the "Tiny" family; that associations should be encouraged in the rural parts of England for the promotion of rat-catching in all its branches; that the bodies of the vermin be sold for manure; and lastly that rewards be given to the greatest killers.

Literature has, from first to last, been strengthened by recruits from nearly every class; but till now we know of no volunteer who has enlisted under her banner from the ranks of rat-catching. We know not if the publication that has afforded a text for this article will effectually augment the exterminators of the rat-tribe; but this is certain, that, rat-killer though its writer be, he has produced between forty and fifty pages, in which, though there may be much comical exaggeration, there are, nevertheless, many curious facts and suggestions for abating one of the greatest animal nuisances that have infested our homes and fields, since the days when an English king levied tribute of wolves' heads upon our brethren of Wales.

MR. BOOLEY'S VIEW OF THE LAST LORD MAYOR'S SHOW.

MR. BOOLEY having been much excited by the accounts in the newspapers, informing the public that the eminent MR. BATTY, of Astley's Amphitheatre, Westminster Bridge Road, Lambeth, would invent, arrange, and marshal the Procession on Lord Mayor's Day, took occasion to announce to the Social Oysters that he intended to be present at that great national spectacle. MR. BOOLEY remarked that into whatever regions he extended his travels, and however wide the range of his experience became, he still found, on repairing to Astley's Amphitheatre, that he had much to learn. For he always observed within those walls, some extraordinary costume or curious weapon, or some apparently unaccountable manners and customs, which he had previously associated with no nation upon earth. Thus, MR. BOOLEY said, he had acquired a knowledge of Tartar Tribes, and also of Wild Indians, and Chinese, which had greatly enlightened him as to the habits of those singular races of men, in whom he observed, as peculiarities common to the whole, that they were always hoarse; that they took equestrian exercise in a most irrational manner, riding up staircases and precipices without the least necessity; that it was impossible for them to dance, on any joyful occasion, without keeping time with their forefingers, erect in the neighbourhood of their ears; and that whenever their castles were on fire (a calamity to which they were particularly subject) numbers of them immediately tumbled down dead, without receiving any wound or blow, while others, previously distinguished in war, fell an easy prey to the comic coward of the opposite faction, who was usually armed with a strange instrument resembling an enormous, supple cigar.

For such reasons alone, MR. BOOLEY took a lively interest in the preliminary announcements of the last Lord Mayor's Show; but, when he understood, besides, that the Show was to be an Allegory, devised by the ingenious MR. BATTY, in conjunction with the Lord Mayor, as a kind of practical riddle for all beholders to make guesses at, he hired a window in the most eligible part of the line

of march, resolved to devote himself to the discovery of its meaning.

The result of MR. BOOLEY'S meditation on the Allegory which passed before his eyes on the ninth of the present month, was given to the Social Oysters, in the form of a report, emanating directly and personally from himself, their President. We have been favoured with a copy of the document, and also with permission to make it public; a permission of which we now proceed to avail ourselves. Those who have any acquaintance with MR. BOOLEY, will be prepared to learn that the real intent and meaning of the Allegory has been entirely missed, except by his sagacious and original mind. We need scarcely observe that its obviousness and simplicity must not be allowed to detract from the merit either of MR. BOOLEY or of MR. BATTY, or of the Lord Mayor. It is in the essence of these things that they *should* be obvious and simple, when the clue is once found.

"At an early hour of the morning," says MR. BOOLEY,—"for I observe, in the newspapers, that when any public spectacle takes place, it always begins to take place at an early hour of the morning—I stationed myself at the window which had been engaged for me. I will not attempt to describe my feelings on looking down Cheapside. I am conscious of having thought of Whittington and his cat, and of Hogarth's idle and industrious apprentice—also of the weather, which was extremely fine.

"When the Procession began, with the Tallow Chandlers' Company, succeeded by the Under Beadle of the Worshipful Company of Tallow Chandlers, walking alone, as a Being so removed and awful should, tears of solemn pleasure rose to my eyes; but, I am not aware that I then suspected any latent meaning in particular. Even when the 'Beadle of the Tallow Chandlers' Company in his gown,' caused the vast assemblage to hold its breath, and sent a thrill through all the multitude, I believe I only regarded him as the eminent Beadle in question, and not as a symbol. The appearance of 'The Captain and Lieutenant of the Band of Pensioners,' and also of a Band of Pensioners, each carrying a Javelin and Shield, struck me (though the band was by no means numerous enough) as a happy idea, emblematic of those bulwarks

of our constitution, the Pension-List, Places, and Sinecures; but, it was not until two pages bearing flambeaux filled with burning incense, preceded a young lady 'attired in a white satin robe and mounted on a white palfrey,' that the joint idea of Mr. BATTY and the Lord Mayor burst upon me. I will not expatiate on the pleasure with which I found my discovery confirmed by every succeeding object. I will endeavour to state the idea to you in a tranquil manner, and to do justice to Mr. BATTY and the Lord Mayor.

"The Tallow Chandlers' Company," Mr. BOOLEY proceeds, "with their Under Beadle and Beadle, I found to be the representatives of noxious trades and unwholesome smells; at present very rife within the City of London, but shortly to disappear before the penitient exertions of the Corporation. The Band of Pensioners, with javelins and shields, were clearly the persons interested in the maintenance of such nuisances, though powerless either for attack or defence, and only following those sources of disease and death into oblivion. The burning incense, I need not observe, was used to purify and disinfect the foul air before the appearance of the Goddess HYGEIA (called PEACE in the programme, that the Allegory might not be too obvious), who was very properly represented with a spotless dress, and riding on a spotless palfrey. It was a happy part of this thoughtful fancy, that the civic authorities, and the Aldermen in their carriages, had gone before; Mr. BATTY and the Lord Mayor being sensible that until those distinguished functionaries had moved on a little, and been got out of the way, the appearance of the Goddess of Health could not possibly be expected.

"The Goddess, that distinguished stranger," Mr. BOOLEY goes on to say, "having been received by the City of London with loud acclamations, and having been most eagerly and enthusiastically welcomed by the multitudes, who were to be seen squeezed into courts, byeways, and cellars, gave place to 'The Horse of Europe;' in which generous quadruped I perceived a pledge and promise on the part of the Corporation, that filled me with the liveliest emotions. For, not to dwell upon the significant fact that the body, which it is my welcome function to commend so highly, paraded, on this solemn occasion, a Horse, and not a Donkey—which is in itself worthy of observation: the City having, very frequently heretofore, made a surprising show of Donkeys when the Public Health has been under discussion—I had only to refer to BUFFON, to strengthen my sense of the importance of this beautiful symbol. 'Horses,' says he, 'are gentle, and their tempers social; they seldom show their ardour and strength by any other sign than emulation. They endeavour to be foremost in the course.' And again, 'They renounce their very being for the service of man.' And again, 'Their man-

ners almost wholly depend on their education.' And again, 'A horse naturally morose, gloomy, or stubborn, produces foals of the same disposition; and as the defects of confirmation, as well as the vices of the humours, perpetuate with still more certainty than the natural qualities, great care should be taken to exclude from the stud all deformed, vicious, glandered, broken-winded, or mad horses.' No animal could have better illustrated the united meaning of Mr. BATTY and the Lord Mayor. The City pledged itself by that token to show its ardour and strength by emulation in all efforts for the public good, and to abandon all other considerations to the service of man. Further, it recognised the great truth, that the manners of a people depend upon their education; and that gloomy, morose, or otherwise ill-conditioned parents will perpetuate an ill-conditioned and constantly degenerating race; irksome to itself and dangerous to all. Hence, it promised to extend, by all possible means, among the poor, the blessings of light, air, cleanliness, and instruction; and no longer to enforce filth, squalor, ill-health, and ignorance, upon thousands of God's creatures. I was particularly struck." Mr. BOOLEY remarks, "by this beautiful part of the Allegory, and shall ever regard Mr. BATTY and the Lord Mayor with a feeling of personal affection.

"The Horse of Europe was followed by the Camel of Asia. And difficult, indeed, it would have been," says Mr. BOOLEY, "to have presented, next in order, any animal more felicitously carrying out the general idea. For, the impossibility of people being healthy and clean without a good and cheap supply of water, must be as obvious to the meanest capacity, as even the dearth, bad quality, and insufficient quantity, of the present supply of water in London. I therefore consider that anything happier than the exhibition at this point of an animal who is supplied with a subtle inward mechanism for storing this first necessary of life—who is furnished, as I may say, with an inexpensive Water Works of its own—was one of the most agreeable and pointed illustrations ever presented to a populace. I consider it a stroke of genius, and beg thus publicly to tender the poor tribute of my warmest admiration to Mr. BATTY and the Lord Mayor.

"After the 'Camel of Asia, came the Elephant of Africa. I found this idea, likewise, very pleasant. The exquisite scent possessed by the elephant rendered it out of the question that he could have been produced at an earlier stage of the Procession, or the Tallow-Chandlers, with their Under Beadles, Beadles, and Band of Pensioners, might have roused him to a state of fury. Therefore, the Civic Dignitaries and Aldermen (whose noses are not keen) immediately followed that ill-savoured Company, and the Elephant was reserved until now.

"His capacity of intellectual development under proper training, his strength and docility, his industry, his many noble qualities, his patience and attachment under gentle treatment, and his blind resentment when provoked too far by ill-usage, rendered him, besides, a touching symbol of the great English people; and this idea was still further expressed by his carrying trophies on his back, expressive of their enterprise and valor. In parading an animal so well known for its aversion to carrion, and its liking for clean provender, the City of London, pleasantly but pointedly, avowed its determination to seek out and confiscate all improper human food exposed for sale within its liberties, and particularly to look, with a searching eye, into the knackers' yards, and the sausage trade. I almost fancied," Mr. BOOLEY proceeds, "that the sagacious elephant knew his part in the Allegory, and was conscious of the whole Castle of meaning on his back, as he proceeded gravely on, surveying the crowd with his small, but highly intelligent eye.

"The two negroes by whom he was led," Mr. BOOLEY goes on to remark, "rather perplexed me. Can it be, that they had any reference to certain estimable, but pig-headed members of the Civic Parliament, who learn no wisdom from experience and instruction; and in humorous reference to whom, Mr. BARRY and the Lord Mayor suggested the impossibility of ever washing the Blackamoor white?

"But now," he adds, "appeared what I cannot but consider the crowning feature of the allegory: in perfect harmony and keeping with the rest, and pointing directly at the removal of an absurd, a monstrous, and cruel nuisance. I allude to the 'Two Deer of America,' whose horns I no sooner observed advancing along Cheapside, than I immediately felt that an allusion was intended to Smithfield Market. The little play upon words, in which it was candidly admitted that that nuisance was 'Two Dear to the Corporation generally, might have struck me, perhaps, as rather too obvious, if I had been disposed to be hypercritical; but, the introduction of horned beasts among the crowd was in itself an Allegory, so pointed and yet so ingenious and complete, that I think I was never better pleased in my life. On further reflection, I discovered a still more profound and delicate meaning in the exhibition of these animals. Their association with the chase, typified the constant flight and pursuit going on all over the City, and, indeed, all over the Metropolis, on market-days; while their easy connection in the beholder's mind with those periods of English history when it was a far greater crime to kill a stag than to kill a man, reflected with just severity on the obsolete inhumanity and rapacity of the Corporation that cared for the lives and limbs, neither of beasts nor men, in the tenacity of its clutch at an old, pestilential, worn out abuse.

"This," says Mr. BOOLEY, in conclusion, "is the Allegory that was presented to the people last Lord Mayor's Day, and which I have now had the satisfaction of explaining to the Social Oysters. I deem it highly honourable to the new Lord Mayor, whom I cordially wish a prosperous and happy reign; together with a vigorous determination to do his utmost to carry out the needful reforms, and remedy the crying evils, so ably glanced at, by himself, on this auspicious occasion. As I dined in the Guildhall after the show, I had the honour of giving utterance to these wishes (but not within his hearing) after dinner; when, remembering this Allegory, I divined a new meaning in the Loving Cup, and was charmed to find the first City in the universe bravely devoting its charter and liberties to the welfare of the community, and not poorly sheltering itself behind them as an immunity from the plainest human responsibilities. I had the honour and pleasure of drinking his lordship's health in a bumper of very excellent wine; and I should have been happy to have drunk to Mr. BARRY too, if his health had been proposed, which it was not."

UNIVERSITY OMISSION AND COMMISSION.

THE other day I was poring over a leader in a London paper, on the University Royal Commission, when my chambers were suddenly invaded by a jovial old gentleman who had intrusted me with the pleasing task of drawing up the marriage settlement of his second daughter.

He is a rosy-faced elder, who, amidst all the misfortunes of his earlier days, has contrived to retain possession of his spirits and of a certain cheerful and jocular way of regarding every event that has befallen him. Rushing into my rooms, without knocking, he plunged at once as eagerly into the subject of University reform and with as little regard to the object of his visit as if his daughter were destined to die an old maid. That was his particular craze at that particular juncture. "I'll tell you what it is," he exclaimed, "it won't do any longer. The time is past for it. The man who emerges from his *alma mater* with the dead languages alone for the purpose of struggling with the living, breathing, bustling, buffetting world, is, as in the present day, defenceless, as if he went into battle with a rusty sword."

"Not quite," I ventured to reply; "they give him the means to polish and sharpen his weapons; which are his wits. A man turned out with a thorough knowledge of the fundamental structure of language and with mathematics—with the means of reasoning and judging correctly—may, if he chooses, learn anything."

"So he may; but when it is too late;—when the struggle has commenced; when he has no time to do that which ought to have been

put in his way to do in the days of his pupilage. Why, Sir, by attaining the summit of my ambition, and being elected a Fellow of my College, I was ruined!"

"Indeed!"

"Utterly; but the fact is you will not understand this question until you hear my story. Some one sketched, the other day, in a popular periodical, (I suspect it was you), the career of a negligent dog who neglected his college studies and devoted his attention exclusively to college pleasures, and was ruined accordingly. My misfortunes were occasioned by availing myself too assiduously of the advantages offered at the University."

"You threaded your way so far into the mazes of learning that you found you could not extricate yourself from them when you entered the open paths of Life."

"Precisely."

And, without further ado, the old gentleman commenced, in substance, the following narration:—

"My father was a highly respectable wine-merchant, in the town of Mudborough. He commenced in quite a humble way. I have been told, and owed his rise in life to his own exertions. In ten years after first setting up in business, he had realised enough to marry on; in another ten, he had his crest and his villa; in ten more, he was of unquestionable Norman descent. My mother considered herself to be of a higher family than my father's, and of better breeding, and waged a furious war of scowls and frowns against certain manners and customs of his which she declared to be more befitting a shopkeeper than a gentleman of wealth and family."

We were two, brothers. Charles, the younger, was to be admitted into my father's office, with the view of succeeding him in the business, which was too lucrative to be suffered to pass entirely out of the family. For me, a higher destiny was reserved. I was to be a classical scholar. What my father of all things most regretted was that he had not himself received a classical education. I have known him, indeed, when reading a sermon or a treatise, to assume a puzzled air, as if he were but ill at ease amongst the grammatical expressions which he found there. I was, therefore, placed under a dynasty of tutors, from an idea that at school sufficient pains were not expended on the boys' instruction. Under their excellent system, I was reading Thucydides in the original Greek before I could understand Mrs. Markham in the original English; and, about the time that my father forbade my looking at the newspapers on account of the immoralities which sometimes crept into the police reports, I was deeply read in the loves of the heathen Gods and Goddesses.

"Excellent! excellent!" my father would sometimes cry out, when, on his asking me what author, or whose life I had been reading, I came out with some uncommonly hard name.

That of Heliogabaldus, I remember, particularly pleased him. 'Lælius on Friendship and Scipio on old age! Scipio and Lælius! Very good, sound, entertaining writers. Make yourself acquainted with their writings by all means.' I believe that the poor man had fitted up a panorama, on a small scale, in his own mind, in which I was represented as the beau ideal of a scholar, my breast covered with medals, and my hands covered with ink. I should be the hope of the family. I should be one day a leading man in Mudborough, and quote Horace to enraptured vestry-meetings. I should overwhelm the obnoxious Robinson, who had long been the bugbear of my father's political and municipal existence, inasmuch as he belaboured and pummelled him with quotations from the Latin poets, which my father, from not understanding, was, of course, unable to reply to.

"I remember very well the day on which I first went up to Cambridge. I had been crammed like a turkey-cock up to the very night before, and was filled almost to bursting with the names of ancient towns and intrigues of Jupiter, which they had managed to make me contain. When I looked upon my tutor, and recollected that that was the very man whose exploits I had read of in the Calendar, my knees knocked together, and my hair stood on end. I could have fallen down and worshipped a Senior Medallist! However—courage! In three years—my mother said—I should be one too."

"I believe that no man could have read harder than I did during my college course. My father insisted upon my having two private tutors, a mathematical and a classical one, for an hour a day each. I was up early, and in bed late; I never wasted my time in useless pursuits, in billiard-rooms or card-parties, in empty conversation, or in attending college lectures. For my private tutors I paid the sum of one hundred and sixty-two pounds a-year, namely, fourteen pounds a term and thirty pounds for the Long Vacation to my mathematical tutor; and twenty pounds a term and thirty pounds for the Long Vacation to my classical tutor. My father never grudged the expense in the least; he was well content that I should be deluged with that which he so much regretted not having had forced upon him in his own youth. I believe that I was always naturally of a cheerful disposition, but it must be confessed that all this load of mythology and antiquity weighed down upon me like Etna upon the imprisoned Typhon. I saw little beyond the uncleared windows of my room, but being of a strong frame and still stronger resolution, determined to persevere."

"I remember that an effort was at one time made by a very steady and respectable young man, who occupied the adjoining rooms, to get up what he called some 'English literary readings,' of an evening. They were to com-

mence with selections from the works of Chaucer, Spenser, and the Elizabethan dramatists, and we were to read in turns, aloud, each taking a certain number of lines. I frequented them for some time, but the history and literature of the period and country were as strange to me (and I think to several of the others) as if we had been reading about China. I therefore—principally upon the advice of my tutor—discontinued my attendance. 'You have been sent here,' said my tutor to me, 'solely with the view of learning Latin, Greek, and Mathematics. Of what use will it be to you, at present, to know about Edward the Third, or Henry the Eighth? You will not be asked these things when you go into your examination. There will be plenty of time for all this, when you leave College.' His remarks carried the more weight from his not being one of those who give advice without following it, and I conscientiously acquit him of all knowledge either of Edward the Third, or Henry the Eighth.

"I almost wish, now, that I had been a wild young fellow, not only on other accounts, but that I might entertain you with a recital of the steep-chases that I rode and the hearts that I broke. The life of the student is usually destitute of incident, of intrigue, of duelling, of seductions, of drollery, of delightful and interesting topics, in a word. It is a smooth unruffled surface, rising up into a waterspout, or roaring down in a cataract, only at the epoch of a Prize Ode, or a Scholarship examination. I dined with Horace, and supped with Homer; I pored over the historians, and kindled with enthusiasm at the speeches of Pericles, whenever he happened to make one that did not contain a very large admixture of particles and irregular verbs. I could have conducted an Athenian law-suit long before I knew the ordinary forms of an English one, and should perhaps have invested any money that might have been left me with greater prudence, and better knowledge of the rate of interest, at Corinth than at Manchester.

"Not to be tedious, at the end of my twelve terms I took an excellent degree; not, perhaps, quite so high as I might have wished, but still sufficiently good to entitle me to look forward to a fellowship at the end of three years. I confess, that the idea of spending three more whole years secluded, as it were, from the world, and knee-deep in the ruins of Rome and Athens, would have proved insupportable to me had it not been for my father, who on this point was inexorable. My disgust was heightened by the situation in which I now found myself, and which I must explain in a few words.

"About this time, I fell in love. It was a very simple affair, without any romance about it. My classical tutor, Mr. Smith, had three daughters, Hecla, Phyllis, and Astarté. I met them for the first time at the ball which my

tutor gave at the end of every term, when more than two hundred persons were called upon to enjoy themselves and to perspire, in three little rooms, each about twelve feet by six. I did not dance—no more did Astarté; we sat upon an ottoman together, and talked about the Brown Medal. She was very talented, and the favourite of her father. 'That girl,' he used to say, 'can construe the *Lysistrata* of Aristophanes as well as I can. And as for her Greek Odes—Stop! here are half-a-dozen; sit down, and I'll read them to you.' On this evening commenced an acquaintance, which, through the kind offices of Mrs. Smith, ripened into a closer connection. Perhaps, instead of saying that I fell over head and ears in love, it would be more correct to state that I was gently pushed in by Mrs. Smith, who kept watch on the bank to see that I did not struggle out again. She thought it prudent that the affair should be concealed from my father at present; it was, however, tolerably well known to my few undergraduate acquaintance. 'What!' cried out one of them to me one day, 'so you are hooked in, are you?' 'No!' I replied, smiling at what I thought his ignorance, 'pierced with a dart, you mean. You have mistaken your metaphor—Cupid is never represented to us by the ancients as armed with anything but a bow and arrow.' But at this he only laughed the more.

"We had not been engaged long, when Mr. Smith obtained a living at some distance from the University. Astarté and I bade each other farewell at a little hot supper, and wept very much. We were to love each other like Hero and Leander, and to correspond by the twopenny post. I was to go down and visit them as often as I possibly could. She had not been gone more than a few days when I received from her an *Amœbean Ode*, in Latin, with a great quantity in the way of affection, and—if I remember right—a false quantity in the way of metre.

"Meanwhile, I was living my three years of undergraduate life over again, undertaking exploring expeditions into Aristotle, and travelling no further than from one book to another amongst those that constituted my little world. I attempted, at one time, to take pupils, which resident Bachelors of Arts very often do, but I found that it was a different thing to possess knowledge and to be able to impart it, and no sooner did I become aware of my unfitness in this respect, than I refused to accept my pupils' money, and sent them off to some one else. At the close of the third year I passed a good examination, my name being announced as one of the half-dozen successful candidates for a fellowship. I was now twenty-six years of age, and had passed six years at college, and—counting from the time that I was put into my Latin Grammar—nineteen years and five months studying exclusively the dead languages.

"I was induced to continue my residence at Cambridge, instead of going to live at home, by various feelings, by habit, by a knowledge that I was a great man there and a small one everywhere else, by a certain sense of helplessness when out in the great world, but principally by being very much nearer to Astarté and the Smiths, when there than at Mudborough. We formed a society of seventy in number, from the tottering old Senior of fourscore, to the spruce young Deacon of twenty-five. I look back upon this period of my life in much the same manner that, on emerging into the broad thoroughfare, we cast a glance behind us at the close and pestilential alley through which our way has lain. Of the whole seventy, two were related to the Master's first wife, one to his second wife, and one to himself; the remaining sixty-six owed their elevation to their superior attainments either in classics or mathematics. We had some eminent men, it is true, but they were entirely among the non-residents; for more than half the fellows were abroad in the world engaged in different professions—at the bar, in the church, or under government. These had not enjoyed any connection with the University, for years, beyond the fact of receiving their salaries, which they would have continued to do if they had been in Peru or at Ispahan. Those that were in residence were, for the most part, ignorant inversely as their ages, that is to say, the most recently elected generally knows the most. This will not appear surprising, when it is remembered that the Seniors having spent forty or fifty years, pretty equally divided between the labours of eating, preaching, and sleeping, had forgotten by that time most of the Latin and Greek that they had learnt in their youth, without having acquired any other branches of knowledge to supply the deficiency. They used the same old forks and spoons, and retained the same old ideas and prejudices that they had brought up with them half a century before. Upon these they had engrafted all detestable habits of old bachelorhood, much love of port-wine, and a little dirt. They had always been accustomed to consider themselves the Lords of everything around; it was disagreeable to go elsewhere and be undeceived. They accordingly, every now and then, ran a little way out of their hermitage to look upon the faces of men, but quickly trotted back to their favourite little delusions, to their courtyards, to their sleepy sermons, and to their red mullet. Talking of red mullet, one of the most extraordinary things was our system of dinners. They consisted of every luxury from earth, air, and sea, and we had to pay for them, if I remember rightly, about eight shillings a day (exclusive of wine). It would have been infinitely more agreeable to the feelings of every one, except these Seniors, who of course governed the College, to have had a good plain dinner for three or four shillings, and to put the remainder into

our pockets. But no one thought of saying a word openly, and the cook and steward got richer and richer every day.

"After a short experience, I determined upon making an effort to extricate myself from this position, and with that view wrote to my father, announcing my engagement, and demanding permission to marry immediately. I received a reply from him (my poor mother, I must tell you, died during my college career), with enquiries as to the position and family of the fair one, but more especially as to what money she was likely to have. To the last query, I replied that I really did not know, never having indeed thought upon the matter. In answer to this, he told me that I was a fool, for, as I should forfeit my fellowship by marriage, what means of support remained to me unless Astarté had money? This was true, but I felt that he had no right to blame me for not knowing that which I had never been taught. The business of the Greek Stage, and the winding ways of Helicon, had been pressed upon my notice from my earliest years, but the business of the nineteenth century, and the winding ways of men, I had been left to pick up as I could, or rather not to pick up at all.

"At last, however, he relented, and we were married upon three hundred a year which he allowed us. My Astarté brought me her facility in versification by way of dowry, but it was as good in my estimation as any other. We had not been married long before we found out that we were in debt. Not that the circumstance was revealed to us by the state of our accounts, for we scarcely kept any, but by this simple fact, that persons knocked at the door asking for money and we had none to give them. The fact is, that my wife and I had been so long in the habit of contemplating sheep in the form of 'peaceful flocks,' and oxen in the act of 'drawing with unwearyed breast the strong plough,' that we were quite unable to realise their cost when they were divided by the butcher into joints, and by the cook, the maid-servant, between their aunts, and cousins, and parish constable for the time being. We were just beginning to appreciate the difficult position in which we found ourselves, when a dreadful calamity overtook us—the ruin of my father, followed, almost immediately, by his death. He had invested his savings—about forty thousand pounds—in some great undertaking, presided over by an enormously wealthy and much respected man. The undertaking had been ruined by mismanagement, or even something worse; the enormously wealthy and much respected man had retired into privacy for a few years, in order to husband his gains and to emerge again, one day, wealthier and more respected than ever; and thousands were, like my father, left without a penny in the world, to carp at fortune or to worry the daily papers with their useless and at last rejected communications.

"There was now nothing left but the wine-trade, which, from my father not having attended to it of late, did not produce so much as formerly. Such as it was, however, it furnished the means of employment, and (until certain debts were paid off) a barely sufficient sustenance to my younger brother. There was, therefore, no hope from that quarter. Besides which, people were in the habit of saying, 'James has received a splendid education—a College education—which Charles has not.' They accordingly aided Charles in preference to James. Ah! if they had known how utterly helpless I was. If fifty thousand pounds had been put into my hands at that moment, I should not have known what to do with the sum. Whereas Charles, with business habits and some knowledge of commercial matters, might convert a few hundreds into as many thousands with much more ease than I could raise the money to pay my butcher's or my baker's bill.

"At this period, and when nothing short of downright starvation seemed to be our prospect, a benevolent peer, who had been a great patron of my father (and, indeed, of all the wine merchants round), came seasonably to my assistance. Earl Canute was desirous that his third son, the Honourable Phelim Fitz Canute should travel abroad for a year previously to his being entered at Oxford, and offered me the situation of companion and tutor to the young man. If I could consent to part with my wife for so long a time—such were the terms on which the handsome offer was made—I should receive five hundred pounds for my services during the year, with the certainty of being appointed, on my return, permanent tutor to the Honourable Phelim, at Oxford, where of course I could reside. Such a prospect was too dazzling to be rejected lightly. Astarté and I compared notes to see whether we could bear to part with each other; we found that, upon the whole, we could. The fact is, that six months after marriage most husbands and wives are endowed with wonderful fortitude in this respect; they have just begun to find out each other's bad qualities, and have not yet had time to become accustomed to them. My conscience, however, compelled me to state to the earl that I had already attempted to act the part of tutor, but I failed; that my natural timidity, a slight impediment which I had at that time in my speech, and other causes had operated together to produce this result. His lordship replied, that that was of no manner of consequence. He did not mean, by offering me the post of tutor, to imply that I should give a regular lesson to his son every day. There would not, indeed, be any necessity for Phelim to acquire an extended knowledge of the classics or mathematics, as the University would confer upon him an honorary degree in virtue of his connection with the peerage. With regard to after-life, it was not intended to make a Professor or a learned man of him.

On the contrary, he was destined for a Member of Parliament. My duties would be, therefore, to regulate his accounts, to see that he formed no improper connections of any kind, and, generally, to overlook his conduct and actions. I embraced Astarté (but without any allusion to Amœbean odes), and we set off—my pupil, his valet, and I—for the Continent.

"This pupil of mine, as I soon found out, was an exceedingly sharp young fellow, and much better calculated to act the part of tutor to me than I to him. From his knowing a little of the French language, and I, of course (for had I not been Fellow of a College?) knowing none, he soon contrived to get the management of accounts into his own hands. Indeed, I had no clear conception, at that time, of the process of letters of credit, by means of which we raised money in all the principal towns. They were as full of mystery to me as the words, bill of exchange, bill of lading, specie, currency, rate of exchange, and so on, which, not being obsolete, I was wholly ignorant of. But though Phelim soon discovered me to be a fool, I must confess that he behaved very leniently towards me, sometimes taking me under his charge for whole days together. He patronised me in this way, I recollect, at Pompeii and at Rome, where my classical knowledge became subservient to his amusement; and I could tell him of Romulus, and Julius Cæsar, and other persons connected with the place, whose names he had scarcely heard before. We journeyed on in this way for several months, till we came to Baden-Baden, where we had not been located more than a few days, when my pupil announced to me, one morning, at breakfast, his intention of remaining there for some time to come. 'You have heard of the great poet Schiller?' he asked. By a strange coincidence, I had. 'I have made acquaintance with his son,' he replied; 'you will see him presently. He is coming here in about half-an-hour.'

"In about half-an hour, accordingly, the son of the great Schiller made his appearance. He was, like all the other people, dirty, and smelling of pipes, which was the only piece of German statistics that experience had made me acquainted with.

"'Well!' exclaimed my pupil, as soon as Schiller had taken a seat. 'I will agree, if Mr. — has no objection.'

"'To what?' said I.

"'Mr. Schiller, having taken a fancy to me, has kindly consented to become my instructor in the German language. With this end in view, he has invited me to his house for a few hours every night, to read his father's works. I suppose you can have no possible objection.'

"Of course I could not. I was delighted that such a lucky chance had befallen him. Breakfast concluded, he and Schiller went out together.

After this, for several weeks, my pupil repaired to the house of his friend every night, from nine till twelve, where he told me that he was making immense progress, and could now read, with perfect ease, the play of William Tell. I remarked, however, that he continued to address the waiters in English, as heretofore, probably from a feeling of bashfulness. Once or twice I met him walking in the street with Schiller and a lady—Mrs. Schiller, I was told—a very beautiful, and, indeed, quite English-looking woman.

"Things had been going on in this way for some time, when one morning I received a brief but peremptory letter from Canute Castle, ordering our immediate return to England. Phelim, I thought, looked rather uncomfortable; but there was no help for it. We departed, and got back safely. It was nightfall when our post-chaise drew up in the great Ostro-Gothic archway. I shall not easily forget the countenance of the Earl as he advanced to meet us. Without noticing his son, he bade me follow him to his study—a small apartment, adorned with a picture of King Canute, the founder of the family, who is represented in the act of throwing cold water upon the flattery of his followers. I remember glancing vaguely at this picture as I went in, and wondering at the extraordinary likeness which the present earl bore to his ancestor. This seemed to me to be a great phenomenon. It was a painting of Sir Thomas Laurence's, I think.

"Without offering me a chair, the earl asked me in a stern voice for what purpose I had gone abroad with his son. I replied, wondering very much at his tone and manner, that I had gone as tutor, of course. Had I discharged my trust? I answered, that to the best of my ability I had. How then could I account for the fact, that during the last month my pupil had gambled away, in a private hell at Baden-Baden, a sum of more than eight hundred pounds, as he, the Earl, could prove on information which admitted of no doubt? I was thunderstruck, and declared, with perfect truth, that I had entertained no idea that such a thing was going on.

"That is difficult to believe," interposed Lord Canute, "when I am informed to a certainty that this little fool of a boy was engaged at play for three or four hours every evening. You must have missed him during that time, Mr. —"

"I related the imposition which had been practised on me in regard to Schiller.

"Pooh! Pooh!" replied his Lordship, "a man of twenty-seven is not quite a babe in arms. He must have acquired a little experience by that time.

"I don't know, though, on the whole," he continued, after a short pause, "whether it may not be true, as you say. You have been hitherto Fellow of a College, I believe, and—ah well! perhaps it was my fault. Here,

Sir, is a cheque for five hundred pounds, your full salary. But it is, of course, unnecessary for me to say, that your services will be no longer required." I bowed and withdrew, thinking, in spite of myself, that with his air of mild reproachfulness, he looked more like King Canute than ever.

"We actually managed to live for more than fourteen months on these five hundred pounds, which kept continually diminishing as our family increased. Our little twins, too, Knox (so called from the Reverend Cephas Knox, our rector) and his brother Erebus had been afflicted, according to my wife, with divers infantine complaints, which I, for my part, was never able to perceive, but which cost a great deal of money, some part of which I think she devoted to the purchase of a new gown. At the end of this time it was absolutely necessary to rouse ourselves. Charles, meanwhile, had been extending his business very much, and would soon be in a position to lend me a helping hand. I was determined, however, never to solicit assistance from that quarter, while I had health and strength left to aid myself. Independently of any feeling of delicacy prompting me to this resolution, I knew that people would cry out if James, 'who has received a College Education, and should be fit for anything,' were the one to solicit assistance from Charles 'who has not, poor fellow! enjoyed such advantages.'

"One morning, it was suggested to me by some one or other, that I should turn literary man, and join the 'Mudborough Gazette,' which would be sure to avail itself at once of my offer to become a contributor. No sooner had the idea been put into my head, than I walked off to the residence of the Editor, a neat villa in the outskirts of the town. He was a good boon companion and an elder at his meeting-house, and could be charged with only one failing in the wide world, which was that of beating his wife. Even for this solitary failing there was an excuse to be made, for she was in the habit of charging him with nightly inebriety, which charge being strictly true, was, of course, doubly provoking. I think that when I knocked at the door, I interrupted him in his usual occupation, for I heard shrieks in the back parlour, and he came out to meet me with a very red face. He, however, showed me into his study; my errand was soon explained, and he appeared to jump at my offer.

"To have such a distinguished man as yourself connected with our paper, will give us great pleasure, Sir."

"It was agreed that I should commence with a leading article on the approaching trial of Queen Caroline. I was to 'give it' to George the Fourth, and to draw tears for Caroline.

"An unhappy female, Sir, ill-treated by a monster of a man!" as the Editor said, showing me to the door.

"It was agreed that I should send in my article the next Tuesday, and go up the following day to learn its fate. I was not much accustomed to English composition; but I got up the facts from the daily papers, and compounded a piece of prose on the subject, which I forwarded by the maid-servant. On the Wednesday, I found the Editor sitting with two manuscripts before him—mine and another. He looked particularly unpromising; but asking me to be seated, addressed me as follows:—

"This paper that I have, Sir, in my right hand, is your leading article. How does it begin? "It is no doubt to be considered and borne in the attentive mind, that the ill-fated Queen, who is even now about to be submitted as a criminal to the loftiest tribunal of her country, has, under circumstances which have scarce need of recapitulation, but which will recur to the mind as having occurred at various times and epochs, been ill-treated." "Pardon me, Sir, but that's a terribly unwieldy sentence. Well, what's the next?" "She was led to the Hymeneal altar on the eighth day of April, 1795; the officiating clergyman's name —," and so on.

"You see we don't want to know all these things. We want something sparkling, cutting, spicy! Excuse me, Sir, but you're a University man, and that's *your* article. Now hear the one on the same subject just sent by Tom Twincer, who scarcely had ever any education at all, but whom we all remember at one time as potboy at the Headless Horseman. "It was a remark of Rochefoucauld." There, you see!—lively and sparkling for you at once!"

"But," said I, "I never read Rochefoucauld, so I could not quote him." "No more has Tom," replied the Editor, "never a word of him. What of that?" "It was a remark of Rochefoucauld that a man was never so happy as when his wife was unhappy. If the dashing philosopher could be permitted to revisit for awhile the earth, we would gladly send our devil as an exchange prisoner"—funny you see, too!—"and sought for a confirmation of his remark—we would direct his attention to a certain bloated potentate not a hundred miles from —," and so on. There, Sir, that's the kind of article we want. If you can only produce such a one as you have sent us by way of specimen, why the negotiation must be at an end."

"The above form only two examples of the many efforts which at this time I made to obtain respectable employment, and in which I found that my University education acted as a barrier to my progress. I shall not entail upon you any more of these examples; suffice it to say, that, after having picked up a precarious subsistence for some years, I was at last induced to enter into a sort of partnership with my brother, and there to commence my education over again. I released myself from the load of Latin and

Greek which had been weighing me down from my earliest infancy, and for once devoted my attention to something sound, useful, and practical. At his death I succeeded to the wine-business and to a brewery which we had added to it. So that, instead of disfiguring creation by remaining, at my time of life, a rusty and musty old fellow, you behold me a—in fact, what I am. That is all. I have said my say. You don't happen to have a glass of wine, or even of brandy-and-water on the premises, do you?"

At this moment my clerk opportunely hastened into the room announcing "Sir J. Cocculus-Indicus's carriage!"

"Bless me!" cried the old gentleman, rising and looking at his watch. "I have been here a long time. However, I won't detain you further. I only came in to say that I hope you have put that marriage deed into a conveyancer's hands, and to remind you that it is fifteen, not ten thousand pounds that I settle on my daughter Jane."

FOOD FOR THE FACTORY.

THE weekly mail from America is not of more moment to the great cotton lord of Manchester than it is to John Shuttle, weaver, and his thousands of shop-mates. If he ever thinks how entirely his own existence, and that of his little household, depend upon the plant that grows five thousand miles off, he must pray that the sun may shine propitiously, and the wind subside to the gentlest zephyr, about the cotton-fields of the Southern States of America. He would regard the flies of Alabama to be as deadly as serpents to him; and when the frost pinches him on his way to his work early in the morning, he would wonder how the temperature stands in Georgia and New Orleans; tremble at the least rumour of war with the Yankees; and would rather read a declaration of defiance, addressed by the Secretary for Foreign Affairs, to Europe, Asia, and Africa combined, than glance at the mildest remonstrance officially directed to the American Minister.

War with America—a hurricane in Georgia—a blight in Alabama—continued rain in New Orleans—are one and all death-cries to the mill spinner and power-loom weaver; for when the cotton-fields of the Southern States yield less than their average quantity of cotton, the Manchester operative eats less than his average quantity of food. He flourishes or decays with the cotton-pod. Cheap bread is to him a less important question than cheap cotton. When his blood boils at the indignities and cruelties heaped upon the coloured race, in "the land of the free;" he does not always remember that to the Slave States of America he owes his all; that it is to his advantage that these States should remain untroubled—that the negro should wear his chains in peace. It is for his gain that slavers dare the perils of slave dealing, since his loom is furnished with the

produce of the negro's forced exertions. While only one, and one only source exists for the supply of his loom, he is dependent upon slavery. The thongs of the slaveholder's whip increase and quicken the means not only of his own existence, but of four millions of spinning, weaving, and printing co-mates; that being the number of the British population—in fact, one-sixth of it—which shares his dependence upon the peace and prosperity of the Southern States of America. This enormous section of the people are precisely in the condition of a nation, who depend upon one sort of food, or of a man who risks his whole fortune upon the issue of one venture. When the potato crop failed in Ireland, thousands died of starvation; millions would meet a similar fate were supplies of cotton to be suddenly cut off from the shores of the Western Atlantic.

Manufactured cotton is the staple clothing of nearly three-fourths of the inhabitants of the globe; and five-sixths of the cotton reared in the various parts of the world are imported into this country; yet up to the present time we have been content to depend upon the one source for the raw article. A quarrel about a line of territory—another Oregon question—may paralyse our cotton factories to-morrow, and burden the general community with the support of one-sixth of our entire population. A frosty night never occurs in the Cotton States without pinching the resources of the Lancashire operative; for as cotton becomes scarcer and dearer, work becomes slacker and wages less. The entire commercial aspect of this country may at any time be suddenly changed by any sudden misfortune happening to the North American cotton-fields. There is no other country to which we can successfully turn in such an event. Our own Colonial territories might still be made to furnish us with a sufficient supply to render us independent of the slaveholders of the Southern States; but up to this time colonial agriculturists have been too busy abusing the home Government for its mismanagement, or squabbling amongst themselves about local matters, to be in a condition to send us more than a few bales—not sufficient food for a dozen factories. Regardless of the comparatively small amount of labour cotton culture demands—the slight risks of failure in the crop, the ready market for its consumption and the insignificance of the requisite capital—our colonial or Indian possessions have been occupied too earnestly by intestine disagreements, or in territorial warfare, to yield cotton profitably to themselves or to the parent country. Yet in these most suitable climates nothing is more easy. The peculiarities of culture offer no difficulties that cannot be surmounted. The seed is usually planted in rows, from six to eight feet apart, in holes made at intervals of about one yard. The depredations of the grub make it requisite to place eight or ten seeds in each hole. The germ appears above

ground about a fortnight after the seed has been planted. In about four months the shrubs are topped; in the sixth month the blossoms burst, and between the seventh and tenth month the pods form, and fill with the delicate fibre which we weave into stuffs of endless variety, although the cotton shrub is exposed to many hostile influences.

Indeed, in many of the tropical possessions of Great Britain, its cultivation is attended with less risk than that which accompanies cereal crops at home, and with which itself is reared in America, where the variable climate under which it is now chiefly cultivated, and the consequent unsteadiness of supply, render the cotton market of this country liable to frequent and highly-injurious fluctuations. The present disturbed and uncertain condition of the market, amply justifies this assertion.

The demand for cotton has increased with such unprecedented rapidity, that it is a matter of wonder to many that the supply has been at all commensurate. The official tables of the importations of cotton for the last forty-five years, show how rapidly the demand has risen, and how, year by year, we have become more dependent upon America. In 1791, according to the official statement of Mr. Woodbury, secretary to the United States Treasury, the States produced no more than two millions of pounds of cotton; in 1805, or fourteen years afterwards, they exported thirty-two million five hundred thousand pounds into this country; in 1842, we bought five hundred and seventy-five million pounds of American cotton; and last year we imported nearly five hundred and seventy-two million pounds, worth above fourteen millions sterling, nearly all from the same quarter.

This extraordinary increase gives a striking proof of the truth of the economical axiom, that permanent excess of demand produces depression of price. The fact is, that a pound of cotton is not worth more than a fourth of its price in 1815. This progressive cheapness is attributable to the improvements and economy in the mode of culture, forced upon the producers by the immensity of the demand. Mr. Bates, of the house of Baring and Co., stated before a Parliamentary Committee in 1833, that "even six cents, or threepence per pound is a price at which the planters can gain money in the valley of the Mississippi;" and according to Mr. Woodbury, "where rich lands and labour were low, as in Alabama a few years ago, two cents (one penny) per pound for cotton in the seed, or eight cents when cleaned, would pay expenses. It is supposed to be a profitable crop in the South Western States at ten cents per pound. Fresh land in the States will, it is estimated, give on an average from one thousand to one thousand two hundred pounds per acre of cotton seed, which will yield of clean cotton from two hundred and fifty to three hundred pounds. Taking the smaller average, and

estimating the value of the cleaned cotton at eight cents per pound, the worth of an acre of cotton is four pounds three shillings and fourpence. It is difficult, however, to frame an estimate of the value of a cotton estate, since cotton varies in price from a few pence to many shillings. Thus, while Bengal cotton of inferior quality can be raised and delivered in England with profit to the grower at two-pence half-penny per pound, Sea Island cotton (so called from the circumstance of its having been first cultivated in the low, sandy islands on the American coast, between Charlestown and Savannah) fetches from ten to twenty-two pence per pound. The value of cotton necessarily depends upon the care with which it is cultivated, and the land from which it draws its sustenance.

If we turn to the past, experience tells us that the best cotton can be cultivated in our own colonies. It was undoubtedly first transplanted from Anguilla to the Bahamas, whence seeds were sent in 1786 from Georgia. From this date we have gradually allowed our former sources of supply to fall into disrepute, and to place ourselves altogether in the hands of Americans. In 1786, our total imports of cotton amounted to twenty million pounds, no part of which, it is important to remember, was furnished by North America. We find that our West India colonies sent us a third of the above quantity, that about another third came from foreign western colonies, while two millions of pounds came from Brazil, and five millions of pounds from the Levant. Yet only nineteen years afterwards, out of the fifty-nine millions of pounds which entered our ports in the course of one year, the United States—that had but a handful of seed in 1786—sent us upwards of thirty-two millions.

One of the wisest steps taken by the Americans after the conclusion of the peace which established their independence, was to beg a few pods of cotton-seed from the Bahamas. The astounding fact that last year we paid the Americans upwards of fourteen millions sterling for the produce of those few pods, is a convincing proof of the sagacity which prompted the planters of Georgia to sow them in their adopted soil. It remains to be proved whether or not a few of our own colonists may be induced, even after this lapse of time and the advance which the Americans have made, to turn unprofitable lands into productive and valuable cotton-fields.

For whatever is to be done in this important matter, we must look to Manchester. Already the House of Cotton Lords—the Manchester Chamber of Commerce—but a glance at the foregone connexion of Manchester with Cotton will show what we may expect from that quarter for the future.

The present greatness of Manchester as a manufacturing town was, in all probability, founded by the band of Flemish manufac-

turers who fled to this country on the reduction of Antwerp by the Duke of Parma in 1583. It is conjectured that these refugees introduced the manufacture of cotton into this country. Lewis Roberts, writing in 1641, of the industry of the Manchester folk, tells us that "they buy *cotton wool* in London, that comes first from Cyprus and Smyrna, and at home worke the same, and perfect it into fustians, vermillions, dimities, and other such stufes, and then return it to London, where the same is vented, and sold, and not seldom sent into forrain parts, who have means, at far easier termes, to provide themselves of the said first materials." Under the vigorous stewardship of the Chethams cotton manufacture grew rapidly in importance. At this period cotton yarn was generally used as weft, and flax as warp. The cotton yarn was spun by the peasantry, and travelling chapmen from the manufacturing houses went with packhorses from cottage to cottage to gather the produce of the poor folk's wheels. Passing from the seventeenth century to the eighteenth, we find, about the year 1739, according to the "Gentleman's Magazine," that the manufacture of cotton had arrived "at so great perfection" that the manufacturers were beginning systematically to export cotton goods to the colonies. The gradual introduction of machinery, the cheapening of transit, the progressive freedom of commerce, have at last evolved, from the small beginnings here chronicled, that stupendous mass of machinery which now helps to clothe the large proportion of the family of man. We are told that the cotton yarn annually spun in England would, in a single thread, encompass the earth two hundred and three thousand, seven hundred and seventy-five times—that our wrought cotton fabric exported annually would girdle the equatorial circumference of the globe seven times; at the same time it is reported that the cotton plant has so precarious an existence that "in the morning it is green and flourishing; and in the evening, withered and decayed."

The evils of this fluctuating uncertainty now encompass us. We have only to recur to the yield of the last few years to demonstrate the unsettled and perilous condition in which our cotton manufacturers exist. In one year we find the crop estimated at one million seven hundred thousand bags; in another at two millions one hundred thousand; in another at two millions four hundred thousand; in another at two millions seven hundred thousand; and in another we find that it dropped to two million bales—differing in two years as much as twenty-five per cent. The Fugitive Slave Bill, which has made a deep sensation throughout the States, and exasperated the three million slaves upon whom we depend for our cotton supply, has increased the danger of dependence upon America. Mr. Bright said very well, at

Manchester, the other day, that the emancipation of the slaves of America—come when it might—would have the effect of destroying the cotton crop for a few seasons, at least; and thus “the very greatest act of justice ever granted by any government in the world, might be the cause of the greatest misery and disasters to the vast population of this country connected with the industry of the cotton-trade.” Such a contingency would be accounted disgraceful as well as disastrous to this country.

To obviate the coming pressure in the cotton market, from this and other causes, the attention of the Manchester manufacturers has been chiefly directed to the vast extent of country under the control of the East India Company. From this great territory, with its hundred millions of inhabitants, we get only one-tenth of our cotton supply—and the cotton we do get is of such an inferior quality, that we never pay for it more than one-twentieth the amount we pay for our gross importation. The reasons assigned for this disproportionate supply of Indian cotton are four. The first is the oppressive tax or rent; the second is the want of roads; the third is the want of common buildings, barns, and stores; and the fourth, the want of piers, quays, and docks. Mr. Bayley has shown that, in the present neglected state of the interior, it costs fifty per cent. on the value of the cotton, to convey it from the field to the place of shipment. Ineffectual appeals have been made to the East India Company by the Manchester Chamber of Commerce. The Company have, from time to time, promised to do all in their power to encourage the growth of cotton within their territories. Roads were to be made into the interior; rivers were to be rendered navigable; and docks and ports were to be constructed on a magnificent scale; yet, up to this hour, roads are nowhere to be found in India, and a foreign vessel has not a harbour to ride in, in safety, along the vast seaboard that we possess in the East. The climate of India is better adapted to yield a steady supply of cotton than that of any other country. The frosts which nip the plants in the Southern States of America, do not visit India, and the cotton plant is, here, perennial, whereas, in America, it must be planted annually. The extensive cultivation of cotton in India would not only make us independent of those casualties, under the effect of which the trade of Manchester is now suffering, but would also be an inestimable boon to the native population. The inquiry which the Manchester Chamber of Commerce have set on foot is a timely measure; it may stir the Company, now that their charter is on the eve of expiration; at all events, we shall learn, from Mr. Mackay's investigation, the precise causes which have hitherto operated to the prejudice of the cotton cultivators of India.

With good roads and commodious docks, it is conjectured that cotton would be imported from India into this country, at a price that would necessarily compete with the fluctuating American market.

However, there is no reason why our factories should depend for their food mostly upon India. From the West Indies we may look for growing supplies as well. An interesting letter from a Jamaica cotton planter, dated September of the current year, affirms, that extensive experiments have proved that Sea Island, as well as every other kind of cotton, can be grown on that island. The geniality of the climate, the absence of winter, and the large tracts of land which are uncultivated, and which are so peculiarly adapted for the growth of cotton, seem to point out Jamaica as a place where any kind, and large quantities, of this material can be cheaply cultivated. The only drawback at present is the paucity of labour; and even this drawback is likely to be soon removed.

Experimental cotton fields are progressing in Australia, Port Natal, and Western Africa. In all of these countries the plant has been successfully reared. The distance of Australia, however, forbids us to hope that we may be able to rely upon the product of her splendid climate for our cotton. But from Natal we may reasonably expect a large cotton growth. The climate is exquisite: the fig, the peach, the orange, and the almond flourish side by side in the open air; and the fine light soil of the D'Urban district so genially nourishes the cotton plant, that it bears vigorously for five consecutive years.

These facts have been for some time patent to the authorities, both home and colonial; yet, with the hole worm feeding at his leisure, the frost nipping the pods, or the rude winds sweeping away acres of undeveloped calico, how tardily and reluctantly has the question of cotton cultivation been taken up. It is only when we are threatened with a dearth of cotton, which would entail horrors upon this country, as terrible and deplorable as the potato blight inflicted upon Ireland, that the matter is mooted. We have unproductive soils in every quarter of the globe, where we might grow food for our factories, without regard to the tyrannies of a Fugitive Slave Bill—without being parties to the degradation of human creatures to the level of beasts of burden; and the present aspect of the cotton market—the swelling murmurs of American slaves—the hole worms of Georgia—the floods of New Orleans, and other constantly recurring casualties of the Southern States, all should combine to rouse the energy of colonial speculators, and bid prudent agriculturists to spread the frail fibres of the cotton plant in the burning sun of India, the more temperate heat of South Africa, and in the steady climate of the West India Islands. By these energetic measures

we may secure that important consideration—steadiness in the supply of food for the factory.

HUMAN BROTHERHOOD.

The monarch, glitt'ring with the pomp of state,
Wears the same flesh as those that die of hunger;
Like them, the worm shall be his loathsome mate,
When he resigns his glory to a younger.

The beauty, worshipp'd by the limner's eye,
On whom a hundred suitors gaze admiring,
Is sister to the hag, deformed, awry,
Who gathers in the road her scanty firing.

The scholar, glorying in the stamp of Mind,
Master of all the wisdom Time has hoarded,
Is brother to the lumpish, untaught hind,
Whose vulgar name will perish unrecorded.

Therefore let human sympathies be strong,
Let each man share his welfare with his neighbour;
To the whole race Heaven's bounteous gifts belong,
None may live idly whilst his fellows labour.

THE KING OF THE HEARTH.

"Do thee go on, Phil," said a miner, one of sixteen who sat about a tap-room fire. "Do thee go on, Phil Spruce; and, Mrs. Pittis, fetch us in some beer."

"And pipes," added a boy.

"Mr. Spruce contemplated his young friend with a grim smile. "Well," said he, "it's a story profitable to be heard, and so—"

"Aye, so it be," said a lame man, who made himself a little more than quits with Nature, by working with his sound leg on the floor incessantly. "So it be," said Timothy Drum. "Phil's a philosopher."

"It always struck me," said a dirty little man, "that Phil has had a sort of nater in him ever since that night we lost old Tony Barker."

"What happened then?" inquired the squire's new gamekeeper.

"Did ever you see down the shaft of a pit?" asked Phil.

"No; and I'd rather not."

"A deep, deep well. Whatever they may do in other parts, we sing hymns, when we are pulled up, and if so be any of our butties at such times says a wicked word, he gets cursed finely when we be safe up at the top. We gon up and down different ways. In some old pits they have ladders, one under another, which reminds me—"

"Always the way with Phil."

Mr. Spruce gazed sternly in the direction of the whisperer, and drank some beer. "Which reminds me that once—"

We must here announce the fact concerning Mr. Philip Spruce, that his method of telling a story ("Which reminds me," always meant a story with him) is very discursive. He may be said to resemble Jeremy Bentham, who, according to Hazlitt's criticism, fills his sentence with a row of pegs, and hangs a

garment upon each of them. Let us omit some portion of his tediousness, and allow him to go on with his tale.

"It was in the year One thousand, eight, four, four; by token it was the same month, November, in which the block fell upon Tim Drum's leg, I was invited to a Christmas dinner, by old Jabez Wilson. You are aware, gentlemen, that hereabouts there are a great number of deserted pits. The entrances to these are mostly covered with a board or two. There aren't many stiles in our pit-country, so we are drove to using these for firewood. The old pit mouths being left uncovered, and sometimes hidden in brushwood, it is a very common thing for sheep to tumble in, and if gentlemen go shooting thereabouts, they may chance to return home without a dog—your good health, Timothy. —As I was saying, I love to ponder upon causes, and compare effects. I pondered as I walked—"

"And the effect was that you tumbled into a pit, Phil Spruce."

"The truth has been told, gentlemen, but it has been told too soon. And now I've forgotten where I was. Ay, pondering." Here Phil hung up a long shred of philosophy on one of his pegs; and after the first ten minutes of his harangue, which was chiefly occupied in abusing human nature, a fierce-looking individual said, "Go on, Sir; you've brought things to that pass where they won't bear aggravation. The company expects you to fall down the pit directly."

"In the middle of my reflections—my natural Christmas thoughts," continued Phil, "I felt a severe bump on the back and a singular freedom about my legs, followed by a crash against the hinder part of my head—"

"To the bottom at once," said the fierce-looking man.

"I was at the bottom of a pit in two seconds. By what means my life was preserved, I cannot tell; certain it is that I sustained at that time no serious injury. Of course, I was much stunned, and lay for a long time, I suppose, insensible. When I opened my eyes there was nothing to be seen more than a faint glimmer from the daylight far above, and a great many dancing stars which seemed like a swarm of gnats, ready to settle on my body. I now pondered how I should obtain rescue from my dangerous position, when an odd circumstance arrested my attention. I was evidently, unless my ears deceived me, not alone in my misfortune; for I heard, as distinctly as I now hear Mr. Drum's leg upon the fender, I heard a loud voice. It proceeded from a distant gallery. 'Who did you say?' inquired the voice in a hoarse tone; a softer voice replied, 'Phil Spruce, I think.' 'Very well,' answered the big sound; 'I'll come to him directly.'"

"Here was a state of things. A gentleman resided here and was aware of my intrusion

Moreover I was known. Was the acquaintance mutual? Well, gentlemen, that question was soon to be decided, for presently I heard a rustling and a crackling noise, like the approaching of a lady in a very stiff silk dress. But that gruff voice!—I trembled. As the sound approached, a light gleamed over the dark, dirty walls, and glittered in the puddle upon which I was reposing. 'He or she has brought a candle, that is wise.' So I looked round. Mother of Miracles! He, she, or it. What do you think approached? A mass of cinder, glowing hot, shaped into head, body, arms, and legs; black coal on the crown of its head, red glow on the cheeks, and all the rest white hot, with here and there a little eruption of black bubbles, spirting out lighted gas. It was the shape of a huge man, who walked up, with a most friendly expression in his face, evidently intending to give me a warm reception.

"And so he did, as I will tell you presently. It needed not the aid of his natural qualities to throw me into a great and sudden heat; his supernatural appearance was enough for that. Then I was seized with a great fear lest, in his friendliness, he should expect me to shake hands. That was as if I should have thrust my fingers into this tap-room grate. Well, ma'am (your good health, Mrs. Pittis), the strange thing came up to me quite pleasant, with a beaming face, and said, in something of a voice like a hoarse blast pipe, 'Glad to see you, Mr. Spruce. How did you come here?' 'O,' said I, 'Sir,' not liking to be behindhand in civility, 'I only just dropped in.' 'Cold, up above, Mr. Spruce? Will you walk in and take a little something warm.' A little something warm! What's that? thought I. 'O yes,' I said, 'with all my heart, Sir.' 'Come along, then; you seem stiff in the bones, Mr. Spruce, allow me to help you up.' 'O Lord!' I cried, forgetting my manners. 'No thank you, Sir. Spruce is my name, and spruce my nature. I can get up quite nimbly.' And so I did, with a leap; although it made my joints ache, I can tell you. The thing bowed and seemed to be quite glowing double with delight to see me. Take a little something warm, I thought again. O, but I won't though! However, I must not seem eager to get away just yet; the beast seems to think I came down on purpose to see him. 'After you, Sir!' said I, bowing and pulling my forelock. 'If you will be so good as to lead, I'll follow.' 'This way, then, Philip.'

"So we went along a gallery, and came to a vault which was lighted by the bodies of a great number of imps, all made of brisk live coal, like my conductor. 'I dare say you find the room close,' said the king—for I found afterwards he was a real king, though he was so familiar. 'What will you take to drink?' I calculated there was nothing weaker than vitriol in his cellar, so I begged to be excused. 'It is not my habit, Sir, to

drink early mornings; and indeed I must not let my wife wait dinner. We will have a little gossip, if you please, and then you will let one of your servants light me out, perhaps. I merely dropped in, as you are aware, my dear Sir.' 'Quite aware of that, my dear Phil. And very glad I am to get your company. Of course you are anxious to be up above in good time; and if you can stop here an hour, I shall be happy to accompany you.' Indeed, thought I to myself, Polly will stare. 'Most happy,' I replied. 'I fear you will take harm from that nasty puddle at my door,' observed the king. 'Wouldn't you wish to lie down and rest a bit, before we start out together.' I thought that a safe way of getting through the time. 'You are very good,' said I. 'Get a bed ready, Coffin and Purse!' Two bright little imps darted away, and the Thing turning round to me with a sulphurous yawn, said, 'I don't mind, Phil, if I lie down with you.' Surely he's roasting me, I thought.

"True as sorrow, Mr. Timothy, Coffin and Purse came back in no time to say the bed was ready; and I followed the king with as good courage as a Smithfield martyr. But I did not, I did not expect what followed. We went into a small vault, of which half the floor was covered by a blazing fire: all the coals had been raked level, and that was Coffin and Purse's bed-making. 'Well, I'll get in at once,' said the king; 'you see we've a nice light mattress.' 'Light, Sir! why it's in vivid blazes. You don't suppose I can lie down on that.' 'Why not, Phil? You see I do. Here I am, snug and comfortable.' 'Yes, my dear Sir, but you forget the difference there is between us?' 'And yes again, Mr. Spruce; but please to remember this is Christmas Day, a day on which all differences should be ended.'

"And now," said the monster, sitting up suddenly upon a corner of the bed, 'and now, Phil, I will urge you to nothing. You are a reasoning man, and count for a philosopher. Let's argue a bit, Mr. Spruce.' 'I'm favourable to free discussion,' I replied; 'but I decide on principles of common sense.' 'Let common sense decide,' replied the king, crossing his knees and looking conversational. 'The point at issue is, whether with your views it would be better for you to remain a man or to become a cinder. What were your thoughts this morning, Philip Spruce?' 'This morning I was thinking about human nature, Sir.' 'And how did you decide upon it, Philip?' 'Humbly asking pardon, Sir, and meaning no offence, may I enquire whether in present company it is permitted to speak disrespectfully of the Devil?'

"I wouldn't have said that, Phil, to a man of his appearance."

"Lord bless you, Tim Drum, he looked so mild disposed, and 'No offence,' he says; 'speak out without reserve.' 'Then, Sir,' said I, 'this is what I think of human nature.

I believe that it was full of every sort of goodness, and that men were naturally well disposed to one another, till the Devil got that great idea of his. Men are born to worship their Creator, and to supply the wants of their neighbours, but then comes in the deceiving fiery monster, with a pocketful of money, and says, quite disinterested, 'Gentlemen and Ladies, it's of no use asking you to venerate me; you don't do it, and you oughtn't to; but the most convenient and proper thing is for every individual to worship only just his self. You see the result of this,' says the old sinner; 'by paying sacrifice to your own images, you just change things from the right-hand pocket to the left, or if you go abroad, as you must do, in search of offerings, all the fish comes to your own net, and all the fat into your own belly. You smoke your own incense, and if you chance to be remiss in your devotions, you may make peace and atonement any way you please. Then,' says the great brimstone beast—I beg your pardon, Sir, excuse my liberty of speech—if anybody remark you are my servants, you can laugh, and tell them you are no such fools. As for any formulary of religion, follow in that the fashion of your country'—

"The cinder gentleman, Mrs. Pittis, my dear, rolled about in the fire, quite at his ease, and said, 'Very good, Phil. And what else have you to say of human nature?' by which you will see that he had discrimination enough to perceive the value of my observations. 'The result is, Sir,' I says to him then, 'that the whole human race is a dancing and a trumpeting in corners, every man singing hymns in honour of his self. And the old enemy capers up and down the country and the town, rejoicing at the outcry which he hears from every lip in his honour. A friend is rarer than a phoenix; for no man can serve two images, and each sticks firmly by his own.'

"Have you no charity yourself, this Christmas, Mr. Spruce?' enquired the king, after he had called to his two imps that they should put fresh coals upon the bed, and rake it up. 'When I was a young man, Sir,' said I, 'no one could have started in the world with a stronger faith in human goodness. But I've seen my error. All the ways of human nature are humbug, Sir; as for my fellow-creatures, I've been very much deceived in 'em. That's all I know in answer to your question.'

"I understand you, Phil,' the king said, lounging back upon the bed, and kindling the new coals into a blaze around him by the mere contact of his body. 'You are a philosopher out at elbows, and therefore a little out of temper with the world. You would like best to make your observations upon human nature without being jostled. You'd rather see the play from a snug little box, than be an actor in it, kicked about and worried.' 'Ah, Sir,' said I, 'and where is

such a seat provided?' 'Philipp, I can answer that question,' said the king; 'and what is more, I can give you free admission to a snug private box.' 'How so, Sir?' said I, quite eagerly. 'The coal-box, Phil,' replied the king. 'I'm puzzled, Sir,' said I. 'In what way is my condition to be improved by the act of sitting in a coal-box?' 'That, my dear Phil, I will make as clear to you as a fire on a frosty night. Know, then, that I am King among the Coals.' I bowed, and was upon the point of kissing his extended hand, but drew back my nose suddenly. 'The cinder which I now have on I wear—because it is large and easy—in the manner of a dressing gown, when here at home. I am, however, a spirit, and ruler over many other spirits similarly formed. Now, Phil, the business and amusement of myself and subjects is to transfer ourselves at will into the tenancy of any coal we please. The scuttles of the whole kingdom are our meeting-houses. Every coal cast upon the fire, Phil, is, by our means, animated with a living spirit. It is our amusement, then, to have a merry sport among ourselves; and it is our privilege to watch the scenes enacted round the hearths which we enliven. When the cinder becomes cold, the spirit is again set free, and flies, whither it pleases, to a new abode.'

"Isn't that the doctrine of metempsychosis?" asked the boy (a national scholar) tapping the ashes from his pipe-bowl.

"It's a thing I never heard on," said the gamekeeper. Mr. Spruce went on:—

"Did you never," continued his majesty, 'when gazing into the fire, see a grotesque face glow before you? That face, Phil, has been mine. You have then seen the king among the Coals. If you become a cinder, Mr. Spruce, you may consider yourself made a judge.'

"Well, Sir," says I, 'your reverence, it's firstly requisite to judge whether I will or won't sit down upon the fire. It's my opinion I won't. I'd like a little more discussion.' 'Talk away, Phil,' said the king. 'Well, Sir,' says I, 'since you're always a-looking—leastways in winter—through the bars of grates, it's possible you've seen a bit yourself of human nature. Don't it fidget you?' 'Why,' says he, 'Phil,' a-stretching out his arms for a great yawn so suddenly as very nigh to set my coat on fire with his red fingers, 'I have been tolerably patient, haven't I?' 'If it's sarcasm you mean,' says I, a little nettled, 'I must say it's a figure of speech I don't approve of.'

"I beg your pardon, Sir," he says, 'and here's an answer to your question. It's my opinion, Mr. Spruce, that as a cinder you will be agreeably surprised. I do see people sitting around me, now and then, whom I can't altogether get my coals to blaze for cheerfully. They sit and talk disparagement about all manner of folks their neighbours; they have a

cupboard in their hearts for hoarding up the grievances they spend their lives in searching for; they hate the world, and could make scandal out of millstones, but if one hints that they are erring, they are up in arms and don't approve of sarcasm. 'Sir,' says I, 'you are personal.' 'By no means, Mr. Spruce; you, and a number like you, are good people in the main, and deeply to be pitied for your foolish blunder. You're a philosopher, Phil,' he says, 'and did you never hear that your "I" is the only thing certainly existent, and that the world without may be a shadow or mere part of you, or if external, of no certain form or tint, having the colour of the medium through which you view it—your own nature.' Here I saw occasion for a joke. 'Sir,' I says, 'if my own "I" is the only thing certainly existing, then the external world is all my eye, which proves what I propounded.' His flames went dead all of a sudden, and he looked black from top to toe. 'I am sure I beg your pardon, Sir,' says I, 'excuse my liberty.'

"He took no verbal notice of what I had said, but gave a tremendous shiver, and his flames began to play again. 'I'm of a warm and cheerful turn of mind,' says he, 'and I must say, that whenever I look out upon the men and women in the world, I see them warm and cheerful.' 'That's nothing wonderful,' said I; 'it's just because you see them sitting round your blaze.' 'Well,' says he, 'Mr. Spruce, I'm very glad you own so much; for my opinion is, that if you had shone out cheerfully when you were in the world, and warmed the folks that came within your influence—if you had put a little kindly glow into your countenance, you would have been surrounded always as I generally am.' 'You're young,' says I, 'and you have had no experience; least ways, your experience have not been human. You get stirred when you're low, and people tend you for their own sakes—you ain't preyed upon by disappointments.'

"'Young!' said he; 'disappointments!' And to my horror, he stood bolt upright, to be impressive. 'Look you, Mr. Spruce, the youngest is the wisest; the child remembers throughout years a happy day, and can forget his tears as fast as they evaporate. He grows up, and his budding youth imagines love. Two or three fancies commonly precede his love. As each of these decays, he, in his inexperience, is eloquent about his blighted hopes, his dead first love, and so on. In the first blossom of his manhood, winds are keen to him—at his first plunge into the stream of active life, he finds the water cold. Who shall condemn his shiver? But if he is to be a healthy man, he will strike out right soon, and glow with cheerful exercise in buffeting the stream. Youth, Mr. Spruce, may be allowed to call the water of the world too cold, but so long only as its plunge is recent. It is a libel on maturity and age to say that

we live longer to love less. Preyed upon by disappointments—'

"'Yes,' says I, 'preyed upon.'

"'Say, rather, blessed with trial. Who'd care to swim in a cork jacket! Trouble is a privilege, believe me, friend, to those who know from whose hand, for what purpose, it is sent. I do not mean the trouble people cut out for themselves by curdling all the milk of kindness in their neighbours. But when a man will be a man, will labour with Truth, Charity, and Self-Reliance—always frank and open in his dealings—always giving credit to his neighbours for their good deeds, and humbly abstaining from a judgment of what looks like evil in their conduct—when he knows, under God, no helper but his own brave heart and his own untiring hand—there is no disappointment in repulse. He learns the lesson Heaven teaches him, his Faith and Hope and Charity by constant active effort become strong—gloriously strong—just as the blacksmith's right arm becomes mighty by the constant wielding of his hammer. Disappointment—let the coward pluck up courage—disappointment is a sheet-and-pumpkin phantom to the bold. Let him who has battled side by side with Trouble say whether it was not an angel sent to be his help. Find a true-hearted man whose energies have brought him safe through years of difficulty; ask him whether he found the crowd to be base-natured through which he was called upon to force his way? Believe me, he will tell you 'No.' Having said this, his majesty broke out into a blaze, and lay down in his bed again. 'Well,' he said, 'Philip, will you come to bed with me?'

"'Why, Sir,' said I, 'to say the best of it, you're under a misconception; but if it's in the nature of a coal to take such cheerful views of things as you appear to do, I'd rather be a coal than what I am. It's cold work living in the flesh, such as I find it—you seem jolly as a hot cinder, and for the matter of that, what am I now but dust and ashes? Coke is preferable.'

"'Coffin and Purse, you're wanted,' cried the king. And indeed, Mrs. Pittis, and indeed, gentlemen, I must turn aside one minute to remark the singularity of this king's body-guard, Coffin and Purse. 'Cash and Mortality,' said the king to me, 'make up, according to your theory, the aim and end of man. So with a couple of cinders you can twit him with his degradation. Sometimes Coffin, sometimes Purse, leaps out into his lap when he is cogitating.' 'Yes,' said I, 'that will be extremely humorous. But, so please your majesty, I still have one objection to joining your honourable body.' 'What is that, Phil?' 'I suppose, if I sits down in them there flames they'll burn me.' 'To be sure,' said the king, kicking up his heels, and scraping a furnace load of live coal over his body, just as you might pull up the blanket when you're in bed to-night, Mrs. Pittis.

'Well, your highness,' said I, 'how about the pain?' 'Pah!' says the king, 'where's your philosophy? Did you never see a fly jump into a lamp-flame?' 'Yes, sure,' I answered. 'And what happened then? A moment's crackle, and an end of it. You've no time to feel pain.' 'Well, then,' said I, 'if your majesty will make a hole for me as near the middle as is convenient to yourself, I will jump into the bed straightway.' The king made a great spatter among the coals, and in I jumped. You know, ma'am, that a great part of our bodies is composed of water.

"I don't know that of any gentleman in this room," replied the landlady. "But I do believe that you are two parts built out of strong beer."

"There was a burst—a flash, gentlemen; the liquid part of me went off in instantaneous steam. I cried out with a sharp burn in my foot. The pot was boiling over furiously that contained our bit of dinner; and as I sat close in to the fire, I got considerably scalded. How I got back in the steam to my own fireside, I never rightly comprehended. Fill the can now, Mrs. Pittis."

"Yes," said the landlady, "but let me tell you, Mr. Spruce, that king of the hearth's is a gentleman, and if you really had gone with the coals and got acquainted with fire-sides, it would have done you a great deal of good. You'd have owned then that there is a mighty deal more love than hatred in the world. You'd have heard round almost any hearth you chose to play cavedropper to, household words, anything but hard or bitter. Some people do not pay their scores with me, but on the whole I live. Some of our human natures may run termagant; but on the whole we men and women love. Among the worst are those who won't bear quietly their share of work, who can't learn self-reliance, but run to and fro squealing for help, and talking sentiment against their neighbours, who won't carry their burdens for them. It's all very well for a musty, discontented old bachelor, to say there's no love in the world, but it's a falsehood. I know better."

"My pipe's out," said the boy. "Be smart there with the 'bacey."

LIFE IN AN ESTANCIA.

THIRD PART.

THE horse department, although in point of value, it is greatly inferior to that of the horned cattle, is the right arm of the estanciero. It is to him precisely what horses are to an army; for as without them an army could neither convey its artillery, baggage, nor stores, so, without horses, the estanciero could neither collect his cattle, nor keep them together when, at certain periods, it is necessary to do so. There is, also, at certain seasons, work to be done which requires both the speed and strength of the horse to assist the men to

perform it. For an Estancia to possess an effective supply, I consider that each peon ought to have ten sound horses assigned to him. There ought, also, to be a certain number reserved for special services, independent of those required for the daily labour of the establishment. Liable as the horses are to accidents, and lamed from so many causes when galloping at the top of their speed over whatever ground the rider finds in his way, it will be found that out of ten horses three or four are from one cause or another put *hors de combat*, and require to be left at ease for some time. They are not fed, as in England, on hay and corn, but turned out all the year round. Let the weather be as it may, the season favourable or unfavourable as regards the supply of food, the horse must still do his work. After he has been engaged all the morning in collecting the cattle, the peon brings him to the corral drenched with sweat, and in that state he is unsaddled, and turned adrift. The man then saddles another, and that one, in his turn, has to work all day, is tethered all night, and next morning at day-break is taken out to collect the cattle, and that done, he is let go in the same state as the other, let the weather be ever so inclement. It is this which foundlers the horses and soon renders them unfit for the work of the rodio; they are then turned over to the secondary duty, or given to the shepherd, to tend the sheep.

In order to secure a good supply of colts, to make good the wear and tear of the year, herds of brood mares are kept, which yield an annual supply. The small herds are called *manadas*, and consist of from twenty-five to thirty mares, and over them presides the father of the family. The way in which these *manadas* are brought together, is as follows: From such of the other herds as have too many females, you part off from twenty-five to thirty mares. These are delivered over to the horse, and with him shut up in the corral for the night. Observe him well, and see how he pays his addresses to them all in turn, and tries to ingratiate himself with the ladies of his harem.

They seem to feel their separation from their old friends and companions, and look cool and indifferent upon the gallant bridegroom. At sunrise they are let out, and a peon is appointed, to assist the horse to keep them together. Presently one jade bolts away at full speed, and tries to regain her old accustomed herd. Away goes the horse in chase, and as he overhauls her, with his ears laid back, and his nose to the ground, he compels her return quicker than she went away. Half in play, and half in earnest, he snatches at her haunches, whilst she, well aware that she has done amiss, looks as full of fear as it is possible for a runaway to do. Before he has got well breathed, another starts off in the opposite direction. After her goes the horse, and the jilt is brought back at the top

of her speed. This continues nearly all the day, and at night they are again locked up. Next day the same game goes on, the horse still assisted by a well-mounted peon; until, at the end of eight or ten days, their acquaintance is made. If any remain refractory, they are thrown down, the axe applied to one of the hoofs of the hind legs; it is cut to the quick, and, thus punished, she is compelled to *limp* it for fifteen or twenty days, until the hoof grows again. By that time she becomes reconciled, and the *manáda* is *entablada*, and keep together. They are then conducted to a quiet part of the ground, apart from the other herds, in order to prevent collision between the horses of the different families.

This is the way in which one *manáda* is established. Let me now describe the mode in which several *manádas* are founded at the same time.

Let us suppose that five hundred mares are to be parted off from the different herds, and that twenty-five horses are selected to form their future families. The first thing to be done is to throw down the mares, and cut to the quick one of the hoofs of the hind legs, taking care that the near side hoof be cut in them all, in order that they may all limp in one direction. They are then enclosed with the horses, and at daylight next morning are let out to graze. A peon is appointed to look after them, and prevent them extending too far over the ground. As soon as the peon observes that any one of the horses has got as many mares to follow him as are sufficient to form a *manáda*, he informs the capitaz, and they are allowed to remain at large, whilst others, less social, are condemned to be shut up in the *potrero*. As the peon reports daily, that the *chemut*, the *brown*, or the *bay* horse has made up his complement, they are severally set at liberty, with their future charge, and by the end of the month the whole is completed.

When I have occasion to go to the *Vigilante*, as soon as I arrive my horse is unsaddled and turned loose. Having taken water and grazed awhile, he returns to the *Estancia*, and joins his *manáda*. As soon as the horse which I have saddled at the *Vigilante* arrives and is unsaddled here, he immediately returns home, and seeks the herd to which he belongs. The whole system is this:—the horse keeps the mares together, the colts and fillies follow their mother, and the saddle-horses cleave to the herd in which they have been bred and reared. As the colts reach the proper age (three years) they are given to the peons to break in for the daily duty of the *Estancia*. Each *manáda* has from fifteen to twenty saddle-horses attached to it; and these are brought to the corral in rotation for the men to change after collecting the cattle in the morning. When about to go a journey, I tell the capitaz to bring me the black horse, the roan, the *chemut*, or the *sorrel*, and he gives the order to his deputy,

who knows in which *manáda* he is domesticated. It is brought to the corral, and the horse I order is caught with the lazo, and saddled for me. When I reach any of the more distant puestos, as soon as the capitaz presents himself, and the usual "*buenos dias*" have been exchanged, the first question is, "*Do you wish to change horses, Señor?*" "*Let this go, and saddle me the *tordillo*,*" and away goes the peon, brings up the herd, and the *grey* is immediately at my disposal; on him I ride from Sta. Isabel to the *Vigilante*, or San Martín, let him go there, and saddle another to bring me home. Each horse, as soon as dismissed, returns to the herd, although the distance was from ten to fifteen miles.

Apart from these herds of horses already described, we have small troops of horses accustomed to go together in company with a mare selected for that purpose, and called the *madrina*. These are reserved for particular service, and are called *tropillas*. The horses, which generally consist of ten or twelve, are selected of one colour, and the mare, to render her more distinguishable, is as different as possible from the horses. For instance, a *tropilla* of black horses will generally have a white mare; she wears a bell suspended from her neck, so that the horses, at night, may hear the sound, and prevent them from parting company.

The mode of forming these *tropillas* depends upon circumstances; if the horses are all ready, they are put with the *madrina*, kept together by day, and at night enclosed in the corral, until they are accustomed to each other, and form an attachment to the mare. When the horses are not all at once put with the mare, you proceed, one by one, to neck-collar them with her, and let them go a few days together; you then cast the horse off, and neck-collar another, and so on, until you complete the number required. It is necessary to keep the *tropillas* as much as possible from the *manádas*, to prevent them mixing, as the horse is apt to carry off the mare, and the horses of the *tropilla*, left to themselves, would separate after they lost the *madrina*. The principal value of the *tropilla* is, that they can be taken to any distance where the capitaz requires them, and at night he places a sort of fetter or handcuff upon the fore-ankle of the mare to prevent her from going to a distance, and the horses stick by her all night. They appear to distinguish the sound of their own bell, for if twenty *tropillas* are near each other, each horse remains by the side of his *madrina*; and a careful peon, if he chanced to lose the bell from the neck of his mare, will always shut up the *tropilla* for a few nights, until the horses become accustomed to the tone of the new one. We have here seven *tropillas* of twelve horses each, reserved for special purposes.

With these sketches of the equine economy

of a South American Estancia I conclude. The life I lead is, you perceive, a lonely one; but 't is not without its profit and gratification.

A VISIT TO THE REGISTRAR-GENERAL.

TENS of thousands of people every year pass along Wellington Street, on their way from the Strand to Waterloo Bridge, and notice the empty space over the wall on the left hand, between the last of the shops and the turnstile of the toll-collector, and when doing so, can scarcely fail to note also the tall brick house-backs which bound the space, and give an unfinished look to what seems to be an ugly end of Somerset House. Perhaps not one in ten thousand of that multitude knows what the two last of those common-place brick buildings contain, or the spot would at once be interesting. The place would no longer be a mass of dingy brick and mortar, but would grow in interest as the centre to which comes the earliest, and most authentic, and where remains the most lasting record of the three great epochs in the existence of our great family of twenty odd millions of English people—the births, the marriages, and deaths—of the nation. The whole house would swell into the semblance of a huge book, with leaves as endless as the flow of the stream near by; names in hundreds, thousands, tens of thousands, millions—almost as countless as the ripples of the Thames, and, like them, ever and ever repeated.

The most humble and the most lofty are chronicled alike in the parchment indexes of that great counting-house,—the unwelcome offspring of the pauper, and the cambric-clad heir of the peer; the wedding of Thomas Nokes with Mary Styles, and the fashionable alliance of the Right Hon. the Lord Fitz Philp with the Lady Adeline De Vavasour; the death of the felon in the gaol, of the outcast in the hospital, of the good man amid his family, of the noble in his palace—all alike have their record in the archives of the place. Pages enough to line Waterloo Bridge from end to end—tons weight of paper and of parchment—are needed for all this. But there they are. Each man posted out in his right place—chronicled and certified with official exactness—and all in such strictly alphabetical order, that the record of him may be found at any time in a marvellously few minutes. Smith, or Jones, who hurries across Waterloo Bridge to see his newly-wedded wife, little thinks that a whole housefull of clerks are at that moment passing the entry of the "happy event" from room to room, till it is finally and correctly stated and bound up in the archives of the Registrar. Thompson, or Jackson, who are proudly mounting outside the Waterloo 'bus, to make the best of their way to Camberwell, where their first-born is being dressed out for the christening, don't know that the little innocent will shortly be inscribed on the

parchment indexes of the grand muster-roll of the British nation; nor is that heart-broken widow, just paying one of her last halfpence to cross the bridge, aware that the note of her partner's death has already passed into the black volumes of the Registrar; and that in the cellar-floor, deep down there over the wall, a zealous physician, searching for facts about mortality, has just numbered him amongst the thousands of other victims who fall year by year the early victims of the fleshless spectre—Consumption.

This enumeration of the people is not merely startling or curious—it is most important for a variety of purposes. In questions of succession to property, registers of births, marriages and deaths, are most essential. The facts collected under this system throw great light upon the causes that affect the health of the people, thereby tending to show how sickness may be avoided, and life be lengthened. The number of marriages in any given period affords an unerring index to the opinions entertained by the people of their prospects in the world. When they are well off, they marry; when poorly off, matrimony is at a discount. Whilst the deaths indicate by their increase the past sufferings, or by their comparative fewness, the prosperity of the masses. The returns to the Registrar, therefore, are a kind of barometer of the real state of the nation, valuable alike to the philosopher, the statesman, the physician, the lawyer, and the man of business.

Unfortunately, the present mode of Registration has only been in operation since 1837. Before that time almost the only record of births, deaths, and marriages, was in the parish registers, and how miserably imperfectly such books were kept, was shown in the evidence taken before a Parliamentary Committee appointed at the suggestion of the dissenters to inquire into the subject. Since that year—that is, in the twelve years and three-quarters between 1838 and the autumn of 1850, the enormous number of one million six hundred and thirty-five thousand eight hundred and ten men, and an equal number, of course, of women, have been married in England and Wales; six millions, eight hundred and one thousand, two hundred and five children have been born; and four millions seven hundred and twenty thousand and seventy-four persons have died. The names of all these, with various circumstances connected with them, have been chronicled in the Registrar's office! How this labour was accomplished—and how day by day and year by year it is now progressing, as fresh births, deaths, and marriages, are perpetually demanding notice—let us now demonstrate.

The office where this system of national book-keeping goes on, is The General Register Office, and to find it, we must walk from the bustle of the Strand, into the handsome quadrangle of Somerset House, and thence

into Somerset Place. In the fine old times of heavy salaries and light work, the houses were appropriated to the private comfort of different *attachés* of the Government; but now-a-days, some at least of them are employed for the most useful of public purposes.

Threading a stone passage, and ascending a stone stair, we are ushered into a room where, surrounded with maps and books, sits the commander-in-chief of the operations we wish to inspect—Major Graham, the Registrar-General. Seated at his desk, with his blue-books and acts of parliament, and the forms and returns we shall presently know more about, he may be regarded as the centre of a grand piece of official mechanism, which has ramifications all over the country so complete, as to embrace not only large towns and open country, but the most secluded villages, and the most obscure city courts. He has, besides his staff in Somerset Place, the control of six hundred and twenty-four officers, called superintendent-registrars, each in an allotted district—generally a poor law union. Under these superintendents there are two thousand one hundred and ninety registrars; thus making altogether a perfect little army of two thousand eight hundred and fourteen officials, charged with the duty of keeping a correct record of the births and deaths, and of the dissenters' marriages. The weddings solemnised in the old-fashioned way, in the parish church, or by license by a clergyman of the establishment, are still registered by the clergy; and this adds to the list of the Registrar-General's correspondents no less a number than twelve thousand gentlemen. Adding all together, then, we find no less than fourteen thousand contributors to the volumes of Somerset Place, without counting divers persons who attend to the marriages of Jews and Quakers. The registrars are people in very various grades of life. Some are lawyers; some doctors; some farmers; some shopkeepers; some parish clerks; some schoolmasters; some sextons. Their qualifications are as various as their callings. Some write like print; and some indulge in the frightful scrawls which form the great misery of life to those who have to work out their returns. Scores of hours are lost in the London office, and hundreds of letters are written in the year, because registrars in the country will persist in making no difference between u's and n's, and between e's and i's. This, which seems so unimportant a matter at first sight, and which, in ordinary correspondence, really is comparatively unimportant, becomes a serious affair when it affects the entry of a name in books that are to be the legal evidence of a birth, or a marriage, or a death. But the fine flowing, fashionable writing-master hand is equally the horror of all who deal with such documents. The primitive pothook-and-hanger, plain, schoolboy-looking, writing, in which each letter has its own dis-

tinctive though awkward character, is their delight. The fourteen thousand

"Chiefs among us tak'ing notes"

have of course to be supplied with regular books, and forms, and rules, and the issue and account-keeping of these forms, is in itself a laborious and onerous duty. The books are oblong folios, with limp leather covers, which permit of rolling up, if necessary, when the Registrar sets off from his house to go over his district in search of subjects for entry on the pages. The books are three in number; and the colour of the cover of each indicates its purpose. Births are bound in a cheerful red; the contriver of the marriages' book was evidently determined to have a joke carried into every wedding-party,—for the marriages are clad in green; whilst the third book in its cover indicates its serious purpose: the deaths are black.

It seems a simple matter enough to make an entry in an official book, all ruled ready for the purpose, and to make that entry at the proper time, and with the needful formality; and yet it is found that when thousands of different persons have this simple duty divided amongst them, it is difficult, almost to impossibility, to get the thing done with accuracy. To promote the object in view all the plans that ingenuity can contrive are adopted. The printed forms are abundantly supplied; inspectors are constantly going about the country to examine the books, give suggestions, and report on the character and qualifications of the Registrars. Letters are eternally issuing from Somerset Place, pointing out any irregularities, and insisting upon correction; and above all this, a "general caution" is enclosed in the pages of each register book, recounting how certain misdoers have met with punishment. Here is a list of sinners gibbeted as a warning to negligent Registrars:—

The Registrar-General wishes it to be distinctly understood, that the commission of any one of the irregularities specified below cannot be permitted by him to pass with impunity. A Registrar of births and deaths in the City of London, was publicly dismissed, 25th April 1845, for having parted with the custody of one of his register books, and having made part of an entry, with the intention of obtaining the signature of the informant to it at a subsequent period. Another Registrar at Askrigg, Yorkshire, was publicly dismissed, 22nd Nov. 1845, for having inserted false dates of registration in his register book of births. [He had thereby rendered himself liable to be prosecuted for felony]. A third Registrar at Linkeard was publicly dismissed, 11th January 1847, for having omitted, for several weeks, to inform himself of the births and deaths that had occurred within his district, and having omitted, without reasonable cause, to register certain deaths respecting which he had received due notice. [He had, by the latter irregularity, rendered himself liable to a fine of fifty pounds on summary con-

viction before the magistrates upon the complaint of any common informer or other person]. A fourth Registrar at Westbourn, Sussex, was publicly dismissed, 30th March 1848, for not having made the whole of an entry (the signature of the Registrar included) at the time and in the presence of the informant; the entry having been completed, and the signature of the Registrar attached to it, in the absence of the informant, and after the informant had signed it. But a worse case still follows; a Registrar at Liverpool was publicly dismissed, 9th September 1848, for having wilfully made a false and counterfeit register of a pretended birth. For this offence he was, December 1848, tried at the assize, convicted of felony, and sentenced to six months' imprisonment with hard labour.

By dint of incessant vigilance, in the detection of mistakes, and by instant applications to the authors of errors for immediate corrections, the entries all over the country are finally obtained with a remarkable degree of accuracy. In the course of three months the number of entries in different districts varies, of course, enormously. In Marylebone or St. Pancras, for instance, there will be hundreds of births, and deaths, and marriages by banns, by Registrars and by dissenters, according to the various forms of Methodists, Jews, and Quakers; whilst in remote places, the quarter of a year may pass by without a dozen claims upon the attention of the registering officer. Where there is most to be done, there the work is usually done best, because the fees are enough in amount to make the duty worth attending to; whilst in spots where a Registrar's quarterly bill amounts, perhaps, to ten shillings, it is not very marvellous that he should be somewhat indifferent about a task so little remunerative. In distant and rural places, the Registrars get very few fees for weddings. The church still holds its ancient sway in that respect. But in large towns like London, Manchester, Liverpool, and Birmingham, many "happy couples" contribute to the emoluments of Major Graham's Officers.

The mode of marrying away from church or chapel has still, however, but little popularity. Made legal to satisfy the scruples of dissenters, even they seem to award it so little patronage, that the forms are comparatively unknown amongst the mass of the people. "Putting up the banns," and holiday clothes, and white gloves, and veils, and church aisles, and ringing bells, have been so long associated with the national idea of a wedding, that it is not unusual, after the brief forms of a matrimonial engagement at the office of the Registrar have been gone through, and the parties are as legally man and wife as Acts of Parliament can make them, for the lady to raise an objection to the proceedings.

"Is it all over?" asks a surprised and trembling voice.

"Yes," says the Registrar, bowing and smiling, "that is all. You are man and wife."

"Oh!" is the semi-spasmodic response. "It seems like no wedding at all!" And then turning to the bridegroom the lady may be heard appealing to the happy swain, and declaring "She would rather go to church as well." And often and often the ceremony is gone through according to old fashions after the newer and shorter one has been completed.

A wedding at the Superintendent Registrar's Office is certainly a very rapid and unimposing affair. The gentleman—say Mr. John Jones—gives notice to the Registrar of the district in which they have lived during the previous seven days, that he has arranged a match between himself and Miss Mary Smith. A printed form is filled up with their names, rank, age, and place of residence. This is entered in a volume called the "Marriage Notice Book." This first step of the operation is performed at the small charge of one shilling. The volume containing the solemn announcement remains in the Registrar's Office, "open at all reasonable times, without fee, to all persons desirous of inspecting the same." The notice so entered is read before the next three weekly meetings of Poor-Law Guardians. Unless the wedding has been "forbidden by any person authorised to forbid the same"—and a sharp papa or mamma would be needed to find out what had been going forward if Miss Smith desired to keep the little affair secret—at the expiration of the three weeks, the happy couple, between the hours of eight and twelve in the morning, may meet—accidentally, of course—just by the office of Mr. Thompson, the Registrar, and walking in (also accidentally, of course), may, in the presence of two persons accidentally present—the Registrar's Clerk and a passing stranger, for instance—join in the following brief and innocent dialogue:—

"I do solemnly declare that I know not of any lawful impediment why I, John Jones, may not be joined in matrimony to Mary Smith."

One minute is enough for saying this. Whereupon the lady responds—

"I do solemnly declare that I know not of any lawful impediment why I, Mary Smith, may not be joined in matrimony to John Jones."

Another minute has thus been passed.

Emboldened by the lady's declaration, the gentleman next says—

"I call upon these persons here present to witness that I, John Jones, do take thee, Mary Smith, to be my lawful wedded wife."

A third minute has passed, and the lady's turn has come again—

"I call upon these persons here present to witness that I, Mary Smith, do take thee, John Jones, to be my lawful wedded husband."

Just four minutes have been consumed, the fee is five shillings, and a shilling for a certificate, and the affair is complete. No ring, no kneeling, no fuss. They are bound

man and wife at the small charge of seven shillings altogether, with a degree of certainty which nothing but an Act of Parliament price one thousand pounds can undo. If Jones be rich, he can shorten the probationary three weeks to seven days, by paying a somewhat higher fee; and if the happy couple please they can adjourn from the Registrar's to any church or chapel, there to go through any further forms they may think good—as the ladies often insist upon doing—but the few words—the very brief dialogue just recapitulated, and the few minutes in the presence of the Registrar, have been the essential and only requisite legal steps to bind them together in the chain matrimonial, “for better for worse, till death shall them part.”

But though five minutes may complete a wedding, and permit the couple to go their way rejoicing—and though an equally short space of time may suffice for the registration of their first-born, or the registration of a death—these brief duties of the public in a district office are but the beginning of the process we are about to trace through its various stages, till its completion for national purposes.

Let us suppose a case, for the sake of illustration. The Superintendent Registrar of Polton-cum-Chalvey has been going on his way, certifying the babies, the weddings, and the mortal departures of his district, when some evening, just as he has smoked his pipe, and is thinking about supper, he is told “a gentleman from London wishes to see him.” His prophetic heart leaps to his mouth, and as he shuffles on his slippers, he mentally runs over his books, for he knows very well, before he sees the mysterious stranger, that he is about to meet one of the Inspectors—gentlemen of great keenness, who travel about all the year round, never telling when they are likely to visit any place, and, like bagmen, ever on the move, and seldom sleeping two nights together in the same place. Civil greetings are soon followed by an examination of the doings of the Polton-cum-Chalvey office. Formidable-looking papers are at hand, in which our Registrars know very well that his character will shortly be written down—his name, his address, his other occupations; where his office is; whether it be used for other purposes than those of registration; whether his books are kept in the fire-proof box provided by Government for the purpose,—if not, where; what kind of repository the books have; whether or not the place is damp; whether it seems safe from fire, and whether capable of being securely closed; whether he has gathered together all the documents he should possess—the returns of minor Registrars, and of the clerical certificates of marriages performed in churches; whether he does his own work, or employs a deputy; whether his place displays, in general, any want of order or arrangement; And, finally, he knows that in the corner of the formidable paper there is a

ready-made frame for the insertion of his own official portrait, to be sketched by the Inspector at his leisure, in manner following:—

“Different degrees of Efficiency being represented by Numbers up to 6,—utter Inefficiency being indicated by 0, and complete Efficiency by 6,—write in the adjoining space the figure which most nearly expresses your opinion of the Efficiency of this Superintendent Registrar.

Signature of the Inspector.

That square is to contain the Inspector's opinion of his character. No. 1 is by no means the figure he wishes to stand at on this occasion; for he knows that numeral means but one step from 0, or, in other words, dismissal. Seven was the olden mystic number, but with the Registrars six is the favourite figure,—but what figure really stands against him in the archives of Somerset Place is to him a secret. The Inspector goes away as quietly and mysteriously as he came; his report is forwarded to head-quarters; and the result at Polton-cum-Chalvey is known very few posts afterwards, if said Polton-cum-Chalvey house has not been found to be in apple-pie order.

The Inspector of the books of the minor Registrars goes even to more minute particulars than in the case of the Superintendents. The colour of the ink is noted—for bad ink might lead to the loss of a large estate to its owner by the loss of the entry of his birth or of his parent's wedding. Any erasure is a deadly sin, and so is the cancelling of any entry. Mis-spelling of names and discrepancies between the spelling of surnames in different parts of a certificate are other great faults often committed, but almost always discovered, rebuked, and corrected. In an entry of a birth, the omission of the former name of a mother who has been twice married, is a heavy fault, and so also, in the registration of twins, is the non indication of which of the two is the elder. Only by a ceaseless vigilance can all these points, seemingly unimportant to many whose attention is required to them, but in fact all-essential to the perfection of the national documents of which each entry forms a part, be correctly ascertained.

By these several registering offices spread over England and Wales, about twelve hundred thousand names are, in round numbers, entered every year upon the official books. Every three months each local Registrar makes an exact copy of his register, and taking both original and copy, goes with them to the Superintendent of his district, who examines the transcript to see if it be correct, and then, after certifying its accuracy, sends it to the London Central Office in Somerset Place, himself retaining the original book. Any person wanting a certificate within the current quarter, may therefore obtain it from the local Registrar; but after the expiration of that time can only inspect the original

at the office of the Superintendent. Certified legal copies may be had at his office, or in London.

The postmen who bring letters to the Registrar-General's office, in Somerset Place, have no sinecure. About nineteen thousand letters a year are sent out and received there in reference to points for securing accuracy in certified copies alone—the largest number of errors (a curious fact) being made by the most educated class of persons connected with the registration—namely, the clergymen of the Established Church! But the great days for the postmen are when the certified copies of the registries begin to pour in after the end of the quarter. The packets that then arrive ought to be talked of by hundred-weights and not by number. Packets are due from no less than fifteen thousand eight hundred persons, and by dint of whipping-up they are all made to do their duty. The papers so sent up contain the one million two hundred thousand names already referred to, and the great job of resolving these into alphabetical order under the separate headings of Births, Marriages, and Deaths, has now to be begun. This is the heaviest business of the staff of officers engaged in London, and to see how they get through it we will again walk into the General Register Office, through the stone-passage and up the stone-stairs, at the head of which we first made Major Graham's acquaintance at the commencement of this paper. Again, under his official roof, let us trace the progress of a quarter's papers through the sixty or seventy pairs of hands, and under the sixty or seventy pairs of vigilant eyes, who have to deal with them before they are finally complete and settled in the General Register.

When the fifteen thousand local people have each responded to the demand for their "returns," and their fifteen thousand communications have been checked off as received, the papers are passed into the hands of Examiners,—a set of clerks under the immediate control of Major Graham. These gentlemen pass such as are regular and correct, whilst those presenting irregularities are sent into the Error Department, for further inquiry, and by post forwarded to the offending Registrar. The papers which have been examined and found complete, are then sent up to another room, in which clerks are all the year busily engaged copying the names upon large sheets of paper, marked off by lines into portions about a foot broad, and an inch and a half deep. These sheets of names are then again examined; after which they are sent down to the basement story, where a bookbinder cuts them into slips of the size so marked off. This operation is performed by an ordinary plough machine, and each slip, when separated, contains one name, and the reference to the certified sheet on which it may be found. These slips are then taken to rooms filled with *sorters*, the first of whom arranges them with

great rapidity according to the first letter—all the A's together, all the B's together, all the C's together, and so on. Another sorter then takes a letter—say A, for instance—and arranges all the Ab's together, and all the Ac's together, and so on. A third clerk then arranges these again, according to alphabetical sequence of the third letter. In this way, the whole of the slips are reduced into strictly alphabetical regularity, even to the last letter in each Christian and surname. This done, the order of the slips is examined by another officer, and when he has found them to be correct, they are tied in bundles of three hundred and twenty each, and are handed to clerks, who copy them upon parchment sheets, which sheets are afterwards bound up to form the great index of names. Every quarter of a year the certified copies are bound up in eighty-one huge volumes; that is, twenty-seven of births, twenty-seven of marriages, and twenty-seven of deaths; and thus, in a year four times this number, or three hundred and twenty-four volumes are added to the collection. This number is without the Indexes, which themselves occupy about fourteen volumes a quarter, or between fifty or sixty for a year. Four times in each year this labour has to be begun, continued, and completed!

No sooner has one quarter been cleared off than another flood of names comes on to be examined, sorted, copied, and bound up; and so on from year to year.

The persons engaged on these duties have a most monotonous task. Imagine the tedium of going through the list of the eighteen hundred Jones's who are born, the thirteen hundred Jones's who die, and the nine hundred Jones's who marry, every quarter of the year. Imagine months of a life spent in looking all day at a repetition of such names, the duty being to see that Jones is spelt J.O.N.E.S., and in no other way. To see that it has not been carelessly made into Jonis or Janes, or otherwise perverted. Two of the examiners are deaf and dumb, and another is utterly deaf; and these gentlemen make, it appears, very excellent officers. The loss of a sense seems to assist that concentration of the mind upon the object in view, which the monotonous task demands.

The labours of the Register Office afford some highly curious facts as to the relative number of persons of different names living in England and Wales. From time immemorial it has been thought that Smith was the commonest of names. The Smith's are soldiers, and sailors, and parsons, and tailors, and bakers, and authors, and, indeed, everything. But the exact figures of the Registrar upset the long cherished fallacy that they form the most numerous of our clans. The Jones's out-number them and stand at the head of the list; Smith coming second. This question of the frequency of particular names must interest so many persons that we give the following list of the fifty most common

appellations, in the order in which they are found to rank in the books of the Registrar, together with the number of each name, who were born, married, or died, in the year June 30th, 1837, to July the 1st, 1838.

Jones	1	18429	Harris	26	2771
Smith	2	12637	Cooper	27	2682
Williams	3	8743	Clark	28	2683
Taylor	4	8440	Davis	29	2681
Davies	5	5659	Harrison	30	2502
Brown	6	5635	Baker	31	2635
Thomas	7	5378	Ward	32	2818
Evans	8	4980	Morris	33	2209
Roberts	9	4190	Morgan	34	2206
Johnson	10	3743	Martin	35	2272
Robinson	11	3555	James	36	2209
Wilson	12	3398	King	37	2156
Wright	13	3299	Clarke	38	2145
Hall	14	3227	Cook	39	2135
Hughes	15	3180	Allen	40	2116
Wood	16	3177	Price	41	2090
Walker	17	3148	Phillips	42	1997
Lewis	18	3134	Parker	43	1989
Green	19	3112	Moore	44	1985
Edwards	20	3097	Watson	45	1908
White	21	3087	Carter	46	1882
Jackson	22	3040	Richardson	47	1817
Turner	23	2908	Lee	48	1815
Thompson	24	2874	Griffiths	49	1801
Hill	25	2856	Shaw	50	1754

In the year from which this abstract was made, we find no less than thirteen thousand four hundred and twenty-nine persons named Jones had been born, married, or had died. Correcting the number for increase of population, the yearly number of Jones's who came into the world, went out of it, or got married, during the last twelve months would be, in round numbers, about sixteen thousand—an army in itself. Finding Jones to be the name at the head of our list of fifty we look to the foot of it to find Shaw; and the proportion of persons bearing that name, it seems, is in the ratio of one thousand seven hundred and fifty-four Shaw's to thirteen thousand four hundred and twenty-nine Jones's; the other names we have given, ranging between the two extremes; the Jackson's and the Thompson's, however, it will be seen, not mustering one-fourth the number of the Jones's or the Smith's.

Apart from the frequency of certain appellations, another curious point deserves notice. It is the very strange names given, at times, by parents to their children. One of the clerks in the office kept by him, for years, a memorandum-book in which he collected a variety of these, giving with each the number and page of the volume in which the certified reference might be found. Without such evidence one might almost be inclined to doubt the genuineness of some of them. But they are, all real enough, as the documents show. Let us take a few specimens:—

Dewell Sykes. Father, a Weaver.
Loyal Thomas Inkpen. Father a Farmer.
Patience Dismar. Wife of a Husbandman.
Zaphnathaneah Drayton. A Cooper.
Thankful Joy. His wife's name before he married her was Payne.
Acta Apostles Tong. Witness to a Marriage.
Albertina Regina Victoria Gotha Boulton. Daughter of a Farmer.
Repentance Taylor. Daughter of a Labourer.
Emma Tuesday Taylor. Daughter of a Comb Maker, born on a Tuesday.

Eliza Thursday Taylor. Daughter of a Comb Maker, born on a Thursday.
Sansapariel Scamp. Daughter of John Scamp, a Thinker.
First Son Jones. Son of a Labourer.
Feargus O'Connor Frost Mason. Son of a Mule Spinner.
Feargus O'Connor Vincent Bronkhorst Hallowell. Son of a Shoemaker.
Fergus O'Connor Frost O'Brien McDonnell Hunt Taylor. Son of a Shoemaker.
John Frost Fergus Bronkhorst Paine Smith. Son of a Printer.
Turnerica Henrica Ulrica De Gloria De Lavinia Rebecca Turner. Daughter of a Book-keeper.
Jane Stickolorum. Wife of a Weaver.
Hostilina Iphigenia Maria Hypsilide Wadge. Daughter of a Carpenter.
Prince Albert Daniel Gamon. Son of a Labourer.
Zelonstantia Chaffer.
Matilda French Onion A Spinster.
James Death. A Butcher.
Samson Catechistides Kitchen.
Happy George Dadd. Son of a Blacksmith.
William Teatottle Cross. Son of a Mechanic.
Primus Communitalis Flitteroff. Son of a Bricklayer, born at Queenwood Community.
Martin Luther Spooner. Son of a Malster.
Goin Teal. A Cooper.
Hubert Pay Day. An Engineer, married 1843.
Isabella Wilhelmina Jacobina Carolina Adolina Cunningham Campbell Moffat. Daughter of a Farmer.
Betsey Toast Divine.

This list and this paper might be greatly extended; but our limits forbid further present exemplification, since enough has surely been said to show the extent, the character, and the value of the operations carried on under the guidance of the Registrar-General. Any one of our readers who may feel inclined to see the place itself, and to test the completeness of the records we have attempted to describe, should visit the public room of the establishment. It is called the Search Room; and there, for a small fee, the curious may gain, in a few minutes, a certificate of any marriage, birth, or death that has occurred since the establishment of this public office; and he will get a glimpse into the bargain of the iron safes, with their tall narrow doors, where the parchment Indexes are kept, and may witness for himself the rapidity with which the practised clerks search out a name. The certified registers are too bulky to be held in any one apartment. In all the odorous dignity of bindings in Russia leather, they line shelf after shelf in the basement story—a portly and important library—in their way a truly wonderful national record and national work—the great muster-roll, in truth, of the people of Old England.

Such is the good fortune meted out to the three great events of the English human family at Somerset House, in registering them. What a contrast it presents to "The Doom of English Wills!"

THE HOUSEHOLD NARRATIVE OF CURRENT EVENTS.

WINGS OF WIRE.

IN an age of express trains, painless operations, crystal palace, revolutions and republics, Mormons and Puseyites, and a hundred curiosities, such as our grandfathers and grandmothers never dreamt about, there is yet little difficulty in saying which of all our modern wonders is really the most wonderful. In our first days, we have one thing, above all others, the fastest; in our generation of marvels, we have one thing of all others the most marvellous. We hear of it in conversation; we see it paraded in newspapers; we are reminded of it in our railway travels, until its very familiarity half blinds us to its merits. Yet, among all the useful things which human ingenuity has of late completed, it would not be difficult to show that the Electric Telegraph is one of the most useful. The new Dorado itself, with its plethora of yellow wealth, judged by the standard of what great services may come of it, cannot be more valuable than the strange machine that enables one side of a country to speak with another, regardless of the intervening hundreds of miles of hills, streams, and plains: solitudes and cities.

The old heroes of the race-course—the fleet footed descendants of Arabian deserts, bred and nurtured in England to a speed that outdid all previous rapidities of pace—have been outdone. Flying Childers is no longer a byword for swiftness; and Eclipse, with his race of a mile a minute is left far, far behind. Horse-flesh, in its finest forms, may henceforth aid our sports, grace our vehicles, give vitality to our green pastures, but may no longer typify haste. We have caught, and can control, another steed. We have bitted and bridled, and mounted and broken in, another wonder, which for ages sported, in elemental freedom, round about us; which, from the creation of the world, was more free than the wild-horse, or any other thing, trammelled by mortal elements, except the human thought.

This was long work. Watching, deep study, thousands of experiments, suggestions, and reasonings; numberless plans and models—not of one man, or of two, but of thinkers in many countries, in many generations—until, at last, some shrewd, practical men

thought out the final means of turning to a purpose the accumulations of their predecessors; and, lo, the hidden vagaries of the element that claims close kindred with the lightning, are reined up and made to do the worldly work of men!

Straightway poles arise, and wires run along them from one end of England to another. The wires are made of the metal that the sister of the lightning loves best to fly through, and where that wire would touch the post supporting it, there is a little tunnel of porcelain for it to pass. But, the spirit (so let us call this principle which we term electricity, or electro-magnetism) hates the cold, half-vitrified burnt clay, and keeps, therefore, faithfully to the wire, no matter how long its course may be. One wire dipped into the earth, and starting from some great central point, say London, with other wires spreading from it, may run in all directions, as the nerves of the human body run from the brain all over the frame. As the will runs through the nerves, so this strange spirit runs through the wires, until those wires stay at any point, no matter whether Birmingham, or Dover, or Plymouth. At that point, the wire extends down into the earth, conveying into it this subtle messenger; which, quick as human thought, has made a circuit, by darting through the earth to join the tip of the wire, whence it started in London. And so the race goes on with almost inconceivable swiftness—so swift, indeed, as altogether to outdo even delicate Ariel, the tricky spirit who could "put a girdle round about the earth in forty minutes." If the wires went half across the globe, our Spirit of Electro-Magnetism would, it is calculated, fill the wires with itself, and make the circuit complete, through the intervening earth, eight times in a second! And this race goes on, imperceptibly, silently, incessantly, from end to end of any line, whilst the wires are kept from contact with anything the Spirit has a sympathy for. This is the condition of an electric telegraph whilst at rest. Round and round the ring—half isolated wire, half earth—goes the current. But, break the circuit,—divide the wire,—and, if there be against the gap a poised needle of magnetised iron—like the needle of a compass for instance

—this needle will move. Upon this fact,—this property,—the electric telegraph is constructed. The instrument is far more simple than a clock, and it does neither more nor less than this—it folds a poised needle, and first breaks and then reconnects the electric current; first cuts (as it were) and then rejoins the wire; and, as this interruption, this violence, is done to its free progress, the Spirit, before unseen, manifests itself, and either *attracts or repulses the needle*. And not the needle only, but a hundred needles if they be connected with the so broken wire, with the so interrupted race of the Spirit round and round along the wires and through the earth. This, the Spirit will do, early and late, day and night, with speed never flagging, on and on, so long as wires stand true and there is earth for them to rest upon.

The mystery, then,—the secret of the electric telegraph,—is simply this. Two handles serve to break and to re-unite the current of the Electric Spirit; each breakage causes a needle, swinging above the handles, to move. Another similar needle, miles away, moves at the same instant, in the same way. Different amounts of motion of this needle are understood to indicate certain letters; and thus the telegraph people talk to one another, by spelling what they have to say, letter by letter.

Theirs is a new calling, and a curious one, too. They hear the strangest and earliest of news. With hands upon the two handles of the instrument, and a sharp eye upon the dial, the work goes on;—it would be in silence, but for the noise made by the instrument. “Jerk! jerk!” go the handles—“Chop! chop! chip-chop!” are the sounds heard in response, as a little cylinder moves, and metal meets metal, to break and re-complete the circuit. At all the chief railway stations, on all the chief lines, with one or two exceptions, there are telegraph clerks day and night on duty, ready to indicate the approach or departure of trains, the safe arrival of packets in port, or the sailing of ships on their voyage; to forward newspaper dispatches, and trade advices; to send up the prices of corn, and to send down the quotations of consols and railway stock; to give orders for tracking thieves, or stopping runaway young ladies; to call doctors to the sick, and relatives to dying beds; to tell how much may be bid for a house at an auction; to let anxious papas know that their families have been increased, and that mamma and the new arrival are “as well as can be expected,” and to tell anxious wives that voyaging husbands “had a bad passage,—too tired to come up to-night.”

Few of the thousands who have read telegraphic dispatches in the papers and in other shapes, have, perhaps, been behind the scenes in a telegraphic office; for it is necessary to keep such places free from intrusion. Could they be entered, there is much to excite sur-

prise and wonder, not so much in the means by which the work is done, as in the curiously instantaneous results. In the telegraphic room at Tonbridge, for instance, the central station of the South-Eastern Company's system of telegraphs, we find the superintendent of that system, Mr. C. V. Walker, seated before a very business-like, but in no way remarkable, table, covered with papers. The apartment is small; for science, here again, claims but little house-room. Upon the shelf, are a few specimens of parts of apparatus. On one side of the wall, run numerous electric wires, concentrating above a kind of side-board or counter, on which there stand a row of the telegraph instruments, looking, at the first glance, not unlike the counter-fittings of a very gay public-house; on closer observation, like the fronts of little mahogany churches, with very large clocks. Under this counter you may see a number of galvanic batteries—wooden troughs filled with alternate plates of copper and zinc, buried in sand that has been saturated with sulphuric acid and water. These batteries generate the electro-galvanic fluid that is to be sent on its eternal round through wire and earth, the interruption of which is to set the needle in motion, that messages may be read between Tonbridge and London or Dover, or any other station on the line.

“Let us get Dover to read us some lines of ‘Household Words,’” said Mr. Walker to his assistant, on the morning of our visit to him at Tonbridge. The clerk went to the little mahogany church front.

“Call Dover,” said Mr. Walker. Jerk, jerk—chop, chop. Dover called.

“Dover answers: ‘Go on,’” said the clerk.

“Tell him to ring our bell,” said Mr. Walker.

In an instant, the alarm in the Tonbridge room was in a whirl of noisy excitement, ringing in a most determined and peremptory way. The Electric Spirit had been stopped in its circular chase; had pounced upon the piece of soft iron close by the point of breakage; had magnetised it, drawn it from its place as a boy's toy loadstone draws a toy swan round a basin of water; and, by so drawing it, released a little spring that set our bell ringing.

The bell having done its work, the Superintendent, Mr. Walker, gave another hint:

“Let Dover read the first article in number thirty-three.”

“Jerk, jerk; chop, chop, chip-chop. In half a second, as it seemed, the direction was given. We took also, a number thirty-three, that was upon the table, to see fair-play; the clerk, before the little mahogany church front, stood watching the needle to read off what Dover might say. As word followed word, at the end of each, he moved the handles, to give the signal that he understood what was meant.

Wave, wave, went the needle; jerk, jerk,

went the clerk's hands; and he read off the words spelled by Dover; the sounds came in this fashion, as rapidly as any one could well read them from a book:

"The"—chop—"cow"—chop—"with"—chop—"The"—chop—"Iron"—chop—"Tail"—chop.

"Go on," said Mr. Walker; for there was a momentary pause.

Chop—chop—chip-chop. "Dover, says," interpreted the clerk, "that there is some one knocking at his door. Wait."

"Ask what it is."

Chop—chop—chip-chop.

"He says he was trying to send us the Cow with the Iron Tail, whilst somebody was knocking about a message; and they made such a noise that he stopped. He will send the message to London, and then attend to the Cow again."

All this was said as rapidly as though Dover was bodily in the room at Tonbridge, and was giving his explanation by word of mouth.

There was again a short pause. We had already found, not only that Dover and London had obviously different *hands upon the instrument*, but that the touch of each clerk at a station, where there are two or three, is easily known, and is a curious test of his natural impetuosity.

"Dover is now talking to London," explained Mr. Walker. He had scarcely said so, when the signal was given "Go on," and on went our friend the Cow.

It—chop—was—chop—four—chop—o'clock—chop—in—chop—the—chop—morning,—chip—chop—and—chop—the—chop—Cow—chop—with—chop—the—chop—Iron—chop—Tail—chop—prepared—chip-chop—for—chop—the—chop—duties—chop—of—chop—the—chop—day—chop—with—chop—her—chop—accustomed—chip-chop—stolidity—chip-chop.

The word "stolidity" bothered the clerk for a second. "Is it 'stolidity'?" he asked. "All right, go on," was the response—but, before the words were uttered, Dover was reading on, for the amusement of us good folks, in the station at Tonbridge, miles away from him. And on he went until he had repeated thirty lines of the story, and brought it to the point where it arrives at the locality of the Cow in a certain Court in Holborn.

"High—chop—Holborn—chip-chop—"

"That will do," said we, turning to the clock. Then, counting up the amount sent, we found that two hundred and thirty-seven words had been telegraphed and read off in about fourteen minutes.

Some of the instruments have, on their large clock-looking faces, only one vibrating needle, whilst others have two. The needles in the improved instruments, are much smaller and lighter than in those first constructed; it being naturally demonstrated by

experience that the smaller needle turned the more readily and quickly on its axis. Let us hear Mr. Walker's first lesson in the art of conquering his mystic alphabet—the electric A, B, C. He would fain persuade us that it is vastly easy. And indeed, we should observe that it is unquestionably so easy, as that Mr. Walker's fairer and better half is mistress of it, and both despatches and reads messages with great facility, by a little electric telegraph established between the Tonbridge Station and his private house.

"Out of only two needles, each of which has but two movements, the telegraph alphabet is formed. On the face of the instrument are the letters of the alphabet, arranged *seriatim* in two lines, beginning at the left and ending at the right, as in ordinary writing. The commencing series, from A to P, is above the top end of the needles; and the concluding series, from R to Y, below the bottom end. Some letters are engraved *once*, some *twice*, and others *three times*. To make a letter engraved once requires *one* motion of the needle; to make one engraved twice, *two* motions of the needle; and to make one engraved three times, *three* motions. In respect to the upper row, the needle *nearest* to the letter is moved, and it is moved *some* to point *toward* the letter. In respect to the lower row, both needles are moved, and their *lower* end is made to point in the direction of the letter required.

The rule of the current, is, that if it passes any magnet—such as the magnetised needle of the instrument—the north pole of the magnet moves to the right, if the current be a descending one. On the contrary, if it be an ascending current, it moves to the left. But to return to our letters;—

Six of the letters, C, D, L, M, and U, V, require a twofold motion of the needle or needles, first to the right then to the left for C, L, and U, and first to the left then to the right for D, M, and V. These six letters are engraved *intermediate*, and with a double arrow between. The alphabet produced by this arrangement is of a simple character, and is very readily acquired. To the stranger, it appears confused; but when he has the key to it, the difficulty disappears: it might at first sight appear that a dial instrument—a telegraph, that is, provided with alphabets engraved on a circular dial, and an index made to revolve and point to any required letter—is more simple. Several such telegraphs exist, and among them are some very happily arranged; and there is something so simple in the fact of being able to point to any desired letter, that it is no wonder the public generally may, on a hasty glance, and before studying the practical merits of the case, be ready to decide in their favour, and prefer them to any other plan, the A, B, C of which is less obvious.

"But is it such a very serious matter to learn another alphabet? Every schoolboy, now-a-days, knows some half-dozen alphabets: there are Roman letters large, and Roman letters small; manuscript letters large, and manuscript letters small; Old English large, and Old English small; Greek large, and Greek small, and so on, and all different, and not one of them in which the letters

are represented by so few strokes of the pen as are the telegraph letters by beats of the needle. Take one of our plainest alphabets as an example; the Roman Capitals, for instance, and place a few of them in juxtaposition with the corresponding telegraph signals:—

A E G
 B F H

"The simplicity of these symbols is obvious. Two diagonal and one horizontal line are required for the Roman A; two diagonal lines for the telegraph A; one vertical and three horizontal lines make the Roman E; one diagonal the telegraph E, and so on; the difference being that all the world have learned the Roman alphabet, but only a chosen few have studied the telegraph symbols. That the latter really are simple and distinctive; that they are full of meaning and very legible; that they are applicable to ordinary language, and good, ay, very good! no one will for a moment doubt, who has seen the rapidity and accuracy with which a telegraph officer receives a despatch."

Mr. Walker becomes more graphic as he warms with his subject:—

"To one who sees a telegraph in operation for the first time, the effect borders on the marvellous; setting out of the question the fact that the needles are caused to move by an individual perhaps a hundred miles off; the motion of the needles hither and thither, quicker than the untrained eye can follow; the want of all apparent order and rule in their movement; the ringing of the changes between one and the other, and both; the quiet manner in which the clerk points his needle to the letter E, in rapid intervals, implying that he understands the word; while to the uninitiated looker-on, all is wonder, and mystery, and confusion; and the rare occurrence of the clerk pointing to implying he did not understand; and, finally, the quiet manner with which the clerk tells you, very coolly, as the result of his operations,—that 'The very pretty girl with bright blue eyes and long curls has sailed for Boulogne in the Princess Clementine,' now leaving Folkestone Harbour; and that she is accompanied by the tall, handsome man, with the dark moustache and military cloak:—as he tells you this, and says, 'Message and answer, forty words, two rates, at 16s. 6d., one guinea, portage a shilling—one pound two,—if you happen to be the papa of the pair of blue eyes, you are bewildered, and wish you were an electric current, and could be sent after them.'"

"But to return to the alphabet; and here, by-the-by, I should mention that the voltaic current is put into circulation and the needles deflected by a right or left motion given by the hand to the handles on the lower part of the instrument. Having described the general arrangement of the code, I need not go through the letters *seriatim*—but shall describe the arbitrary signals, also engraved on the face. The symbol like a Maltese cross , which we term 'stop,' is used by the sender at the end of every word, and by the reader when he does not understand any particular word. In these cases it is merely pointed to by a left-hand deflection of the needle. The letter E is pointed to by the reader the moment he understands a word. Two beats to the letter E are used for 'yes.' For

instance, to spell the word HEN, we make the four following beats:—

The first beat is made with the right needle, and is H
" second " " left " E
" third " " right " N
" fourth " " left "

the last beat being the end of the word. If the correspondent understands, he makes with the left needle the first of the following deflections; if he does not, he makes the second:—

/ \

Some of the letters are engraved smaller than others, not for any other reason than to pack them comfortably on the engraved plate; there would be no room if all were made large.

"Wait and Go on are engraved on the instrument, and are useful signals. If London calls Dover at a time when Dover is otherwise occupied, and unable for the moment to attend, Dover exchanges signals with London and discovers who wants him, and he then points the lower end of his needles to the letter W, or word 'Wait.' When he is disengaged and ready to take the message, he calls London, exchanging signals in the usual way, and points the needles to W, or 'Go on.'"

Before any message is commenced, the attention of the clerk at the place it is to be sent to is aroused by the ringing of an alarm. This is done by sending a current of the electric fluid along one of the wires, the other end of which is near a piece of soft iron. The fluid attracts the iron, the motion of which releases a spring. This release sets free some clock-work—an escapement, in fact—which rings a bell. The wires seen, by an upward-glancing traveller, along the side of a railway line, ruling the sky like music-paper, are not all necessary for messages between the two termini. One wire would be enough for communicating messages between Dover and London, and the chief stations between, but the more convenient plan is to have two for the purpose; that is, one for the messages, and one for the alarm-bell. When more wires than two are seen, the additional number are set up for the convenience of intermediate smaller stations, grouped together for the purpose, in order that their electric conversations may not disturb, or be disturbed by, more urgent communications between the larger and more important stations of the railway.

The South-Eastern Line has already its telegraphic anecdotes and little romances. Here is one of them—

"On Thursday, the 2nd of October, 1847, a man named Hutchings was to have been executed for murder at Maidstone; but just before the appointed hour, the Government sent a message by the South-Eastern Telegraph to stay the execution for two hours. This was virtually looked on as a reprieve; and, regarding all the circumstances of the case, everybody in Maidstone considered that the man's sentence had been commuted. The sheriff was busily engaged in examining the

exact character of the communication, with a view, no doubt, of satisfying himself that, in acting on the order of the electric telegraph, he was not exceeding his duty. Perplexed as to the proper course to be adopted, the sheriff, in his trepidation, commenced by electric telegraph a correspondence with the Home Office, to the effect that he waited for further orders. Two hours and a half elapsed, when a second order was received per telegraph, instructing the sheriff at once to proceed, and carry the sentence of the law into effect. The order was to be forwarded from the London Bridge station of the South Eastern Railway; but here the telegraph clerk appealed to the railway officers, to know whether the authority for sending such a message was sufficient. The Chairman of the Company was at hand at the time, and expressed himself not satisfied with it, requiring further proof of its authenticity before allowing the telegraph to be the messenger of death. Accordingly, the superintendent, at once drove over to the Home Office to obtain the necessary proof, and stated to Sir Denis Le Marchant, that in a matter involving such consequences, it became his duty to have a written order, and that without evidence of this kind, the railway authorities would not be justified in instructing the sheriff. The Home Office authorities at once saw the reasonableness of the request; a written paper was signed, the message sent, and the man was executed."

But, the tales are not all of a tragic cast. "One day, some accidents on the railway had created much uneasiness, and gave to every want of punctuality an alarming aspect. The officers of the station were heard to mutter their 'wonder where the down train was.' Eyes were stretched to their utmost, but no sign of the train. All at once, there was a loud tingle of the telegraph bell—sudden thoughts of a terrible collision crossed all minds—the officer of the station ran in, and took his place before the telegraph, with his back to the anxious passengers in waiting, who, stretching their necks across the counter, gazed with amazement at the mysterious needle. There was a moment's pause, when the officer turned round, and gravely said—'*They want a pound's worth of coppers at the station!*' There was a sudden laugh and a buzz, in the midst of which a shrill whistle announced the coming train."

The greater part of the despatches sent by this wonderful invention, in England relate, we believe, to occasions of disaster and surprise. During the prevalence of the cholera, for example, they related principally to sudden sickness and death. Its greater general use in America has lately been the subject of interesting discussion; but the immense distances at which persons engaged in commerce are often apart, in that country, and the time required for the despatch and receipt of the fleetest Post in such cases,

afford an obvious reason for its use there which does not exist in this Island. On the question of cheapness, it must be remembered that both wood and land are greatly cheaper in the United States than in England, and that these important items in the cost of construction are necessarily low across the Atlantic. The question of the relative degrees of speed in the transmission of so many hundreds or thousands of words, can only be settled on very accurate evidence. We have a great regard for our Brother Jonathan, but we cannot forget that the virtue of patriotism (which he possesses in a very high degree) occasionally inclines him to statements on such points a little resembling the preliminary announcements of that famous American steam-ship which was to arrive in Liverpool the day before it left New York.

A COAL MINER'S EVIDENCE.

THE common scene of action for our mortal enemy, Death, in all his manifold shapes, whether of deep grief, slow pain, sudden terror, or prolonged and gentle decay, is upon the open face and fabric of our mother earth; but every now and then we are startled by the intelligence of some dreadful loss of life, a loss even of numbers, from a blow dealt in the darkness of many hundred feet beneath the ground. The details of one of the last of these frightful events,—together with some previous accidents of a similar kind in South Staffordshire and North Durham, we are enabled to lay before our readers in the words of a miner, as related by himself. He was in the pit at the time of the recent explosion. We only omit such technical terms and local phraseology as would be unintelligible; the rest is all in his own language.

"I am a coal miner, as you see, and have been all my life. I was one o' them as had the providential escape from the Sloughton Colliery explosion, which all the newspapers, I'm told, are a-talking about just now. They may talk with good cause, but they don't know, and cannot know, what we suffered, in our minds more than our bodies,—we as survived to escape. I pray to my God night and day—and I am not much used to praying, neither—that I may never again go through such a scene as that night was. Many a man prayed then, who had never thought of it much since he was by his mother's knee.

"Now I shall tell you what happened to us then, as well as I can; for it was a dark and smoky business, you know, and not long a-doing, till we got walled up in the ruin; and also, if you please to hear me begin my life a bit, of some things of the same kind that have happened to me afore. These explosions are nothing new to me. I have been all my life a miner, man and boy, now these two-and-forty year: first at Kilston, and now here in Durham. I must tell you all

in my own way, from the beginning : only, as you write it down for me, just be so good as make it all clear grammar-like and spelling; for I'm no great hand at that.

"I went down in the pit when I was six year old. My father and mother passed me off as seven and a half; so they got my wages. I was employed in carrying picks [little short-handled pickaxes that hew down the coals] to be mended, and often carried three at a time. I got two and sixpence a week. When I was a few months older, I was put to keep a trap-door. At first they let me have a candle, but after a week they said I could sit just as well in the dark to attend to the trap. I sat in a little hole like a chimney-place, cut in the coal. Sat in this way twelve hours a day, all in the dark. Not so *werry* dull and lonesome as you'd suppose. A good deal of company coming and going all day. When the horse came with an empty basket and skip, he could open the door with a poke of his head; but when he came along with a load, I pulled it open by a string. He knowed all about it. I sat there with a string in my hand. For this work I had eightpence a day. Some time after I was moved to a trap, where I always had to pull the door open, for the horse and tram, empty or loaded, and then I got tenpence a day. Besides the coming and going of the horses, and men and boys, trappers have other amusement, or perhaps they might get very sad, or go to sleep, as we often did, and get woke with a whip. This other amusement was often a cruel one. I was taught it by other boys. There were rats and mice in the pit, as came down in the oats and hay, and they lived by stealing the candles, horses' food, and the bait-bags of the men. I sometimes killed a rat with a large coal; but when I caught mice, I used to put the tails of three or four of them into a split stick, and then shake them together till they fought like mad. I always kept a bit of candle to see the sport by, sorry I am to own it, now I'm a man. There were also a great many jack-gnats, and wood-lice, and old forty-legs, and black clocks—long-legged black beetles with horns. I was often cruel to the jack-gnats when they plistered me, and I used to try and make the clocks fight, but they soon shammed dead, and the old forty-legs always ran away.

"After about a year and a half in this way, I was put to sweep the tram-road and clear the rail with a whisp of hay, and pick up coals off the road; and next they set me to walk with a candle before horses. The candles were short sixteen. I was eight year old now, and got three and sixpence a week, which I took home to my mother.

"Before I was nine years old I had a bad accident from an explosion. The wild-fire came rushing along a road, and knocked itself out against the opposite end just at the cross way, where I was coming, which saved my life; but some of it reached me, and I was scorched all over the breast and arms.

I lay ill nine weeks. It was caused by a man opening the Davy lamp to prove to another that the gas about them was not so bad as he said. They had betted a pot of beer on it. These sorts of doings are common enough, even when you hear the gas *pit-pit-pitting* in little explosions as it gets through into the lamp. I once heard a man, one of the under-goers, who was on his way to remove a pillar, complain that his Davy did not show light enough; so, another man accompanied him with a lighted candle in his hand to help him see his work better. A dreadful explosion followed, a few minutes after, and nine men and two boys were killed. The two underneath, where the pillar was to be hewn away, were got out all black, like coke and cinder. If they hadn't been Christians, there was no call to bury them, as far as their bodies were concerned, poor fellows. Wrong too; for they caused the death of other poor fellows by their carelessness and folly.

"After my accident I did not go down again in the pit for six months. I wasn't strong enough. I drove a 'gin' on the bank. [the 'gin' consists of a horse going in a circle, and working a wheel that winds up or lets down loads into the pit]. The work was not hard, except in cold or wet weather; but then I often stood in a hovel by a fire, and kept th' old horse going by pelting him with small bits of coal, to let him know I was there. I learnt to read at an evening-school at this time; and to write a little too. But I've forgotten both since.

"When I next went down into the pit I drew little waggons of coals, with a girdle and chain; this is called *barrying*. Hard work it was. The blisters were often as big as shillings and half-crown pieces. All full of water they were. And the blisters of one day were broken the next, and the girdle stuck to the wound. Sore work, I promise you; but I got one-and-sixpence a day for it, and, the last three months, two shillings.

"After this, I was hired as *foal* to my uncle, a young fellow of nineteen who was a *putter*. Those who push the little waggons of coals along the tram-roads are called 'putters'; and when a young boy helps an elder he is called his 'foal.' When two boys of fourteen or fifteen years of age push together, equally, they are called *half-marrows*. I was a foal for near a twelvemonth; and then a half-marrow, and got twelve-and-sixpence a-week. One day the butty (overseer) sent us to a part of the mine where we had never been before. There was fire-damp there, and it put out our candles, one after another, as fast as we lighted them. So we saw as it was not safe to try it on any longer, and we began to scramble our way back in the dark. Laughing we were a good deal. But we missed our way, and got into an old working as had been abandoned for years, and got quite lost. We wandered about here two whole days and nights afore we

found our way out, and were nigh starved to death.

"I was strong of my age, and the *butty* said I had some sense in me, and set me to to use the pick sooner than is usual. In general the miner does not use the pick, and become a *holer* or *undergoer* [those who go into holes and undermine masses of coal] till he is one-and-twenty. I was set to do this at nineteen, and earned four shillings a-day, and sometimes more. Got badly burnt once at this work. I was lying in a new working where the air was bad, and I was obliged to use a Davy lamp. I had bought a new watch at Tipton, and I wanted to see what o'clock it was by it—also, what was the use on it?—and as I couldn't tell by the Davy, I just lifted off the top—and *phen!* went the gas, and scorched my face all over, so that the skin all peeled off. It was shocking to see. I was laid up with this for two months—and say'd I me right, I say now, but it was hard to bear at the time.

"As for accidents from the explosion of gas, I say there's no help for them, and never can be, so far as the men themselves are concerned. I have been oftentime very careless myself, as I've told you, and so are all miners, and always will be. You may cure the mine of gas, perhaps, but you'll never cure the men. Nor I don't well see how you're to cure the gas, at all times, neither. When a heading [the working at the end of an excavation] is made up a slant, the gas collects in the upper end, and to disturb this gas, as you must do, and distribute it, and drive it away, a't so safe and easy a matter, without a chance of a bit of an explosion or two. The worst time of all is when an up-hill heading is united to another heading, for then you're almost certain to have a rush down of the gas, and if there's an uncovered light in the way, you're sure of an explosion. Well—then, don't *have* a light in the way, on such occasions; make the juncture of the two headings in the dark. That's easy said; and so we're ordered, and so we ought to; but to get men to do it, that's the job. Besides, if it *was* all being done in the dark, a boy might come running that way with a lighted candle in his hand, a-singing 'Susannah'—and then where are you?

"You want to know if there's no authority, and no order down in the mines—nobody to walk about and prevent accident from carelessness? Well—there's the *butty*, as gives out the work; and there's the *doggy*, who is always a-walking about to see it done. But what's one man to miles and miles of darkness underground, with gas or bad air everywhere, and roof and walls always liable to fall in? The overlookers have enough to do to take care o' themselves, at times. Some years ago—1838 about—at Tamworth—a *butty* coming to his work in the morning, walked right into the pit's mouth with two candles in his hand; and only t'other day, in one of

our mines here, a *doggy* had his head blown off with the wild-fire.

"It doesn't come of drink, this carelessness of the miners; it's just in our natur not to care—that's all. We do drink and eat too, a good deal; but not in the mine. Our dinners there, are not much, except on particular days, when there is a feast: but when we come up from the pit, we have hot suppers at night in our cottages. The doctors say that a miner needs to eat near three times as much as a mechanic who sits at his work all day; and we do eat three times as much. We're not a drunken set o' people; only on Mondays there's a many drunk, and not very handsome-like on Tuesdays. We mostly lie in bed and sleep half Sundays. Some of us are tea-totallers—but a *verry, verry* few. The Marquis o' Hastings, who's a great coal-owner, once told a collier that he knew a miner who had never drank a quart of beer in all his life, put together, yet he had lived to the age of ninety. But the collier said, that if such a man without beer could live to be ninety,—if he had but ha' drunk a quart of ale a day, he'd have lived for ever!

"After I had been an *under-goer* three years, I had a large piece of coal fall upon me from the roof in one of the workings which broke my leg. My mother was dead, and I was not married at this time, because the girl I should ha' married, took up with somebody else; so I went to my sister to be nursed. She and her husband were going to live at Durham, and persuaded me, when I was well, to go along with them. I soon went down into the pit again, and used to earn five shillings a day. It was here that happened one of those very bad explosions I told you of when you first spoke to me about this last business. The one I now speak of was in the Willington Colliery.

"It was in the Bensham seam of this colliery that the explosion I am going to tell on took place. It took place on the 19th of April, 1841, at a little arter one p.m. The Bensham seam lies about a hundred and forty fathoms from the surface; the coal is over four feet in thickness in most parts, and the pit is good nine feet four wide from wall to wall. The coals are drawn up in iron cages; two tubs on each cage. The pit had been in work some time. We had advanced two hundred and eighty yards from the bottom of the shaft. Besides this, there were two north headways, each seven feet wide, which had advanced more than two hundred yards. Holings were made between each of the headways for air. We had an up-cast shaft, called the Edward Pit, by which the air ascended to the surface, after ventilating all the workings. The current of air, you understand, descended by another shaft, as was called the Bigge Pit. One current went one way; another current another. There was pains enough taken to give us enough wholesome air.

"It was at the west the explosion took place. I was at work with another man and a boy, near five hundred yards, reckoning ins and outs, east of the shaft. A sudden rush of wind and dust came past us. It put out our candles. We knew directly there had been an explosion somewhere, and we ran along in the dark as fast as we could. We fell down several times, tumbling over stones and large pieces of coal or timber that had been shaken and blown out. When we got to the foot of the shaft, we found the iron cage stuck fast, all jammed with the explosion; but we made the signal, and another cage was lowered to us, into which we jumped, before it reached the bottom, by scrambling up the sides of the shaft. When we got to the bank, and had taken our breath a bit, we saw the chief viewer of the pit come running to us with his Davy lamp. We each took a Davy, and went down the pit, to see who we could help. We knew there had been sad work among them: When we got down to the bottom of the shaft, we soon heard moans and groans. They were two lads, still alive. We got them hoisted up in the cage to the bank; but they lived a very little while. Soon after, we found two more quite dead, shockingly burnt. We had not gone much further when we found there had been a great fall of the roofing; and among the loose coals and stones, and timbers we found a horse and a pony, all mangled and singed. We now met the after-damp, and were thinking of returning, when a groan made us go forward, and we brought out the body of a young man alive, but in such a state, he couldn't be recognised. We now found that the doors of the trappers in several places had been blown out, and consequently the air currents had ceased to ventilate all the west and north workings, so that those who were there, and had escaped the explosion, would be likely to lose their lives by the after-damp.

"A strange smell of burning now made us know that some other sort of fire was at work, and as we ran in the direction it smelt like burning straw, which told us it was the stables as had taken fire. And sure enough, there they were all in thick yellow smoke and red flames. The horses were prancing wild about, and one, who was blind, got out, and tore away, and killed himself by running agen a wall. We all saw death before us, if we couldn't master this fire; because if it communicated with the workings in the west and north, where the bad gas was, there would be another blow-up worse than the first. Mr. Johnson, the viewer, acted like a man. We all gave our minds to the work, and succeeded in stopping out, with wood and wet clay plaster, the entrances to these workings. Fire engines were then got down, and we continued to pump at the stables, and at the walls of coal which had took fire on each side, and after we had drenched them with water for several

hours, the fire was put out. It took thirteen hours and more to do this.

"The main currents of air were restored as usual, and we then continued our search for those who had suffered by the explosion. We found Robert Campbell and another man crushed and buried under a fall of stone, and William Coxon, and Thomas Wood, and Joseph Johnson, all dead, but not burnt. It seemed as if they had got to this place, and then been suffocated and poisoned by the after-damp. Johnson had the top of a linen cap forced into his mouth, to keep out the poison—but that was no use. A little further on, we found two more men, and near them three little boys—trappers they were—all burnt horrid. Some distance beyond, Thomas Bainbridge, James Liddel, and William Bower, together with two, if not three, more boys, who had been blown a long way, and also Robert Pearson and Richard Cooper, both very little boys—trappers. Up by the north heading we found the body of John Reed, the deputy who had charge of the pit, and also five others, some burnt, some mangled.

"The cause of this explosion, which cost all these lives, was traced, on examination of all signs and appearances, to the trapper boys, Robert Pearson and Richard Cooper. Cooper's body was found away from his own trap, and lying close beside that of Pearson, where we saw reasons for knowing he could not have been blown by the explosion; and all on us come to the conclusion that he had left his own trap-door open, and gone to play with Pearson. The proper course of the ventilation was thus destroyed, and when George Campbell, whose body was found near, went there with his candle, to fill coals, the gas that had accumulated while the boys were at play instantly exploded.

"You are surprised that children should have charge of these air-doors, on which the safety of the whole mine chiefly depends; but it has always been so. They are often trappers at six years of age. I was myself. Seven and eight are the most common ages; sometimes nine. In course the Queen's Ministers don't know anything about these underground matters. Some gentlemen were sent to look after us, about eight years ago. They said the Queen sent 'em; and they came down among us in the pits, and about on the bank; but I suppose they kept what they found to themselves.* For here we are with our little trapper boys, and our explosions, and our burnt and mangled men, just as we have always been. It's a hard life, any way; but to be killed slap off, is worst of all.

"Now, as to the dreadful explosion and loss of life that happened at Sloughton, I thought I could tell you all about it, in some sort o' order; but directly I begin to think about it, so many things come at once that

* Far from it. See Report and Evidence of the Children's Employment Commission; and, in especial, those of Dr. Mitchell and Mr. Lettfield.

it's not easy to think at all, or know what to say first. The overman had been out late on Sunday night. He went to the pit at two in the morning to see that all was safe. At three we all came to work, and a hundred and fifty of us, men and boys, went down. One of the workings was new opened, after being closed thirteen years. A dangerous place o' course. One o' the undersgoers was sent in to remove the first pillar. I went to work with others at a good distance. We were at it about two hours, and then all of a sudden a rush of wind and coal dust cut by us, taking out all the candles, and there was a rumbling noise. We knew very well what it meant, and we all ran towards the shaft. As we ran we came upon others in the dark, and others came rushing out upon us from the side workings, and all of us together ran in a crowd and crush along the dark ways, in the direction of the shaft, and presently we found those who were foremost had fallen, and we got a sudden giddiness and gasping, so we knew we had met the choke-damp. It's a deathly, sleepy sickness you feel, and sinking at the knees, only you're sure it's not the breath of sleep you're a-feeling, but you're breathing death. I called to those a-head to stop, and so did others near me, but many of them would go on, and down they went, one after the other. We felt the bad air couldn't be passed through, and we hurried backward in a worse disorder, if that's possible, than we had come on; and at last we all stooped in a scurrying crowd in a place where we found the air could be breathed. Here we remained. What a time it was, good Lord of Heaven! At first the elder ones of us tried to keep some order, and quiet the rest by telling them, as we know'd those on the bank, and plenty of others would be sure to know what had happened, and they'd soon come to help us. They would attend to this for a little, but soon they began to get wild and desperate, and so they went on crying out, and shouting like mad, ending with a scream, until they were tired out. All this time many were down on their knees praying, and some lying about with their faces hid on the ground, and all of us expecting every minute another explosion, or else the advance of the after-damp would bring us certain destruction. And here we remained, hemmed round by the walls and by the after-damp, which we could no more get through than through the walls themselves—hour after hour; every minute of which was a long torment of all sorts of things in ourselves, and in all those about us. I gave myself up for lost after the first hour—then I took hope a little; but after more time had gone, I gave up hoping, and was as bad as the rest. Still as more time went on, I began to pick up a bit. I knowed our friends would help us if they could. Ay, but *could* they!—that was the chance. And then again I fell into

despair, and crouched down, and covered my face and head with my hands, and sat there a trying to pray, and make my last peace with God, amidst all manner of cries and loud praying, and miseries of despair and madness of those huddling in the darkness all round me. Sometimes they got a little silent and solemn-like, and listened to the voice of one man who had never ceased to pray aloud all along; but presently somebody called out his wife's name—two or three cried out on their children, their mothers, the girls they were to be married to—and in a moment all again was wild cries and rushing about in the dark.

"You know how we were saved. A great part of the roofing had fallen with the explosion, and this had shut off the fire from us, and the advance of the after-damp. Our friends made their way through the ruin—got fresh air in to us, and helped us out. Some died from exhaustion when they reached the bank; but most of us recovered, to thank God again and again in the arms of our wives and relations, who were all standing in crowds to receive us. They had come from all parts round about. The bank was like a fair, only a different sort of merriness, and many had no cause. The grief of some was a sad sight for any man. Five-and-twenty had been killed; some crushed, some burnt to a black cinder, so that they couldn't be told; some torn all in pieces, their limbs being found in different places, and the head of Anderson flung into a horse-tub—and the rest damped to death.

"We think the explosion was caused by the gas from the old working, now opened after being closed thirteen years. Some noise made the undersgoer go to this place, and instead of taking his Davy lamp, he ran there with a lighted candle in his hand. He, and the man who was at work there, we found near each other all black and mutilated. He was a mere body of cinder, and was only known by a little book in his pocket, as escaped. The Queen's gentlemen, when they came down here among us, said they could mend these things; but they hav'n't, you see. We think the Queen was 'nt told."

An effectual remedy for these horrible accidents is indeed most difficult to devise. For even if the Government instituted a system of police inspection, it would require one officer, at least, to be constantly perambulating the dark roads and by-ways of every mine; and still, as the miner, whose evidence we have just read, very truly says, an explosion might be caused by a moment's carelessness at one end of a mine, while the "authority" was at the other.

To us there appears no other chance of a remedy so good as this:—First, most stringent laws as to the proper ventilation of mines: Secondly, a system of Government inspection, extending to that of frequent visits by day

and night, at times not known to the masters or miners: and, Thirdly, a regular system of registration of all accidents that occur in mines, especially as regards defective machinery and the explosion of gases.

This system of registration has been put in operation with respect to the Factories, with very good effect. No child can receive an injury, which disables it from work for a fortnight, without a report of the same, under penalty of a heavy fine on the mill-owner, being sent to the Inspector of the District. The publicity caused by this has brought the question so continually into notice that the force of *public opinion* has operated most beneficially in reducing the number of accidents.

If then, a system of inspections and registration has been found necessary with regard to works above ground, where the difficulty of concealment must be so great, how much more necessary is it in works conducted hundreds of feet or fathoms under ground, where almost any recklessness or gross abuse may be committed with impunity, because unknown, and where none of its wrong doings come to light except with these terrific explosions and waste of industrious human lives!

THE MARTYRS OF CHANCERY.

IN Lambeth Marsh stands a building better known than honoured. The wealthy merchant knows it as the place where an unfortunate friend, who made that ruinous speculation during the recent sugar-panic, is now a denizen: the man-about-town knows it as a spot to which several of his friends have been driven, at full gallop, by fleet race horses and dear dog-parts: the lawyer knows it as the "last scene of all," the catastrophe of a large proportion of law-suits: the father knows it as a bugbear wherewith to warn his scapegrace spendthrift son; but the uncle knows it better as the place whence nephews date protestations of reform and piteous appeals, "this once," for bail. Few, indeed, are there who has not heard of the Queen's Prison, or, as it is more briefly and emphatically termed, "The Bench!"

Awful sound! What visions of folly and roguery, of sloth and seediness, of ruin and recklessness, are conjured up to the imagination in these two words! It is the "Hades" of commerce—the "Inferna" of fortune. Within its grim walls—surrounded by a *chevaux de frise*, classically termed "Lord Ellenborough's teeth"—dwell at this moment members of almost every class of society. Debt—the grim incubus riding on the shoulders of his victim, like the hideous old man in the Eastern fable—has here his captives safely under lock and key, and within fifty-feet walls. The church, the army, the navy, the bar, the press, the turf, the trade of England, have each and all their representatives in this "house." Every grade, from the ruined man

of fortune to the petty tradesman who has been undone by giving credit to others still poorer than himself, sends its members to this Bankrupts' Parliament.

Nineteen-twentieths in this Royal House of Detention owe their misfortunes directly or indirectly to themselves; and, for them, every free and prosperous man has his cut and dry moral, or scrap of pity, or screed of advice; but there is a proportion of prisoners—happily a small one—within those huge brick boundaries, who have committed no crime, broken no law, infringed no commandment. They are the victims of a system which has been bequeathed to us from the dark days of the "Star Chambers," and "Courts of High Commission"—we mean the Martyrs of Chancery.

These unhappy persons were formerly confined in the Fleet Prison, but on the demolition of that edifice, were transferred to the Queen's Bench. Unlike prisoners of any other denomination, they are frequently ignorant of the cause of their imprisonment, and more frequently still, are unable to obtain their liberation by any acts or concessions of their own. There is no act of which they are permitted to take the benefit; no door left open for them in the Court of Bankruptcy. A Chancery prisoner is, in fact, a far more hopeless mortal than a convict sentenced to transportation; for the latter knows that, at the expiration of a certain period, he will, in any event, be a free man. The Chancery prisoner has no such certainty; he may, and he frequently does, waste a lifetime in the walls of a gaol, whither he was sent in innocence; because, perchance, he had the ill-luck to be one of the next of kin of some testator who made a will which no one could comprehend, or the heir of some intestate who made none. Any other party interested in the estate commences a Chancery suit, which he must defend or be committed to prison for "contempt." A prison is his portion, whatever he does; for, if he answers the bill filed against him, and cannot pay the costs, he is also clapped in gaol for "contempt." Thus, what in ordinary life is but an irrepressible expression of opinion or a small discourtesy, is, "in Equity," a high crime punishable with imprisonment—sometimes perpetual. Whoever is pronounced guilty of contempt in a Chancery sense is taken from his family, his profession, or his trade (perhaps his sole means of livelihood), and consigned to a gaol where he must starve, or live on a miserable pittance of three shillings and sixpence a week charitably doled out to him from the county rate.

Disobedience of an order of the Court of Chancery—though that order may command you to pay more money than you ever had, or to hand over property which is not yours and was never in your possession—is contempt of court. No matter how great soever your natural reverence for the time-honoured insti-

tutions of your native land: no matter, though you regard the Lord High Chancellor of Great Britain as the most wonderful man upon earth, and his court as the purest fount of Justice, where she sits weighing out justice with a pair of Oertling's balances, you may yet be pronounced to have been guilty of "contempt." For this there is no pardon. You are in the catalogue of the doomed, and are doomed accordingly.

A popular fallacy spreads a notion that no one need "go into Chancery" unless he pleases. Nothing but an utter and happy innocence of the bitter irony of "Equity" proceedings keeps such an idea current. Men have been imprisoned for many years, some for a lifetime, on account of Chancery proceedings of the very existence of which they were almost in ignorance before they "somehow or other were found in contempt."

See yonder slatternly old man in threadbare garments, with pinched features telling of long years of anxiety and privation, and want. He has a weak starved voice that sounds as though years of privation have shrunk it as much as his hollow cheeks. He always looks cold, and (God help him) feels so too; for Liebig tells us that no quantity of clothing will repel cold without the aid of plenty of food—and little of that passes his lips. His eye has an unquiet, timid, half-frightened look, as if he could not look you straight in the face for lack of energy. His step is a hurried shuffle, though he seldom leaves his room; and when he does, he stares at the racket-players as if they were beings of a different race from himself. No one ever sees his hands: they are plunged desperately into his pockets, which never contain anything else. He is like a dried fruit, exhausted, shrunken, and flung aside by the whole world. He is a man without hope—a Chancery prisoner! He has lived in a gaol for twenty-eight weary years! His history has many parallels. It is this:—

It was his misfortune to have an uncle, who died leaving him his residuary legatee. The uncle, like most men who make their own wills, forgot an essential part of it—he named no executor. Our poor friend administered, and all parties interested received their dues—he, last of all, taking but a small sum. It was his only fortune, and having received it he looked about for an investment. There were no railways in those days, or he might have speculated in the Diddlosex Junction. But there were Brazilian Mining Companies, and South Sea Fishing Companies, and various other companies, comprehensively termed "Bubble." Our friend thought these companies were not safe, and he was quite right in his supposition. So he determined to intrust his money to no bubble speculation; but to invest it in Spanish Bonds. After all, our poor friend had better have tried the Brazilian Mines; for the Bonds proved worth very little more than the paper

on which they were written. His most Catholic Majesty did not repudiate (like certain transatlantic States) but buttoned up his pockets and told his creditors he had "no money."

Some five years after our friend was startled by being requested to come up to Doctors' Commons, and tell the worthy Civilians there all about his uncle's will—which one of the legatees, after receiving, all he was entitled to under it and probably spending the money—suddenly took it into his head to dispute the validity of. Meanwhile the Court of Chancery also stepped in, and ordered him (pending the ecclesiastical suit) to pay over into court "that little trifle" he had received. What could the poor man do? His Catholic Majesty had got the money—he, the legatee, had not a farthing of it, nor of any other money whatsoever. He was in contempt! An officer tapped him on the shoulder, displayed a little piece of parchment, and he found that he was the victim of an unfortunate "attachment." He was walked to the Fleet Prison, where, and in the Queen's Prison, he has remained ever since—a period of twenty-eight years! Yet no less a personage than a Lord Chancellor has pronounced his opinion that the will, after all, was a good and valid will; though the little family party of Doctors' Commons thought otherwise.

There is another miserable-looking object yonder—greasy, dirty, and slovenly. He, too, is a Chancery prisoner. He has been so for twenty years. Why, he has not the slightest idea. He can only tell you that he was found out to be one of the relations of some one who had left "a good bit of money." The lawyers "put the will into Chancery; and at last I was ordered to do something or other. I can't recollect what, which I was also told I couldn't do now if I would. So they said I was in contempt, and they took and put me into the Fleet. It's a matter of twenty years I have been in prison: of course I'd like to get out, but I'm told there's no way of doing it anyhow." He is an artisan, and works at his trade in the prison, by which he gains just enough to keep him, without coming upon the county rate.

In that room over the chapel is the infirmary. There was a death lately. The deceased was an old man of sixty-eight, and nearly blind: he had not been many years in prison, but the confinement, and the anxiety, and the separation from his family, had preyed upon his mind and body. He was half-starved, too; for after being used to all the comforts of life, he had to live in gaol on sixpence a day. Yet there was one thousand pounds in the hands of the Accountant-General of the Court of Chancery, which was justly due to him. He was in contempt for not paying some three hundred pounds. But Death purged his contempt, and a decree was afterwards made for paying over the one thousand pounds to his personal representa-

tives; yet himself had died, for want of a twentieth part of it, of slow starvation!

It must not, however, be supposed that Chancery never releases its victims. We must be just to the laws of "Equity." There is actually a man now in London whom they have positively let out of prison! They had, however, prolonged his agonies during seventeen years. He was committed for contempt in not paying certain costs, as he had been ordered. He appealed from the order; but until his appeal was heard, he had to remain in durance vile. The Court of Chancery, like all dignified bodies, is never in a hurry; and therefore, from having no great influence, and a very small stock of money to forward his interest, the poor man could only get his cause finally heard and decided on in December, 1849—seventeen years from the date of his imprisonment. And, after all, the Court decided that the original order was wrong; so that he had been committed for seventeen years *by mistake!*

How familiar to him must have been the face of that poor, tottering man, creeping along to rest on the bench under the wall yonder. He is very old, but not so old as he looks. He is a poor prisoner and another victim to Chancery. He has long ago forgotten, if he ever knew, the particulars of his own case, or the order which sent him to a jail. He can tell you more of the history of this gloomy place and its defunct brother, the Fleet, than any other man. He will relate you stories of the "palmy days" of the Fleet, when great and renowned men were frequently its denizens; when soldiers and sailors, authors and actors, whose names even then filled England with their renown, were prisoners within its walls; when whistling shops flourished and turnkeys were smugglers; when lodgings in the prison were dearer than rooms at the west-end of the town; and when a young man was not considered to have finished his education until he had spent a month or two in the Bench or the Fleet. He knows nothing of the world outside—it is dead to him. Relations and friends have long ceased to think of him, or perhaps even to know of his existence. His thoughts range not beyond the high walls which surround him, and probably if he had but a little better supply of food and clothing, he might almost be considered a happy man. But it is the happiness of apathy, not of the intelligence and the affections—the painless condition of a trance, rather than the joyous feeling which has hope for its bright-eyed minister. What has he to do with hope? He has been thirty-eight years a Chancery prisoner. He is another-out of twenty-four, still prisoners here, more than half of whom have been prisoners for above ten years, and not one of whom has any hope of release! A few have done something fraudulent in "contempt" of all law and equity; but is not even their punishment greater than their crime?

Let us turn away. Surely we have seen

enough, though many other sad tales may be told, rivalling the horrors of Spielberg and French Lettres-de-cachet.

THE OUTCAST LADY.

THE Lady sate at the castle gate,
Her face was wan and wild,
And "Oh," she said, "that I were dead,
But for ye, my bonnie wee child."

The night grew late, still there she sate,
Biding the winter storm;
The morning came, and still the same,
Sate there the muffled form.

With stately show, but sad and slow,
They throw the portals wide,
And a little bier was drawing near,
Borne with a mournful pride.

"Why sit ye there?" cried they who bare,
"This is nae place for you,
Gae seek a name to hide your shame,
And make nae man ado."

She spake nae word, she never stirred,
They plucked her cloak away—
From her face so wan, was the wildness gone,
And there Death softly lay.

A CAPE COAST CARGO.

"Now then," said Jack Ayres, "we'll go and look for a ship." Accordingly, turning out of our boarding-house in Maddison Street, New York, we bent our steps towards the Shipping Master's Office, on the quay.

We were walking along the quay, under the jib booms of the large ships, that thrust their ends almost into the warehouse windows, when Jack suddenly stopped, as if he had forgotten something, and exclaimed, "Have you got your protection?"

"No," I answered, "nor do I exactly know how to get one. I have only been an American a month."

"Oh, that's nothing," cried Jack, "come along with me;" and he hurried me off to the Custom House. Jack stated at the proper department what I wanted, and in five minutes I had a document, stating I was born at New Bedford, Massachusetts, giving a concise and flattering description of my person, and entitling me to the rights and privileges of a free-born American—all for one dollar.

"And very cheap, too, for such a tremendous 'buster!'" said Jack.

"It's very shocking," I remarked; though I am afraid that I seized and pocketed the document without any repugnance whatever.

"Them sort don't count nothing, you know," said Jack, "afore a stranger—but here we are!"

The Shipping Office was a small room, containing a large counter, that extended quite across it. Behind this stood the Shipping Master, a keen-looking man, with more of a Jewish than American cast of countenance. Before it were a group of sailors dressed in

every style, from the long-tailed swinger and watch and chain of the better sort, down to the red or blue flannel shirt and sheath-knife of the regular Yankee Tar. A list of ships wanting hands hung on the wall. A sheet of paper, with a printed heading, was stretched on the counter as we entered, on which the Shipping Master was writing, vociferating at the same time, "Now then, who's the next? Here you are—John Brown—touch the pen—down with your mark. All right, John Brown; pass on. Next? Silas Jones, eh? Well, Silas, that's the place for your fist, I guess. Good again. You're the last, Silas. No more for the Rainbow," he cried, closing the articles, and turning to another sheet. "Now for the 'Lucy Anne.'"

"Where do you want to go to, my men?" added he, turning to Jack and I.

"Oh, we're not very nice," replied Jack, "anything in the small way. None of your ten-waggons for my money."

"Well, then, my lads, here's just the thing for you," rejoined the Shipping Master; "smart brig—good skipper—only wants two hands. Sails to-morrow for the South coast of Africa. A tar-nation nice trip."

"What do you say—will this do?" said Jack.

"Just as you like," replied I.

"Then here goes!" cried Jack, and in another minute his mark and my signature were attached to an agreement between us and a certain John Curson pledging us to do his behests during a voyage to Ambriz and back, for the consideration of sixteen dollars, each of us, per month. Our month's advance pay was handed to us, and the next day saw us domiciled in the dimly-lighted, half-oval-shaped den—the furniture of which consisted of eight bunks—which was called the "Fok'stle," and was to be our home for some time. The crew consisted of four besides Jack and myself; a Maltese, a Portuguese, and two Americans. It was difficult to say what countryman the "old man" was, or what sort of a person he was, for captains do not generally "show out" at first, particularly if they have any teeth to show. As far as living went (and that very naturally makes a sensible impression on one's feelings), there could be no fault found with the "Lucy Anne." The crew stinted in nothing; so that when, the next day, we ran out with a fair wind past Sandy Hook and its lighthouse, it was with every apparent chance of a pleasant voyage.

Our passage across the Atlantic was accomplished without anything out of the usual routine of sea-life to disturb us. We had the average amount of fresh breezes, squalls, and variables, before we took the S.E. trades, together with a proportionate number of disturbed "Watches below," and reefing matches in consequence; though, on the whole, we had nothing to complain of in that respect.

Everything went on smoothly, and the captain and his mate, who was a foreigner, seemed

on particularly good terms. We had now arrived within a hundred miles of the coast, and had exchanged the regular fresh trade winds for sultry calms, and the first faint indication of land and sea breezes; the latter helped us on, and the next morning we could just discern the remarkable high land, shaped like a saddle, that rises behind Ambriz. As we neared the coast, but before we could make it out at all distinctly, we could discern a column of white smoke in the far distance, to the northward, rising over the dim haze that outlined indistinctly against the sky, where the land was; this was soon followed by a similar one nearer to us, and then another,

"And soon a score of fires I ween

From height, and hill, and cliff were seen;"

rising from the dim mist over the land at regular intervals, and extending along the line of coast to the southward as far as we could see; and visible to any vessel miles farther at sea than we were.

Jack and I had few opportunities of conversing on the passage, being in different watches. The hands were now on deck, and as the brig, running in before the wind, rapidly neared her destination, we were standing on the fore-castle watching the progress of the fires.

"What in the world do they mean?" I asked.

"Oh! I suppose there's some cruiser in sight to the north, and they're signalling any slaver from shore not to come too near."

"That's a capital dodge—why they can see them before they make the land!"

"'Course they can," replied Jack, "and the Brazilians as is regularly fitted, lays off and on till there's a slant o' wind and the coast's clear, then pops in and ships her poor devils of darkies, and is off again with the land breeze, before you can say 'Knife!'"

"You're right, Jack," I exclaimed. "See there—to the north; isn't that smoke? that dark, black streak, I mean."

"O'course it is—that's a British steamer's smoke—a regular blockader I pound it. She's running down the coast, and they're lighting her along."

"Cus 'em," muttered the "old man" who was standing near us, "we shall have that fellow boarding us every day, I suppose."

In the mean time the brig had neared the anchorage, and we could see plainly the line of trees, behind which a cluster of barn-like factories, with their respective flag-staffs, peeped out upon the top of a bluff, red-coloured cliff. To the left, the coast was low with a heavy line of surf breaking, and on the bar, stretching from the bluff in the same direction, the long heavy swell sometimes capped and broke with a growling roar; inside of this, and sheltered by it, was the landing-place.

Before the brig's anchor was well down, a

man-of-war's boat came alongside. The papers were looked at and proved to be regular. As the officer of the boat was going, the old man said—

"Any of Uncle Sam's beauties about here, Capt'n?"

"The 'Perry' was here a week ago—She's gone on the north coast."

"She is—is she—" said the old man, unable to conceal a smile of satisfaction. The officer observed it.

"Ah!" said he, "I should like to be able to look down those hatchways of yours—there's a very good general cargo, I expect."

"Ha, ha, Capt'n," chuckled the skipper, "it won't do that, at any price—I guess you'd better take a good long look up at *that*," and he pointed to the stars and stripes at the brig's peak "before you think about lifting my hatches."

"More's the pity," rejoined the officer, descending into the boat, and shoving off; "it screens many a slaving scoundrel, and its pattern is cut deep enough in many a slave's back."

"And will be, too, I guess," muttered the "old man," turning away, "spite of all John Bull can do."

"Darned if I don't think this old man's up to something," said Jack to me, in a low tone.

"What do you mean?"

"Why, what made him so partic'lar as to where a Yankee man-of-war was? However, keep dark; we shall soon see how the wind sets."

The next day the skipper went on shore to one of the factories, and we saw little or nothing of him; so we commenced discharging our cargo. It consisted of those articles that are used in trading, either for the legal coast exports of gold-dust, gum, ivory, or the more valuable black, live commodity; we had powder, and gun-flints, and bales of trade-cloth and trinkets, knives and beads enough for a miniature Great Exhibition. We had no time to look about us much while at work, but we saw occasionally the white canvas of the man-o'-war steamer, dodging on and off the port, under sail. Her boat did not trouble us either by boarding us, though we caught a glimpse of her every now and then some miles down to the southward.

In a few days the hold appeared about half empty, and with the first boat that went ashore with cargo I was sent to take a letter from the mate up to the "old man," who was at the Portuguese factory. The path from the landing-place up the back of the bluff headland was a perpendicularly steep, beaten track, up and down which the great people of the place were carried in net hammocks slung on a pole, on the shoulders of their slaves or servants. The path was bordered with bush, and here and there patches of cultivation for rearing "cassada." On the brow of the hill we saw the factories between the trees, and

had a long look out both seaward and inland. The "old man" was seated with three or four other men, dressed in the lazy, light style generally adopted on the coast, drinking the usual beverage, bottled beer, and smoking and conversing earnestly. They ceased talking as I entered.

"Well, my man. Is the brig's hold clean swept yet?" said he.

"No, Sir; the cargo is only about half out."

"Half out is it, eh?" said he, opening the note. "Go and cruize about the place, and come back here by-and-bye for an answer." Of course I cleared out; and as I left the place, I heard him add to the others, "We shall be ready by sunset."

"What does he mean?" thought I to myself, as I strolled along without any idea where I was going. "The brig won't be unloaded by that time; perhaps he's going to take a cargo of slaves on the top of all; there's something in the wind. I'll be shot if I have anything to do with it, though."

I had by this time strolled some distance from the factories, and found myself on an open space near a long wooden one-story building, surrounded by a high wood fence that enclosed a considerable space of ground around it. Suddenly, there arose from this place the most piercing yells and howls conceivable; then stifled shrieks and moans, and a low hum, as if there were many people there. Horrified by these cries, I turned into the enclosure. What a scene was there! Hundreds of wretched slaves, worn, emaciated; crouched in every attitude that misery, in its deepest anguish, could suggest. In one corner of the yard there were two men—black men, too—heating brands at a fire they had made there, and searing the living flesh on the legs and arms of the miserables, while others held them in turn, and stifled their heart-rending cries and screams of pain. My first impulse was to rush to the rescue of the unhappy one then undergoing the horrible atrocity, but before I was half-way across the slave-yard, the conviction of the utter uselessness of such a proceeding came upon me, and turning sick and faint, I stopped my ears with my fingers, and retraced my steps. The whole was so inconceivably horrible I could scarcely realise it. The cries and howls of agony still rung in my ears as I walked, and I could see the slave again writhing under the hissing iron, struggling with the brutal ruffians who held him, and crawling in agony on the ground as he was flung there, with that fearful mark upon him, burning into his very nerves.

"Why, I reckon you've been scared, young feller!" exclaimed a tall Yankee in a broad-brimmed straw hat, whom I recognised as one of the agents at the American factory for some American house. I was silent; I had been too much scared to speak.

Presently I learned from him what I had previously suspected; but could hardly be-

lieve that I was one of the crew of a regular slaver.

"But," I remarked, "the brig's not half discharged."

"Don't you believe it," said he. "There ain't much in her now, I guess, besides water for the passage. Your old man's made rather a good thing, I reckon; for they've let him take the lot up there a bargain. You see they're getting short of grub. They've been on short allowance this last week, and there ain't above another day or two's left, so they're glad to take a little less than usual for 'em. But prices ain't bad nohow. The cruisers keep the trade brisk enough. The more the merrier—though they starve a few occasionally."

As I walked towards the place I had been ordered to call for the letter, I turned over in my mind what was best to be done. That I would not go in the "Lucy Anne" and be a witness, if not compelled to be an actor in cruelties perhaps almost as bad as those I had witnessed, I was determined, come what might. My duty I felt to be to expose her real character to a man-of-war. But how was I to get away, and what chance was there of falling in in time—should I escape clear—with her or her boats? These things presented themselves in a very unsatisfactory light, as I revolved them in my mind; so at last I came to the determination of taking a straight-forward course, and telling the "old man" I didn't wish to join him, and request my discharge at once. With this idea I hurried into the factory to tell the "old man" my mind. To my disappointment he had gone on board, leaving orders for me to follow, which I did, regretting all the way that I had not seen him when I felt worked up into good trim for a row with him, had such a thing occurred. The moment I got on board I rushed off to Jack Ayres, and detailed all that occurred, second thoughts having suggested taking his advice.

"Well, what are you going to do?" said Jack.

"Ask for my discharge."

"Absurd! If you go ashore here, you'll be murdered in no time. But, if you will bolt, wait till they begin to ship, and then pop off in a Kabenda boat, or a canoe, to the man-o'-war. But I don't see why you're so 'nation squeamish about the niggers. A couple of hundred dollars or so, don't often come amiss."

"Oh, Jack, if you'd only seen what I have seen—"

"Well, 'vast a bit. Let's hear what the 'old man' has to say," said Jack, for the skipper had just emerged from below, and sung out to the mate to send everybody aft.

"Now my men," said he, when we had all mustered round him. "I'm a going to ship a cargo of slaves at sunset; if you like to share, you'll have two hundred dollars

apiece—if you don't, you may go ashore, or to blazes, if you like."

None of the crew answered: they were regularly taken aback at this unexpected announcement.

"I'll give you an hour to consider, all of you. But look out! if there's any double shuffling with me, or any one goes near those signal halliards, and attempts to lower that flag, I'll shoot him."

The men stood silent, and looked in each other's faces, as if to read what course each should adopt; still no one spoke.

"There—that'll do now; go for'ard and make your minds up."

"I, for one, Captain Odrum, will never—"

"Hush! Hush!"—cried Jack, seizing me by the arm, and hawling me along with the rest.

"Go for'ard, Sir," added the skipper, turning away; and the next minute we were all in the fore-castle discussing the matter. The whole of the crew decided in favour of the "old man's" offer.

"I tell you, Jack, I'll have nothing to do with it," was my answer to Jack's entreaties "not to be a fool." "Well, if you won't, you won't," he continued; "at all events, you needn't say so, but wait till it's dark and get away; for if you go ashore to-day you'll be as dead to-morrow as a dried herring."

"But do come with me, Jack."

"Why you see, old fellow, I'm poor, and can't afford to throw away a couple of hundred dollars for the chance of more kicks than halfpence, in a man-o'-war."

"So be it, then. Every man for himself."

The Captain was told the crew were all willing to accept his offer—much to his satisfaction; and, much to mine, I saw, in the afternoon, the man-o'-war steamer standing in for the land, some distance to the northward, so I took an opportunity of making up in a bundle a selection of best things from my sailor's kit.

The last boat load of the cargo from the States had been despatched, and the "Lucy Anne's" hold now showed a tier of large water-casks, ready filled, which had hitherto been hidden by the cargo. A portion of the hold was stowed too with farina, jerked beef, and rice; and, when a few planks were laid upon the casks and covered with matting, and the large coppers for cooking placed, she was as regularly fitted a slaver below as ever was seen upon the coast; while on deck, her hatches on, and her colours flying, she defied any cruiser's scrutiny, even were one signalled to, unless at the risk of infringing the boasted impunity from search of the flag she wore.

Directly it was dark, the work commenced in earnest; crowds of boats of all kinds—launches, canoes, Kabenda-boats—all loaded to the water's edge with their living cargo, crowded alongside. Hundreds of the unfortunate beings, some of whom were still suf-

fering horribly from the undressed sores that the morning's work had given them, filed in succession on the deck, and were as quickly driven down below. During the bustle I took my bundle in my mouth, seized an unobserved moment, and slipped down the cable into a Kabenda-boat, passing close by, that I had beckoned to. Down in the bottom of the boat I threw myself, and we shoved off, and pulled away. As we did so the Captain just caught a glimpse of us, and roared out, with an oath, to the boat to stop—

"Come back, or I'll fire at you!"

"Don't mind him. Pull, pull—give way—do, do pull!"—cried I, trembling with excitement. The boat sprang a-head into the gloom as a bullet splashed into the water, passing not a foot from the steersman's head. Now then, sails and oars—let her go. Hark they are lowering a boat to chase us. No, they can't spare time! I listened, with held breath, to the noise of shouting, and oaths; the sounds of bustle and confusion died gradually away—I was safe!

I had to bribe the Kabenda boatmen with all the money in my possession to induce them, after an hour's pulling, to continue the search for the man-of-war, or her boat, as I felt that now my only chance. They had seen her, as I had, last, at sunset, standing in—she must have fetched in somewhere where we now were, and had stood off the land again, perhaps for a short tack, perhaps for all night. Praying that the former was the case, I, at last, persuaded the Kabenda men to put the boat's head off shore and stand out in the hope of meeting her. Another hour passed and still no signs. The land wind freshened, the water rippled and broke at the boat's bows as she increased her speed, and the Kabenda men began to exclaim, that it was hopeless. I sat with outstretched neck straining my eyes to look through the darkness. We were about to give it up for the night in despair, when I heard a faint rushing noise over the water.

"'Tis porpoises!" said the steersman. "No—the sound is too regular for that;" and in a few minutes we could distinctly make out the regular beating of the paddle-wheels of a steamer, and her rushing noise through the water.

In five minutes I was on board, and had hastily explained everything to the officer of the watch. The captain was called—steam got up to full power, and we were soon tearing along for the anchorage off Ambriz. In a quarter of the time I had spent in looking for the steamer, we were there, and examining the spot—but we found no vessel. The "Lucy Anne" was gone. A consultation was now held; I was sent for, and had to repeat all the particulars of my escape, and was questioned as to the probable time that must have elapsed after my leaving, before she could make a start. The distance she had run since then was calculated, and opinions taken as

to the course she had steered. At last it was determined to run directly off the land some twenty miles, it being supposed she would not have made more than that with the land-breeze now blowing, and there wait for daylight. This was done; and the first thing I heard on waking in the morning, was, "Sail ho!" from the look-out man. There was a sail just visible on the horizon. It was calm, so that in an hour or so we should know what she was. No alteration of sails or course, indicated any attempt on the part of the stranger of avoidance or escape. In little more than an hour we could make her out to be the "Lucy Anne." There was a bustling about forward, visible as we neared her, and that alone was the only sign of consciousness of our presence that she showed. We approached still nearer, and then was heard something like the faint echo of a stifled shriek over the water—no one could say what it was like. The steamer stops within a few hundred yards astern of her, and a boat is sent. Instead of crowds of slaves, not a vestige of one was to be seen. There was the "Lucy Anne"—hatches on and decks swept—just as she was when the boat boarded her before.

The officer was about leaving when a noise was heard forward. There was a noise of cursing and struggling, and a man half bound, his clothes torn from his back and bleeding from wounds, rushed up out of the fore-castle. It was Jack Ayres—"Look," shouted he to the officer, "Look at the larboard cable," and fainting from loss of blood, fell upon deck. As he said this, the captain coolly walked below, and a moment after the report of a pistol told his fate. The officer and boat's crew rushed forward, and looking over the bows saw that the brig's larboard anchor was let go and the cable hanging in the water. The crew of the brig stood huddled together, pale and terror-stricken. "Great heaven!" cried the officer, as an inkling of the truth flashed upon him.

"Man the windlass—heave in the chain—" round went the clanking purchase, and the chain grated and surged, a few fathoms are in, and all eyes, except those of the men heaving, are fixed upon it, as link after link emerges from the blue sea. What dark mass is that as deep as we can see? No one could speak for horror, as the chain dragging up shows the dead bodies of the slaves lashed to it; they had been let go with the anchor, their bodies thus prevented from rising to tell the fearful tale.*

The chain was unloaded, and the bodies of the poor unfortunates dropped where they had been murdered.

The crew, whose number had been increased by a number of Portuguese, two part

* This is no romance, cases of similar atrocity could be cited. In 1831, the "Expedit" slave, chased by H.M.S. "Fair Rosamond" and "Black Joke," threw overboard two hundred and fifty slaves shackled together, who were drowned.

owners in the cargo, were tried and suffered the punishment of the law. Jack Ayres received a free pardon, and I had a passage offered me in the next man-of-war to England, which I accepted.

THE SEA-SIDE CHURCHYARD.

THE sea-side churchyard is a strange witness of the perilous life of the mariner and the fisherman. It is only by a walk in it that we acquire a clear conception of the real nature of that mode of livelihood which such hundreds of thousands, all round these islands, embrace, as a choice or a necessity. We resort to pleasant places in the summer time, and see the great ocean glittering and rolling in playful majesty, and our hearts leap at the sublime spectacle. We see white sails gleaming on its bosom, and steamers trailing their long clouds of smoke after them, as they busily walk the waters, bearing joyous passengers to many a new scene. We meet the hardy blue-cloth sons of ocean, on the beach and the cliff; see them pushing off their boats for a day's fishing, or coming in in the early morning with their well-laden yawls and cobbles, and the sea and its people assume to us a holiday sort of aspect, in which the labour, the watching, the long endurance of cold, the peril and the death are concealed in the picturesque of the scenery, and the frank and calm bearing of the actors themselves. What a different thing is even a fisherman's life when contemplated as a whole; when we take in the winter and the storm to complete the picture of his existence! But, as few of us can do this in reality, if we wish to know the actualities of a sea-faring life, we may get a very fair idea of them in any sea-side churchyard.

We lately took a survey of two such on the Yorkshire coast, and the notes which we there and then jotted down will afford some notion of the strange and touching records of such a place. Our first visit was to the churchyard of Filey, a mere village, well known to thousands of summer tourists for the noble extent of its sands, and the stern magnificence of its so-called bridge, or promontory of savage rocks running far into the sea, on which you may walk, at low-water; but which, with the advancing tide, becomes savagely grand, from the fury with which the ocean breaks over it.

In tempestuous weather this bridge is truly a bridge of sighs to mariners, and many a noble ship has been dashed to pieces upon it.

One of the first headstones which catches your eye in the little quiet churchyard of Filey bears witness to the terrors of the bridge.—“In memory of Richard Richardson, who was unfortunately drowned December 27th, 1799, aged forty-eight years:—

“By sudden wind and boisterous sea
The Lord did take my life from me;

But He to shore my body brought—
Found by my wife, who for it sought.
And here it rests in mother clay,
Until the Resurrection day.

“Also of Elizabeth, wife of the above, who died January 19th, 1833, aged eighty-nine.”

This fisherman was lost on the bridge, and his wife sought his body on the bridge for *eleven weeks*. She was possessed with an immoveable persuasion that there some day she should find him. All through that winter, from day to day, till late in March, she followed the receding tide, and with an earnest eye explored every ledge and crevice of the rocks, every inch of the wild chaos of huge stones that storms had hurled upon the bridge, and every wilderness of slippery and tangling sea-weed. It was in vain that her neighbours told her that it was hopeless; that they assured her that she would get her death from cold; every day the solitary watcher might be seen, reckless of wind, or storm, or frost; and, at length, she did find the corpse of her husband, and saw it consigned to “mother clay.” She must have had a frame as hardy as her will and strong as her affections, for she survived this strange vigil of conjugal love thirty-four years, and to the age of nearly ninety.

Near this stands a stone in memory of a master-mariner and his wife, both lost, in a severe gale, in a passage from London to Shields; another lost on a voyage to Quebec; and two brothers, one drowned in the Thames, and the other perishing at Constantinople. In the churchyard are numbers of such records. Humble as are the epitaphs on these graves, that hold no bodies in nine cases out of ten, they have generally a touch of real nature in them compared with the hacknied lines we generally find in churchyards. One tells us, that—

“From home he went, with mind most free,
His livelihood to gain at sea:
He ne'er returned, 'twas not to be—
He ne'er returned, 'twas God's decree.
Oh! sad to tell, a furious wave
Cast him into a watery grave—
A grave in motion—termed the deep.”

A boat sinking, carved on the stone, symbolises his fate; while opposite a lucky old mariner has had a boat in full sail placed on his headstone, and gives God hearty thanks for having saved his life some dozen times. Two disconsolate parents address us thus:—

“Unfortunate parents tell
That this our son a victim fell.
In steering homewards they were caught,
With gust of wind upset the boat.
There three were cast into the sea,
And he launched into eternity.
He was a son both good and kind;
May he in God a Father find.”

Some very philosophic friends have inscribed

the following lines, and, for a reason implied, avoided all suspicious encomium:—

"Most epitaphs are vainly wrote:
The dead to speak it can't be thought;
Therefore the friends of those here laid
Desired that this might be said.
That rose two brothers, sad to tell,
That rose in health, ere night they fell—
Fell victims to the foamy main;
Wherefore awhile they hid remain.
Friends for them sought, and much lament,
At last the Lord to those, them sent.
So child and widow may bemoan
O'er husband's and o'er father's tomb."

But Filey churchyard has touches of love and land stories as well as of the sea. Here is one, and a recent one too. Close on your left hand, immediately as you enter the gate, there is a stone by the wall bearing the names of Elizabeth Cammish, aged twenty-one, who died August 1848; and Robert Smart, engineer, aged thirty-one, who died March 1849. Elizabeth Cammish died of consumption. She was betrothed to Robert Smart, whose affection for her was so strong that he continued to regard her parents as his own, and used to be much with them, and also was very often seen lingering about the grave of the lost Elizabeth. One day he was seen very early at her grave in the morning. He was about to quit the place for an engagement in Northumberland. It was a farewell visit and his last. Elizabeth's mother had said to him, "Robert, in my grief I have forgotten to pay the doctor on account of Elizabeth's illness; I must go and pay it." "It is paid, mother," replied Robert, for he always called her mother. The sum was upwards of twenty pounds. Elizabeth's mother frequently insisted on his receiving the money again from her, but he steadily refused. And that morning, on his return from Elizabeth's grave, the old lady said, "Robert, you are leaving us, you don't know what you may want. I will pay you this money."

"Do you wish to insult me, mother?" he replied, "keep it, if anything happens to me, bury me with it; but in life I will never receive it. What is mine would have been Elizabeth's if she had lived, and I have had a melancholy satisfaction in paying this debt for her." Within half-an-hour after those words were spoken, the young man was brought back a bloody corpse from the railway by which he had set out on his journey; and that money did bury him in the same grave with Elizabeth Cammish. The romance of life is not extinguished; even railways contribute to it.

But for abundant and overwhelming evidences of the dangerous life of sea-faring men, a churchyard of a town like Scarborough is the place. There the old Church of St. Mary, at the foot of the Castle Hill, exhibits as densely crowded a scene of tombstones as any graveyard of the metropolis itself. It has

been the great depository of the dead there for, probably, a thousand years. When the Saxons lived on the spot, it most likely received their remains. When the Danes, under Regner Lodbrog scoured this coast, fortified Flambro' Head, and built Whitby, or *Hvit-bege*—their *White-town*—where Pierce Gaveston held the castle for the foolish Edward II., when Robert Aske and his "Pilgrimage of Grace," were its masters, and when Sir John Meldrum, the Parliamentary general, was killed before it. Through all these times this thronged cemetery was receiving its generations of the dead. Yet still how many stones are mere memorials of those whose bones are scattered over the wide earth, and through the deepest depths of the sea. We can only indicate a few of the multitude who have perished in every imaginable region, and have mementos here. "William Allen, drowned at Charente, Nov. 1829, aged thirteen years; and Joseph Allan, son of the *above* (sic), drowned by the overturning of a life-boat, Feb. 17th. 1836, aged thirteen years."

There are records of three persons drowned by the upsetting of that same life-boat. One man was drowned in Russia, another on a passage to New Brunswick, another on a passage to Mauritius. Robert Scott was drowned off Elsinore, and his son off the Cape of Good Hope. William Ticklepenny suffered on Osgodby Sands, Jan. 1828. Were not Osgodby Sands always under water, and that it is added that William Ticklepenny "lived respected and died lamented," we might, from the phraseology, have supposed that he was hanged. The whole crew and passengers of the "*Selina*" were wrecked on the Run Head, drowned, and buried at Plymouth, but have a stone of memory here. There are various records of persons who were drowned in the wreck of "*Betty's Delight*," near Scarborough, in 1844. Another who died at St. Domingo and is buried at Port au Prince. Some drowned in Lynn Deep—on the passage to Dover—"on the coast of France from the dreadful effects of war"—two are there who died on board of a man-of-war—some buried at sea—some bound for London—some for Jamaica—in Yarmouth Roads—off Whitby—in a yawl in sight of the town—off Sunderland—by overturning of a boat at Flamborough Head—at St. John's, New Brunswick—on the coast of Holland—off Jersey—at Batavia—in Java—coming from America—and one of *coup de soleil* at Calcutta.

Such, and from such varied regions of the earth are the memories of sudden death which you meet with here. Few, indeed, are the "water-rats," as Charles the Second used to call them, who can place on their head-stones so jovial a sort of even-song as this:—

"Tho' boisterous blasts and Neptune's waves,
Have tossed me to and fro,
Yet after all, by God's decree,
I'm sheltered here below:

Where I do safe at anchor ride,
With many of our fleet,
Who once again must all set sail,
Our Saviour, Christ, to meet."

If you turn from the churchyards to the histories of these places, you are met again by the records of terrible wrecks and disasters at sea. The "Glory," of Yarmouth, perishes with all hands; "Betsy and Ann" find the waves as faithless and fickle as their namesakes find their crews on land. The "Friendship" is broken on the rocks; "Hope" slips her anchor in the imminent moment; and even the "Happy Return" finds no guarantee for ever reaching home again in so auspicious a name. You would imagine any man mad, from all that you see around you, who would think of trusting himself to the ocean: but you look in the weatherbeaten faces that you meet, and there is no melancholy, no despair there. The tar is still the jolly tar; you have the cheerful *Yo hevo!* sung out heartily from the port, and the sailor bound for the most treacherous coasts, or on the most dangerous service, even in quest of the useless and impracticable North-West Passage, satisfies himself with the threadbare saw, that "we must all die some time."

It was precisely on the 5th of November, 1821, that a terrible gale from the north-west set in. It rose very early in the morning, and blew hurricanes all day. There was a hasty and precipitate running and crowding of fishing-boats, colliers, and other vessels into the friendly ports of Scarborough and Filey, for these once past, excepting Burlington, which is far less sheltered, there is no place of refuge nearer than the Humber to flee to. As the morning broke dark and scowling, the inhabitants looking from their windows saw whole fleets of vessels thronging into the port. Men were seen on the heights, where the wind scarcely allowed them either to stand or breathe, looking out to deserv what vessels were in the offing, and whether any danger were threatening any of them. Every one felt a sad certainty, that on that bleak coast, where this wind, when in its strength, drives many a luckless ship with uncontrollable force against the steep and inaccessible cliffs, such a day could not go over without fearful damage. Before noon the sea was running mountains high, and the waves were dashing in snowy foam aloft against the cliffs, and with the howling winds filling the air with an awful roar. Many a vessel came labouring and straining towards the ports, yet by all the exertions of the crews, kept with difficulty from driving upon the inevitable destruction of the rocky coast.

Amongst the fishing-vessels which made the Bay of Filey in safety, was one belonging to a young man of the name of George Jolliffe. By his own active labours, added to a little property left him by his father, also a fisherman, George Jolliffe had made himself the master of a five-man-boat, and carried on a

successful trade. But the boat was his all, and he sometimes thought, with a deep melancholy, as he sat for hours through long nights looking into the sea, where his nets were cast,—what would become of him if any thing happened to the "Fair Susan?" The boat was christened after his wife; and when George Jolliffe pictured to himself his handsome and good Susan, in their neat little home, in one of the narrow yet clean little lanes of Scarborough, with his two children, he was ready to go wild with an inward terror at the idea of a mishap to his vessel. But these were but passing thoughts, and only made him the more active and vigilant.

He had been out some days at the Dogger-bank, fishing for cod, and had taken little, when the sky, as he read it, boded a coming storm. He immediately hauled his nets, trimmed his sails, and made for home with all his ability. It was not long before he saw his own belief shared by the rest of the fishermen who were out in that quarter; and from whom all sail was bent landward. Before he caught sight of land, the wind had risen to a violent gale; and as he drew nearer the coast, he became quite aware that he should not be able to make his own port, and must use all energy to get into Filey. In the afternoon of this 5th of November, he found himself, after stupendous labour, and no little anxiety, under shelter of the land, and came to anchor in a crowd of other strange vessels.

Wearied, drenched with wet, and exhausted by their arduous endeavours to make this port, as he and his four comrades ascended the steps to Filey village, their attention was soon excited by the crowds of sailors and fishermen who were congregated at the foot of the signal-house, and with glasses and an eager murmur of talk were riveting their attention on something seaward. They turned, and saw at once the object of it. A fine merchant vessel, under bare poles, and apparently no longer obeying the helm, was labouring in the ocean, and driving, as it appeared, hopelessly towards that sheer stretch of sea-wall called the Spectan Cliff—against which so many noble ships had been pitched to destruction.

"Nothing can save her!" said several voices with an apparent calmness which would have struck a landsman as totally callous and cruel. Already there might, however, be seen a movement in the crowd, which George Jolliffe and his comrades knew from experience, meant that numbers were going off to assist, if possible, in saving the human life on board the vessel, which itself no power on earth could save. Little hope, indeed, was there of salvation of life, for the cliff was miles in extent, and for the whole distance presented a perpendicular wall of two hundred feet in altitude, against which the sea was hurling its tremendous billows to a terrific height. But wearied as George Jolliffe was, he instantly resolved to join in the endeavour to afford

what help was possible, or at least to give to the terrified people on board the doomed ship the satisfaction of perceiving that their more fortunate fellow-creatures on land were not indifferent to their misery.

Hurrying, therefore, into the Ship public-house close at hand, he drank a pint of beer as he stood, took a couple of stout pieces of bread and cheese in his hand, and in the next moment was hauled up into a cart which was going off with a quantity of fishermen on the same errand. One only of his crew accompanied him, and that was his younger brother; the three hired men declared themselves half-dead with fatigue, and staid behind.

The cart drove along at an almost furious rate, and there were numbers of others going the same road, with the same velocity; while they could see streams of young men on foot, running along the tops of the cliffs, taking the nearest course towards the scene of the expected catastrophe. Long before George Jolliffe and those with whom he went reached the point where they left their cart, and started forward bearing coils of rope, and even warm garments with them, they heard the firing of guns of distress from the jeopardised vessel. It would seem that up to a certain moment the people on board trusted to be able to bring the ship under shelter of the land, and then get an anchorage: but the dreadful reality of their situation had now evidently burst upon them; and the crowds hastening towards the cliff, hurried forward more anxiously as the successive boomings of these melancholy guns reached their ears.

When Jolliffe and his companions reached the crest of the cliff, and looked out on the sea, it was already drawing toward evening. The wind still blew furiously. The ocean was one chaos of tossing and rolling billows, and the thunder of their discharge on the face of the cliff, was awful. The first sight of the unhappy vessel made the spectator ejaculate "Oh Lord!" That was all that was uttered, and it spoke volumes. The throng stood staring intently down on the ship, amid the deafening thunder of the ocean, and the suffocating violence of the winds. On came the devoted vessel like a lamed thing, one of its masts already gone by the board, and but few people to be seen on the deck. These, however, raised their hands in most imploring attitude towards the people on the cliff, as if relying on them for that aid which they despaired to afford. As the helpless vessel came nearer the cliff, it encountered the resistent force of the waves that were sent with a stunning recoil from their terrible shock against the precipice. It staggered, stooped, and was turned about without power of self-guidance. One mountainous sea after another washed over her, and the few human beings disappeared with shrieks that pierced even through the turbulent dis-

sonance of the tempest. The assembled crowd on the cliff shuddered with horror, and felt that all need of their presence was at an end. But they stood and stared as with a fascinated intensity on the vessel that now came nearer and nearer to its final catastrophe; when all at once there was discerned an old man, with bare head and white streaming hair, lashed to the main-mast. He stood with lifted hands and face gazing up to them as if clinging firmly to the hope of their saving him. A simultaneous agitation ran through the crowd. The ship was lifted high on the back of the billows, and then pitched down again within a short distance of the cliff. A few more seconds—another such a heave, and she must be dashed to pieces. At once flew out several coils of ropes, but the fury of the wind, and the depth to which they had to go defeated them. They were hurled against the crags, and came nowhere near the vessel. Again were thrown out others, and amongst these one was seized by the old man. There was a loud shout at the sight; but the moment was too terrible to allow of much rational hope. The vessel was close upon the cliff—one more pitch, and she would perish. All eyes were strained to see when the old man had secured the rope round him. He was evidently labouring to do this before he loosed himself from the mast, lest he should be washed away by the next sea. But he appeared feeble and benumbed, and several voices exclaimed, "He will never do it!" A sea washed over him. As it went by they saw the old man still stand by the mast. He passed his arm over his face as if to clear his eyes from the water—and looked up. He still held convulsively by the rope which they had thrown; but it was evident he was too much exhausted to secure it round him. At that moment the huge vessel struck with a terrific shock against the solid wall, and staggering backward, became half buried in the boiling waters. Again it was plunged forward with a frightful impetus, and the next instant the mast fell with a crash—and the whole great hull seemed to dissolve in the liquid chaos. In another moment the black stern of the ship was seen to heave from the waves, and then disappear, and anon spars and casks were seen churning in the snowy surf, and tossed as playthings by the riotous sea again and again to the annihilating wall.

The next morning the wind had greatly abated; and, with the first peep of day, numbers of fishing-boats put out to see whether anything of value which had floated from the wreck could be picked up. George Jolliffe was amongst the earliest of these wreckers; but in his mind the face and form of that old man were vividly present. He had dreamed of them all night; and while the rest of his crew were all alert on the look-out for corks or other floating booty, he could not

avoid casting a glance far and wide, to see if he could descry anything of a floating mast. Though the wind was intensely still, the sea still rose high, and it was dangerous to approach the cliff. The vessels around them were busily engaged in securing a number of articles that were floating; but George still kept a steady look-out for the mast; and he was now sure that he saw it at a considerable distance. They made all sail for it; and, sure enough, it was there. They ran their vessel close alongside of it, and soon saw, not only a sling rope encircling its lower end, but a human arm clutching fast by it. Jolliffe had the cobbles soon adrift, and, with a couple of rowers, approached the floating timber. With much difficulty, from the uneasy state of the sea, he managed to secure a cord round the drowned man's wrist, and with an axe severed the rope which tied him to the mast. Presently they actually had the old man in the boat, whom they last evening saw imploring their aid from the wreck. Speedily they had him hoisted into the yawl; and when they got on board, and saw him lying at his length on deck, they were astonished at his size and the dignity of his look. He was not, as he seemed from the altitude of the cliff, a little man: he was upwards of six feet in height, of a large and powerful build; and though of at least seventy years of age, there was a nobility of feature, and a mild intelligence of expression in him, which greatly struck them.

"That," said George Jolliffe, "is a gentleman every inch. There will be trouble about him somewhere."

While saying this, he observed that he had several jewelled rings on his fingers, which he carefully drew off; and said to his men: "You see how many there are;" and put them into his waistcoat-pocket. He then observed that he had a bag of stout leather, bound by a strong belt to his waist. This he untied, and found in it a large packet wrapped in oil-cloth, and sealed up. There was also a piece of paper closely and tightly folded together, which being with difficulty, from its soaked state, opened and spread out, was found to contain the address of a great mercantile house in Hull.

"These," said George Jolliffe, "I shall myself deliver to the merchants."

"But we claim our shares," said the men.

"They are neither mine nor yours," said George; "but whatever benefit comes of doing a right thing, you shall partake of. Beyond that, I will defend this property with my whole life and strength, if necessary. And now let us see what else there is to be got."

The men, who looked sullen and dogged at first, on hearing this resumed their cheerfulness, and were soon in full pursuit of other floating articles. They lashed the mast to the stern of their vessel, and in the course of a few hours were in possession of considerable

booty. Jolliffe told them that, to prevent any interference of the police or the harbour-master with the effects of the old gentleman, he would be put out near Filey, and they must steer the yawl home. He secured the bag under his tarpaulin coat, and was soon set ashore at a part of the bay where he could make his way, without much observation, to the Hull road. He met the coach most luckily, and that night was in Hull. The next morning he went to the counting-house of the merchants indicated by the paper in the drowned gentleman's bag, and informed the principals what had happened. When he described the person of the deceased, and produced the bag, with the blotted and curdled piece of paper, the partners seemed struck with a speechless terror. One looked at the other, and at length one said, "Gracious God! too sure it is Mr. Anckersverdt!"

They unfolded the packet, conferred apart for some time with each other, and then, coming to Mr. Jolliffe, said, "You have behaved in a most honourable manner: we can assure you that you will not fail of your reward. These papers are of the utmost importance. We tell you candidly they involve the safety of a very large amount of property. But this is a very sorrowful business. One of us must accompany you, to see respect paid to the remains of our old and valued friend and partner. In the meantime here are ten pounds for yourself, and the same sum to distribute amongst your men."

George Jolliffe begged the merchants to favour him with a written acknowledgment of the receipt of the packet and of the rings which he now delivered to them. This he obtained; and we may shorten our recital by here simply saying, that the remains of the drowned merchant were buried, with all respectful observance, in the old churchyard at Scarborough; a great number of gentlemen from Hull attending the funeral.

That winter was a peculiarly severe and stormy one. Ere it was over, George Jolliffe himself had been wrecked—his "Fair Susan" was caught in a thick fog on the Filey rocks, his brother drowned, and only himself and another man picked up and saved. His wife, from the shock of her nerves, had suffered a premature confinement, and, probably owing to the grief and anxiety attending this great misfortune, had long failed to rally again. George Jolliffe was now a penniless man serving on board another vessel, and enduring the rigours of the weather and the sea for a mere weekly pittance. It was in the April of the coming year that one Sunday his wife had, for the first time, taken his arm for a stroll to the Castle Hill. They were returning to their little house, Susan pale and exhausted by her exertions, with the two children trudging quietly behind, when, as they drew near their door, they saw a strange gentleman, tall, young, and good-looking, speaking with Mrs. Bright, their next neighbour.

"Here he is," said Mrs. Bright; "that is Mr. Jolliffe."

The stranger lifted his hat very politely, made a very low bow to Mrs. Jolliffe, and then, looking a good deal moved, said to George, "My name is Ankersværd." "Oh," said George; all that rushing into his mind which the stranger immediately proceeded to inform him.

"I am," said he, "the son of the gentleman who, in the wreck of the 'Danemand,' experienced your kind care. I would have a little conversation with you."

George stood for a moment as if confused, but Mrs. Jolliffe hastened to open the door with the key, and bade Mr. Ankersværd walk in. "You are an Englishman?" said George, as the stranger seated himself. "No," he replied, "I am a Dane, but I was educated to business in Hull, and I look on England as my second country. Such men as you, Mr. Jolliffe, would make one proud of such a country, if we had no other interest in it." George Jolliffe blushed, Mrs. Jolliffe's eyes sparkled with a pleasure and pride that she took no pains to conceal. A little conversation made the stranger aware that misfortune had fallen heavily on this little family since George had so nobly secured the property and remains of his father.

"Providence," said Mr. Ankersværd, "evidently means to give full effect to our gratitude. I was fast bound by the winter at Archangel, when the sad news reached me, or I should have been here sooner. But here I am, and in the name of my mother, my sister, my wife, my brother, and our partners, I beg, Mr. Jolliffe, to present you with the best fishing-smack that can be found for sale in the port of Hull—and if no first-rate one can be found, one shall be built. Also, I ask your acceptance of one hundred pounds, as a little fund against those disasters that so often beset your hazardous profession. Should such a day come—let not this testimony of our regard and gratitude make you think we have done all that we would. Send at once to us, and you shall not send in vain."

We need not describe the happiness which Mr. Ankersværd left in that little house that day, nor that which he carried away in his own heart. How rapidly Mrs. Jolliffe recovered her health and strength, and how proudly George Jolliffe saw a new "Fair Susan" spread her sails very soon for the deep-sea fishing. We had the curiosity the other day to enquire whether a "Fair Susan" was still amongst the fishing vessels of the port of Scarborough. We could not discover her, but learnt that a Captain Jolliffe, a fine, hearty fellow of fifty is master of that noble merchantman, the "Holger-Danske," which makes its regular voyages between Copenhagen and Hull; and that his son, a promising young man, is an esteemed and confidential clerk in the house of Davidsen, Ankersværd

and Co., to whom the "Holger-Danske" belongs. That was enough; we understood it all, and felt a genuine satisfaction in the thought that the seed of a worthy action had fallen into worthy soil, to the benefit and contentment of all parties. May the "Holger-Danske" sail ever!

THE YOUTH AND THE SAGE.

YOUTH.

Oh, Sage, the parentage of Wisdom tell!
She seems not of the earth—but from above?

SAGE.

Good Youth, she's part of earth, men know too well;
Pain is her father—but her mother, Love.

THE DEVONSHIRE DORADO.

A DISCOVERY is not thought much of, which has been made not less than ten thousand miles or so from home. Even California would have taxed our credulity for a much longer time than it did before conviction arrived in huge lumps and scales of gold, had it been within an easy sail of John o' Groat's or Land's End. Hence it has happened that the resources of our own English wilds and wastes are wholly overlooked—so busy are we straining our eyes afar, to magnify and exaggerate the treasures of the antipodes. Who, for instance, ever thinks of that great granite back-bone of the County of Devon—Dartmoor—except as a run for sheep, or as a grand show-place for the lovers of the picturesque? No very deep researches below the surface of this celebrated moor enable us, however, to perceive wealth-producing materials, if not so readily marketable, quite as valuable as the same number of square acres in California itself!

Here, in the mildest climate of all England, are two hundred and sixty thousand acres, or four hundred and twenty square miles of waste ground, every inch of which is two thousand feet below the point at which corn ceases to ripen. It might all bear luxuriant cereal crops. There is not an acre of it which would not raise potatoes and turnips. We ourselves have, this very year, seen green peas, and peas in bloom, on it in October. The myrtle, always the test of a delicately-nurturing climate, has been grown in greater perfection on Dartmoor than in any other part of England. Mrs. Bray mentions, in her letters to Southey, four of these trees, from twenty-seven to thirty feet high, and of from one-and-a-half to two feet girth at their bases. Pine grows rapidly, where the experiment of draining and planting is tried. While for animal life the climate is so favourable, that pulmonary consumption is unknown in the district. Yet this English Montpelier, surrounded by a dense population, is allowed to remain a vast, unprofitable, though not unproductive moor.

Of this immense tract, Albert, Prince of

Wales, is the lord of one hundred and sixty-six thousand acres. The Commissioners of Woods and Forests, with the Chancellor of the Duchy of Cornwall, are his land stewards. We are anxious to see what they will make of that which might render our future king the richest prince in Europe, and raise his fortune far above the necessity of any addition from the Exchequer.

It was with fond satisfaction that, on recently visiting Prince Town, in the centre of this moor—where formerly ten thousand French prisoners were kept—we observed the establishment which had been let to, and given up by, a company for the manufacture of naphtha, was in rapid course of re-conversion to the purposes of prison discipline. The experiment of making criminals support themselves, in place of suffering them to "eat off their own hands" and a hole in honest folks' pockets, is about to be fairly tried. The worst classes of convicts are to be marched out daily, under military inspection, to reclaim the moor: and already two hundred convicts are on the spot, selected out of various handicrafts, to prepare the buildings for the reception of the rest. Setting aside the commercial results to be anticipated from this measure, it will help to solve the great problem, "What shall we do with our convicts?" If the principle be enforced of making them work out their emancipation in longer or shorter periods, according to the various terms of imprisonment, the best step towards the reformation, co-incident with the punishment of the criminal, will have been taken.

Our attention to the subject of the capabilities of Dartmoor has just been revived, by the recent announcement in the Times, of the complete and proved success of the experiments of Mr. Owen, an Irish landowner of large possessions. Dr. Hodges, Professor of Agriculture in Queen's College, Belfast, and Messrs. Cuffey and Sons, founded upon the discovery of Mr. Rees Reece, the eminent engineer of London, to convert peat into valuable articles of commerce, yielding a clear profit of cent. per cent. Although the chief object of these experiments was to render the bogs of Ireland, as Mr. O'Gorman Mahon hyperbolically expressed it, "A perfect California to the nation," their results are not less applicable to the case of Dartmoor.

Besides the riches to be culled from the surface of Dartmoor, the exploitation of much wealth from beneath the surface is to be expected. The strata abound in valuable lodes of tin ore. The unstratified formation is equally and universally rich in inexhaustible tracts of the finest granite, of the kind of which is composed the Nelson Column in Trafalgar Square, in London. Ascending again to the surface, we find that when fully drained—by the removal of the peat for the purpose of the contemplated profitable manufacture—many thousand acres of fine friable

loam will be uncovered immediately below, capable of carrying crops of every description of agricultural produce common to the island; and at the south-western extremity of the region, in the parish of Haugh, within seven miles of Plymouth, and six of the Plympton station of the South Devon Railway, (which commences an unbroken line of rail from thence through the whole interior of the country,) is to be found an inexhaustible supply of the very finest fire-brick earth, superior in quality even to the far-famed brick earth of Stourbridge.

But in the district, popularly known as that sub-division of this region which is designated Lea Moor, a material has been found of the most vital importance to one of the most productive and extensive branches of our national industry.

It has long been known to geologists that a powerful chemical agent is produced by the solution of peat caused by the filtration through it of rain water; which, falling upon granite, decomposes it, and dissolves it into its component parts. A bed, the product or this powerful and useful agent, nine hundred acres in extent, and of an ascertained depth of one hundred and twenty feet, has been discovered, which on being analysed, is found to produce a virtually inexhaustible supply of the finest porcelain clay perhaps to be found in the world. It has been compared by Bregniart, the celebrated manufacturer of Sèvres; Bethier, and others; with that of St. Irieux in France, and St. Austell in Cornwall, and pronounced superior to either. Its extent may be imagined, when it is known that it will supply twenty thousand tons of China clay annually, for a period of upwards of two thousand years. Then, as to the means of manufacture: at the distance of only thirty miles, the Bovey Tracey lignite quarries supply an article eminently adapted for baking earthenware of every description; and as it is calculated that every ton of porcelain clay requires for its manufacture at least four tons of fuel, the Lea Moor beds of clay supply the only link necessary to raise this country to the highest point of pre-eminence in natural capability for the manufacture of pottery.

It may well excite the surprise of those who have been accustomed to watch the rapid progress of the enterprise and energy of our capitalists—that the resources of this vast district, susceptible of conversion to so many useful and profitable purposes—should have hitherto been suffered to remain comparatively undeveloped. That the greater portion of it is the property of the Crown, and has been left to the management of the stewards of its hereditary revenues, may perhaps in a great measure account for the neglect which has hitherto deprived the nation of the advantage of its numerous elements of productiveness. But as the stage-manager in Mathews "At Home," consoled himself for

a "poor house," by the reflection that there "were the more to come next night;" so, because our ancestors have not used up the natural resources of Dartmoor, we of to-day, may flatter ourselves with the pleasing fact, that they have left it all for our use and advantage.

The dependence of so vast a proportion of our whole population upon the manufacture of textile fabrics, is a mote in our horizon, which has long troubled the mind's eye of the social economist. The greater the number of branches over which the national industry is diffused, the less are the workers at the mercy of the vicissitudes of each. A failure in the cotton-crop, as we showed in a recent article, produces misery to millions. If the silkworms sicken, or sheep die, whole counties are reduced to idleness, want, and crime. We are already warned of the danger of too absolute a reliance upon the United States for a supply of the raw material of our staple manufacture; and the competition of foreign producers in a fabric, in the production of which we do not command superiority in natural advantages, has already driven us out of many neutral markets, and compelled us to seek new customers.

It is the peculiar excellence of the manufacture of porcelain and other earthenware, that the increasing wealth, civilisation, and luxury of mankind, renders the consumption of articles which have risen from the rank of luxuries to that of necessities of domestic life, capable of almost indefinite increase; that our native producers have already carried the art to such a point that while in the year 1849 we imported only thirty-two thousand pounds worth of earthenware, we exported sixty-one million pieces of the declared value of eight hundred and seven thousand pounds; while there is no department of national industry which calls into requisition such a variety of trades and occupations. The raw materials of the manufacture, and its ancillary appliances, are all within the island itself, and none of them depend for their supply upon the vicissitudes of the seasons. The coal it consumes, and its transport, enrich the proprietor, the miner, the porter, and the carrier by land and water. Pottery is a bulky article, and occupies in its inland or foreign transport our packers, railways, canals, and shipping. The production and carriage of the clay, flint, and collateral substances, which form its elements, and which are all yielded by our own territory, afford employment to our labourers of the most extensive kind, and large profits to our landowners and capitalists; while Science and Art are liberally encouraged by a process which calls into active requisition the inventive skill of the mechanic, the discoveries of the chemist, the thaumaturgic dexterity of the artisan and modeller, the taste of the colourist and designer, and the higher genius of the painter and the sculptor.

While candour would call upon us to concede to foreign nations an equality with our own in the higher attainments of abstract science, it is the peculiar excellence of our philosophers that their genius and knowledge are reproductive, and that having compelled Nature to yield up to them her secrets, they have the ability to apply them to practical and profitable uses. It is also the providential characteristic of scientific discovery, that it is generally found to subserve, not its direct object merely, but to be ancillary to the further development of the advantages of former inventions.

When Mr. Reece's experiments shall have been sufficiently confided in by the commercial public, to induce capitalists to convert his experiments into facts, Mr. Reece will not only substantially centuple the value of the soil and surface of Dartmoor, but the success of his experiments will have the effect of removing the "overburden" (as the super-soil is technically termed by miners) from the mineral substances which it now encumbers, not only without the present heavy cost, but with positive profit. The fire clay, the granite, and porcelain clay which lie immediately below the peat range of Lee Moor, may now be produced at a diminished expense, and thereby cheapen the raw material to the manufacturer, the first condition of an extended demand for his earthenware.

No discovery could come more opportunely for the weal of the experiment of rendering convict labour productive without injury to the honest poor. Criminals may be put to the rough work of digging and piling the peat, and of after-draining, dividing, and enclosing the open moor, to fit it for agricultural purposes. Where now the bittern and the fox contend with the moorland sheep for a scanty subsistence, we may expect to see fertile farms and waving corn; while the wealth which lies under the surface will be in full action of development, to the practical effect of adding four hundred and twenty square miles to the productive acreage of England. It is not, however, the sources of wealth upon the earth at Dartmoor, but to those under the earth, that we must look, to convert the forbidding waste into a profitable and genial territory—into, in short, a DEVONSHIRE DORADO.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 38.]

SATURDAY, DECEMBER 14, 1850.

[PRICE 2d.]

A DECEMBER VISION.

I SAW a mighty Spirit, traversing the world without any rest or pause. It was omnipresent, it was all-powerful, it had no compunction, no pity, no relenting sense that any appeal from any of the race of men could reach. It was invisible to every creature born upon the earth, save once to each. It turned its shaded face on whatsoever living thing, one time; and straight the end of that thing was come. It passed through the forest, and the vigorous tree it looked on shrunk away; through the garden, and the leaves perished and the flowers withered; through the air, and the eagles flagged upon the wing and dropped; through the sea, and the monsters of the deep floated, great wrecks, upon the waters. It met the eyes of lions in their lairs, and they were dust; its shadow darkened the faces of young children lying asleep, and they awoke no more.

It had its work appointed; it inexorably did what was appointed to it to do; and neither sped nor slackened. Called to, it went on unmoved, and did not come. Besought, by some who felt that it was drawing near, to change its course, it turned its shaded face upon them, even while they cried, and they were dumb. It passed into the midst of palace chambers, where there were lights and music, pictures, diamonds, gold and silver; crossed the wrinkled and the grey, regardless of them; looked into the eyes of a bright bride; and vanished. It revealed itself to the baby on the old crone's knee, and left the old crone wailing by the fire. But, whether the beholder of its face were, now a King, or now a labourer, now a Queen, or now a seamstress; let the hand it palsied, be on the sceptre, or the plough, or yet too small and nerveless to grasp anything: the Spirit never paused in its appointed work, and, sooner or later, turned its impartial face on all.

I saw a Minister of State, sitting in his Closet; and, round about him, rising from the country which he governed, up to the Eternal Heavens, was a low dull howl of Ignorance. It was a wild, inexplicable mutter, confused, but full of threatening, and it made all hearers' hearts to quake

within them. But, few heard. In the single city where this Minister of State was seated, I saw Thirty Thousand children, hunted, flogged, imprisoned, but not taught—who might have been nurtured by the wolf or bear, so little of humanity had they, within them or without—all joining in this doleful cry. And, ever among them, as among all ranks and grades of mortals, in all parts of the globe, the Spirit went; and ever by thousands, in their brutish state, with all the gifts of God perverted in their breasts or trampled out, they died.

The Minister of State, whose heart was pierced by even the little he could hear of these terrible voices, day and night rising to Heaven, went among the Priests and Teachers of all denominations, and faintly said:

"Harken to this dreadful cry! What shall we do to stay it?"

One body of respondents answered, "Teach this!"

Another said, "Teach that!"

Another said, "Teach neither this nor that, but t'other!"

Another quarrelled with all the three; twenty others quarrelled with all the four; and quarrelled no less bitterly among themselves. The voices, not stayed by this, cried out day and night; and still, among those many thousands, as among all mankind, went the Spirit who never rested from its labour; and still, in brutish sort, they died.

Then, a whisper murmured to the Minister of State:

"Correct this for thyself. Be bold! Silence these voices, or virtuously lose thy power in the attempt to do it. Thou canst not sow a grain of good seed in vain. Thou knowest it well. Be bold, and do thy duty!"

The Minister shrugged his shoulders, and replied "It is a great wrong—BUT IT WILL LAST MY TIME." And so he put it from him.

Then, the whisper went among the Priests and Teachers, saying to each, "In thy soul thou knowest it is a truth, O man, that there are good things to be taught, on which all men may agree. Teach those, and stay this cry."

To which, each answered in like manner, "It is a great wrong—BUT IT WILL LAST MY TIME." And so he put it from him.

I saw a poisoned air, in which Life drooped. I saw Disease, arrayed in all its store of hideous aspects and appalling shapes, triumphant in every alley, bye-way, court, backstreet, and poor abode, in every place where human beings congregated—in the proudest and most boastful places, most of all. I saw innumerable hosts, fore-doomed to darkness, dirt, pestilence, obscenity, misery, and early death. I saw, wheresoever I looked, cunning preparations made for defacing the Creator's Image, from the moment of its appearance here on earth, and stamping over it the image of the Devil. I saw, from those reeking and pernicious stews, the avenging consequences of such Sin issuing forth, and penetrating to the highest places. I saw the rich struck down in their strength, their darling children weakened and withered, their marriageable sons and daughters perish in their prime. I saw that not one miserable wretch breathed out his poisoned life in the deepest cellar of the most neglected town, but, from the surrounding atmosphere, some particles of his infection were borne away, charged with heavy retribution on the general guilt.

There were many attentive and alarmed persons looking on, who saw these things too. They were well clothed, and had purses in their pockets; they were educated, full of kindness, and loved mercy. They said to one another, "This is horrible, and shall not be!" and there was a stir among them to set it right. But, opposed to these, came a small multitude of noisy fools and greedy knaves, whose harvest was in such horrors; and they, with impudence and turmoil, and with scurrilous jests at misery and death, repelled the better lookers-on, who soon fell back, and stood aloof.

Then, the whisper went among those better lookers-on, saying, "Over the bodies of those fellows, to the remedy!"

But, each of them moodily shrugged his shoulders, and replied, "It is a great wrong—BUT IT WILL LAST MY TIME!" And so they put it from them.

I saw a great library of laws and law-proceedings, so complicated, costly, and unintelligible, that, although numbers of lawyers united in a public fiction that these were wonderfully just and equal, there was scarcely an honest man among them, but who said to his friend, privately consulting him, "Better put up with a fraud or other injury than grope for redress through the manifold blind turnings and strange chances of this system."

I saw a portion of the system, called (of all things) Equity, which was ruin to suitors, ruin to property, a shield for wrong-doers having money, a rack for right-doers having none: a by-word for delay, slow agony of mind, despair, impoverishment, trickery, confusion, insupportable injustice. A main part of it, I saw prisoners wasting in jail; mad people

babbling in hospitals; suicides chronicled in the yearly records; orphans robbed of their inheritance; infants righted (perhaps) when they were grey.

Certain lawyers and laymen came together, and said to one another, "In only one of these our Courts of Equity, there are years of this dark perspective before us at the present moment. We must change this."

Uprose, immediately, a throng of others, Secretaries, Petty Bage, Hanapers, Chaffwaxes, and what not, singing (in answer) "Rule Britannia," and "God save the Queen;" making flourishing speeches, pronouncing hard names, demanding committees, commissions, commissioners, and other scarecrows, and terrifying the little band of innovators out of their five wits.

Then, the whisper went among the latter, as they shrunk back, saying, "If there is any wrong within the universal knowledge, this wrong is. Go on! Set it right!"

Whereon, each of them sorrowfully thrust his hands in his pockets, and replied, "It is indeed a great wrong;—BUT IT WILL LAST MY TIME!"—and so they put it from them.

The Spirit, with its face concealed, summoned all the people who had used this phrase about their Time, into its presence. Then, it said, beginning with the Minister of State:

"Of what duration is *your* Time?"

The Minister of State replied, "My ancient family has always been long-lived. My father died at eighty-four; my grandfather, at ninety-two. We have the gout, but bear it (like our honors) many years."

"And you," said the Spirit to the Priests and Teachers, "what may *your* time be?"

Some, believed they were so strong, as that they should number many more years than threescore and ten; others, were the sons of old incumbents who had long outlived youthful expectants. Others, for any means they had of calculating, might be long-lived or short-lived—generally (they had a strong persuasion) long. So, among the well-clothed lookers on. So, among the lawyers and laymen.

"But, every man, as I understand you, one and all," said the Spirit, "has his time?"

"Yes!" they exclaimed together.

"Yea," said the Spirit; "and it is—ETERNITY! Whosoever is a consenting party to a wrong, comforting himself with the base reflection that it will last his time, shall bear his portion of that wrong throughout ALL TIME. And, in the hour when he and I stand face to face, he shall surely know it, as my name is Death!"

It departed, turning its shaded face hither and thither as it passed along upon its ceaseless work, and blighting all on whom it looked.

Then went among many trembling hearers the whisper, saying, "See, each of you, before you take your ease, O wicked, selfish,

men, that what will 'last your 'time,' be Just enough to last for ever!"

A SUBURBAN ROMANCE.

WHEN I became incumbent of the parochial district of St. Barnabas, Copenhagen Lanes, I lodged in Peppermint Place. It was then creeping its way into the fields, with the apparent determination not to stop till it had reached Highgate. The brick-and-mortar invasion had extended to two ranks of houses, which were then in all conditions, from neat snug finish, to cheerless rooflessness. When I went to take the rooms in number one, on a drizzling afternoon, my landlord was pleased to assure me, while sweeping his arm out of a back window over a landscape in the last stage of damp decay, that the situation was "uncommonly cheerful." The view consisted of a few dismantled garden allotments; a superannuated summer-house was lying in an attitude of utter despondency against a deserted pigsty; bunches of drooping hollyhocks, broken down by the weight of their misfortunes, wept rain-drops; patches of the cabbage and other greens were sicklied over with the pale cast of lime and mortar; and tulips struggled up out of their beds between brick-bats, in the last agonies of strangulation. This uncommonly "cheerful situation" was finished off in the back ground by a damp and ragged hedge; the whole presenting a vivid tableau of the insatiable Ogre, Town, swallowing up the passive, pastoral, Country.

The chief attraction from my sitting-room was a clayey slough, in which a constant succession of brick-carts were continually stuck during all the working hours of the day; yet the boundary to this prospect was far from uninviting. Several of the opposite houses were finished and inhabited. The neatest and prettiest of them was that immediately facing my room. If window curtains were ever made of woven snow, that must have been the material of those at the first-floor window of that modest habitation;—they were so white and transparent. There was such variety in their arrangement: so much taste in the disposition of the crocuses and snow-drops in the window-sill; such evident pleasure taken in concealing the wires of the bird cage in impromptu arbours, now of geranium, now of myrtle, or else by an intertwining of cut primroses—that I was irresistibly reminded of one of those charming little cottage windows in the scenes of a French vaudeville. Nor was this impression weakened when I occasionally espied—but very seldom—between the rows of bob-fringe that dangled merrily from the curtains, the face of a lovely brunette, framed in *bandeaux* of jet hair, and illuminated by a pair of piercing black eyes.

What busy eyes they were! Though I seldom saw them, I could see what they were

doing all day long; for, every thing being dark, as if to correspond to them, (their owner was in mourning), I could observe the plainer how the little lady in black employed herself behind the film of white curtain. She was incessantly bending over a frame, and I could guess, from the motion of the arm nearest the window, that she embroidered, or did something of that sort, all day long. Now and then the hand appeared to move higher than the frame, and I supposed, from the angle of the elbow, that she was pressing it against her over-wrought eyes. Poor girl!—No wonder if they ached; for, from morning till evening, every day, except Sundays, during all that cold and cheerless spring, she was to be seen in busy motion. Except on Sunday mornings—I suppose to go to church—she never went abroad; and no other living soul was ever observed in her room.

In the course of months, my observations of the captivating SILHOUETTE—so I had nicknamed the little black profile—were more frequent than polite. The delicious little gauze of mystery which half-veiled her, piqued my curiosity; and I could safely indulge in it, as my draperies were much less aerial than hers. Though the east wind blew with continued intensity, and it was quite an effort to leave one's fireside, she was never, during daylight, away from her window. Sometimes I could distinguish that she paused, leant her head on her hand, and gazed with earnest intensity directly under where I sat. Then, as if suddenly caught in the act, she would turn like lightning to her frame, and the little black arm would move up and down with unusual rapidity. There was a curious circumstance connected with these fits of abstraction and starts of work: I remarked that they happened inversely to the proceedings of my clever young landlord below (an in-layer, carver, and cabinet-maker); for, during the moments of my Silhouette's fascination, his saw, his chisel, or plane, or hammer were in full and noisy operation; and it was exactly at the instant that either of these tools were laid down and the sound ceased, that my little lady resumed her work. I was convinced one morning that this coincidence was no mere fancy. I had by this time got used to the noises in the shop below, and could distinguish, on the forenoon referred to, that friend Bevil was making, at each stroke of his plane, very long shavings. While trying to guess, from the sounds, the length of the plank he was smoothing, I observed the damsel opposite tracing an embroidery pattern against the glass. The tracing goes on well enough for awhile; but, presently, the left-hand is lifted to the little head, the tip of the elbow rests against the window-frame, the tracing hangs against the glass by the point of the pencil held in the other hand; and the black eyes pour their rays straight into the window below me. The long shavings are turned off

with vigorous regularity; but, hark!—the plane is suddenly arrested half way!—and see, the tracing and pencil instantaneously drop from the glass opposite, and the piquant little artist vanishes like magic from the window. Presently the planing goes on again with a slow and pensive irregularity that makes me feel quite low-spirited.

Although mine was a pastoral as well as an ecclesiastical charge of the St. Barnabas district, and I was bound to watch over my flock, yet it may be said that such close scrutiny of my neighbours as that which I have confessed was scarcely dignified in a clergyman; but it must be remembered that what I have here brought together in a short space was spread over several months. Nor did the arduous duties of a new district admit of much idle window gazing. My church was only a temporary one, and I made it my business to call, in succession, on my parishioners, not only to make myself personally acquainted with each, but to invite them to worship. I began this mission at home; for, although my landlord's mother was a regular attendant at church, the son never once made his appearance within its walls.

Old Mrs. Bevil was a large old lady of painfully timid temperament, whose existence was passed in one of the sunken kitchens, and whose mission on earth was apparently to cook glue for her son, vouchsafing any of the time to be spared between the steaming of the pots in attendance upon me. One Saturday morning I expressed my regret to her that so excellent and industrious a son should appear to be negligent to his Sabbath duties.

"He isn't!" said Mrs. Bevil, sidling towards the door, and feeling, with a hand outstretched behind her, for the handle.

I should mention that Mrs. Bevil was so much "put out" when spoken to by anyone above her in station, that when you showed symptoms of engaging her in talk, she winced and made artful efforts to escape—like a child when a dentist exhibits his instruments.

"What church does he go to?"

"French Protestant."

"Indeed! then he is conversant with French!"

Mrs. Bevil had by this time found the door-knob, and had turned it. Her confusion was so great, that her face—never very pale—glowed like a live coal.

"Of course," I repeated, "as your son attends a French place of worship, he understands French."

In the midst of her bewilderment Mrs. Bevil stammered,

"Yes—French polishing."

I dared not smile, lest the ignorant old soul's shame should overwhelm her; so in order to appear to change the subject without actually doing so, I asked if she knew anything of the mysterious young lady opposite?

The old woman curtsied herself backwards into the opening of the door, and having felt

that retreat was practicable, she said, "Please Sir; no, Sir;" and vanished with the rapidity of a mouse, let out of a lion's cage.

It was not difficult to guess why young Bevil preferred the French church to my own. I had never doubted that the charming embroideress opposite was a foreigner. She worshipped in a language she understood best; and her admirer—more in obedience to his silent passion than his spiritual duties—followed her thither to worship *her*. On expatiating one day, however, on the sinfulness of Sabbath-breaking, he partially disarmed me by owning that he had been assiduously learning French in order to understand and join in the service. I made not the slightest allusion to the charming Silhouette; for I saw from his nervous and blushing manner, that it was too deep an affair with him to be lightly touched. I ascertained that although he saw his adored daily, and followed her weekly to church, he had never had courage to speak to her, or to address her in any way whatever.

My interest in this absorbing case of silent love deepened daily. I pitied young Bevil. Supposing, after he had proceeded to the extremity of avowed courtship, his idol should prove a wicked little French coquette, and jilt him? Such a presentiment did not want foundation. Although the summer had arrived—and warmer, more congenial weather I never remember—the Silhouette disappeared entirely from behind the fairy curtains. During all the cold weather, when she must have shivered to sit there, she was never absent; but now, when the window is the only endurable part of a room, she is utterly invisible. Is she skilfully manœuvring Love's delicate, sensitive telegraph, conscious that she has secured her victim; and now, after the manner of finished coquettes, does she leave him to pine in the throes of hopeless despair? Or, doubts she the truth and ardency of his love, as expressed by his silent watchings of her window, and by his regular church-goings; and does she disappear from his longing, loving looks to lure him to the overt act—a verbal declaration? If the latter, her tactics will fail. Young Bevil's passion is not a mere flash of romance; it is earnest and practical. He does not stand idly gazing, and sighing, and hoping, and despairing. The more he loves the harder he works. Until he has placed himself in a position to speak to her with confidence as to the future, he will be silent.

Here I am probably asked, how could I know all this? I answer, from substantial evidence. When one sees a man running a race, it is certain that there is, far or near, a goal. Young Bevil raced manfully, and the winning-post he kept in view was matrimony. Early and late his tools were audible, not only to obtain capital in money, but to provide property of his own handy-work. When I first took his lodgings, they were scantily

furnished; but the rooms were rapidly filled up; evidently not for my use and pleasure. The capacious tea-caddy, curiously inlaid and splendidly mounted, did not signify much to me; neither was I ever likely to require the Gothic work-table that I found one evening slid, as if by accident, into a recess; and to what earthly use could a bachelor in lodgings put that frame on swivels, studded all round with cribbage-pegs, that looked like a swing-cheval without its glass? In short, every addition to the garniture of the apartments was of the feminine gender. I looked upon these novelties as so many notices to quit; for I did not doubt that the rooms were being quietly prepared for a more cherished occupant. This supposition was confirmed, when, curiosity prompting me to examine the work-table, I saw, exquisitely inlaid in cypher on the inside of the lid, the word "Manette."

All this while, the Silhouette remained obstinately invisible. For a few Sundays she continued to go to church, but so thickly veiled that a sight of her face was impossible. Still he followed; but refrained from speaking. The time had not come. He would not offer his rough but honest hand while yet without a home to which it could lead her.

Poor Bevil had soon to live on not only in silent, but in sightless, despair; the little black profile ceased to appear not only behind her snowy transparencies, but bodily on Sundays. From this time Bevil's intelligent, but sad and thoughtful features struck me with pity; I could not but see that he was staking his hopes—his very existence—on a cast, which might turn up a deadly blank.

On one occasion, my hopes revived for him. It was towards the close of a lovely summer's day. The whiteness of the gossamer curtains made them dazzle in the sun. The figure in black approached; and after a hesitating interval appeared in distinct outline close behind the gauze. All this while, the sharp cuts of Bevil's chisel were audible in busy succession under me. The Silhouette's eyes only, appeared just above the short curtain, darting a long, devouring gaze upon the toiler: they were red; a handkerchief was pressed closely to her face. The chisel goes on chipping away, without one intermission. I would give a quarter's stipend if Bevil would only be idle for a second, and look up; for as the gazer strains her eyes upon him, tears pour out of them, and sparkle in the sun like falling diamonds. Presently she sinks into a chair, as if overcome with grief; and disappears. With this anguish, whatever its immediate cause, I felt certain that Bevil was connected.

"Surely this mystery is not impenetrable. I will unravel it." Accordingly, next morning I took our opposite neighbours out of the regular order of my visits, called, and questioned the woman who rented the house. I

learnt that the girl's name was Manette. She was an orphan: her father, a French teacher, had died recently in a hospital. Her embroidery was fetched and carried to and from the warehouse by my informant's husband. Her industry was extraordinary, and she earned a comfortable subsistence. I asked to see her, but was told she admitted no person whatever into her room. Of late, especially, she concealed her face, with an apparent dread of being recognised by strangers.

My inquiries, therefore, darkened rather than cleared up the mystery. As I left the house, I observed that my landlord had been watching. He looked wistfully into my face as I passed him on the door-step, and I answered his silent appeal by desiring him to follow me to my room.

A very short conversation proved that all my observations and deductions had been correctly made. He owned everything. It was painful to see a fine, muscular, handsome man, suffused with the shame—honest shame though it was—trembling with the weakness we only expect from young impulsive girls. I reasoned with him. I showed him the full risk he ran in nurturing so perfect an ideal out of a mere image; for to him Manette was nothing more. I pointed out the utter uselessness of his self-imposed penance. She might be all he thought her; she might be everything the reverse. How could he know without some acquaintance-ship? It would be madness to give rashly a pledge of matrimony without some probation.

In the end he promised to try and see Manette the following day; and, descending to his shop, worked away harder than ever.

Even now I see Bevil as, next morning he stood at the door opposite. His lips quiver; but his brow expresses a firm but anxious purpose. The woman who admits him tells him something which surprises and disappoints him. Manette, for the first time for a month, has gone out.—The next day was Sunday, and the lover abstained from intruding himself. On the Monday he had as little success. In the evening he consulted me as to what he had better to. Should he write?

I advised him by no means to commit himself; and offered, if he would wait, I would use the influence of my cloth to obtain an interview for him. When the morning came, Bevil desired to accompany me. He would, he said, go himself; but would feel comforted and fortified by the sanction of my presence.

Accordingly we sallied forth across the road at noon the next morning. I would not wait to hear the answer of the landlady; but, pushing by the driver of a spring cart that had just stopped at the house, went straight up to Manette's door. Bevil followed. I knocked; no answer. Not a sound within. I knocked again, and quietly called her by name. Utter silence. I then tried the door; it yielded, and we entered.

The picture of neatness and prettiness which I had drawn as existing behind those dainty muslin curtains was not realised. It was indeed reversed. The room was in the greatest confusion, and untenanted. "Why you see, Sir," said the woman of the house who had ushered the carter up behind us, "Madam'selle went away the first thing yesterday morning. She sold her bits of things to the broker (you'll have to get the sofa bed out o' window, Mr. Bracket), and never give us no notice in a regular way (now mind the walls with them saucapans), leastways not a week's; but my husband never went for to charge her, poor thing, for she paid as punctual as the Monday morning cum—allays."

"Has she left her present address?" I asked.

"O dear no, quite contra-ry. Says she to me, says she—leastways as well as I could understand her French brogue, and she had her han'kercher a kivering of her face—Mrs. Blinkinson," says she, "don't," says she, "answer no questions as may be asked about me. I am a going," says she, "to where I hope nobody may find me out." And then she pulled the street door to, and I never see her more—and never shall."

I looked at Bevil. He was shivering as if an icy chill had struck to his heart. He looked round the room slowly, vacantly. The bird was lying at the bottom of its cage—dead. The flowers, no longer tended, were drooping. He stretched forth his trembling hand, and, plucking a geranium, put it into his bosom. He then turned, and, without speaking, descended the stairs. With unsteady gait he entered his own house.

For more than a week I missed the sounds from below. Bevil had gone straight to his bed-room, and had not left it since. His mother now, instead of tending him with glue-pots, was constantly on the stairs with broths, and coffee, and tea, and a variety of other sloppy sustentation; but her son would partake of them but very sparingly. I determined to rouse him, and advised that, as he would not or could not work, an active search after the lost damsel was better than stolid, inactive grief. This roused him, and he followed my advice.

Weary days and weary weeks were spent in the search. The cunning Silhouette eluded him as if she had been an *Ombre Chinoise*. Bevil first addressed himself to the shop for which Manette had worked. The master of it said that he never saw Manette but once, and then she came with specimens of her embroidery, to get more. It was so good that he had employed her ever since, and was both surprised and chagrined at her sudden desertion. He had, through her landlord, offered her a good salary to work at his house, and had hoped she would accept. Her strange disappearance was therefore the more unaccountable.

The clergyman of the French church, when

Bevil sought him, was as surprised as her lover at Manette's absence from service, and communion. In the latter he said she was a regular and deeply-impressed partaker. He could give no information. Neither could the officers of the hospital, where the girl's father had died in the winter (of whom Bevil also inquired), give him comfort.

"There is nothing for it," I told him one day, "but time and work."

He did after a time resume his work, but the sounds given out from his bench made me melancholy. His tools were taken up, used and laid down with a slow, intermittent apathy, which showed that the heart and the hands did not go together.

Work, on the contrary, grew so fast on my hands, that I hardly had time for sleep. My successor to the curacy I had left in Southwark was taken ill, and besides my own duty, I had volunteered to do a part of his. This occasionally consisted in administering consolation and prayer to the inmates of one of the Borough hospitals.

During one of my visits to the female ward, I was attracted by a few words which fell from the clinical lecturer who was addressing a knot of pupils standing at the bed on a case of tumour of the face. He had, in fact, (warming with his subject), glided from an explanation of the operation which had been performed and of the after-treatment, to an involuntary eulogium on the beauty of the patient, which the consequences of the disease and its remedy tended to impair. I got a peep at the damsel between the shoulders of a couple of the shortest of the listeners, and saw just above the bedclothes (which were held up with extreme rigidity and care to conceal the lower part of the face) a pair of familiar black eyes. They quite thrilled through me. The students were dismissed; and I overheard a sweet voice ask "if zat scar—"

"Don't let it trouble you for one instant," said Dr. Fleam, as he left the bed-side; "it will hardly be visible, and in a week you will be as well—and as pretty—as ever."

I looked again. Those piercing black eyes met mine point-blank. There was a scream, smothered by the bedclothes—under which the head was instantly popped.

But that was enough. I felt convinced that Manette was found.

About a month from that date there was joy at No. 1, Peppermint Place. It is November: on one side of my fireplace sit Bevil and Manette. Old Mrs. Bevil has gradually pushed her chair back to the window; and bit by bit has nibbled folds of the curtain, until she is completely hidden behind it in that comfortable obscurity in which she alone delights. They had assembled to hear a lecture from me.

"Personal vanity," I began with all the solemnity to be invoked in the presence of a pair of eyes, which sparkled so with joy, that

it seemed impossible for their mistress to school and temper them to the occasion—"the vanity of mere personal comeliness had nearly wrecked the happiness of both of you. Because you, Manette, were afflicted with a mere tumour that distorted for a time that which you seemed to cherish more than your worldly welfare—your beauty—you sold your worldly goods and deserted your home, and means of subsistence, rather than the deformity should be seen by one whom you secretly loved. Had you no confidence in the attractions which never fade, that you depended solely upon those which, despite all your efforts, will assuredly pass away?"

"Non," said Manette, lifting her eyelids with a sort of timid courage, "He loved me only for my face—he 'ad nevare spoken. When he saw and loved my face, it was *comme il faut*. Eh, bien! if he 'ad seen my face when it was horrib' disfiguré, would he not have hate me? *Oui*."

A pardonable impulse threw Bevil's arm over the back of Manette's chair, as he exclaimed—

"Oh! no, no."

"You were, I must say, both to blame, Bevil for timidity, and Manette for rashness," I remarked.

Manette, looked down on the prettiest little toe in the district of St. Barnabas, as it pointed itself to trace in outline the pattern of the hearth-rug, and went into a long explanation of her motives in the most delicious broken French. She was quite alone in the world, and the pain and hideous tumour in her face prevented her from working—she saw ruin, and nothing but ruin before her. The day her bird died, she felt so desolate, that she determined to go to a hospital, in order to have the operation performed. On recovering, if she had been much disfigured, she intended never to see Bevil more. She had not courage to bear the disappointment which he might have inflicted, by the altered sentiments she anticipated in her lover, in consequence of her altered appearance; and she preferred the certainty of trying to forget him. If she were perfectly cured, she intended again to return to her old lodging, and by hard work to regain her furniture.

The end of this, like most other romances, was marriage. With marriage, as is well known, all mysteries vanish. Manette's story was this: Her father was a political refugee from the storm of 1848; he had been a staunch Orleanist Deputy in the French Chamber, and had to fly, with his daughter, for his life. In England he taught his native tongue as a means of livelihood, till overtaken by illness. Then Manette practised an accomplishment she was proficient in, with so much success that she supported her father till his death. She knew the time would come when the family property they possessed near Bordeaux would be restored, and she did not wish to let her situation be known,

especially to the unhappy family at Claremont. Hence, she kept herself a recluse till the terrible disappointment drove her to the hospital.

I was not allowed the honour of officiating, the minister of the French Protestant Chapel having been preferred. Of course I was obliged to remove to another lodging.

Nor did the Bevils stay long in Pepper-mint Place. Their united talents in the decorative arts did not long remain hidden. They removed to a fine house near Cavendish Square, and worked for the first nobility. A label in the window tells you, that there "They speak French."

Passing the shop the other day, I was surprised to find another name over the door. The owner of it told me that Mr. Bevil had gone to live in France, in order to superintend his wife's estate on the Garonne. It appeared, then, that my piquant Silhouette had regained her patrimony. The next holiday I get I shall certainly pay them a visit.

BACK STREET CONSERVATORIES.

In threading the mazes of squalor in the purlieus of Whitechapel or Seven Dials in London; in the back settlements of Manchester, Liverpool, and Dublin; or the "wynds" of the Cowgate and Canongate; where every sense is offended; where it is impossible to anticipate improvement in the moral, while the physical condition of the denizens is low and comfortless,—the sight of a flower on a window-sill imparts a gleam of hope and of respect. It redeems the surrounding debasement. You feel that however hard the toil and poor the sustenance of the cultivator, the higher faculties of enjoyment and of taste have not been ground away.

The cockney's love of the country and of what reminds him of the fields, may continue the subject of the mild and simpering jest; but it is one of the most pleasing traits of his character. That miniature fence and five-barred gate with the road-lamp suspended over it, which forms the boundary of his flower-pots and mignonette box outside his window, is not a thing to be laughed at, so much as to decry good qualities from. Its owner will in all probability be found more thrifty, better conducted, more self-reliant, and addicted to less expensive and debasing pleasures than most of his neighbours.

The very difficulty of rearing the tenderest offsprings of Nature in unwholesome atmospheres shows, where moderate success is attained, a degree of care and perseverance, unknown to those who have not tried the experiment. We may see, by dry leafless sticks,—all that is left of once flourishing myrtles—by the mortal remains of rhododendrons, or at best by consumptive geraniums struggling against darkness, and a "foul and

filthy air," how often these experiments are given up in despair, or have languished from ill-success. One case in particular, of this sort, led to a remedy; and to this remedy it is the purpose of this paper to draw more particular attention than it has already attracted; especially among the humbler orders.

Some five-and-twenty years ago, a surgeon living in the densest part of Eastern London, had converted a space at the back of his house into the semblance of a garden. He contrived banks of rock-work, and endeavoured, in the face of opposing influences, to cultivate flowers with all the patience of a Chinese. His efforts, however, were constantly thwarted; his favourite plants would sicken and die, in spite of his utmost vigilance and care. Much as he loved flowers, he was doomed to endless vexation and disappointment; for every sort of ingenious shelter was adopted, in vain.

On returning home from a botanical excursion in the summer of 1829, he buried the chrysalis of a moth in some mould contained in a glass bottle, and covered the bottle with a lid to prevent the escape of the insect when developed. "In watching the bottle from day to day," he says, "I observed that the moisture which during the heat of the day arose from the mould, became condensed on the internal surface of the glass, and returned whence it came, thus keeping the mould always in the same degree of humidity. About a week prior to the first change of the insect, a seedling fern and a grass made their appearance on the surface of the mould. I could not but be struck with the circumstance of one of that very tribe of plants, which I had for years fruitlessly attempted to cultivate, coming up spontaneously in such a situation; and asked myself seriously what were the conditions for its growth." Reflecting upon the matter, he found that while the conditions essential to the existence of plants were fully replisied, all prejudicial influences were effectually excluded. The fern and grass flourished; he now tested the value of the discovery in various ways, and with the most satisfactory results. Every window of his house soon had its occupant; here a tasteful case filled with flowers of various hue; there, another with graceful ferns and diminutive palms; in one place some pent of difficult growth, favoured with special protective covering, and here and there, quaint-looking bottles with quaint occupants of the aloe and cactus tribe.

A view of dead walls and unsightly specimens of domestic architecture, from one of the back windows, was soon excluded, and the eye and taste were gratified by the ruins of a miniature ivy-clad abbey, around whose walls the ferns and wild flowers grew in rich profusion. The highest attainable "ground"—the roof of the house—was made available for an Alpine case, where the plants lived on in

the delusion that they were still enjoying their native mountain air. The rock-work already noticed soon received a glass investment, and a closed case on a larger scale made its appearance, its dimensions being increased at intervals, until nearly the whole space behind the house was enclosed, and in the midst of smoke-evolving sugar-houses and factories, one might enjoy the luxuriance and seclusion of a tropical jungle. The success of the plan was now triumphantly demonstrated. The only wonder was, that some observing naturalist should not sooner have hit upon a method, at once so simple and so beautifully adapted to the necessities of the plants destined to grow in crowded towns. Mr. Ward himself honestly admits, that but for the incident narrated above, the suggestion might never have occurred to him. "The simple circumstance," he adds, "which set me to work, must have been presented to the eyes of horticulturists thousands of times, but has passed unheeded, in consequence of their disused closed frames being filled up with weeds instead of cucumbers and melons; and I am quite ready to confess, that if some groundsel or chickweed had sprung up in my bottle instead of the fern, it would have made no impression on me."

Such is the history of those miniature conservatories occasionally displayed in the windows of middle-class dwellings, known as "Ward's cases."

The most fanciful notions have been entertained respecting the construction and mode of action of these cases,—some supposing that they were air-tight, or hermetically sealed; others, that plants enjoyed in them a perennial blossom; and one intelligent lady fancied that if budding flowers were placed in them, their further development would be arrested, and they would remain in bud for ever. Possibly, too, our fair friend might regret that some such bloom-preserving medium could not be devised for frail mortality. Nothing, however, can be more simple than the principle and mode of construction of these cases. The first thing to be done is to procure a zinc case, or wooden box, japanned or tarred within, with an aperture in the bottom for drainage of superfluous water. Supposing the case to be six inches deep, we fill it for an inch or two with pieces of brick or stone; over this place the mould, and then, if we please, any tasteful arrangement of rock-work on the surface. The plants, whether bulbs, flowering plants, or ferns, are now inserted, and over the whole a closely-fitting bell-glass, or glazed framework of varied form, is accurately placed. The only material novelty, in fact, about the arrangement, consists in the presence of the glass covering. In the first place, it is quite clear that this interferes in no way with the transmission of the vital stimulus, light. Again, if the case be allowed to remain undisturbed for a day or two, either outside the window, or against it within the room, we shall discover

another beneficial effect of the glass in excluding the quantity of sooty particles deposited on its surface, which would otherwise have fallen on the leaves, and interfered with the process of respiration for which they are specially designed. We shall also observe that the glass is covered within, on the colder side, with globules of moisture, and these tell us of another beneficial influence which it exerts. One difficulty experienced in growing plants in London under the old method, consisted in the dry character of the atmosphere of towns, compared with that of the country, and the consequent trouble in keeping plants sufficiently watered. If the mould be well saturated with water, this will rise in vapour, the escape of which is prevented by the glass. It consequently becomes condensed on its cold surface, streams down the side, and thus alternately rises and falls, little or no escape taking place, and many months, or even years, elapsing before a fresh supply is required.

Again, the glass covering, though so closely fitted as to exclude soot and dust, and prevent the escape of the watery vapour, is not intended to be air-tight or hermetically sealed. If it were, the glass would be broken by the first expansion or contraction of the air contained within, which takes place with every rise and fall of temperature, and by which, to some extent, the change of atmosphere necessary for the well-being of the plants is effected. This is further ensured by the operation of a law, by which the intermixture of different gases is provided for. In order to understand this, we must know something of the life of a plant. In its process of respiration, as in that of man, one kind of gas is emitted, and another inhaled. The gas given out differs in weight and other qualities from the surrounding air; but, in obedience to a law known among chemists as the "diffusion law," it finds its way out between the glass and the case; the external air, in like manner, effects an entrance, and this interchange continues until an intimate blending of the two is effected. The carbonic acid gas exhaled by man is incapable of sustaining life; and, being heavier than the atmosphere, it would, but for this law, accumulate in rooms and on the surface of the earth, and produce the most destructive results. In obedience to this, however, as soon as given out, it begins to ascend in opposition to the laws of gravity, and soon becomes lost in surrounding space. Such are some of the unseen processes going on around us, and thus marvellous are the silent workings of Nature! Another important influence exercised by the glass consists in keeping the plants in a perfectly tranquil atmosphere, and thus enabling them to bear much greater degrees of heat and cold than they could do if exposed to currents or even the ordinary agitation of the air, protecting from the injurious effect of these the full-blown flower, and preserving it fresh and perfect much longer than when it is exposed.

Even cut flowers placed in a vase containing water will last much longer if protected by a bell-glass. In short, we isolate our plants, place them as it were in a world of their own, where all noxious influences are excluded, and they are furnished with everything necessary for their life and growth.

The various modifications in the form and contents of the case are mere matters of taste. Its applications are various. It affords every inhabitant of the town the opportunity, at comparatively trifling expense and trouble, of enjoying, on a limited scale, the beauties of nature. Instead of the wearying view of walls and houses, he may, at one of his windows, have an elegantly constructed case, filled with fairy roses, fuchsias, heaths, &c., or with the graceful forms of ferns, and dwarf palms, delighting by their delicate tracery and varied tints. Or, if means permit, a case of larger magnitude may be built out from a study or breakfast-room, and a model of some old ruin be erected, or broken rock-work, with a fountain-basin in the centre, and plants dispersed around. Another advantage offered by this plan is, that if the cases are kept in the ordinary sitting-room which has a fire in it daily during the colder period of the year, the denizens of a warmer clime will grow therein with perfect luxuriance, delighting us with their verdure in the depth of winter, and when the snow is on the ground, and the bosom of mother-earth closed up by frost, reminding us of a brighter and more genial season. To all who preserve a healthful and natural feeling, the "Ward Case" will afford varied and continual pleasure, reminding them of vegetation of larger growth, and of scenery more expanded and majestic. Constant gratification, too, is afforded by watching the growth of plants, especially of the ferns, which exhibit fresh beauties at every stage of their development; whilst amid the hurry of business and the anxieties of life, even a momentary glance at these humble members of creation thus fulfilling the purposes of their existence, cannot fail of imparting tranquillity to the troubled spirit.

To the sick room they are peculiarly adapted, and their office here is indeed that of "ministering angels." We know of no present so cheering and acceptable to the wasted sufferer as flowers. We have seen the victim of disease, worn out by pain, and almost dead to external impressions, suddenly revive at their appearance, and the countenance light up as these friends of childhood were again welcomed. But the loveliest flowers are, at times, objectionable from their exhalations; when cut, too, they are but short-lived, and in severe seasons it is extremely difficult to procure a constant supply. None of these objections can apply to the closed case, for when the plants are once inserted, they require little or no attention, the perfume, if there be any, is confined, and many preserve their freshness in the coldest seasons.

The "miniature conservatory" is ever a cheerful companion, assisting the efforts of the medical attendant where a cure may be hoped for, and where it is hopeless, serving to dissipate the gloom that too often is needlessly spread over the chamber of sickness and death. To the unfortunate sufferer from the country, whom hard fate compels to end his days in the close town, the ever fresh verdure may recall the village-green on which he was wont to sport as a child, and bring vividly before him the green fields and happy vales of earlier years; and if separated from those who are dear to him, he will at least have some humble friends near, who will smile brightly at the last!

The presence of flowers at the poor man's door, and other indications of a love for nature, invariably bespeak industry and sobriety. "When we see a plot," observes an eminent writer, "set apart for a rose-bush, and a gilliflower, and a carnation, it is enough for us; if the jasmine and the honeysuckle embower the porch without, we may be sure that there is a potato and a cabbage within; if there be not plenty there, there at least is no want; if not happiness, the nearest approach to it in this world—content." Those who are interested in improving the condition of the poor would do well to encourage such taste. In one of the most crowded districts in the eastern part of the metropolis, some money was contributed three or four years since, and applied in the purchase of several of the closed cases. These were entrusted to the care of some of the better class of poor, who not only derived the greatest delight from them, but made profitable use of them in the rearing and subsequent sale of plants, or in the cultivation of salad for domestic use. A case, constructed of the cheapest materials, would cost but a few shillings, and a poor man, to view the matter in a purely utilitarian spirit, could not make a better investment of his money. That the lower classes are frequently imbued with a keen love for the objects of nature, and experience the purest pleasure in their cultivation, may be seen by the following extract from a letter with which we have been favoured, addressed to Mr. Ward, by an artisan of Bristol. "I have, with great pleasure and with greater profit, read your works on plants in closed cases, and have now outside my sitting-room window a Lilliputian landscape (entirely through reading that work), obtained by enclosing a space with glass. In this case, which has no sun upon it until near two p. m., and gradually coming on later until it will not be visited for near two months by that luminary, I have a variety of ferns, wood, sorrel, &c., and many other wild plants, which many persons here very much admire, wondering how I could keep them alive *without air*. At the back of my premises, and close to my cases, are some blacksmiths' forges, and a great deal of smoke pouring from a bake-house chimney. I am

quite certain that if I admitted the air of the yard, my present greenhouse would soon become a black-house. If at any time my services will be of use to you, they will be most readily at your command, having been from a boy exceedingly fond of growing anything in the earth; for I well recollect when a row of chick-weed against a wall was to me as great a delight, as a new fuchsia or a purple 'sturtium would be to an amateur of the present day, and when, after having sown some barley in a space of eighteen feet by ten feet, I had a bed of beautiful green, I thought I was a wonderful gardener. I still delight in these things, and I must say I am extremely obliged to you for a great enjoyment I now possess, for when I come in tired with business, and fatigued perhaps in body and mind, there's my little greenhouse looks so refreshing, that I cannot help feeling its influence soothing my mind, and it rewards me for all the trouble I may have taken with it."

We have yet to glance at another and most important application of the Ward case—in the transport of plants from one country to another. Formerly, they were closely packed in cases, and either deprived of light, or exposed to the salt spray, and drying, destructive wind; and, partly from these causes, partly from inadequate supply of fresh water, they died in their transit by hundreds, but few surviving a very long voyage. Now, a genial home is furnished for them on the ocean, and from their snug retreat, they

"Peep through their polish'd foliage at the storm,
And seem to smile at what they need not fear."

The cases used for purposes of conveyance on ship-board are of stouter material, the glass protected by wire-work, and they are lashed securely on the poop of the vessel. The protective glass covering admits the light, wards off wind and spray, and retains the moisture. This mode of conveyance has now quite superseded the old one; many of the rarest palms and ferns in the magnificent collection at Kew have been brought over in this way, and every horticulturist can bear testimony to its value. Mr. Fortune, in the last edition of his "Wanderings in China," gives a relative estimate of the old and new methods. Under the old method, according to a paper published by Mr. Livingstone, in the "Transactions of the Horticultural Society of London," only one plant in a thousand survived the passage to England. Mr. Fortune brought over two hundred and fifty plants in some closed cases, and of these two hundred and fifteen were landed in England, in a perfectly healthy state. One illustration being as good as a thousand, we give the following very pertinent one, of the incalculable benefits conferred by this plan in the introduction of useful plants into countries where they were previously unknown. When Mr. Williams, the missionary, left England for the Navigator Islands, in 1839, he took

with him in one of the glazed cases, among other plants, a species of banana. This reached Upolu, one of the group, in a healthy condition, was transplanted, and, in May, 1840, bore a fine cluster of fruit exceeding three hundred in number, and weighing nearly a hundredweight. The parent plant then died, leaving behind more than thirty young ones, which were distributed to various parts of the Island, and multiplied in the same ratio. To "estimate the importance of the introduction of this plant, we must bear in mind the great quantity of nutritious food furnished by the banana. Humboldt says, that he was never wearied with astonishment at the smallness of the portion of soil which, in Mexico and the adjoining provinces, would yield sustenance to a family for a year, and that the same extent of ground which, in wheat, would maintain only two persons, would yield sustenance, under the banana, to fifty."

Whilst large prizes are annually awarded to new panicles, tulips, and other ephemeral monstrosities in the vegetable world, the inventor of the "miniature conservatory" has, we believe, received no testimonial whatever of the services he has rendered to horticulture from those who have been most benefited by the invention. He reaps his reward, however, in the consciousness of the good he has done "in his generation," and in the feeling that, in the homes of many, his name, associated with ferns and flowers, has become a "Household Word."

CHIPS.

"STREETOGRAPHY."

THOUGH we English flatter ourselves that those systems of general and social polity—which we are pleased to term the British Constitution—give to existence more security and liberty than is ensured to our Continental brethren; yet in the smaller arrangements for public convenience we are, compared with them, barbarians. The details of municipal management in France, for example, are infinitely superior to the arrangements made for the English towns' people by those knots of well-fed wisdom Corporations. In France it is always possible for a stranger to find his way to any street; and to know its name when he is in it; in England, impossible. In Paris, the dullest Dutchman or most opium-soddened Turk never need lose his way in an intricate neighbourhood, because labels tell him, in large and legible letters at the corner of each street, those he wants; but set down the cleverest country gentleman in any one part of London, to find his way to any other part of it with the best map to be got, and he will be only able to find it in a cab; for those who have the ordering of these things in certain districts of the Metropolis, believing that the names of streets ought to

be known by the world at large by instinct, take little care about getting them written up.

The other day a gentleman of Coblenz, by dint of several cabs and endless enquiries, found out at last the residence of a young baronet to whom he was accredited, near Portman Square. He was unusually methodical about trifles, even for a German, and had taken very good care to note down the name of the street in which he had fixed his temporary lodging. The baronet, when he was taking leave, naturally enquired where he should have the pleasure of returning the visit? The German produced his pocket-book, and gravely read from it, "Number nine, Stick-no-bill-Street." "Stick no bills" being the only words he could find written up against the houses, he of course, adopted them, as his proper address.—A similar mistake is recorded of an American, from Fourth Street, Philadelphia. He too was in search of the address on a letter of introduction; and, when he got into the street, actually disbelieved the information given to him, that he had arrived at his proper destination. "Don't I see," he said, looking up at the corner, "that this is F. P. Sixteen-feet Street?"—and returned to his hotel without delivering his letter.

The rustiest select vestryman of the old-school is unable to deny that the name of every street ought—for the convenience of the inhabiting, but more especially for that of the visiting-public—to be distinctly and legibly inscribed at the corners of every street in Great Britain; within the range of ordinary visions, and not some twenty feet high, to be obscured by the friezes of shop-fronts and the balconies of private houses. This very necessary job should be snatched from the neglect of the various parochial officers, and put into the hands of the Commissioners of Police; together with several other small reforms, by a very great deal too numerous for the limits of a "Chip."

We will not dismiss this suggestion without pointing out that in every improvement in Streetography (Like Bentham, we coin as we require, and defy the Dictionary) some variety in the names of our public ways would be very advantageous. As the sponsors of old streets have exhausted all the Charles's, George's, Mary's, and other common-place nomenclatures, the respectability of streets in progress (and they are legion) might not be damaged by being designated by the names of a few of the benefactors of our race—our eminent inventors, divines, poets, and artists. But while the naming of thoroughfares is left to individual caprice, the inestimable confusion of metropolitan topography will continue to be worse and worse confounded. Already, according to the "London Directory," there are streets, squares, terraces, and groves, which are honoured with the names of "Victoria" or "Albert" in twenty-five instances. Thirty-four London thoroughfares bear the title of York, and twenty-three that of Gloucester;

of Wellington "Places" alone, there are ten; besides several Wellington Streets and Squares. Royalty spreads its titles over miles and miles: there are no fewer than thirty-seven King Streets, twenty-seven Queen Streets, twenty-two Prince's Streets, and seventeen Duke Streets; not to mention Courts, Alleys, Terraces, and brick-and-mortar "Groves" innumerable, with one or other of these designations. The list is to be swollen to an endless confusion; and without some improved system of "Streetography," it will soon be as impossible for a stranger to find a Londoner in London, as it is, to trace a fly through the tangled intricacies of a spider's web.

LAND HO!—PORT JACKSON.

An esteemed Contributor has laid open a page of his travelling note-book, to allow us to extract the following graphic "Chip":—

"LAND HO!" cried the look-out. Blessed sound to the weary landsman!—a sound associated with liberty and society, a walk on turf, a dinner of fresh meat and green vegetables, clear water to drink, and something to do. The dark line in the horizon was Terra Australis, the land of my dreams. As we approached more near, I was not greeted, as I had hoped, by sloping shores of yellow sands, or hills covered with green pasture, or clad with the bright-coloured forests of southern climes; but far above us towered an iron-bound coast, dark, desolate, barren, precipitous, against which the long rolling swell of the Pacific broke with a dull disheartening sound.

No wonder that the first discoverers, who coasted along its shores in the midst of wintry tempests, abandoned it, after little investigation, as an uninhabitable land, the dwelling-place of demons, whose voices they fancied they heard in the wailing of the wind among the inaccessible cliffs.

But soon a pilot boarded from a stout whale-boat, rowed by a dozen New Zealanders. He reached the rocks which, divided by a narrow cleft, or canal, and towering above the coast line, are the sailors' landmark, known as Sydney Heads,—the cleft that Captain Cook overlooked, considering it a mere boat harbour. Steering under easy sail through this narrow channel, the scene changed, "as by stroke of an enchanter's wand," and Port Jackson lay before us, stretching for miles like a broad silent river, studded with shrub-covered islands; on either hand of the shores, the gardens and pleasure-grounds of villas and villages descended to the water's edge; pleasure-boats of every variety of build and size, wherries and canoes, cutters, schooners, and Indians, glided about, gay with flags and streamers, and laden with joyous parties, zig-zagged around like a nautical masquerade. Every moment we passed some tall merchant-ship at anchor,—for in this land-locked lake all the navies of the world might anchor safely.

It was Sunday evening, and the church bells clanged sweetly across the waters, mingling in harmonious discord with the distant sounds of profane music from the pleasure parties. On we sailed, until we reached the narrow peninsula where, fifty years previously, trees grew and savages dwelt, and where now stands one of the most prosperous cities in the world,—there, in deep water, close along shore at Cambell's wharf, we moored.

In the buildings there was nothing to denote a foreign city, unless it were the prevalence of green *jalousés*, and the extraordinary irregularity in principal streets,—a wooden or brick cottage next to a lofty plate-glass fronted shop in true Regent Street style. There were no beggars, and no half-starved wretches among the working-classes. In strolling early in the morning through the streets where the working-classes live, the smell and sound of meat frizzling for breakfast was almost universal.

One day, while strolling in the outskirts of the town, above a cloud of dust, I saw approaching a huge lumbering mass, like a moving haystack, swaying from side to side, and I heard the creaking of wheels in the distance, and a volley of strange oaths accompanied the sharp cracking of a whip; presently the horns of a pair of monstrous bullocks appeared, straining solemnly at their yokes; then another and another followed, until I counted five pair of elephantine beasts, drawing a rude cart, composed of two high wheels and a platform without sides, upon which was packed and piled bales of wool full fourteen feet in height. Close to the near wheel stalked the driver, a tall, broad-shouldered, sunburnt, care-worn man, with long shaggy hair falling from beneath a sugar-loaf shaped grass hat, and a month's beard on his dusty chin; dressed in half-boots, coarse, short, fustian trousers, a red silk handkerchief round his waist, and a dark blue cotton shirt, with the sleeves rolled right up to the shoulders of his brown-red, brawny, hairy arms. In his hands he carried a whip, at least twenty feet long, with the thong of which, with perfect ease, he every now and then laid into his leaders, accompanying each stroke with a tremendous oath.

A little mean looking man, shabbily dressed in something of the same costume, trotted humbly along on the off-side. Three huge ferocious dogs were chained under the axle of the dray. This was a load of the golden fleece of Australia, and its guardians the bullock driver and bullock watchman. The dust, the creaking of the wheels, and the ejaculation of the driver had scarcely melted away, when up dashed a party of horsemen splendidly mounted and sunburnt, but less coarse and worn in features than the bullock driver, with long beards and moustaches and long flowing hair, some in old shooting jackets, some in coloured woollen shirts, almost all in

patched fustian trousers; one, the youngest, had a pair of white trousers, very smart, tucked into a pair of long boots—he was the dandy, I presume; some smoked short pipes; all were in the highest and most uproarious spirits. Their costume would have been dear in Holywell Street at twenty shillings, and their horses cheap at Tattersall's at one hundred pounds. These were a party of gentlemen squatters coming down after a year or two in the bush, to transact business and refresh in the great city of Australia.

DEATH IN THE TEAPOT.

By the help of Mr. Slivers, we were enabled in a recent number to expose to an injured public some of the ingredients of metropolitan milk—"London Genuine particular." A correspondent now makes a further revelation of how our tea-pots are defiled when it is innocently supposed that a pure beverage is in course of concoction.

"A short time since," he says, "a friend of mine, a chemist in Manchester, was applied to for a quantity of French chalk, a species of tale, in fine powder; the party who purchased it, used regularly several pounds a week; not being an article of usual sale in such quantity, our friend became curious to know to what use it could be applied; on asking the wholesale dealer who supplied him, he stated his belief, that it was used in 'facing' tea (the last process of converting black tea into green), and that within the last month or two, he had sold in Manchester upwards of a thousand pounds of it. Our friend the chemist then instituted a series of experiments, and the result proved that a great deal, if not all the common green tea used in this country is coloured artificially. The very first experiment demonstrated fraud. The plan adopted was as follows:—A few spoonfuls of green tea at five shillings a pound, were placed on a small sieve, and held under a gentle stream of cold water flowing from a tap for the space of four or five minutes. The tea quickly changed its colour from green to a dull yellow, and upon drying with a very gentle heat gradually assumed the appearance of ordinary black tea. On making a minute microscopic examination of the colouring matter washed from the leaf, and which was caught in a vessel below, it appeared to be composed of three substances, particles of yellow, blue, and white. The blue was proved to be Prussian blue—the yellow thought to be the turmeric, and the white, French chalk. If the two former be mixed together in very fine powder, they will give a green of any required shade. It is made to adhere to the tea-leaf by some adhesive matter, and then it is "faced" by the French chalk, to give it the pearly appearance so much liked.

"This simple experiment any one can perform. A gentleman assured me that a friend

of his a short time since happened—though quite unintentionally—on his part, to walk into a private room connected with the establishment of a wholesale tea-dealer, and there he saw the people actually at work converting the black tea into green; the proprietor soon discovered his presence in the room, and before him, in no measured terms, severely reprimanded the workmen for having permitted a stranger to enter."

CITY GRAVES.

I WALKED straight through the gathering fog,
By drains and ditches fed,
Until I saw the City church
High towering over head,
And came to where the grave-yard holds
Its half unburied dead!

Hard by the Thames, those high-piled graves
Higher and higher grow,
Where living men, at morn and eve,
By thousands come and go:
Where ledgers pile the deeds above,
And gold lies hid below.

Within those walls, the peace of death—
Without, life's ceaseless din:
The toiler, at his work, can see
The tombs of his mouldering kin;
And the living without, grow, day by day,
More like the dead within.

I saw the wheezy beadle pause,
Panting with gold and lace,
He turned the key in its creaking lock,
With handkerchief over his face.
And pale-faced urchins gambolled round
The "consecrated" place.

I saw from out the earth peep forth
The white and glistening bones,
With jagged ends of coffin-planks,
That e'en the worm disowns;
And once a smooth round skull rolled on,
Like a football, on the stones.

I thought of those who bear the sounds
Of Life across the foam,
In foreign climes, in savage lands,
Who rear Religion's dome;
They might have taught our rulers first
To spare our lives at home.

Too late the wished-for boon has come,
Too late wiped out the stain—
No Schedule shall restore to health,
No Act give life again
To the thousands whom, in bygone years,
Our City Graves have slain!

THE HUNTERIAN MUSEUM.

LONDON is full of strong contrasts, and one of them may be met with in Lincoln's-Inn Fields. Two large public buildings adorn that fine open square—as different in character, appearance, associations, and objects as two structures could be—the one appertaining to law, and the other to physic.

Lincoln's-Inn Hall is a noble-looking place, in the English style that perhaps suits our

English climate better than any other—with red brick walls, gables, towers, and buttresses, and a wide spanning roof, betokening a noble building fit for the usages of hospitality or the despatch of legal business.

The second of the two buildings instead of warm red brick, presents a cold stone, stately classic front, adorned by a row of tall Grecian columns, under which we pass to enter the place. In two minutes we are in a different world. Without, we left an atmosphere of life and living bustle; within, we find a stiller, calmer company. We walk amidst an abundant harvest yielded by death to teach the lesson of how life continues, and we come in absolute contact with some things that moved upon the earth before the Flood. About us are innumerable forms in which life has been. Now all are quiet in the serene dignity of death. Very few minutes are generally enough to calm down the minds of those who may visit the two buildings in succession—who, after seeing the Hall of Lincoln's Inn, will pass along the square and enter the Hunterian Museum at the College of Surgeons.

But if we witness here the revelations of the dissecting-room, we are startled by none of its grossness or its taints. The museum is a large architectural building, lighted from above, and at first glance seems to be a noble hall of stone, mahogany, and plate-glass, raised for the occupation of a regiment of skeletons and an army of bottles. Shelves and galleries run round the place, from the floor to the roof, and every shelf is crowded with specimens of all sizes and colours. Upon the front of the galleries, skulls and antlers, of various kinds, are fixed, and amongst them some of gigantic size, which we soon learn belonged to the creatures the traveller Bruce spoke of, as the mysterious Sauga of Central Africa. From the door we enter at, to the extreme end of the place, run two rows of mahogany, glass-roofed cases, the lower portions filled with drawers containing specimens for reference, and the tops covered with others of more beauty or interest. These cases divide the floor into three straight walks, along which, at regular intervals, are pedestals to support various things too large for enclosure. Nearest the door are the oldest and most curious of the contents of the place—the relics of the huge monsters who roved in the primeval wilds of our earth long before the Flood.

These are the ancient glyptodon, the still older mylodon, and the megatherium, more ancient than either. Looking at the bones of these extinct monsters, and glancing from them upon the other bony relics disposed about the place, we see, at once, how immensely larger some of the animals of our earth once were, than they are now. The skeleton of the elephant, at the opposite end of the hall, and the bones of the hippopotamus, close by, look small in comparison with those of the creatures no longer found alive, and

whose existence is now one of the romances of geology and of the animal world. The whale is the only existing creature that can bear comparison with the by-gone monsters whose existence is shown by the bones in this place; and of the skeleton of the whale we have no perfect specimen, because the building is not large enough to hold it, and the college wants funds to build a place for the reception of the creature that would make this national collection more complete. Amid the real riches of the place we cannot avoid wishing it more perfect. The skeleton of a whale was exhibited in London some years ago, and attracted much notice; but it was taken away, and is now in France. Another may be seen in the Museum at Berlin. We ought to have a perfect one in the Hunterian Collection. The money of the College has been liberally poured out to secure the strange old-world relics. One Don Pedro de Angelis, an active collector, who secured the bones of the glyptodon and mylodon, on the alluvial plains near Buenos Ayres, received for them no less than three hundred pounds thirteen shillings; for the bones of the mastodon, found in Kentucky, another speculative gentleman got one hundred and sixty pounds; whilst a Mr. Cumming received one hundred and six pounds for a set of choice shells he collected in the Philippine Islands; making together a handsome sum well spent to enrich the collection. Everything, however, need not be sacrificed to the past. The creatures of our period deserve a place, the more so since the extension of commerce, and of whaling energy, threatens the ultimate extinction of the mammoth of the deep. If the College cannot afford to extend their building to make room for a whale, let the extension be made by the Government. Mr. Arnott, the President of the College, should plead the cause of science to Lord John Russell; and the minister—himself an author as well as a statesman—could scarcely withstand the appeal now that he has an exchequer balance in hand.

But the consideration of what might be in the Hunterian Museum must not divert our attention from the many things it contains. Walking along the central path we gradually obtain an idea of how abundant these riches are. We see around contributions from all countries; hundreds of skeletons; but not one horror. All are clean, calm, and white—bones, dry bones—but standing up in all the characteristic attitudes of life. Asia sends its elephant; Africa its cameleopard, and its hippopotamus; the new world of Australasia, its gigantic extinct bird, the *Dinornis* of New Zealand; Europe, a species of extinct, gigantic deer. The birds of the air, the beasts of the field, the fishes of the sea, the myriad of creeping things, the reptiles of oozy rivers and marishes, and dark forests, send each their contribution to this assemblage of all things—this bony parliament of the natural creation—this Hall of Skeleton Assembly—this

Post Mortem Palace. All rest quietly in company. Lions and lambs; dolphins, turtles, and sharks are on the very best terms with each other; eagles, hawks, swans, and pigeons perch in harmony. Different portions of the animal economy are also displayed. One case contains skulls from all parts of the globe; in another are brains of various creatures, beautifully preserved, and abundant enough to satiate the wildest phrenologist; a third has stomachs sufficient to startle any number of aldermen, or to outdo in capacity the largest of luxurious corporations. The noblest and the meanest of created things send each their contribution; from the mammoth to the mouse,—from man to the ape.

In one case are some illustrations of the durability of the skin of different creatures, and amongst others is a specimen of the integument of the extinct animal giant, the mammoth, discovered in the frozen soil of Siberia, where it must have lain bound up in its crystal prison doubtless not for hundreds, but for thousands, of years. The story of its discovery is told in the Catalogue, and is worth repeating:—

"A Tungusian hunter and collector of fossil ivory, who had migrated in 1799 to the peninsula of Tamul, at the mouth of the Lena, near the seventieth degree of north latitude, one day perceived, amongst the blocks of ice and frozen soil, a shapeless mass, which in the following year was more disengaged and showed two projecting parts. In 1803, part of the ice between the earth and the observed body—which was then recognised as that of a mammoth, yielding the tusks commonly found in the soil of that coast—having melted more rapidly than the rest, the enormous mass fell by its own weight on a bank of sand. Of this, two Tungusians, who accompanied Mr. Adams, the recorder of the fact, were witnesses. In the month of March, 1804, the discoverer came to his mammoth, and having cut off the tusks, exchanged them with a merchant for goods of the value of fifty rubles. Two years afterwards, or the seventh after the discovery of the mammoth, Mr. Adams visited the spot, and found the mammoth still in the same place, but altogether mutilated: the Jakutski of the neighbourhood had cut off the flesh, with which they fed their dogs during the scarcity. Wild beasts, such as white bears, wolves, wolverines, and foxes, also fed upon it, and the traces of their footsteps were seen around. The skeleton, almost entirely cleared of its flesh, remained whole, with the exception of one fore-leg, probably dragged off by the bears. The spine, with other parts of the skeleton, still held together by the ligaments, and by parts of the skin. The head was covered with a dry skin; one of the ears, well preserved, was furnished with a tuft of hair. The point of the lower lip had been gnawed; and the upper one, with the proboscis, having been devoured, the molar teeth

could be perceived. The brain was still in the cranium, but appeared dried up. The parts least injured were one fore-foot and one hind-foot; they were covered with skin, and had still the sole attached. The skin, of which about three-fourths were saved, was of a dark grey colour, covered with a reddish wool, and coarse long black hairs. The dampness of the spot where the animal had lain so long, had in some degree destroyed the hair. The entire skeleton, from the fore-part of the skull to the end of the mutilated tail, measured sixteen feet four inches; its height was nine feet four inches. The tusks measured along the curve nine feet six inches, and in a straight line, from the base to the point, three feet seven inches.

"Mr. Adams collected the bones. He next detached the skin on the side on which the animal had lain, which was well preserved; the weight of the skin was such, that ten persons found great difficulty in transporting it to the shore. After this, the ground was dug in different places to ascertain whether any of its bones were buried, but principally to collect all the hairs which the white bears had trod into the ground whilst devouring the flesh, and more than thirty-six pounds weight of hair were thus recovered. The tusks were re-purchased at Jakutsk, and the whole sent thence to St. Petersburg, where the skeleton is now mounted."

Very many heads and hands have contributed to complete this museum. As its name indicates, the founder of the collection was the self-educated, self-elevated physiologist, John Hunter, who, born to the condition of a village carpenter, raised himself to the foremost rank as an investigator of the laws of Nature. Hunter did not accept as truth, all that was told him; nor did he rest content with what his predecessors had done or said; but, intent upon the discovery of facts, he went to work for himself. Animal and vegetable products of all kinds were materials full of interest to him; some whence they would, they were made to contribute to his knowledge of natural things; and when his skill and his fame grew, and as skill and fame gave money and power, both were used for the acquisition of a larger stock of materials for observation.

During his lifetime he prepared and accumulated a marvellous number of specimens; and when his sudden death whilst attending at St. George's Hospital, brought enemies and friends alike to a recognition of his great services to science, it was determined to buy his museum, with funds provided by the public purse, and to place its contents where they might be ready for public reference. The valuable charge was first offered to the College of Physicians, and declined upon the plea that they were too poor. It was next offered to the College of Surgeons, and accepted. The Government voted a portion of the money necessary for building a museum, the College finding the rest. Since then,

without any help from the taxes, the collection has been increased and enriched from various sources.

Fifteen hundred pounds were given for fifteen hundred preparations left behind him by Sir Astley Cooper; four hundred and fifty pounds were given for four hundred and fifty made by Mr. Liston; eight hundred and sixty-eight pounds for preparations made by "old Brooks," and seven hundred and sixty pounds for a number of specimens prepared by Mr. Langstaff. Innumerable things have been given by different scientific surgeons and others, until the total of the combined supply makes up what we see—undoubtedly the finest physiological collection in the world. The whole cost of bringing the thing to its present perfection has been very great. Since the museum has been in charge of the College, it is calculated that they have spent upon it, in specimens, salaries, catalogues, and preservation (a very costly business) upwards of sixty-six thousand pounds.

With the consequences entailed by its custody (ingloriously escaped by the College of Physicians) the sum spent has been much larger still. This has come almost wholly out of the fees paid for diplomas, the College having no property in houses or lands; and such being the case, now that they see the museum has grown and grown till it almost chokes up the existing space for its reception—large though that be—and now that specimens are hidden up for want of space for their display; the public may fairly demand that aid from some source may be given for its proper expansion. In other countries the Government are foremost in their provision for science; in ours, the public voice has often to be raised again and again before a scanty dole is afforded for such public purposes. About three thousand a-year is now spent out of the funds of the surgical public for keeping up this national museum—open to the nation without fee or stint, with no twopenny fee at the door, as they have at St. Paul's—a museum into which the contributions of science are ever and anon pouring new abundance. The Government of France, or Prussia, or Russia, if they had such an institution, would surely not stint something for house-room. Why should the Government of England?

Whilst to the scientific this museum affords ample means for study, it has also points of deep interest and instruction for the simplest of unlettered visitors. On a pedestal in the centre of the room, stands the skeleton, eight feet high of the Irish giant, O'Byrne, the living human wonder of his day. He died about seventy years ago, when only twenty-two years old, his death being hastened by his love for drink. His last fears were, that his enormous frame might fall into the hands of the doctors, and he made those about him promise to carry his body out to sea, and sink it there. So remarkable a specimen of

the human family was not, however, fated to be utterly lost. A hundred years might pass without producing another man of the same height; extraordinary exertions were made to secure his skeleton, and John Hunter succeeded in adding it to his museum, but not without an expenditure of a very large sum of money to the depraved associates of the drunken dead giant. Beside O'Byrne's skeleton are those of an adult man and woman of the ordinary stature, and the contrast is sufficiently complete. A more striking one, however, is secured by a fourth skeleton, that of a little woman, known thirty years ago, as the Sicilian Dwarf. Her name was Caroline Crachami, and she was exhibited in various parts of England, being much less than two feet high! She died in Old Bond Street, in 1821, and her skeleton measures but twenty inches. The man who put up her skeleton, had evidently a dash of the satirist in his composition; for at the foot of the tiny bony frame lies a silk stocking that once clothed the dwarf's leg, and a little ring filled with pearls, and a ruby that once encircled her finger. The glitter of the gew-gaws is a silent commentary on the vanities once allied to the dry bones they now lie beside—vanities not limited to poor dwarfs.

Beyond the human giant, loom the bones of a quadruped the skeleton of poor Chuny, "the mad elephant of Exeter Change." Many of our readers will remember the days when Zoological Gardens were unknown in England, and when Exeter Change projected half across the present Strand near the end of Catherine Street, and ran for a considerable distance down towards Charing Cross—the under part being an arcade for the sale of nick-nacks, and the upper stories being full of caged wild-beasts. Those who remember that old favourite haunt of shopping ladies and sight-seeing Londoners, will remember also the day when the town was alarmed by news that the elephant had gone mad, with love and tooth-ache, and was breaking out of his den; and how, in spite of drugs by pulsif, and poisons by the pound, he could be neither cured nor killed; and how, at last, men were summoned from the neighbourhood armed with guns to fire upon the enraged creature, and at last a file of grenadiers were sent for, and all fired, and fired more than two hundred muskets and rifle shots in vain, until at length one ball took effect in the poor crazy monster's brain. To all who remember these things, Chuny will appear an old acquaintance when they see him in the College Museum, for which he was bought at a cost of two hundred pounds.

Round about the museum are many other, smaller objects of attraction. The paper nautilus is there with a word in the catalogue, dissipating the old poetical notion that their expanded arms are used as sails; also some beautiful Italian models of the torpedo—the fishy living galvanic battery;

some cases of most curiously dissected insects, and also some skeletons of fish, showing each in its proper place, the multitude of small bones that bother the hasty epicure. One of the specimens is a trout caught at Drayton Manor. It weighed twenty-two pounds, and was sent by Sir Robert Peel, as a curiosity, to the College, when the council, in compliment to the statesman who dealt so much more liberally with science than many other ministers had done, spent a round sum in putting up the skeleton in the present style.

Besides remarkable instances of normal structure, many curious freaks of nature are there also; some of them being in a small additional room on the left of the hall. One of these, the child with two skulls, may be mentioned. It is the skeleton of a boy born in Bengal, about seventy years ago. Here is the description from the catalogue:—"The child was healthy and was more than four years old at the time of its death, which was occasioned by the bite of a poisonous snake. When born, the body of the child was naturally formed, but the head appeared double, there being, besides the proper head of the child, another of the same size, and to appearance almost equally perfect, attached to its upper part. This upper head was upside down, the two being united together by a firm adhesion between their crowns, but without any indentation at their union, there being a smooth continued surface from one to the other. The face of the upper head was not over that of the lower, but had an oblique position, the centre of it being immediately above the right eye. When the child was six months old, both of the heads were covered with black hair, in nearly the same quantity. At this period the skulls seemed to have been completely ossified, except a small space on the top. The eyelids of the superior head were never completely shut, but remained a little open, even when the child was asleep, and the eyeballs moved at random. When the child was roused, the eyes of both heads moved at the same time; but those of the superior head did not appear to be directed to the same object, but wandered in different directions. The tears flowed from the eyes of the superior head almost constantly, but never from the eyes of the other except when crying. The superior head seemed to sympathise with the child in most of its natural actions. When the child cried, the features of this head were affected in a similar manner, and the tears flowed plentifully. When it sucked the mother, from the month of the superior head the saliva flowed more copiously than at any other time, for it always flowed a little from it. When the child smiled, the features of the superior head sympathised in that action. When the skin of the superior head was pinched, the child seemed to feel little or no pain, at least not in the same proportion as was felt from a

similar violence being committed on its own head or body." A fuller account of this remarkable case of monstrosity may be found in the "Philosophical Transactions," by those who like to seek it.

Many other things equally strange might be named, were it needful, for the smaller museum is half-full of curious things. There are, for instance, illustrations of two of the most marvellous cures, or rather escapes, on record:—such as the bones of the front of the chest of a man who was literally impaled by a gig shaft, but recovered; a second, are drawings to illustrate the injuries of another man, a sailor, who was pinned to the deck by an iron spike at the end of a mast, weighing six hundred pounds, but who yet recovered, and is believed to be yet alive, and well, in Wales. The crowning curiosities, however, are not named in the catalogue, though they stand in two small bottles, on a mahogany pedestal, in the centre of this smaller room. To a man with a soul for identicals, they must offer great attraction, for they are two portions of the small intestine of the Emperor Napoleon, showing the presence of the cancerous disease that killed him. These post-mortem relics were removed by a French surgeon who assisted in opening the body of the deceased conqueror, and were given by him to Barry O'Meara, who presented them to Sir Astley Cooper. They offer scientific and historical evidence of the cause of the great man's death. Some time ago a card leant against the bottles, explaining the nature of their contents, but more than once a French visitor to the place became excited, and even violent, on seeing the relics of their venerated chief. One day a perfect scene occurred:—"Perfide Albion!" shrieked a wild Gaul, whose enthusiasm seemed as though it had been fed upon Cognac. "Perfide Albion!" again and more loudly rang through the usually quiet hall. "Not sufficient to have your Waterloo Bridge, your Waterloo Place, your Waterloo Boots, but you put violent hands on de grand Emperor himself. Perfide! perfide! perfide!" he yelled again, and had he not been restrained, would have run a Gallie muck among the bones and bottles that would have been recollected for many a day. From that time the pathological record of Napoleon's fatal malady has been unnumbered, and—to the million—unrecognisable.

A popular enquiry of the place is, "Where's Mrs. Van Butchell? Which is Mrs. Van Butchell?" The lady in question was the first wife of Martin Van Butchell, a celebrated quack doctor, who, eighty years ago, used to ride in Hyde Park on a pony painted blue, green, and red, as an advertisement of himself and his pretended cures. When the good lady died, her husband employed some eminent medical men of the day to try a mode of preserving her remains, and they were accordingly embalmed with turpentine and

calophorated spirits of wine. Seventy-five years have elapsed since it was done, and Mrs. Van Butchell, judging by her head, is still a most respectable mummy. Another female, who desired about the same period to be so treated after her demise, and whose wish was realised, is in a similar state of preservation. But we have said enough. Let those who would know more of the fine collection, go and search out its curiosities for themselves.

THE WEALTH OF THE WOODS.

THOSE uncultivated regions, dotted here and there with trees, and serried everywhere with brambles, which we of Europe call a forest, is a garden compared with the least extensive forest of New Brunswick. A saunter only a few hundred yards from a New Brunswick settlement suddenly brings you to a barrier of trees, firmly rooted, side by side, in the severest military order, and you are told that that (pointing between the crevices of the trees) is your way into the forest; the reflection at once passes through your mind that the famed Daniel Lambert would have been an indifferent backwoodsman. However you are in a North American wilderness, a few hundred miles from the most distant approach to the comforts of civilisation; and your resolution to make the best of matters is strong. With a desperate effort, that rapidly pumps the blood into your face, you force your way through the barrier. In a few minutes you are buried in the vast solitude. You hear the chirp of birds at a great height. It is March, and you are reminded that about this season of the year the black bear, having sucked the thick part of his paw throughout the winter, and taken no other kind of nourishment, issues from his den in quest of more substantial fare. This reflection, however unpleasant at first, is soon dispelled by the marvellous variety of the scene. Life in a thousand forms is busy about you. Pussy is changing her winter coat of white for the grey of summer; and the fox is quietly speculating upon the hen who is sitting under your neighbour's shed. After a quarter of an hour's desperate scrambling you emerge into a small open space; and are startled to find a busy band of people at work. On inquiry, you learn that you have surprised the workers of a maple-sugary. The sugar maples, into which holes have been bored, are noble trees, rising, in some instances, to the height of seventy or eighty feet. The ground on which they grow is a gentle declivity, in the valley of which a stream, with bits of frail ice still clinging about its banks, bubbles along. The back of the rock or sugar maple is of a dazzling whiteness. The sugar camp is a rough shanty, pitched in one corner of the cleared space, to shelter those who attend to the kettles. The process of extracting the

saccharine sap and reducing it to sugar is, at present, rude, and perhaps wasteful. The trees are perforated with an auger in an oblique upward direction, at about twenty inches from the ground, and on the south side. The trough, which is to receive the sap is placed at the foot of the tree, and left there throughout the day, at the close of which its contents are poured into casks, or into a huge trough made of the hollowed trunk of a birch tree. The evaporation is kept up by a brisk fire, night and day, until the liquid is reduced to a syrup. It is then strained through a blanket. Afterwards it is boiled till reduced to the proper consistency for being poured into the moulds. When properly refined, the maple-sugar of New Brunswick equals in quality and beauty the finest sugar consumed in Europe. Maple sap is also convertible into vinegar by acetous fermentation under the rays of the sun.

Maple-sugar is consumed throughout New Brunswick, and in various other parts of the American Continent. Some of the sugaries tap eight hundred trees annually; yet these trees, so valuable for their saccharine matter (and the extraction of which does not retard their growth), have been indiscriminately felled by the settlers; and already many New Brunswick farmers when they hear of the pains the people of the United States are taking to plant maple orchards, look back with regret to the noble maple groves they have chopped up into firewood. The wood when worked has a rosy tinge, and a silky texture. It exhibits two accidental forms, which give it additional value in the eyes of cabinet makers. One is known as "curled maple," that is, maple with an undulating grain, such as the red flowering maple (which also grows plentifully in the dense forests of New Brunswick) often shows.

The second accidental formation of which cabinet makers take advantage, is found only in old trees. It consists of an inflexion of the fibre from the circumference towards the centre, producing spots of half a line in diameter, sometimes contiguous, and sometimes several lines apart. This formation is called "bird's-eye maple." The sugar-maple is now beginning to be imported into this country in considerable quantities. Even from the excrescences or knobs of this beautiful and valuable tree, cabinet-work of rare beauty is manufactured by the French.

Passing from the sugary, and leaving behind you the graceful rows of silver maple, that look like fairies' wands, you may pass one or two stunted grey oaks. The severe winter dwarfs them, yet their wood is sound and hard, and serves for agricultural implements, and sleighs. Your attention is, however, soon taken from the puny oaks to be rivetted upon some magnificent specimens of vegetation. The grand walnut or butternut trees of New Brunswick, are hardly known in England. The butternut, however, makes noble

timber, and most useful for many important purposes. It sometimes grows to the height of eighty feet, and its branches, which generally shoot at a right angle from the trunk, give it a wide-spreading and luxuriant tuft. The fruit of this tree is an oily nut, called a "butternut," which the settlers pickle. The bark of the tree makes an excellent yellow dye. Butternut-wood is a most valuable timber; it has great powers of resistance to heat and moisture. For coach-panels it is in request from its lightness, toughness, and the manner in which it receives paint. At Fredericton, butternut wood is used generally for furniture. The grain is handsome, easily worked, and susceptible of a good polish. Some of the public buildings of Fredericton have been fitted up with butternut wood with a most pleasing effect; yet this timber is never imported into this country, although it can be procured in large quantities and blocks, and is easily propagated. Near the great butternut tree you will find the flowery dog-wood, a most useful timber from its hardness and the beauty of its grain. Its diminutive proportions, however, render it useless except for tool handles, or other equally small articles.

Upon a gentle declivity, or in a valley of rich soil, you find the tall and slender canoe-birch, another most valuable and beautiful tree. The wood of this birch exhibits, immediately below its first ramification, gentle undulations of the fibre, which American joiners turn to account for inlaid work. The bark of this birch, however, is the most valuable part of it. From this bark the Indians manufacture various ornaments and build their canoes.

In close proximity to the ash, and surrounded with black spruce and hemlock spruce, you find a tall tree with a stem like a shaft of gold. Its lowest branch is forty feet from the ground. This is the yellow birch, esteemed by cabinet-makers for its durability, and its handsome appearance when polished; large quantities of it reach Europe. It is from the bark of this tree that the empyreumatic oil is extracted with which Russian leather is dressed, and it is from this oil that prepared Russian leather obtains its peculiar odour. The most useful of the American birches, however, is that species known to the Canadians as cherry birch, and to the inhabitants of New Brunswick as black birch. It is imported into this country in large quantities. Under water it is almost imperishable; but its tendency to warp when dry, detracts greatly from its value for furniture. For that part of vessels which is under water, this wood is extensively used. Its sap yields excellent vinegar, and its leaves, when rubbed and dried, emit a pleasant perfume, or make a refreshing infusion when steeped in milk and sugar. Its inner bark is valuable for tanning.

You ramble on, pushing your way through the dense underwood, starting many hares, catching a glance, perhaps, at rare intervals, of a quiet fox making his disappearance on tip-toe with grotesque caution, or pausing in astonishment at the shrill cries of some of the great birds that flaunt lazily about in the air. When you get upon low moist ground you find the common alder and the black alder growing in thick clusters. The wood of the alder takes black better than any other timber; from this property chiefly it derives its value. With sulphate of iron the bark forms a good black dye for wool, and this dye is not unfrequently used by American hatters.

To see the wild cherry tree to advantage you must take a forest ramble about the end of August. You will then find the wild cherries hanging in rich profusion above you. You will seldom find the wild cherry tree of New Brunswick exceed thirty-five feet in height, with a trunk averaging from eight to ten inches in diameter. The wood is of a dull light-red tint, which deepens, with age, into a brilliant brown. In the United States, where the tree grows to a large size, it is so worked that it rivals the beauty of the finest mahogany. The settlers of New Brunswick turn the wild cherries of their forests to account by extracting a liqueur from it, which, when carefully prepared, is said to out rival the Kirschwasser made from the cherries of the Black Forest. Now and then in your forest rambles your sense of smell will be gratified with the odour emitted from that almost useless, though graceful tree, the balsam poplar. This odour comes from a yellow gum which exudes from the spring-buds of the tree. The American aspect is a tender, graceful tree; the larger kind is a valuable wood, equal in richness, when carefully polished, to satin-wood.

It has been, and probably is still, a matter of dispute which tree is the monarch of the North American forests. The oak, of which Englishmen are so proud, is a puny, sickly plant in new Brunswick, overshadowed by the butternut and cherry-birch; but the rambler, who has a sense of the beautiful, will give a decided supremacy to the beech. All botanists have united in extolling the magnificent feathery foliage of the beech; its grand proportions, its roots, like the claws of a giant stretched along the surface of the earth around it, then suddenly plunged below. The traveller in New Brunswick will suddenly find himself buried in a dense forest consisting entirely of these noble trees—such a forest is one of the grandest scenes in nature. The white birch depends for its preservation upon its marvellous beauty, inasmuch as it can minister to the wants of man only in the shape of firewood. The red birch is less ornamental, but more useful than its gorgeous brother. Red beech timber is stronger and tougher than oak, but less stiff

Water is almost powerless to corrupt it; but variable atmospheres rapidly destroy it. After forty years' immersion in water it has been found as sound as when it was felled. The finest specimens of this timber are to be found in Prince Edward Island. Timid rambles learn with some concern that the bears resort to the beech forests to satisfy their partiality for beech nuts.

Here and there you come across a specimen of the iron-wood tree. It is a stunted plant, not often exceeding seventeen feet in height. The fine grain and weight of its timber, however, gives it a particular value. Near the brilliant yellow birch the ash will generally be found. The white ash is tougher and stronger than oak; but is principally esteemed for its remarkable elasticity. In swampy ground the black ash thrives. Its wood is yet more elastic, though weaker than that of the white ash—it is, however rich in alkali.

You will also, in the course of the shortest forest ramble in New Brunswick, come up with lofty specimens of white and red elm. These trees, remarkable for their beauty wherever they are found, are in the forests of New Brunswick magnificent plants, reaching sometimes one hundred feet in height. The toughness of elm timber forms its chief value. It perishes rapidly when exposed alternately to wet and dry atmospheres, but under water it lasts in a sound condition for centuries. Red elm timber resists variable weather better than the white elm, but its grain is coarse. Another gigantic tree to be found in the loose, deep soils of New Brunswick forests, is bass-wood, or the American lime. It is a handsome tree, but of little more value than the gorgeous beech.

The speculative man cannot walk ten paces in any part of the vast forests of New Brunswick, without pausing to inquire how it is that the wealth he sees about him lies there unproductive. In the noble trees, the heads of which are lost in the clouds, the utilitarian, whom it is the fashion to deride, sees so many incipient arm-chairs and sofas. He notes how the handsome knotty branch of yonder elm might be fashioned into a garden-chair. If this current of reflection be indulged at the expense of a little poetry; if a man, with a hatchet and a foot-rule, be a less poetic visitor of the forest than the verse maker who muses in its mighty labyrinth, at least the prosaic leveller of arboricultural monarchs does good service to his kind. Our forest ramble is open to the charge of utilitarianism; we have not used pre-Raphaelite colours; but while pleading guilty to a practical tendency in our inquiries, we shall, perhaps, be permitted to gather unto ourselves a consolation, in the hope that some of the wood, the useful properties of which we have noticed, may in due time be fashioned into casels for some seraphic painter of very angular virgins, draped in a costume of most painful stiffness. Grateful as all men must

be, that Nature presents to them pictures as grand as those of the American solitudes, they cannot, if they look at the question in its human light, be sorry to learn that there is a faint hope of one day beholding the solitudes which the poet loves peopled by happy families. There is poetry in the practical, as well as in the purely imaginative. The man who first stayed the mountain's stream to turn a mill-wheel, was, in all probability, as poetic a being as the author of the finest lines on its pellucid waters, the music of its flow, and the verdure of its banks. In this view, let our practical view of the untrodden wildernesses be regarded; if we have not written poetry on their beauty and their grandeur, we have endeavoured to show the resources they contain for the profitable exercise of that honest labour which fails to find its due reward in our teeming island. Thus the muse may forgive us for taking our forest ramble with a note-book in one hand and a foot-rule in the other.

THE MAGIC CRYSTAL.

It is the fashion—especially among people of fashion—to point with pity to a tale of modern witchcraft, to an advertisement of a child's caul, or to the *bona fide* certificates of cases from the takers of quack medicines, and to deplore the ignorance of their inferiors. Delusions, however, of the grossest kind are not confined to the illiterate. A cloud of dupes have ever floated about in the higher regions of society; while it is quite a mistake to suppose that the refinements and discoveries of the nineteenth century have dispersed them. The reign of Queen Victoria, like that of Elizabeth and of Anne, has its Dr. Dees, and Lillys, and Partridgeas, who are as successful as their precursors in gaining proselytes who can pay handsomely. Damsel of high degree, fresh from boarding-school, with her head more full of sympathy for the heroes and heroines of fashionable novels, and ideas more fixed upon love affairs than on any legitimate studies, can easily find out, through mysteriously worded advertisements in the Sunday papers, or through the ready agency of friends who have already become victims to the "science" of astrology and magic, the whereabouts of these awful and wonderful beings. There are a number of styles and classes of them, all varying in appearance and mode of operations. There are the old women, who, consoled by the glories of their art, repine not at inhabiting comfortless garrets in the purlieus of the New Cut, Lambeth; and hiding their vocation under the mask of having staylances or infallible corn-plasters to sell, receive more visitors from the fashionable cream of Belgravia than from the dross of Bermondsey. Disguises are sometimes resorted to, and parties of titled ladies have been known to meet, and put on the

habiliments of "charwomen," and to pass themselves off as dressmakers. There is an old man with unshaven beard and seldom washed face, who lives in more comfortable style with his son, in Southwark (the favoured district of the conjurors), who, to keep up appearances, has "Engineer," hugely engraved on a great brass plate over the door; who casts nativities, and foretells events of the future, for three or five shillings, as the appearance of the visitor will warrant him in demanding; receives all his votaries sitting at a terribly littered table of dirty papers, with a well-smoked clay pipe beside him.—Passing to a higher grade, the "agent," or arranger of matters, legal, pecuniary, or domestic, only practises the black art for the love he bears it and to oblige his friends, but never refuses a few shillings fee, out of respect to the interests of the science. Nearly all his customers are people of title.

But the most successful of these astrological conjurors is the possessor of a certain MAGIC CRYSTAL; to the surface of which he pretends to call up angels, constellations, and heroes of the past, with all of whom familiar conversations are held, to the amazement of large parties of fashionables assembled in elegant salons. Were the rank and numbers of the persons weak enough to be deluded by such exhibitions to bedivulged, the revelation would not be credited by the sane part of the world. The Magic Crystal, during the London season last past, became the wonder, the talk, and—with not a few—the belief. Some account of the antecedents of Magic Crystals will not be without interest:—

Those who have passed any time in India, will have become acquainted with the use made of round masses of rough hewn polished glass, designated Divining Crystals, and bear testimony to the superstitious awe with which they are regarded. The High Priest of the Buddhist and Hindoo Temples in former times, when arrayed in the consecrated garments for the festivals, had one of these round knobs—about the size of a large pendant drop of a chandelier, or the top of a beadle's staff—suspended from his neck by a chain of great value, and of dazzling brilliancy. It was through the agency of this crystal that he was supposed to hold communion with the spirit or spirits to whom he and his followers accorded devotion and made intercessions; and the glass, acting as did the famed oracle of Delphi, gave orders and commands, and settled all great questions that might be submitted to its spiritual master. The priest, although he might be a pattern of purity, and the quintessence of all that was good, having, however, the sin of being in years, and not able perhaps to keep from the spirit inhabiting the crystal all the transactions of his youth, could not hold direct communication with it; to arrange this, a certain number of boys (and sometimes, in some of the temples, young damsels) were retained, who, never

having mixed with the world, could not be supposed to be in any way contaminated by its vices. These alone were said to be capable of beholding the spirits when he chose to make his appearance in the divining glass, and interpreting to and fro the questions put, and answers received. Although it was not every boy or "seer" to whom was permitted the gift of spiritual vision, yet in later times, when divining crystals multiplied, little ragged boys would run after the passers in the streets and offer to see—anything that might be required of them—for an anna, or even a cake or sweetmeat. In Egypt, the Divining Glass is superseded by putting a blot of thick black fluid into the palm of a boy's hand, and commanding him to see various people and things, of which practice Lane, in his "Modern Egyptians," gives some curious disclosures.

Divining mirrors were not confined to the East. Dr. Dee was the first English impostor who vaunted the possession of one of these priceless treasures. He had for the "seer" one Kelly, an Irishman, and to this, doubtless, was attributable the impression that prevailed among the astrologers and amateur spirit hunters, that when the spirits condescended to speak, they always gave speech with a very strong spice of the brogue. This "beryl," as it is called, was preserved amongst the Strawberry Hill curiosities, and fell under the hammer of George Robins at the memorable sale. It proved to be a globe of cannel-coal. In Aubrey's Miscellany there is an engraving of another larger crystal, and there is with it (as also in other works produced about the same period) many wonderful stories; yet notwithstanding the magic capabilities of these mirrors, they went out of fashion until the beginning of the present year.

This revival and its consequences is like a page out of a silly romance. The story, if told by a disinterested historian, would require authentication as belonging to the year 1850. We therefore turn, by way of voucher, to a publication—which on any other occasion, it would require an apology to our readers for quoting—called "Zadkiel's Almanac for 1851." At page 46 of that farrago, after referring to the existence of Magic Crystals at the present day, the writer says:—"One of large size (four inches in diameter) was a few years since brought over by a friend of Lady Blessington; after the sale of whose effects it recently fell into the hands of a friend of mine; and, having tested its powers, I have resolved on giving my readers an account of this wonderful mode of communicating with the spirits of the dead. The crystal is spherical, and has been turned from a large mass of pure rock crystal. I have been shown some few others, but, with the exception of one shown me by Lord S,* they are all much

* For which his lordship, we are told, paid Zadkiel's friend £50.

These are said to be consecrated to the Angels of the planets, and are, therefore, far less powerful than Lady Blessington's Crystal, which, being consecrated to the Archangel of the Sun, Michael, may be consulted during four hours each day, whereas the others can generally be used only for a very brief space of time; nor can very potent spirits be called into them or made to render themselves visible. It will be seen that in this large crystal spirits appeared without being 'called,' as is usual; and that they give us most important information of the actual existence of the soul after death, and of the state in which it exists and will exist until the Judgment. They confirm all the great truths of Revelation and of the Christian religion; and they tell us that we should take the Holy Scriptures as our guide alone, and not rely on the dogmas of any Church, or heed the opinions of any human teachers. They aver that Prayer and Praise are essential to salvation, but that forms and ceremonies are not; and they say that ALL the spirits, and even the highest Angels in Paradise, do pray to God, who is always pleased with earnest prayer."

It is this sort of blasphemy which, unhappily, makes the most dupes, for weak minded people mistake it for religion. The mode in which this delusion was "worked," we learn from a friend who accidentally became acquainted with the imposture. He says:—

"The first intimation that we received of the revival of this notable practice of divination was about six months ago, when we were casually informed that the son of a distinguished officer of the Royal Navy was, at that time, frequently, engaged in developing before a few privileged friends, the extraordinary faculty of being able to hold intercourse with the world of spirits. It was added that the revelations made through the medium of this youth were of so wonderful a nature, and carried such conviction to the minds of those who listened, that they were declared to be the result of more than human power.

"We made inquiry as to the nature of these revelations, and found—as we expected—that they were precisely what might be expected, not from a supernatural intelligence, but from a naval young gentleman who carried to the ceremony a fair proportion of that readiness of belief in supernatural agency which is, more or less, characteristic of all sailors. On the subject in general these gallant officers were imaginative enough, but their specific yearnings—we are forced to admit—did not display any very lofty range. Their questions, instead of turning on

"'Fate, foreknowledge, and free-will,'

were limited to inquiries as to the personal appearance of some of our distinguished naval

Commanders, and the spirit who communicated his replies, through the interposition of the son of a Captain in the Royal Navy, must have been somewhat of the chillest capacity if he could not have satisfied the ingenuous interlocutor. One specimen of this sort may serve for a dozen.

"'Ask him,' said Lord —, for such was the rank of the querist, 'ask him to describe Lord Nelson!'

"And, accordingly, the spirit, with an accuracy which was quite astonishing—considering that no portrait, bust, or statue of Nelson is known to exist—gave a full, true, and particular account of England's hero, describing him as a very thin man, in a cocked-hat, with only one eye, one arm, &c.; and the truth of this description was declared to be something truly marvellous.

"What the spirit of Lord Nelson said we were not informed, but we have no great difficulty in believing that it was to the effect that 'England expects every man to do his duty,' if, indeed, those memorable words were not actually used. Something more he might have added of an equally astonishing nature, for we have since discovered that there is a formula in these matters. Whatever it was, his hearers were perfectly satisfied, and the fame of this apparition soon got bruited abroad amongst the relations and friends of the noble and gallant lord already adverted to.

"Another boy, also the son of a naval officer, about thirteen years of age, was a skilful interpreter; and even if he had not been an agent between two worlds, must still have shone forth as something remarkable, for one young lady, the daughter of a dignitary in the Church, declared that 'in her conversation with him, upon metaphysical subjects, she had been particularly struck by the depth and clearness of his reasoning!' The youthful agent had, certainly, the advantage over his principals in this respect, their answers being mostly delivered in the hazy manner which usually characterises communications of an oracular nature.

"There was, however, on the occasion of a *matinée* at the retired naval officer's, who was and is, the Arch-Priest of this mystery, one Spirit who spoke plainly enough, but whose attributes and revelations were at once so comic and appalling, that we are almost afraid to transcribe them; still, for the benefit of our readers, we will venture:—

"A demand was made that the spirit of a deceased brother of one of the querists should be summoned to appear.

"The lieutenant's son averted his face, and bent over the crystal.

"Presently he said, 'I see him—he has red, curly hair, and stoops a good deal. I can't exactly see his features, but I think he squints.'

"This account of her late brother's personal appearance, though not very flattering, satis-

fled the lady as far as it went ; but being, like Macbeth—

“ ———— bent to know,
By the worst means, the worst.”

she required further proof of her relative's identity.

“ There was a pause for a minute or two, and then the Spirit-seer spoke again :

“ He has got a scroll in his hand, which he unfolds ; there is this inscription on it, *in letters of fire* :

“ I AM TOM !!! ”

We were assured that this sublime revelation was received with a degree of solemn awe, which caused our informant to shake with suppressed throes of well-bred laughter.

“ Besides the particular cases of ‘ Tom ’ and ‘ Lord Nelson,’ others, not a whit less marvellous, have been described, and with perfect good faith on the part of the narrators, who could not be reasoned out of their absurdity, and who insisted, moreover, that there could be no deception in the matter, on account of the means employed, and the evident sincerity of the *employers* ! These means, they said, required that the person who looked into the crystal should be perfectly *pure* ; that is to say, a child free from sin (and by no means given to lying, as sometimes happens with the best of children), and that the form of adjuration used was, ‘ *In nomine Domini*, ’ &c. ; Latin being, as is well known, the language which spirits of all denominations, ‘ red, black, and grey,’ are most accustomed to. When interrogated after this fashion, the spirit, if evil, fled away, howling (inaudibly) ; if good, it came, when called, unless particularly engaged in the *Sun* ; for it appears that it is to that planet almost all spirits go when their term of purgatory is over.”

Thus far we are lighted on our amusing way by private information ; but for more evidence of the balderdash by which educated persons are capable of being deluded, we must revert to the Almanac. According to this voracious record, the first spirit who favoured Zadkiel with a visit (it was on the 29th of January last) was Orion, of whom such frequent mention is made in the fathers. He is described as “ a TALL man, with a helmet on, and in armour ; a bear on its hind legs near him ! He is fierce-looking, but has a pleasant smile.”

Zadkiel indulges the readers of his Almanac with woodcuts of the various spirits as they are said to have appeared in the Crystal. They were drawn by one of the seers—a young gentleman having a knack with the pencil. The bear “ on his hind legs ” does not appear ; but Orion himself is, in the guise of a knight, precisely like those theatrical heroes dear to the eyes of youth, and sold at a “ penny plain, and twopence coloured.” What renders this portrait quite authentic, is a sentence in a letter which our

friend showed us, from the author of the Almanac to an old retired officer, in which he speaks of the young seer as a draughtsman, as a recreant, and ~~charges~~ him for having owned that what ~~was~~ seen in the glass was—nothing. That the portraits he took, the visions he declared he saw, the answers he pretended he heard from the glass, were simply of his own invention. That in short he had perpetrated an egregious hoax. After the date of the letter in which this is dolorously communicated, the young artist's drawings are published in the Almanac as authentic likenesses of what appeared in the extraordinary glass of spirits.

The substance of Orion's communication is as follows, commencing with the caution that what he tells is not to be published “ for the first half of this year,” that is to say, till the Almanac is ready. All his communications are evidently copyright.

He says that the Crystal in which he appears was made in the year 657 B.C. ; that any questions may be asked, “ except wicked ones ; ” that the querist “ cannot always be told ; ” and that he comes “ from the atmosphere.” Being out of breath with talking—though he says little besides the above—Orion has recourse to the expedient of “ *letters of fire*,” which, observes Zadkiel, in a note, “ appear *written* in various ways in the Crystal ; sometimes on flags, which the Spirits hold up ; but sometimes they are *in print*.” In these letters of fire, Orion thus counsels the querist : “ Be merry. Quarrel not. Keep your temper, and your children, too. You are a good man, but try to be better. I am wanted. Let me go.”

Besides Orion, there is a spirit whom we never had the advantage of hearing of before—his name is Gego. He is not quite so clever as Orion, or the Egyptian magicians. However we learn from him that in the Predamite era the world did *not* go round the Sun, which is something worth knowing, and would be satisfactory information for Dr. Cullen. He also says, that “ The Babylon mentioned in the Revelations did not allude to Rome but to London.”

Without troubling Orion or Gego any further, we turn to a few deceased celebrities who were at different times summoned into the Crystal, and hear what they have to tell us.

Milton relates that the idea of “ Paradise Lost ” was suggested to him in a dream, by his guardian angel. Homer was born in Athens, and knows Virgil. Tacitus, who is eminently modest, prefers Caesar's account of the Britons to his own, and says that the Druids were “ stupid fellows in general.” Sir Isaac Newton says, that “ Electricity is *partly* the cause of the moon's motions,” and that “ the nature of light will be discovered, but not for a long time.”

The following specimens of colloquies heard by large parties of amazed, titled, and be-

Having listeners, are copied from the Almanac literature.

"Are you Pharaoh, that was Klug of Egypt?—Yes. Where do you dwell now?—In Jupiter. How long have you been there?—About thirty years. Where did you dwell till then?—In the Atmosphere, and was undergoing punishment till then. Were you King of Egypt when Moses was there?—Yes, and Aaron too. Did you build the Pyramids?—Some. Were any built before your time?—Yes. Do you know how long the first was built before Christ?—About three hundred years after Adam; it was building then. Do you mean that it was built before the flood?—No, it was not finished; the flood destroyed them. What was the principal object of them?—To hold the Kings of Egypt. Were there Kings of Egypt so soon after the Creation?—Yes; that was the first country Kings were in. Were you drowned in the Red Sea?—Yes."

"On a certain Sunday Alexander the Great appeared—on horseback—in armour; the horse also in armour, &c. He is undergoing his punishment, but looks to be released next Sunday. Deeply regrets killing Clitus, and all the murders he perpetrated. Has seen his father once only; not allowed intercourse with any Spirit till after next Sunday. Amuses himself in fighting his battles over again."

In another Crystal dialogue, Emmanuel Swedenborg objects to capital punishments, and also to paying tithes to clergymen. He volunteers information about Sir John Franklin, which Zadkiel says he should like to see "for his wife's sake," and not at all with any hope of reward from the Admiralty!

"What do you wish?" asks Swedenborg. What is the best way to communicate with him? replies Zadkiel. "*By the natives; they speak to him sometimes.*"—Will he be home next summer? "No."—Why? "*Because he cannot help himself; he is stopped by ice, but his heart does not fail him; he wants to explore.*"—How will he do for provisions? "*He will find bears, dogs, and wolves.*"—Will he find the passage? "No; there is a contingent there."—But there is also a passage? "*There is one, but he will not find it.*" What latitude does it lie in chiefly? "I do not know; good bye."

It appears odd that Swedenborg, who knew so much, did not know this; but we learn in another place, that "Spirits do not well understand about latitude and longitude." Orion seems to have been a trifle more explicit, for he places the expedition "to the north-east of Melville Island," where certain young gentlemen of Zadkiel's acquaintance had just killed a bear. The voyagers, we are further told, get "a kind of wolves" (to eat) and "a kind of turf full of gas" (perhaps to drink).

According to the seer Socrates, for he has rather a French taste in dress, came forward in this guise: "A tall, middle-aged man, rather bald, dressed with striped coarse trousers,

very loose at the top and tight near the feet; a kind of frock, open in the front, and without sleeves." He is generally employed in "singing praises," but was not quite happy. Like no other Spirits, he is very polite, for when going, he said, "Many happy returns of your Birthday." ("It was," says Zadkiel, "the seer's thirteenth birthday.") It was this young gentleman who proved a traitor, and proclaimed that he had imposed on Zadkiel and all his friends.

It may be objected that the miserable stuff which we have quoted must prove its own antidote; but, when we find that its author boasts of the scores of thousands which he has sold, of his rapid publication, and sets forth the example set by the higher classes with the view of selling more—an example which always finds a certain number of imitators—we hold, that the pernicious tendency of the publication calls for exposure. Observe the direct effect of the following paragraph, with which Zadkiel sums up the nature of the success he has experienced in the course of a few months—the italics are his own:—

"In concluding this account, I may remark that numerous children have seen these visions, some of them the sons and daughters of persons of high rank; and that several adults have also seen visions, one of them a lady of title, another a member of one of the highest families in England. It will be easily seen that delicacy prevents my publicly naming individuals; but I can assure my readers that *above one hundred of the nobility*, and several hundreds of other highly respectable ladies and gentlemen, have examined this wonderful phenomenon, and have expressed the highest gratification and astonishment."

What is likely to be the future career of "children" who have been trained to a system of imposture? And what may not be the influence upon persons of weak minds, of the opinions expressed by "hundreds of highly respectable ladies and gentlemen," in a community who hold "respectability" in so much reverence? If "above one hundred of the nobility" are not likely to find imitation, amongst their dependents alone, why do we see daily the shrewdest, money-making tradesmen of London advertising the "nobility" as encouragers of their professions, or purchasers of their wares? The answer is obvious.

THE

JANUARY, FEBRUARY, AND MARCH NUMBERS.

On the 1st of January, 1861, will be published,

THE FIRST VOLUME,

Being a complete and carefully-digested ANNUAL REGISTER
of Public Occurrences, in every part of the Globe, during
the year 1860.

THE CHRISTMAS NUMBER.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL
CONDUCTED BY CHARLES DICKENS.

No. 39.]

SATURDAY, DECEMBER 21, 1850.

[Price 2d.]

A CHRISTMAS TREE.

I HAVE been looking on, this evening, at a merry company of children assembled round that pretty German toy, a Christmas Tree. The tree was planted in the middle of a great round table, and towered high above their heads. It was brilliantly lighted by a multitude of little tapers; and everywhere sparkled and glittered with bright objects. There were rosy-cheeked dolls, hiding behind the green leaves; there were real watches (with movable hands, at least, and an endless capacity of being wound up) dangling from innumerable twigs; there were French-polished tables, chairs, bedsteads, wardrobes, eight-day clocks, and various other articles of domestic furniture (wonderfully made, in tin, at Wolverhampton), perched among the boughs, as if in preparation for some fairy housekeeping; there were jolly, broad-faced little men, much more agreeable in appearance than many real men—and no wonder, for their heads took off, and showed them to be full of sugar-plums; there were fiddles and drums; there were tambourines, books, work-boxes, paint-boxes, sweetmeat-boxes, peep-show boxes, all kinds of boxes; there were trinkets for the elder girls, far brighter than any grown-up gold and jewels; there were baskets and pineushions in all devices; there were guns, swords, and banners; there were witches standing in enchanted rings of pasteboard, to tell fortunes; there were teetotums, humming-tops, needle-cases, pen-wipers, smelling-bottles, conversation-cards, bouquet-holders; real fruit, made artificially dazzling with gold leaf; imitation apples, pears, and walnuts, crammed with surprises; in short, as a pretty child, before me, delightedly whispered to another pretty child, her bosom friend, "There was everything, and more." This motley collection of odd objects, clustering on the tree like magic fruit, and flashing back the bright looks directed towards it from every side—some of the diamond-eyes admiring it were hardly on a level with the table, and a few were languishing in timid wonder on the bosoms of pretty mothers, aunts, and nurses—made a lively realisation of the fancies of childhood; and set me thinking how all the trees that grow and all the things that come

into existence on the earth, have their wild adornments at that well-remembered time.

Being now at home again, and alone, the only person in the house awake, my thoughts are drawn back, by a fascination which I do not care to resist, to my own childhood. I begin to consider, what do we all remember best upon the branches of the Christmas Tree of our own young Christmas days, by which we climbed to real life.

Straight, in the middle of the room, cramped in the freedom of its growth by no encircling walls or soon-reached ceiling, a shadowy tree arises; and, looking up into the dreamy brightness of its top—for I observe, in this tree, the singular property that it appears to grow downward towards the earth—I look into my youngest Christmas recollections.

All toys at first, I find. Up yonder, among the green holly and red berries, is the Tumbler with his hands in his pockets, who wouldn't lie down, but whenever he was put upon the floor, persisted in rolling his fat body about, until he rolled himself still, and brought those lobster eyes of his to bear upon me—when I affected to laugh very much, but in my heart of hearts was extremely doubtful of him. Close beside him is that infernal snuff-box, out of which there sprang a demoniacal Counsellor in a black gown, with an obnoxious head of hair, and a red cloth mouth, wide open, who was not to be endured on any terms, but could not be put away either; for he used suddenly, in a highly magnified state, to fly out of Mammoth Snuff-boxes in dreams, when least expected. Nor is the frog with cobbler's wax on his tail, far off; for there was no knowing where he wouldn't jump; and when he flew over the caudle, and came upon one's hand with that spotted back—red on a green ground—he was horrible. The cardboard lady in a blue-silk skirt, who was stood up against the candlestick to dance, and whom I see on the same branch, was milder, and was beautiful; but I can't say as much for the larger cardboard man, who used to be hung against the wall and pulled by a string; there was a sinister expression in that nose of his; and when he got his legs round his neck (which he very often did), he was ghastly, and not a creature to be alone with.

When did that dreadful Mask first look at me? Who put it on, and why was I so

thickened that the sight of it is an era in my life! It is not a hideous visage in itself; it is even meant to be droll; why then were its stolid features so intolerable? Surely not because it hid the wearer's face. An apron would have done as much; and though I should have preferred even the apron away, it would not have been absolutely insupportable, like the mask? Was it the immovability of the mask? The doll's face was immovable, but I was not afraid of her. Perhaps that fixed and set change coming over a real face, infused into my quickened heart some remote suggestion and dread of the universal change that is to come on every face, and make it still? Nothing reconciled me to it. No drummers, from whom proceeded a melancholy chirping on the turning of a handle; no regiment of soldiers, with a mute band, taken out of a box, and fitted, one by one, upon a stiff and lazy little set of lazy-tongs; no old woman, made of wires and a brown-paper composition, cutting up a pie for two small children; could give me permanent comfort, for a long time. Nor was it any satisfaction to be shown the Mask, and see that it was made of paper, or to have it locked up and be assured that no one wore it. The mere recollection of that fixed face, the mere knowledge of its existence anywhere, was sufficient to awake me in the night all perspiration and horror, with "O I know it's coming! O the mask!"

I never wondered what the dear old donkey with the panniers—there he is!—was made of, then! His hide was real to the touch, I recollect. And the great black horse with round red spots all over him—the horse that I could even get upon—I never wondered what had brought him to that strange condition, or thought that such a horse was not commonly seen at Newmarket. The four horses of no colour, next to him, that went into the waggon of cheeses, and could be taken out and stabled under the piano, appear to have bits of fur-tippet for their tails, and other bits for their manes, and to stand on pegs instead of legs, but it was not so when they were brought home for a Christmas present. They were all right, then; neither was their harness ceremoniously nailed into their chests, as appears to be the case now. The tinkling works of the music-cart, I *did* find out, to be made of quill tooth-picks and wire; and I always thought that little tumbler in his shirt sleeves, perpetually swarming up one side of a wooden frame, and coming down, head foremost, on the other, rather a weak-minded person—though good-natured; but the Jacob's Ladder, next him, made of little squares of red wood, that went flapping and clattering over one another, each developing a different picture, and the whole enlivened by small bells, was a mighty marvel and a great delight.

Ah! The Doll's house!—of which I was not proprietor, but where I visited. I don't admire the Houses of Parliament half so much as that stone-fronted mansion with

real glass windows, and door-steps, and a real balcony—greener than I ever see now, except at watering-places; and even they afford but a poor imitation. And though it *did* open all at once, the entire house-front (which was a blow, I admit, as cancelling the fiction of a staircase), it was but to shut it up again, and I could believe. Even open, there were three distinct rooms in it: a sitting-room and bedroom, elegantly furnished, and, best of all, a kitchen, with uncommonly soft fire-irons, a plentiful assortment of diminutive utensils—oh, the warming-pan!—and a tin man-cook in profile, who was always going to fry two fish. What Barmecide justice have I done to the noble feasts wherein the set of wooden platters figured, each with its own peculiar delicacy, as a ham or turkey, glued tight on to it, and garnished with something green, which I recollect as moss! Could all the Temperance Societies of those later days, united, give me such a tea-drinking as I have had through the means of yonder little set of blue crockery, which really would hold liquid (it ran out of the small wooden cask, I recollect, and tasted of matches), and which made tea, nectar. And if the two legs of the ineffectual little sugar-tongs did tumble over one another, and want purpose, like Punch's hands, what does it matter? And if I did once shriek out, as a poisoned child, and strike the fashionable company with consternation, by reason of having drunk a little teaspoon, inadvertently dissolved in too hot tea, I was never the worse for it, except by a powder!

Upon the next branches of the tree, lower down, hard by the green roller and miniature gardening-tools, how thick the books begin to hang. Thin books, in themselves, at first, but many of them, and with deliciously smooth covers of bright red or green. What fat black letters to begin with! "A was an archer, and shot at a frog." Of course he was. He was an apple-pie also, and there he is! He was a good many things in his time, was A, and so were most of his friends, except X, who had so little versatility, that I never knew him to get beyond Xerxes or Xautippe—like Y, who was always confined to a Yacht or a Yew Tree; and Z condemned for ever to be a Zebra or a Zany. But, now, the very tree itself changes, and becomes a bean-stalk—the marvellous bean-stalk up which Jack climbed to the Giant's house! And now, those dreadfully interesting, double-headed giants, with their clubs over their shoulders, begin to stride along the boughs in a perfect throng, dragging knights and ladies home for dinner by the hair of their heads. And Jack—how noble, with his sword of sharpness, and his shoes of swiftness! Again those old meditations come upon me as I gaze up at him; and I debate within myself whether there was more than one Jack (which I am loth to believe possible), or only one genuine original admirable Jack, who achieved all the recorded exploits.

Good for Christmas time is the ruddy color of the cloak, in which—the tree making a forest of itself for her to trip through, with her basket—Little Red Riding-Hood comes to me one Christmas Eve, to give me information of the cruelty and treachery of that dissembling Wolf who ate her grandmother, without making any impression on his appetite, and then ate her, after making that ferocious joke about his teeth. She was my first love. I felt that if I could have married Little Red Riding-Hood, I should have known perfect bliss. But, it was not to be; and there was nothing for it but to look out the Wolf in the Noah's Ark there, and put him late in the procession on the table, as a monster who was to be degraded. O the wonderful Noah's Ark! It was not found seaworthy when put in a washing-tub, and the animals were crammed in at the roof, and needed to have their legs well shaken down before they could be got in, even there—and then, ten to one but they began to tumble out at the door, which was but imperfectly fastened with a wire latch—but what was *that* against it! Consider the noble fly, a size or two smaller than the elephant: the lady-bird, the butterfly—all triumphs of art! Consider the goose, whose feet were so small, and whose balance was so indifferent, that he usually tumbled forward, and knocked down all the animal creation. Consider Noah and his family, like idiotic tobacco-stoppers; and how the leopard stuck to warm little fingers; and how the tails of the larger animals used gradually to resolve themselves into frayed bits of string!

Hush! Again a forest, and somebody up in a tree—not Robin Hood, not Valentine, not the Yellow Dwarf (I have passed him and all Mother Bunch's wonders, without mention), but an Eastern King with a glittering scimitar and turban. By Allah! two Eastern Kings, for I see another, looking over his shoulder! Down upon the grass, at the tree's foot, lies the full length of a coal-black Giant, stretched asleep, with his head in a lady's lap; and near them is a glass box, fastened with four locks of shining steel, in which he keeps the lady prisoner when he is awake. I see the four keys at his girdle now. The lady makes signs to the two kings in the tree, who softly descend. It is the setting-in of the bright Arabian Nights.

Oh, now all common things become uncommon and enchanted to me! All lamps are wonderful; all rings are talismans. Common flower-pots are full of treasure, with a little earth scattered on the top; trees are for Ali Baba to hide in; beef-steaks are to throw down into the Valley of Diamonds, that the precious stones may stick to them, and be carried by the eagles to their nests, whence the traders, with loud cries, will scare them. Tarts are made, according to the recipe of the Vizier's son of Bussorah, who turned pastrycook after he was set down in his

drawers at the gate of Damascus; cobblers are all Mustaphas, and in the habit of sewing up people cut into four pieces, to whom they are taken blindfold. Any iron ring let into stone is the entrance to a cave, which only waits for the magician, and the little fire, and the necromancy, that will make the earth shake. All the dates imported come from the same tree as that unlucky date, with whose shell the merchant knocked out the eye of the genie's invisible son. All olives are of the stock of that fresh fruit, concerning which the Commander of the Faithful overheard the boy conduct the fictitious trial of the fraudulent olive merchant; all apples are akin to the apple purchased (with two others) from the Sultan's gardener, for three sequins, and which the tall black slave stole from the child. All dogs are associated with the dog, really a transformed man, who jumped upon the baker's counter, and put his paw on the piece of bad money. All rice recalls the rice which the awful lady, who was a ghoul, could only peck by grains, because of her nightly feasts in the burial-place. My very rocking-horse,—there he is, with his nostrils turned completely inside-out, indicative of Blood!—should have a peg in his neck, by virtue thereof to fly away with me, as the wooden horse did with the Prince of Persia, in the sight of all his father's Court.

Yes, on every object that I recognise among those upper branches of my Christmas Tree, I see this fairy light! When I wake in bed, at daybreak, on the cold dark winter mornings, the white snow dimly beheld, outside, through the frost on the window-pane, I hear Dinarzade. "Sister, sister, if you are yet awake, I pray you finish the history of the Young King of the Black Islands." Scheherazade replies, "If my lord the Sultan will suffer me to live another day, sister, I will not only finish that, but tell you a more wonderful story yet." Then, the gracious Sultan goes out, giving no orders for the execution, and we all three breathe again.

At this height of my tree I begin to see, cowering among the leaves—it may be born of turkey, or of pudding, or mince pie, or of these many fancies, jumbled with Robinson Crusoe on his desert island, Philip Quarll among the monkeys, Sancho and Merton with Mr. Barlow, Mother Bunch, and the Mask—or it may be the result of indigestion, assisted by imagination and over-doctoring—a prodigious nightmare. It is so exceedingly indistinct, that I don't know why it's frightful—but I know it is. I can only make out that it is an immense array of shapeless things, which appear to be planted on a vast exaggeration of the lazy-tongs that used to hear the toy soldiers, and to be slowly coming close to my eyes, and receding to an immeasurable distance. When it comes closest, it is worst. In connection with it, I descry remembrances of winter nights incredibly long; of being sent early to bed, as a punishment for some small

offence, and waking in two hours, with a sensation of having been asleep two nights; of the leaden hopelessness of morning ever dawning; and the oppression of a weight of remorse.

And now, I see a wonderful row of little lights rise smoothly out of the ground, before a vast green curtain. Now, a bell rings—a magic bell, which still sounds in my ears unlike all other bells—and music plays, amidst a buzz of voices, and a fragrant smell of orange-peel and oil. Anon, the magic bell commands the music to cease, and the great green curtain rolls itself up majestically, and the Play begins! The devoted dog of Mountargis avenges the death of his master, foully murdered in the Forest of Bondy; and a humorous Peasant with a red nose and a very little hat, whom I take from this hour forth to my bosom as a friend (I think he was a Waiter or an Hostler at a village Inn, but many years have passed since he and I have met), remarks that the sassiness of that dog is indeed surprising; and evermore this jocular conceit will live in my remembrance fresh and unfading, overtopping all possible jokes, unto the end of time. Or now, I learn with bitter tears how poor Jane Shore, dressed all in white, and with her brown hair hanging down, went starving through the streets; or how George Barnwell killed the worthiest uncle that ever man had, and was afterwards so sorry for it that he ought to have been let off. Comes swift to comfort me, the Pantomime—stupendous Phenomenon!—when Clowns are shot from loaded mortars into the great chandelier, bright constellation that it is; when Harlequins, covered all over with scales of pure gold, twist and sparkle, like amazing fish; when Pantaloon (whom I deem it no irreverence to compare in my own mind to my grandfather) puts red-hot pokers in his pocket, and cries “Here’s somebody coming!” or taxes the Clown with petty larceny, by saying “Now, I sawed you do it!” when Everything is capable, with the greatest ease, of being changed into Anything; and Nothing is, but thinking makes it so. Now, too, I perceive my first experience of the dreary sensation—often to return in after-life—of being unable, next day, to get back to the dull, settled world; of wanting to live for ever in the bright atmosphere I have quitted; of doting on the little Fairy, with the wand like a celestial Barber’s Pole, and pining for a Fairy immortality along with her. Ah she comes back, in many shapes, as my eye wanders down the branches of my Christmas Tree, and goes as often, and has never yet stayed by me!

Out of this delight springs the toy-theatre, —there it is, with its familiar proscenium, and ladies in feathers, in the boxes!—and all its attendant occupation with paste and glue, and gum, and water colors, in the getting-up of The Miller and his Men, and Elizabeth, or the Exile of Siberia. In spite of a few besetting

accidents and failures (particularly an unreasonable disposition in the respectable Kelmar, and some others, to become faint in the legs, and double up, at exciting points of the drama), a teeming world of fancies so suggestive and all-embracing, that, far below it on my Christmas Tree, I see dark, dirty, real Theatres in the day-time, adorned with these associations as with the freshest garlands of the rarest flowers, and charming me yet.

But hark! The Waits are playing, and they break my childish sleep! What images do I associate with the Christmas music as I see them set forth on the Christmas Tree! Known before all the others, keeping far apart from all the others, they gather round my little bed. An angel, speaking to a group of shepherds in a field; some travellers, with eyes uplifted, following a star; a baby in a manger; a child in a spacious temple, talking with grave men; a solemn figure, with a mild and beautiful face, raising a dead girl by the hand; again, near a city-gate, calling back the son of a widow, on his bier, to life; a crowd of people looking through the opened roof of a chamber where he sits, and letting down a sick person on a bed, with ropes; the same, in a tempest, walking on the water to a ship; again, on a sea-shore, teaching a great multitude; again, with a child upon his knee, and other children round; again, restoring sight to the blind, speech to the dumb, hearing to the deaf, health to the sick, strength to the lame, knowledge to the ignorant; again, dying upon a Cross, watched by armed soldiers, a thick darkness coming on, the earth beginning to shake, and only one voice heard. “Forgive them, for they know not what they do!”

Still, on the lower and maturer branches of the Tree, Christmas associations cluster thick. School-books shut up; Ovid and Virgil silenced; the Rule of Three, with its cool impertinent enquiries, long disposed of; Terence and Plautus acted no more, in an arena of huddled desks and forms, all chipped, and notched, and inked; cricket-bats, stumps, and balls, left higher up, with the smell of trodden grass and the softened noise of shouts in the evening air; the tree is still fresh, still gay. If I no more come home at Christmas time, there will be girls and boys (thank Heaven!) while the World lasts; and they do! Yonder they dance and play upon the branches of my Tree, God bless them, merrily, and my heart dances and plays too!

And I do come home at Christmas. We all do, or we all should. We all come home, or ought to come home, for a short holiday—the longer, the better—from the great boarding-school, where we are for ever working at our arithmetical slates, to take, and give a rest. As to going a visiting, where can we not go, if we will; where have we not been, when we would; starting our fancy from our Christmas Tree!

Away into the winter prospect. There are

many such upon the tree! On, by low-lying misty grounds, through fens and fogs, up long hills, winding dark as caverns between thick plantations, almost shutting out the sparkling stars; so, out on broad heights, until we stop at last, with sudden silence, at an avenue. The gate-bell has a deep, half-awful sound in the frosty air; the gate swings open on its hinges; and, as we drive up to a great house, the glancing lights grow larger in the windows, and the opposing rows of trees seem to fall solemnly back on either side, to give us place. At intervals, all day, a frightened hare has shot across this whitened turf; or the distant clatter of a herd of deer trampling the hard frost, has, for the minute, crushed the silence too. Their watchful eyes beneath the fern may be shining now, if we could see them, like the icy dewdrops on the leaves; but they are still, and all is still. And so, the lights growing larger, and the trees falling back before us, and closing up again behind us, as if to forbid retreat, we come to the house.

There is probably a smell of roasted chestnuts and other good comfortable things all the time, for we are telling Winter Stories—Ghost Stories, or more shame for us—round the Christmas fire; and we have never stirred, except to draw a little nearer to it. But, no matter for that. We came to the house, and it is an old house, full of great chimneys where wood is burnt on ancient dogs upon the hearth, and grim Portraits (some of them with grim Legends, too) lower distrustfully from the oaken panels of the walls. We are a middle-aged nobleman, and we make a generous supper with our host and hostess and their guests—it being Christmas-time, and the old house full of company—and then we go to bed. Our room is a very old room. It is hung with tapestry. We don't like the portrait of a cavalier in green, over the fireplace. There are great black beams in the ceiling, and there is a great black bedstead, supported at the foot by two great black figures, who seem to have come off a couple of tombs in the old Baronial Church in the Park, for our particular accommodation. But, we are not a superstitious nobleman, and we don't mind. Well! we dismiss our servant, lock the door, and sit before the fire in our dressing-gown, musing about a great many things. At length we go to bed. Well! we can't sleep. We toss and tumble, and can't sleep. The embers on the hearth burn fitfully and make the room look ghostly. We can't help peeping out over the counterpane, at the two black figures and the cavalier—that wicked-looking cavalier—in green. In the flickering light, they seem to advance and retire: which, though we are not by any means a superstitious nobleman, is not agreeable. Well! we get nervous—more and more nervous. We say "This is very foolish, but we can't stand this; we'll pretend to be ill, and knock up somebody." Well! we are

just going to do it, when the locked door opens, and there comes in a young woman, deadly pale, and with long fair hair, who glides to the fire, and sits down in the chair we have left there, wringing her hands. Then, we notice that her clothes are wet. Our tongue cleaves to the roof of our mouth, and we can't speak; but, we observe her accurately. Her clothes are wet; her long hair is dabbled with moist mud; she is dressed in the fashion of two hundred years ago; and she has at her girdle a bunch of rusty keys. Well! there she sits, and we can't even faint, we are in such a state about it. Presently she gets up, and tries all the locks in the room with the rusty keys, which won't fit one of them; then, she fixes her eyes on the Portrait of the Cavalier in green, and says, in a low, terrible voice, "The stags know it!" After that, she wrings her hands again, passes the bedside, and goes out at the door. We hurry on our dressing-gown, seize our pistols (we always travel with pistols), and are following, when we find the door locked. We turn the key, look out into the dark gallery; no one there. We wander away, and try to find our servant. Can't be done. We pace the gallery till daybreak; then return to our deserted room, fall asleep, and are awakened by our servant (nothing ever haunts him) and the shining sun. Well! we make a wretched breakfast, and all the company say we look queer. After breakfast, we go over the house with our host, and then we take him to the Portrait of the Cavalier in green, and then it all comes out. He was false to a young housekeeper once attached to that family, and famous for her beauty, who drowned herself in a pond, and whose body was discovered, after a long time, because the stags refused to drink of the water. Since which, it has been whispered that she traverses the house at midnight (but goes especially to that room where the Cavalier in green was wont to sleep), trying the old locks with her rusty keys. Well! we tell our host of what we have seen, and a shade comes over his features, and he begs it may be hushed up; and so it is. But, it's all true; and we said so, before we died (we are dead now) to many responsible people.

There is no end to the old houses, with resounding galleries, and dismal state-bed-chambers, and haunted wings shut up for many years, through which we may ramble, with an agreeable creeping up our back, and encounter any number of Ghosts, but, (it is worthy of remark perhaps) reducible to a very few general types and classes; for, Ghosts have little originality, and "walk" in a beaten track. Thus, it comes to pass, that a certain room in a certain old hall, where a certain bad Lord, Baronet, Knight, or Gentleman, shot himself, has certain planks in the floor from which the blood will not be taken out. You may scrape and scrape, as the present owner has done, or plane and plane, as his father did, or scrub and scrub, as his

grandfather did, or burn and burn with strong acids, as his great-grandfather did, but, there the blood will still be—no redder and no paler—no more and no less—always just the same. Thus, in such another house there is a haunted door, that never will keep open; or another door that never will keep shut; or a haunted sound of a spinning-wheel, or a hammer, or a footstep, or a cry, or a sigh, or a horse's tramp, or the rattling of a chain. Or else, there is a turret-clock, which, at the midnight hour, strikes thirteen when the head of the family is going to die; or a shadowy, immovable black carriage which at such a time is always seen by somebody, waiting near the great gates in the stable-yard. Or thus, it came to pass how Lady Mary went to pay a visit at a large wild house in the Scottish Highlands, and, being fatigued with her long journey, retired to bed early, and innocently said, next morning, at the breakfast-table, "How odd, to have so late a party last night, in this remote place, and not to tell me of it, before I went to bed!" Then, every one asked Lady Mary what she meant? Then, Lady Mary replied, "Why, all night long, the carriages were driving round and round the terrace, underneath my window!" Then, the owner of the house turned pale, and so did his Lady, and Charles Macdoodle of Macdoodle signed to Lady Mary to say no more, and every one was silent. After breakfast, Charles Macdoodle told Lady Mary that it was a tradition in the family that those rumbling carriages on the terrace betokened death. And so it proved, for, two months afterwards, the Lady of the mansion died. And Lady Mary, who was a Maid of Honour at Court, often told this story to the old Queen Charlotte; by this token that the old King always said, "Eh, eh! What, what? Ghosts, Ghosts? No such thing, no such thing!" And never left off saying so, until he went to bed.

Or, a friend of somebody's, whom most of us knew, when he was a young man at college, had a particular friend, with whom he made the compact that, if it were possible for the Spirit to return to this earth after its separation from the body, he of the twain who first died, should reappear to the other. In course of time, this compact was forgotten by our friend; the two young men having progressed in life, and taken diverging paths that were wide asunder. But, one night, many years afterwards, our friend, being in the North of England, and staying for the night in an Inn, on the Yorkshire Moors, happened to look out of bed; and there, in the moonlight, leaning on a Bureau near the window, steadfastly regarding him, saw his old College friend! The appearance being solemnly addressed, replied, in a kind of whisper, but very audibly, "Do not come near me. I am dead! I am here to redeem my promise. I come from another world, but may not disclose its secrets!" Then, the whole form becoming paler, melted,

as it were, into the moonlight, and faded away.

Or, there was the daughter of the first occupier of the picturesque Elizabethan house, so famous in our neighbourhood. You have heard about her? No! Why, *She* went out one summer evening, at twilight, when she was a beautiful girl, just seventeen years of age, to gather flowers in the garden; and presently came running, terrified, into the hall to her father, saying, "Oh, dear father, I have met myself!" He took her in his arms, and told her it was fancy, but she said "Oh no! I met myself in the broad walk, and I was pale and gathering withered flowers, and I turned my head, and held them up!" And, that night, she died; and a picture of her story was begun, though never finished, and they say it is somewhere in the house to this day, with its face to the wall.

Or, the uncle of my brother's wife was riding home on horseback, one mellow evening at sunset, when, in a green lane close to his own house, he saw a man, standing before him, in the very centre of the narrow way. "Why does that man in the cloak stand there!" he thought. "Does he want me to ride over him?" But the figure never moved. He felt a strange sensation at seeing it so still, but slackened his trot and rode forward. When he was so close to it, as almost to touch it with his stirrup, his horse shied, and the figure glided up the bank, in a curious, unearthly manner—backward, and without seeming to use its feet—and was gone. The uncle of my brother's wife, exclaiming, "Good Heaven! It's my cousin Harry, from Bombay!" put spurs to his horse, which was suddenly in a profuse sweat, and, wondering at such strange behaviour, dashed round to the front of his house. There, he saw the same figure, just passing in at the long french window of the drawing-room, opening on the ground. He threw his bridle to a servant, and hastened in after it. His sister was sitting there, alone. "Alice, where's my cousin Harry?" "Your cousin Harry, John?" "Yes. From Bombay. I met him in the lane just now, and saw him enter here, this instant." Not a creature had been seen by any one; and in that hour and minute, as it afterwards appeared, this cousin died in India.

Or, it was a certain sensible old maiden lady, who died at ninety-nine, and retained her faculties to the last, who really did see the Orphan Boy; a story which has often been incorrectly told, but, of which the real truth is this—because it is, in fact, a story belonging to our family—and she was a connexion of our family. When she was about forty years of age, and still an uncommonly fine woman (her lover died young, which was the reason why she never married, though she had many offers), she went to stay at a place in Kent, which her brother, an India-Merchant, had newly bought. There was a story that this place had once been held in trust, by

the guardian of a young boy: who was himself the next heir, and who killed the young boy by harsh and cruel treatment. She knew nothing of that. It has been said that there was a Cage in her bed-room in which the guardian used to put the boy. There was no such thing. There was only a closet. She went to bed, made no alarm whatever in the night, and in the morning said composedly to her maid when she came in, "Who is the pretty forlorn-looking child who has been peeping out of that closet all night?" The maid replied by giving a loud scream, and instantly decamping. She was surprised; but, she was a woman of remarkable strength of mind, and she dressed herself and went down stairs, and closeted herself with her brother. "Now, Walter," she said, "I have been disturbed all night by a pretty, forlorn-looking boy, who has been constantly peeping out of that closet in my room, which I can't open. This is some trick." "I am afraid not, Charlotte," said he, "for it is the legend of the house. It is the Orphan Boy. What did he do?" "He opened the door softly," said she, "and peeped out. Sometimes, he came a step or two into the room. Then, I called to him, to encourage him, and he shrunk, and shuddered, and crept in again, and shut the door." "The closet has no communication, Charlotte," said her brother, "with any other part of the house, and it's nailed up." This was undeniably true, and it took two carpenters a whole forenoon to get it open, for examination. Then, she was satisfied that she had seen the Orphan Boy. But, the wild and terrible part of the story is, that he was also seen by three of her brother's sons, in succession, who all died young. On the occasion of each child being taken ill, he came home in a heat, twelve hours before, and said, Oh, Mauma, he had been playing under a particular oak-tree, in a certain meadow, with a strange boy—a pretty, forlorn-looking boy, who was very timid, and made signals! From fatal experience, the parents came to know that this was the Orphan Boy, and that the course of that child whom he chose for his little playmate was surely run.

Legion is the name of the German castles, where we sit up alone to wait for the Spectre—where we are shown into a room, made comparatively cheerful for our reception—where we glance round at the shadows, thrown on the blank walls by the crackling fire—where we feel very lonely when the village innkeeper and his pretty daughter have retired, after laying down a fresh store of wood upon the hearth, and setting forth on the small table such supper-cheer as a cold roast capon, bread, grapes, and a flask of old Rhine wine—where the reverberating doors close on their retreat, one after another, like so many peals of sullen thunder—and where, about the small hours of the night, we come into the knowledge of divers supernatural mysteries. Legion is the name of the haunted German students,

in whose society we draw yet nearer to the fire, while the schoolboy in the corner opens his eyes wide and round, and flies off the footstool he has chosen for his seat, when the door accidentally blows open. Vast is the crop of such fruit, shining on our Christmas Tree; in blossom, almost at the very top; ripening all down the boughs!

Among the later toys and fancies hanging there—as idle often and less pure—be the images once associated with the sweet old Waits, the softened music in the night, ever unalterable! Encircled by the social thoughts of Christmas time, still let the benignant figure of my childhood stand unchanged! In every cheerful image and suggestion that the season brings, may the bright star that rested above the poor roof, be the star of all the Christian world! A moment's pause, O vanishing tree, of which the lower boughs are dark to me as yet, and let me look once more! I know there are blank spaces on thy branches, where eyes that I have loved, have shone and smiled; from which they are departed. But, far above, I see the raiser of the dead girl, and the Widow's Son; and God is good! If Age be hiding for me in the unseen portion of thy downward growth, O may I, with a grey head, turn a child's heart to that figure yet, and a child's trustfulness and confidence!

Now, the tree is decorated with bright merriment, and song, and dance, and cheerfulness. And they are welcome. Innocent and welcome be they ever held, beneath the branches of the Christmas Tree, which cast no gloomy shadow! But, as it sinks into the ground, I hear a whisper going through the leaves. "This, in commemoration of the law of love and kindness, mercy and compassion. This, in remembrance of Me!"

CHRISTMAS IN LODGINGS.

A BACHELOR'S life is not without its attractions. Freedom of will and action are, at least, among a bachelor's joys; but experience has taught me that, after a certain time, such absence from restraint resolves itself into that species of liberty which Macaulay touchingly designates "the desolate freedom of the wild ass."

I came to London about ten years ago to study for the bar. I was entered at the Inner Temple, and, as far as the dinner-eating went, I can safely assert that I was an ornament to the Hall. I adorned the margin of my copy of "Burn's Justice" with caricatures of the benchers; and my friends appended facetious notes to my "Blackstone." I went to the masquerade in my gown; and strolled down to my law-tutor's chambers for the ostensible purpose of reading, about two P.M., daily. In short, I went through the usual routine of young gentlemen of ardent temperaments and competent means when they begin life: like most men, also, the pace of my fast days moderated in due time. About the time of my call to

the bar I began to study. My old companions, finding that I was becoming, what they were pleased to designate, "slow," dropped off. I entered into the solitude of lodgings, near Brunswick Square, and read eagerly. Still I found it necessary to relieve my legal studies with copious draughts from all the great fountains of inspiration, and I fear, that even when I was endeavouring to crack the hardest passages of "Blackstone," my ideas continually reverted either to the grace of Montaigne, the wit of Congreve and Pope, the sparkle and depth of Shakspeare, or the massive grandeur of Milton. By degrees my books became my dearest, my only associates. Though as a companion and friend I had decidedly fallen off, I improved as a lodger: I kept regular hours, and paid all my bills punctually.

My landlady grew confidential, in proportion as I grew domestic. She favoured me with her history from the time of her birth. I knew how she took the measles; the precise effect of her visit to a vaccine establishment; the origin of a scar over her left eye-brow; the income of her brother in Somersetshire; the number of kittens which her cat annually produced; the character she gave her last servant; and the fond affection she had lavished upon a brute of a husband. These matters, however, were intrusted to me in confidence; and, to use an original phrase, they shall be buried with me in my grave! I had no occasion to repay my landlady's confidence with my own, because she paid herself. I could keep no secrets from her. She knew the contents of my trunks, desks, and drawers, as well as I did—better, for, if I lost any little article, I never, perhaps, missed it. I was seldom allowed to wear a pair of dress gloves more than once: when a collar was not to be had, "them washerwomen was," I was told, "always a longing of something or other." I am sure the flavour of my tea, the quality of my mutton, and the excellence of my coals, were no secrets to my landlady: but she had many good qualities, so I ate what she left me in silence and in peace.

Despite my but too prying landlady, however, I got on very well by myself; and, like men who live alone, I became egotistic and lazy. I thought of the weaver at his loom; the lawyer burning the midnight composition over his brief; the author, with his throbbing temples, hard at work; and I rejoiced quietly by my fire and in my books. There was a selfish pleasure in the conviction that my case was so much better than that of thousands of the toilers and strugglers of the earth. This I found a capital philosophy for every day in the year—except one. On that day my landlady entered my room, and, with a few words, blighted my happiness, and made me miserable as the veriest outcast.

"Beg pardon for interrupting you," the worthy soul said, "but I wish to know whe-

ther you dine at home on Christmas Day. Though, of course, you will be with your friends—but I thought I might as well make sure."

The good woman must have noticed my confusion. I stammered out something in the most awkward manner; but contrived to make her understand, in the end, that I *should* dine at home.

"On Christmas Day, Sir?" the woman repeated, with particular emphasis. "I'm talking about Christmas Day, when every gentleman dines with his friends and relations; leastways, all the gentlemen I ever had, have done so."

"My friends live in Scotland, where Christmas is no festival," I replied, rather relieved at the opportunity of explaining my solitary condition.

"Well, dear a-me!" my landlady went on to say, "that's very awkward, very awkward, Sir, indeed. Dear, dear a-me, what shall I do? My table, down stairs, won't hold any thing like fifteen!"

Fifteen persons to greet my landlady on Christmas Day, and not a soul to break bread with me! I saw, at once, the tendency of her observation as to the size of her table; and willingly offered to vacate my room for her great annual festivity. This offer was eagerly accepted, and once more I was left to my solitude. From that moment my fortitude deserted me. I knew that the weaver would enjoy his Christmas feast; that the lawyer would throw aside his brief, and abating his professional solemnity, would, on Christmas Day, make merry; and that the author would leave the pen in the inkstand to be jolly during a great portion of those twenty-four happy hours. Let me confess that I felt sick at heart—stupidly and profoundly dejected.

On Christmas Eve the maid came into my room, and, with a beaming face, begged that I would allow her to decorate it with holly:—she said nothing about the mistletoe which she carried under her apron, but I saw her dexterously fasten it above the door-way. I was very lonely that evening. The six square yards of space which I occupied were the only six square yards in the neighbourhood not occupied by laughing human creatures. The noise of my landlady and her relatives below made me savage; and when she sent up the servant to ask whether I would like to step below, and take a stir at the pudding, my "no!" was given in such a decided tone that the poor girl vanished with miraculous celerity.

The knocks at the street-door were incessant. First it was the turkey, then the apples, oranges, and chestnuts, for dessert, then the new dinner-set, then the sirloin. Each separate item of the approaching feast was hailed with smothered welcomes by the women, who rushed into the passage to examine and greet it. Presently a knock re-

sounded through the house, that had to me a solemn and highly unpleasant sound, though it could not have differed from the preceding knocks. I listened to the opening of the door, and heard my landlady, in a sympathetic tone of voice, declare, that "it was only the first-floor's steak;—poor fellow!" My loneliness, then, was a theme of pitiful consideration with the people below! I was very angry, and paced my room with rapid strides. I thought I would wear cotton-wool for the next four-and-twenty hours, to shut out the din of general enjoyment. I tried, after a short time, to compose myself to my book; but, just as I was about to take it down from the shelf, the servant, having occasion to enter my room, informed me, in a high state of chuckling excitement, that "missis's friends was a going to light up a snap-dragon!"—and the shouts that burst upon me a few minutes afterwards confirmed the girl's report. I was now fairly savage, and, having called for my candle, in a loud determined voice, went to bed, with the firm conviction that the revellers below were my sworn enemies, and with the resolution of giving warning on the following morning—yes, on Christmas Day.

Brooding over the revenge I promised myself for the following morning, I went to sleep, and dreamed of the Arctic solitudes and the Sahara Desert. I was standing at a dry well, surrounded, on all sides, by endless sand, when a loud rumbling noise broke upon my dream. I awoke, and heard a heavy footstep passing my chamber. I started from my bed, flung open my door, and shouted, "Who's there?"

"It's only me, Sir, a going for to put the puddin' in the copper," said an uncommonly cheerful voice.

Here was a delightful opening scena of my Christmas Day. I believe I muttered a wish, that my landlady's pudding had been in a locality where it might boil at any time without disturbing any lodger.

That morning I rang four times for my hot water, three times for my boots, and was asked to eat cold ham instead of my usual eggs, because no room could be spared at the fire to boil them. I occupied my landlady's back parlour, and was intruded upon, every minute, because a thousand things wanted "for up-stairs" were left in odd nooks and corners of the room. I had no easy-chair. My books were all "put away," save a copy of "Jean Racine," which I had taken down by mistake for a volume of the "Racine." My breakfast-table could not be cleared for three hours after I had finished my meal. I was asked to allow a saucepan to be placed upon my fire. It was suggested to me that I might dine at two o'clock, in order to have my repeat over and cleared away before the feast up-stairs began. I assented to this proposition with ill-feigned carelessness—although my blood boiled (like the pudding) at the

impertinence of the request. But I was too proud to allow my landlady the least insight into the real state of my feelings. Poor soul! it was not her fault that I had no circle within my reach; yet I remember that throughout the day I regarded her as the impersonation of fiendish malice.

After I had dined she came to ask me if there was anything she could do for me? I regarded her intrusion only as one prompted by a vulgar wish to show me her fine ribbons and jaunty cap, and curtly told her that I did not require her services. To relieve myself of the load of vexation which oppressed me, I strolled into the streets; but I was soon driven back to my landlady's little parlour—the gaiety that resounded from every house, and the deserted streets without, were even more annoying than her marked attention. I sat down once more, and doggedly read the heavy verse of Jean. I called for my tea; and, in reply, I was informed that I should have it directly the dinner was over up-stairs. My patience was giving way rapidly. My tea was produced, however, after a considerable delay; and I then thought I would make a desperate attempt to forget the jovial scenes that were going forward in every nook and corner of the country—save in my desolate, sombre, close back parlour. I swung my feet upon the fender, leisurely filled the bowl of my meerschaum, and was about to mix my first fragrant cup, when that horrible servant again made her appearance, holding a dark steaming lump of something, on a plate.

"Please, Sir, missis's compliments, and p'raps you'd accept this bit of Christmas puddin'!"

I could have hurled it, plate and all, into the yard below. I saw myself at once an object of profound pity and charity to the company above. Although I am extremely fond of that marvellous compound of good things eaten with brandy-sauce on Christmas Day, I could not have touched my landlady's proffered plateful for any consideration. I gave a medical reason for declining the dainty, and once more turned to my pipe and my tea. As the white smoke curled from my mouth a waking dream stole over me. I fancied that I was Robinson Crusoe; my parrot dead, and my dog run away. I cursed fate that had consigned me to a solitude. I recited a few verses from Kents aloud, and the sound of my voice seemed strange and harsh. I poked the fire, and whistled, and hummed—to restore myself to the full enjoyment, or rather to the misery, of my senses. The tea on that evening only was green tea. I felt its effects. I grew nervous and irritable.

The servant once more invaded my seclusion—what could she want now?

"Please, Sir, have you done with the tea-things? I'm a going to wash 'em for up-stairs."

"Take them;" I replied, not very grace-

fully. The servant thanked me, as I thought, with impertinent good-nature and cleared the table.

About this time, sounds of merriment began to resound from the Christmas party. The shrill laughter of children was mingled with the hoarse guffaws of their parents; and the house shook at intervals with the romps of both parties. In the height of my desolate agony it gave me no little consolation to think that those children who were at their games, would probably dance to the tune of a tutor's cane at no distant interval. Such was my envy at the exuberant mirth that reached me in fitful gusts as the doors were opened or shut, that I felt all sorts of uncharitableness. Presently there was a lull in the laughter-storm. I began to hope that the party was about to break up. A gentle footstep was audible, descending the stairs. There was a smothered call for Mary. Mary obeyed the summons; and the following dialogue was whispered in the passage:

"Did he eat the pudding?"

"No, Mum—he was afraid of it: and he was so cross!"

"Cross! I was going to ask him to join us: do you think he would, Mary?"

"Bless you, no Mum! He jine! I think I see him a jining! Nothing pleases him. He's too high for anybody. I never see the likes of him!"

The feet then ascended the stairs, and after another pause of a few moments, the din of merriment was resumed. I was furious at the sympathy which my loneliness created. I could bear the laughter and shouting of the Christmas party no longer, and once more with a determination of having my revenge, I went to bed. I lay there for several hours; and did not close my eyes before I had vowed solemnly that I would not pass another Christmas Day in solitude, and in lodgings—and I did not.

In the course of the following year, I married the lovely daughter of Mr. Serjeant Shuttleface. My angel was a most astonishing pianoforte performer, and copied high art pictures in Berlin wool with marvellous skill, but was curiously ignorant of housekeeping; so, we spent the beginning of our wedded bliss in furnished apartments in order that she might gain experience gradually.

On one point, however, I was resolute; I would not spend a second Christmas Day in lodgings. I took a house, therefore, towards the close of the year, and repeatedly urged my wife to vacate our apartments that we may set up for ourselves. This responsibility she shrunk from with unremittent reluctance. There were besides innumerable delays. Carpets wouldn't fit; painters wouldn't work above one day a week: paper-hangers hung fire; and blacksmiths, charging by the day, did no more than one day's work in six. Time wore on. December came, advanced, and it seemed

to be my fate to undergo another Christmas torment. However, to my inexpressible joy, everything was announced to be in readiness on the twenty-fourth. My sposa had by this time learnt enough of housekeeping to feel strong enough for its duties, and on Christmas Eve we left our rooms in Bedford Square, and took our Christmas pudding, in a cab, to my suburban villa near Fulham. And a merry Christmas we made of it! I don't think I ever ate a better pudding, though I have eaten a good many since then.

CHRISTMAS IN THE NAVY.

If there be any fire, above all fires, in which one ought to be able to see pleasant "figures," it is a Christmas fire. So I will just plant myself opposite my log, and look for some pleasant images of memory, to recal Christmas at sea.

"Lash up hammocks!" The pipe of the boatswain's mate thrills shrilly through the lower-deck some winter morning, at four o'clock. You begin to be gradually aware that you are an officer in Her Majesty's service once more; that you belong to the "Bustard;" and that you have got the morning watch. Of the last fact, the quartermaster makes you most thoroughly aware, by routing away at the "netties" of your haumock (very much like a boy routing out a blackbird's nest); and so does the young gentleman you are to relieve, who, having called the lieutenant of the next watch, glides alongside you, and says, "Be quick up, Charley. I'm very sleepy."

"Is it cold?"

"Infernally!"

You temporise for five minutes. You think about Lord Nelson. At last you hear "Watch to muster!" You have to muster that watch. Out you jump, fling yourself into blanket trousers and a tremendous coat, and run up on deck. The watch are gathering aft; the quartermaster brings a lantern; you produce your watch-bill, and commence calling over the names. If you are a man of idle habits, your watch-bill is probably in an incorrect state. Among the main-top-men you come to the name "Tomkins." "Tomkins!" you cry. No answer. "Tomkins!" (with indignation). A voice answers "Dead." There is a kind of solemnity about that, which touches you rather poetically. But the lieutenant of your watch is affected by it in a more homely way, and indulges in a growl. However, a man's watch-bills, and quarter-bills, and division-lists, can't be always right. I remember that my friend Childers, of the "Rhinoceros," who had no division-list at all, used to bring up a copy of "Thomson's Seasons," which looked rather like one, and by judiciously asking the men what their names were, first, and then roaring them out, afterwards, rubbed on very well.

You glance round the ship. The rigging is glittering with icicles, and looks like a tremendous chandelier. We suppose you to be at anchor somewhere. Halifax is a very good place for a winter scene,—a very hospitable place, and capital quarters for salmon. Or, what do you say to Athens? It sounds too warm for a jolly Christmas; but, in reality, it is sometimes terribly cold. There is a wind that comes down from Russia as biting and peremptory as an ukase.

But at present we are in the "Bustard." She was a line-of-battle ship; and I will tell you, first, how they pass Christmas in a line-of-battle ship. The "Bustard" was a credit to the profession; for she could sail right off at once, directly after she was launched, and was not repaired above twice in four years! We had a very pleasant Christmas in her, at anchor, in Vourla Bay, near the entrance of the Gulf of Smyrna. We had been looking after "British interests" in Smyrna, that autumn, and had protected two balls, a masquerade, and several dinners at the consul's.

"It's getting near Christmas," said the lieutenant of the watch to me after we had set the men to work holystoning, that morning.

"Very true, Sir," I said, as if he had made a striking observation.

"Are you cold, Mr. Topples?"

"Very, sir," I answered; for my

'Blue-veined feet unsandalled were,'

like Geradine's, in 'Christabel.' They always made us keep the morning-watch barefoot in that precious "Bustard."

"Ah, you'd better walk about, then. Just lift that hammock-cloth over me," said the lieutenant, composing himself in the nettings. "Thank you."

There was considerable discussion in the "Bustard," how Christmas should be kept that year. Should the ward-room ask the gun-room and Captain to dinner? or the Captain ask them? The last was impossible. Captain Barbell expected every man to do his duty—and to ask him. So we plucked up courage. We were an ambitious gun-room mess. One of that mess was a duke's son. It was notorious that we had Madeira, while the ward-room drank mere port. We invited the ward-room, and Captain Barbell. With a condescension which is the true charm of greatness, Captain Barbell accepted. I shall never forget my emotions when I saw him enter our mess-room, as if he had been a gentleman—(I mean, of course, as if he had been only an ordinary gentleman), and ask twice for soup!

It was a brilliant preparation that we had made to receive him. The tiller (which traverses the gun-room) was wrapped round with flags. The standards of every nation, hung gracefully blended around in waves of colour. Eagles and trio-headed eagles swung together, as if they never pecked at each other,—never laid bullets instead of jolly edible eggs—

never fed on blood, or turned men into sausages! The mess looked like a menagerie. The British lion lay down with every conceivable animal. Friend Jonathan's stars helped the Turkish crescent to make a night of it; and the laurel which they all fight for (and which grows so impartially in every country,—why should poor Daphne be made to back the Furies?) glittered tranquilly and green among them all.

But, before we went to dinner—just as the "Roast Beef of Old England" was played, and Captain Barbell marched out of his cabin, looking very like the roast beef in question, raw—we all visited the lower deck where the seamen were beginning the evening. There, on the little tables, suspended by their polished bars, stood plum-puddings. Perhaps there were a couple to each mess—looking very like a pair of terrestrial and celestial globes. How the coppers ever hold these puddings, I mean some day to inquire, when I have found out who wrote "Junius," why Ovid was banished from Rome, and some easier questions. These coppers had boiled a lake of cocoa that morning; had swallowed and boiled masses of junk, sparkling with lumps of salt; how they managed to hold the puddings, and to make them so good, I don't know, just now. Each pudding was decorated, perhaps with a paper ornament, perhaps with a sprig from some bush. Each "great globe itself" vanished that night! I could feel no doubt of their destiny when I saw the expression of the biggest fellow in the ship—the captain of the fore-castle—as, like incense before the shrine of Neptune, his pudding sent up an awful steam before his weather-beaten face!

We returned to the gun-room. Captain Barbell took the place of honour. He gave a little grin smile as he saw the Sauterne. There was no Sauterne in his time—when he was a youngster. And yet he seemed to like it! He paused, startled at the sparkling Burgundy also—but he managed to swallow it! The duke's son asked him to take wine. There was a sensation. The captain nodded ("Homer sometimes nods"), and a thrill went through the mess. Meanwhile, the commander chatted with the senior mate; my messmate Riverby got confidential with the gunnery lieutenant, and found out that they were related through the Selby of Blocksey; and a few youngsters made desperate attempts to shatter the sobriety of the boatswain.

The boatswain! He was one of our guests. He always dines with the officers (generally with the Captain) on Christmas Day. It is the alce-blossoming of his life. It is his Lord Mayor's Day. With a yellow waistcoat as large as the mizen-top-sail,—with a fine coat quite new and creasy, that seems to have been kept in a glass-case, for show, all the year—he takes his seat. He is asked to take wine. In olden days, he would have said, "No, thank 'ee, Sir—I'll take a potato!" Now he says, "My respects," and tops off the

glass at a draught. Brave old boatswain—descendant of the sea-kings—if I ever look with anything but respect on even thy most trenchant peculiarities,—may I remain as ignorant of seamanship as are the dandies who “look down” on blue.

The dinner passed off. Little Pipp, a youngster, got maudlin, and cried at the sight of some preserved pears, which reminded him of home. Several fellows became sentimental, and wondered whether their relatives in England were “keeping it up.” I also grew tender, as I thought about—no matter! I imitated Cleopatra, and dropped a pearl into my wine!

Then, you know, there was no misletoe. And if there had been, you couldn't have embraced old Barbell under it! You couldn't well salute. We might have saluted the Admiral, had he been there—tenderly, from the jaws of a nine-pounder. So we talked about England, and each speculated which of his pretty cousins was being kissed by an ugly cousin at that moment. The time wore on—the bell struck—and as you turned away from the circle chatting about home, and gazed out of the ports—you heard the water go booming by, wave after wave telling its watchman's cry—and far away shone the black Asiatic coast, with the light in a mountaineer's cottage quivering here and there—and not lighted in honour of Christ's day!

At last, Captain Barbell rose, and bowed, and sailed out in a stately manner. We broke into groups. The fiddle was heard going on the lower deck. Singing began on the fore-castle, and we were soon informed how—

“The sea looked black and dark all round,”
in the commencement of some naval epic;
how

“Four jolly sailors, so stout and so strong,”
accomplished some feat in remote times; or
of the adventures of a merchant ship of
Liverpool, which thrashed a pirate, with a
jolly chorus, wishing—

“Success to the gallant Liverpool ship,
With all her gallant crew!”

I have not always had so lively a Christmas Day as that in the “Bustard.” I once spent it in a gale of wind, in the brig “Roarer,” when we had nothing in the mess but some woodcocks, which we had shot in Albania, and which the caterer could not carve, having got drunk, before dinner began, on ship's rum. I once spent it in prison, in Spain, for having made a row, with some other youngsters, at a bull-fight. Another time, I spent it in a whaler which had had a bad whale season; likewise in a galleot, where there were plenty of Dutchmen and very little “Hollands.”

But, I have usually found that one may be very happy on that occasion, on that merry evening where the moonlight seems to like to shine so richly—and which buries you, and

thousands of you, and spares men the sight of their brothers' groans! Yes, indeed, I have found that one may have a very pleasant Christmas at Sea.

A CHRISTMAS PUDDING.

MR. OLDKNOW had been romping with his children on Christmas Eve. At last they had gone to bed, with flushed faces and disordered curls, and the drawing-room was deserted. Mrs. Oldknow, a careful matron, looked thoughtful as she saw that the pride of the sponge-cake was utterly fallen, and that unquestionably another must be procured for the next day's festival. Mr. Oldknow, “on hospitable thoughts intent,” half soliloquising, said—

“My dear, we must have a second pudding to-morrow.”

“Indeed! How is it to be made?” replied the lady.

“How made? Why, of course, with plums and flour, and plenty of brandy.”

“Oh, you are a precious cook!” said Mrs. Oldknow. “You think a Christmas pudding can be made as easily as a pancake—do you? Why, our pudding is made already. Come into the kitchen. The cook is gone to bed, and I will show it you.”

The kitchen mantel was radiant with the brightness of brass candlesticks that were never used, but were duly cleaned; powder water-plates, also for ornament, gleaned over the dresser; an ancient clock, something too big for the corner in which he stood, stretched up from the floor to the ceiling, with the crown of his respectable old head pressed against its whitewashed surface, and his vigorous pendulum passing and re-passing behind its own peculiar little window, like a sentry always on guard. A walnut-tree bureau was still smart, in another and larger recess, under the polishing of half a century. Mr. Oldknow sighed as he recollected that, in his father's time, he had often taken his frugal meals in that kitchen; and now, when the family home had acknowledged him as master for twenty years, the refinement of our days had banished him from a room where his father used to sit in patriarchal dignity. There was the identical arm-chair, the fine old high-backed chair, which, to his boyish imagination, was a King's throne!

Mrs. Oldknow took out her Family Receipt Book from the polished bureau, and then read aloud, for her husband's edification:

“A POUND CHRISTMAS PUDDING.”

“One pound raisins; one pound currants; one pound suet; one pound bread-crumbs; quarter pound orange-peel; two ounces citron-peel; two ounces lemon-peel; one nutmeg; one teaspoonful powdered ginger; one teaspoonful powdered cinnamon; one wine-glassful brandy; seven eggs; one teaspoonful salt; quarter potmd raw sugar; milk enough to liquefy the mass, if the eggs and brandy be not sufficient for this purpose.”

"And why, my love, can't we have two Pound Christmas Puddings, or, four Half-Pound Puddings?" said Mr. Oldknow. "I want the Porters to have a pudding, and old nurse Franklin, and the Corderys. Fruit is cheap. And why not?"

"My dear Oldknow, they always *do* have a pudding, every one of them. Look here!"

Mrs. Oldknow then lifted a cloth off a vast earthen pan, and behold! a rich, semi-liquefied mass, speckled throughout with plums and currants, presented itself to her husband's view. He was content. He learnt that, at the peep of dawn the copper-fire would be lighted, and the fruity treasure would be divided into several portions; the mightiest of which would be for the home table, and the others for the Porters, and the Franklins, and the Corderys.

"My love," said the contented Mr. Oldknow, "as I am in the old kitchen for the first time these dozen years, I think I'll light a cigar—for there is a fire, I see, in this new-fashioned cooking range—and rest for a quarter of an hour, after all the polking and blind-man's buff we have had."

And so Mrs. Oldknow went to bed.

Now, Mr. Oldknow was a great reader of travels, ancient and modern—a kind of social antiquarian, also. He read the travellers, partly for commercial information and general views of life, and partly with an imaginative taste for unfamiliar scenes. The Moving Panoramas—the Nile, and Mississippi, and Overland Routes—had given a new intensity to these studies. The vast pudding dish was before him; and he mused and mused over the mercantile history of the various substances of which that pudding was composed. The light wreath of the cigar crept round the old kitchen, forming fantastic shapes before it melted in the dim distance. More and more obscure became the well-remembered room; as Oldknow sent forth feebler and feebler puffs from the weed. Its dying fragrance mingled with thoughts of nutmeg and cinnamon, and became

"Sabon odours from the spicy shore
Of Araby the blest."

The walls of the kitchen then gradually expanded. The bright pewter plates became mirrors, in which landscapes of every clime were reflected. At length all the other mirrors were absorbed by one central mirror of vast proportions, upon whose vivid pictures the contemplative Mr. Oldknow long gazed with a blissful serenity.

And first, the shores of Malaga floated before his vision. Groves of orange-trees clustered around secluded convents; the sugar-cane and the cotton-plant covered the plains; vineyards, creeping up the bright mountain slopes, basked in the autumnal sun, and their ponderous fruitage grew browner and browner as the white or red skin of the delicious muscat shrivelled in the noontide

heat. Ruins of Moorish towers and mosques were studded amidst white-washed houses; and the brilliant columns of the Alhambra glittered as in mockery amidst its fallen roofs. By the side of the tributaries of the Guadalquivir, the *Carmenes*—(the vineyard gardens of the Arabs)—formed enchanting walks; and, as our book-traveller heard the night-breeze, laden with a thousand perfumes, whispering amidst the orange groves, an articulate sound gradually dropped upon his ear, and he saw the GENIUS OF THE RAISIN, with the fresh vine-wreath of a Greek Pacha on the head, and the Cashmere shawl of an Arabian Sultana round the waist.

"Son of a vineless land," said the form, "behold how I labour for thee! I gather the sun-beans in my hand, and range over the salt wave of the Mediterranean, to scatter ripeness wherever the vineyards bow beneath the pulpy clusters which are too rich for the wine-press. Your ships throng my Andalusian ports of Malaga and Valencia, ranging onward to the Eastern Chesmô; and they bear to your cold and cloudy land the richest gifts of our sunny South. Why come ye, every year more and more, with your linens and your woollens, your glass and your pottery, to exchange with our native fruit? Why strip ye the gardens which the Faithful planted, of the grapes which ought to be reserved for the unfermented wine which the Prophet delighted to drink!"

"Immortal child of the Arab," replied the son of the vineless land, "your nation gave us the best element of commerce when you gave us your numerals. Your learning and your poetry, your science and your industry, no longer fructify in heaven-favoured Andalusia. The sun which ripens your grapes and your oranges makes the people lazy and the priests rapacious. We come to your ports with the products of our looms and our furnaces, and we induce a taste for comforts that will become a habit. When our glass and our porcelain shall find its way into your peasant's hut, then will your olives be better tended and your grapes more carefully dried. Man only worthily labours when he labours for exchange with other labour. Behold that pudding!—It is our England's annual luxury. It is the emblem of our commercial eminence. The artisan of Birmingham and Manchester—the seaman of London and Liverpool—whose festive board will be made joyous, to-morrow, with that national dish, has contributed, by his labour, to make the raisins of Malaga and the currants of Zante—the oranges of Algarve, the cinnamon of Ceylon, and the nutmegs of the Moluccas—of commercial value; and he has thus called them into existence as effectually as the labour of the native cultivator. Child of the Arab civiliser, be grateful."

Mr. Oldknow looked for an approving answer; but the Genius of the Raisin had fled. The hill sides of Andalusia rapidly change

into the great plain of Zante. No longer is it the woody Zacynthus of Homer, but a land of olives and vines. There lies the Flower of the Levant before our home traveller, with its gardens of pomegranates, and peaches, and oranges, and melons; and its fields of vines and currants. The GENIUS OF THE CURRANT arose—a diminutive figure, winged like the Pegasus of Corinth, and having the Rose of England entwined with the olive leaf amongst his hair. The Genius smiled upon the listener.

"Welcome is your Christmas," said he, "to Zante and Cephalonia. We have twelve thousand acres of our little grapes under culture for your festivities; and your ships have this year carried off our fifty million pounds of currants for your puddings and your cakes. Welcome are ye with your sugar and your coffee, your rice and your cheese. Welcome are ye with your gold. Our corn crops are gone; and without ye the Morea would not yield us the wheat and the maize which we shall need till the next harvest. It is better to grow currants in the soil which they delight in, and buy our wheat, than plough up our little vines for a bread-producing crop. We are sure of our bread for our currants, whilst England demands plum-puddings; as England is sure of her puddings whilst she weaves calico and forges steel. So a happy Christmas to you, and good night."

"The same to you, and bravo, my little free-trader," cried Mr. Oldknow, to the Genius of the Currant.

An English scene! It is harvest time all over the wide chalk fields of Kent. Wherever the eye can stretch inland, the golden corn is bending under the sea-breeze, or the sheaves are patiently waiting for the coming waggon. On every side a visible plenty smiles upon the traveller. The GENIUS OF BREAD arises. He is a stalwart figure in a white smock-frock. From his straw hat to his laced boots all is tight and trim about him. He is slow of speech; but he ever and anon mutters the word "Protection."

"Protection!" exclaimed Mr. Oldknow, "who taught you that song? Do you want protection against cheap bread, my friend; against warm and clean clothing; against a sound roof with glazed windows; against a coal fire; against your tea, your sugar, your butter, your cheese, your bacon, and your Christmas pudding? Eh! what are you thinking of? Anything! Call up the ghost of your grandfather. Show him your wheaten bread, and ask him to compare it with his black loaf of rye. You have small wages, it is true; but your wages do not depend upon the cheapness of your produce. Your real wages are as great as you ever got in the protection-days; and they go twice as far. You stand up now as a man, instead of breaking stones upon the road at the bidding of the parish. Leave the beer-shop; cultivate your garden; have a pig in the sty; send your children to school; and believe me you will

be better off than any other labourer of Europe."

Mr. Oldknow was excited; but he was fairly angry when the GENIUS OF SUEW presented himself in the guise of a Smithfield drover, with an over-driven ox falling upon his knees in a crowded street, as if imploring for rest. Mr. Oldknow groaned, and was wicked enough to wish that the drover's dog was scattering the Court of Aldermen.

The Banda Islands now filled the scene. Grouped in the Indian Archipelago, they reared their volcanic peaks abruptly from the ocean, their mountain-sides clothed with timber trees; and the sago-palms yielding sustenance to the people of the plains. In the covert of the forest-trees sate the brilliant Birds of Paradise, occasional visitants. But the great feature of the landscape was contributed by the nutmeg trees. It is the gathering time. The Bandanese, mingled with their Dutch masters, are plucking the peach-like fruit from their shelter of green and grey leaves. The ripe fruit has split in half as it hangs on the tree, and there is the kernel surrounded by the mace. But the precious nutmeg has a second protection—its shell. The mace is removed—the kernel is dried in the sun—the shell splits—and there is the nutmeg of commerce!

The GENIUS OF THE NUTMEG appeared. He was a fantastic figure—half man, half bird—a Dutchman's head on a wood-pigeon's body.

"Englishman," said he, "you have wrestled with me for the Spice Islands; but they are mine. You have taken from me the cinnamon groves of Ceylon—they are yours. In the sea traditions of your country you have the Flying Dutchman. I am he. We of the Zuyder Zee built up our commerce upon restrictions and monopolies. When we drove the Portuguese from the Archipelago, we rooted up all the clove-trees but those of Amboyna, and all the nutmeg trees but those of Banda. We limited the world to a fixed quantity of cloves and nutmegs, as we limited also the commerce of cinnamon. Rather than fill the market and lower the price, we have thrown our nutmegs into the deep, and made a bonfire of our cinnamon in the streets of Amsterdam. When in the Indian Seas, in the dim twilight, or under the hazy moon, a figure has been seen flying along the still waters in which the keel left no furrow—I was that navigator. I was pursuing the wood-pigeon, who defied all the rigours of my unsocial laws, and carried the nutmeg seed to lands which owed Holland no tribute. I have given up the contest against nature. My spice monopoly was ruinous to myself and injurious to my colonists. In Ceylon I saw your English diffusing comfort and equal laws, opening roads, encouraging industry, destroying forced labour, and selling cinnamon to all the world. I have made an alliance with the wood-pigeon; I have planted the nutmeg in Java, and there will I contest with

you the commerce of cinnamon. I have learnt that a small demand at high prices, for any useful commodity, is neither so safe nor so profitable as a large demand at moderate prices. I have learnt, further, that the end of commerce is not to make individuals rich, and support public expenditure by heavy duties, but to diffuse all the productions of nature and art, amongst all the inhabitants of the globe. You have taught me a lesson. The old trade of the United Provinces has died under monopolies and restrictions. We may once more be your honest rivals under a wiser code. You want two hundred thousand pounds weight of nutmegs yearly; we will deal like merchant princes and good men and true."

"Agreed!" said Mr. Oldknow.

A West Indian Sugar Plantation is now mirrored—with its canes ripening under a tropical sun, and its mills with their machinery of cylinders and rollers. The GENIE OF SUGAR is a freed Negro. It was said that in freedom he would not work; he has vindicated his privileges in his industry and his obedience. The grand experiment has succeeded in all moral effects. But the nation that demanded cheap corn would not be content with cheap sugar. We must buy our sugar wherever the cane ripens. We use seven hundred millions of pounds of sugar annually, which yield a duty of four millions sterling. Mr. Oldknow thought this, but was silent, when he saw the net sitting under his own fig-tree, for the political questions which his freedom involved were somewhat complicated. He would trust to the ultimate power of a noble example, and in the meantime rejoice that the great body of the British people could buy their sugar at half the price that their fathers paid.

Mr. Oldknow, being somewhat at fault upon the sugar question, grew confused as new forms flitted before him. The solitary tax-collector, of Cork, was there, in her blue cloak and her *kish* on her back. Her step was brisker than in the former years, and her light grey eye was once more laughing under her long black eye-lashes. She had walked from cottage to cottage some twenty miles; and her *kish* was to form part of the many hundred egg-crates that England required for her Christmas puddings. "May the daughters and sons of Erin," soliloquised Mr. Oldknow, "never again suffer as they have suffered! May plenty smile upon their fields, and comfort in their cottages! May they have just masters and wise rulers! May they rely upon industry, and not upon agitation! May they"—the Blue Cloak was gone.

A figure started up, half Gnome, half Nereid. Mr. Oldknow was thinking of his ever-consciousness of "Yes and No;" so, with half-consciousness he asked—

"Animal kingdom?" "No." "Vegetable?" "Yes." "In England?"

"Here," continued the figure, "I am free. I fly through the land, scattering blessings as widely as the dews of heaven. I bring my treasures out of the bowels of the earth and from the depths of the sea. I make the fields fruitful; I forbid your food to perish. Without me the sustenance of man and beast is imperfect. The herds of unfathomable forests wander to the plains in search of me; the child that loves me not, loses the bloom of its cheek and the odour of its breath. I am the universal friend. And yet kings have impiously dared to deny me to their subjects, even though they should perish—their crimes have been punished. Even now, the Hindoo, whom you have benefited in so many things, is deprived of me by your fiscal injustice. Learn to be wiser. You have freed me from the burdens of your home taxation, and your industrial wealth is quadrupled. I am,—"

"SALT!" guessed Mr. Oldham.

To Salt succeeded a singular figure as the MINKY GENIE. It seemed one-half dairy-woman, with her pail and stool, decently clad in woollen petticoat and black stockings; but above was a Naiad of the Thames, with dripping locks held loosely together with a wreath of rushes. Mr. Oldknow was about to harangue, when a brisk *power-loom* never stepped forth, with pudding-cloth in hand. "The water boils," said he; "the ingredients are mixed. Be it mine to bind them together!"

"Right," cried Mr. Oldknow. "Again our country's emblem. The bundle of sticks and the pudding cloth have each the same moral. Our ancestors in their 'civil dudgeon' made 'plum-porridge.' We, in our united interests, well bound together, produce Christmas pudding."

There was a silence and a pause. Mr. Oldknow peered out. The mirror had lost its brilliancy. But suddenly the great pudding-bowl expanded into a mighty flat dish. The pudding swelled into an enormous globe, black with plums, and odorous with steaming sauce. A holly-tree, with its prickly leaves at bottom, its smooth leaves on high, and its bright red berries, grew up under a crystal dome. On the edge of the dish were grouped the Andalusian with the Cashmere shawl, the Ionian islander with the wings of Corinth, the Kentish ploughman in the smock-frock, the Flying Dutchman, the Negro without the chains, the Irish market-woman, the Gnome-Nereid, the London Naiad, and the Weaver with the cloth; and they all took hands, and thrice danced round the edge of the dish. And, lo! out of the holly-tree dropped a moustached denizen of the Palais Royal. He had a flask of brandy in one hand, and a huge silver bowl in the other.

"Oh, nation of anti-chemical cooks," he cried, "you put the cognac into the pudding, and nine hours' boiling drives off all the spirit."

into unprofitable gas. Look at me. It is the genius of our nation to flare up!"

With that he emptied the flask into the bowl, and set it on fire, and poured it over the pudding. And the makers of the pudding again danced round it in the blue flame; and the pudding was nothing hurt by the flare-up, but remained as sound and unscathed as the land itself after a month's polemical fire. And then Mr. Oldknow volunteered a song, of which four lines remained in his memory; for he had learnt it as a child, when England was threatened with invasion:—

"Britain, to peaceful arts inclined,
Where commerce opens all her stores,
In social bands shall league mankind,
And join the sea-divided shores."

Mr. Oldknow opened his eyes. The kitchen was in darkness, and his cigar smoked out. "Bless my heart!" said he, "the Waits are playing 'The Wooden Walls,' and the clock strikes two!"

CHRISTMAS AMONG THE LONDON POOR AND SICK.

OUT of the family parties, two millions and a quarter strong, assembled in London, some eighty or a hundred thousand have their Christmas dinner provided for them by their respective parishes. Their pauper-hood does not sink them below the reach of the genial season. Christmas finds them out, even in their wards and their day-rooms. A cheerful bustle betokens the welcome day. An extra polish is seen on workhouse shoes; here and there, a stray morsel of finery, or a special evidence of neatness, is visible in workhouse garments. The workhouse chapel has a spray or two of the green emblems of the season, and the sermon has an extra spice of geniality. The dining-room has quite an exhilarating polish. The white bare walls are warmed up with their sprigs of holly, and the tables—well scrubbed as usual—are graced by the promised feast. No *skilly* to-day—but beef! No hard dumplings, but plum-pudding! The plums are not stoned, and there's no brandy sauce; but the appetites are not epicurean.

But, the huge prandial army of eighty to a hundred thousand paupers in London do not all feast in the workhouses. In round numbers, only about twenty thousand, young and old, are so accommodated. The majority are out-door poor, who enjoy anything they may receive at their own lodgings. The number of both classes had greatly diminished last year as compared with the previous twelve months. It is anticipated that Christmas, 1850, will show a still greater reduction in the number of persons dependent on charity for their holiday meal.

Of the twenty thousand who usually partake of workhouse beef and plum-pudding in the metropolis, the largest party assemble in

Marylebone. In the workhouse of that parish, last year, nearly two thousand paupers were feasted. The City of London, in its establishment at Bow, and at the Norwood Schools, fed the next largest number: their ranks mustering altogether some sixteen hundred. Third in the list, stood St. Pancras, who fed on Christmas Day, of young and old, sick and well, more than thirteen hundred. To the East of this Modern Babylon for the two next great Christmas gatherings, and we find them in Stepney and Whitechapel—each gathering, together, upwards of a thousand candidates for beef and pudding.

Across the river, we have the next strong parties, in Lambeth, and the two Southwark parishes; after these, follow a list of places where snug sets of seven hundred, six hundred, five hundred, assembled. Unfashionable St. George in the East musters only two hundred more than aristocratic St. James, whilst such suburban places as Edmonton and Kensington display the fewest candidates for parish fare.

The largest party of children has always assembled at the Norwood Schools, where about a thousand of the progeny of London pauperism open their young hearts on the great festival of the English year.

From this chronicle of the pauper's Christmas, let us now trace a faint outline of the Christmas of the London sick. A dozen large Christmas dinners are eaten in the great general Hospitals of London, besides smaller feasts in minor institutions for special diseases. The income of these twelve Hospitals amounts, every year, to upwards of one hundred and forty-two thousand pounds, of which large sum considerably over a hundred thousand pounds is derived from property, the balance only being made up from voluntary donations. From this large fund three thousand three hundred beds are kept, all the year through, occupied by poor sick persons, too ill to attend as out-patients. This little army of invalids includes unhappy people suffering from all the severest ills to which humanity is subject. Frightful accidents; hideous deformities; fearful and dangerous operations, have been the lot of successive unfortunates who tenant these Hospital beds. To such, though Christmas may come, it can bring little festivity. Yet, there are many by whom the time of rejoicing may be welcomed; and these, in all cases where indulgences are at all permissible, find Christmas beef and plum-pudding at their bedsides. Some, who are well enough, hobble from their beds to the table of the ward; and there the dinner of the day has even more of the semblance of the season.

Though given with caution, and with the kindest of motives, and though it spread a new air of cheerfulness in places full of pain and painful thought, these luxuries do rather harm than good within the walls of the Hospitals; whilst, amongst the out-patients,

Christmas is invariably recognised as a time when almost all diseases become aggravated. Within the walls the sick are under control, but those who seek it only for medicine, and live in their own way, are at liberty to follow or neglect the advice which is to cure them. Christmas, to most of them, is a time of over-eating and over-drinking, and hence it is a notorious morsel of Christmas Hospital experience, that the out-patients will all be worse after "Boxing Day" than they were before. In some large classes of diseases this may be said to be invariably the case.

In a large Hospital like Bartholomew's, for instance, it is always a question who is to be house surgeon on duty on Boxing Night; for so sure as the night shall come, it shall be no night of rest for him. Double the number of casualties are brought in as compared with the average of any other night in the year. Broken heads, "got in a scrimmage, your honour, with Paddy Phelan;" broken legs, and sometimes thighs, from slipping down stairs after the feasting and drinkings; stabs given by folks who met and quarrelled "just in a friendly way;" insensible bundles of clothes and humanity, who had taken poison with their drink for jealousy sake; and cabs with men in a state which defies policeman and good-natured pedestrians to decide whether they be dead with drink or dying of an apopleptic fit. A dreary side of the Christmas picture is this, but a true one nevertheless; the shadow of the subject; the gloom that must exist, to contrast with brightness in all things human. The poor house surgeon, possibly, ought to think so, but as splints, and bandages, and plaisters, and sleepy-looking nurses, and lancets, and drugs, and stomach-pumps, throng round about him in the disturbed quiet of his Hospital night, no one can blame him much if he lectures the hero of the "scrimmage" and the broken head, or mildly supplies advice, as well as bandages, to the tipsy proprietor of the broken leg, upon the old and good adage "That Enough's as Good as a Feast"—even at Christmas Tide.

CHRISTMAS IN INDIA.

CHRISTMAS in India!—There is anomaly in the very sound. Christmas in the heart of the land, where millions fall in idolatrous worship before the rude images of Brahma, Shiva and Vishnu—and where hundreds of thousands of the followers of Mahomed scoff at the promises of the Redeemer! Christmas—identical in English minds with frost and snow, and crisp holly—in a clime where the scorching rays of the sun eternally pierce the very marrow of man, and penetrate the very bowels of the earth!

And were India solely tenanted by the Hindoo and the Mussulman,—had the zealous missionaries and propagandists, who followed the fortunes of Albuquerque and Vasco de Gama, borne the cross to the shores of

Hindustan,—had the French Abbés who enjoyed the protection of Lally and Duplex failed to till the field of proselytism—had England never played her part in the revelation of Christian truths—to this moment no voice would be heard to tell with impunity, on the blessed anniversary, how herald angels sang "glory to the new-born King!"

But, the tide of European conquest, and, better still, the tide of European civilisation, has carried to the benighted land knowledge, and a large spirit of toleration; and now, from Cape Comorin to the furthest northern confines of the Punjab, the cross is recognised by thousands who gladly accept its guarantee of salvation. In Western India, and in many parts of the Peninsula, the peasantry have adopted the Roman Catholic faith: imperfectly taught, however, and rudely administered by the degenerate descendants of the early Portuguese settlers. At all the Presidencies, there are handsome Romish churches, and still more chaste and beautiful edifices dedicated to Protestant worship. In many parts of the large towns, the eye can take in, at a single view, a Pagoda, a Mosque, a Protestant church, and a Catholic chapel. Sixty thousand Englishmen, Irishmen, and Scotchmen, scattered over India; and five hundred thousand of the half-castes or country-born, in whose veins some British blood flows and throbs, together with a few hundred natives, are of the Protestant persuasion. And every day sees their number and the beneficent effects of their example, and the teaching of their ministers, augment.

Is there, then, anything so very anomalous in the connection of the idea of Christianity with idol-worshipping India? Or can it be a matter of surprise that Christmas Day should be observed throughout the localities tenanted by Europeans, and (so called) Portuguese, with peculiar interest and solemnity?

At once the season of worship and rejoicing, Christmas in India, and more especially at the Presidencies, abounds with interesting features.

It is early morning; the sun is up and Christians of all classes are afoot. The bells of all the places of Christian worship are summoning to prayer. Hurrying along the roads and across the *maidans*, or esplanades, the Portuguese clerks and *ayahs* (nurses and waiting-women) attired in their best cottons, wend their way to mass, to celebrate the glorious Nativity, and behold the image of Nossa Senora. The gorgeous paintings which decorate the massive religious structures in Italy, Austria, Spain and Portugal, are wanting; but, there are other types which equally address themselves to the vulgar sense. After mass, at many chapels and churches, a little bed is exhibited, and, within, reposes an effigy of the Virgin mother bearing the infant Jesus. Crowds rush forward to render homage to the image. It is kissed by thousands, and bedewed with the tears of joy and gratitude. Holy water is at a premium. The vast congregations

return homewards the better and the happier for the annual commemoration. Away from the chief towns, and more especially along the Malabar coast, the small primitive chapels are thronged by the rustic Christians bearing offerings to the poor and worthy *Pudré*, in the shape of wheat sheaves, fruits, cheeses, conserves, and whatever their own poverty will permit. Herein, their offerings resemble the contributions of the Irish peasantry to Father Luke or Father Brady.

While early service is performing in the Roman Catholic places of worship, the servants of the Protestant householder are busy testifying their respect for "master." By dawn, the portico of his house has been hung with festoons of marigolds or *Mogree*, (the Indian Jasmine). Wreaths and branches of laurel—the tropical substitute for holly—adorn the columns of his verandah, and the entrances to his rooms.

Now, "master," or the *sahib*, has breakfasted, and the head-servant announces that the rest of the domestics claim permission to pay their respects. What procession is this? Is a marriage-feast toward? Behold the *sircar*, or clerk, who keeps the *sahib's* accounts! Attended by a coolie, or porter, he makes his salaam, and lays before his employer a huge *roosee* or *seher* fish, a plum-cake charmingly frosted with sugar-candy, a copper tray of almonds and raisins, two vast cauliflowers, and a nose-gay. His offering is graciously accepted, and a small present cancels the obligation. Now comes the *Khatmudghar*, or body-servant. He has brought a leg of mutton, some oranges, a smaller cake, and a quantity of *Kismis*—the small Sultana raisin from the shores of Persia. *Kismis*! whence the word? Has it been adopted by the Hindoos, because it is acceptable at Christmas? We never could divine the etymology. *Kismis* is a pretty dessert fruit to play with—and isn't it suggestive of the standard joke of the old *Qui hye*? He accidentally on purpose rolls a mango towards the fruit-plate, and exclaims with a chuckle, "See how naturally *man goes to Kismis*!" The children laugh; and a faint smile plays about the lips of the adults, who have heard the veteran jest a score of times. The *Khatmudghar* is dismissed with a present. Anon comes the Sirdar bearer, the tailor, the washerman—even the poor *mahdur* (sweeper), each with the Christmas present—and each receives a suitable *douceur* or *buk-shaish*—often pronounced *buxis*, and so suggesting the notion, that we have borrowed the term and converted it into "boxes."

Blessed and blessing, the master now dismisses his domestics, and the carriage is ordered to the door to carry the family to church. Service is performed with the extra solemnity suitable to the occasion. The church is garlanded with laurel and other evergreens; an appeal is made to the charitable feelings of the congregation; and as the organ peals the final voluntary, the bank-

notes, and the silver coin, are freely dropped into the churchwarden's plate, to provide food and clothing for the indigent of all castes and classes.

Home! and the family are greeted at the door by visitors, native and European, of the highest grades. More cakes, more fish, more legs of mutton, more oranges, more almonds and raisins, crowd the hall and staircases.

The question is, how to dispose of all this perishable matter; for *Khatsumagee*, the butler, takes care that all these supplies shall not interfere with his usual bazaar arrangements. He has, in anticipation, made the market for the day. So, when the children are satisfied, the perishable presents are given to the poor.

As evening closes in, the house of each family of respectability opens its hospitable doors to the reception of friends; and the roast beef and the plum-pudding, and the mince pies, the port wine and the champagne, attest the attachment of the English to old home-honoured usages. The glass goes round; good wishes are exchanged; many a thought is directed to friends and relatives at a distance, and the day closes much as it closes in England. In Calcutta, fires are burnt in English grates, in the months of December and January; and although a handsome bouquet of roses decorates the drawing-room table and the chiffoniers, there is a wintry feel about the atmosphere; and as the chairs are drawn round the fire-place, and the whiskey-punch is brewed, the cherished idea of home on Christmas Day is suitably and completely realised.

CHRISTMAS IN THE FROZEN REGIONS.

THINK of Christmas in the tremendous wastes of ice and snow, that lie in the remotest regions of the earth! Christmas, in the interminable white desert of the Polar sea! Yet it has been kept in those awful solitudes, cheerfully, by Englishmen. Where crushing mountains of ice, heaped up together, have made a chaos round their ships, which in a moment might have ground them to dust; where hair has frozen on the face; where blankets have stiffened upon the bodies of men lying asleep, closely housed by huge fires, and plasters have turned to ice upon the wounds of others accidentally hurt; where the ships have been undistinguishable from the environing ice, and have resembled themselves far less than the surrounding masses have resembled monstrous piles of architecture which could not possibly be there, or anywhere; where the winter animals and birds are white, as if they too were born of the desolate snow and frost; there Englishmen have read the prayers of Christmas Day, and have drunk to friends at home, and sung home songs. In 1819, Captain Parry and his brave

companions did so; and the officers having dined off a piece of *fresh* beef, nine months old, preserved by the intense climate, joined the men in acting plays, with the thermometer below zero, on the stage. In 1825, Captain Franklin's party kept Christmas Day in their hut with snap-dragon and a dance, among a merry party of Englishmen, Highlanders, Canadians, Esquimaux, Chipewyans, Dog-Ribs, Hare Indians, and Cree women and children. In 1841, I, who am now at home to write this, kept Christmas Day with the South Polar expedition, consisting of the "Erebus" and "Terror," and their crews. In 1850, some commemoration of Christmas may perhaps take place in the Frozen Regions.—Heaven grant it! It is not beyond hope!—and be held by the later crews of those same ships: for they are the very same that have so long been missing, and that are painfully connected in the public mind with FRANKLIN'S name.

The Christmas Day of 1841 was ushered in by one of those dense fogs so peculiar to very high latitudes. The two ships, beset in the heavy pack, or vast belt of ice, drifting on the confines of the Antarctic Pole, alone broke the still, deep solitude of the wide scene of desolation.

On the lifting of the fog, the "Terror" appeared closely beset behind a large iceberg, her topmasts just peering above the shelving extremity of its lower end. It was a very remarkable-looking berg, little less than two hundred feet in height, surmounted by two white cupola-shaped hummocks; whilst the cracks and fissures on its stupendous sides, reflecting the blue rays, relieved the uniform whiteness of its surface by tints of the most beautiful and delicate azure. We christened this the "Christmas Berg," and, as it was destined to be the frequent companion of our zig-zag course through the monotonous pack, it was soon looked upon as an old familiar friend. The "Erebus" was beating about in a "hole of water," as the temporary openings in the pack were called, surrounded on all sides by ice, in heavy floe-pieces of irregular shapes; heaped together by the enormous pressure which the whole mass was exposed to, when the vast body of water composing the Southern Ocean was disturbed by heavy gales.

Many interesting objects, however, occurred to beguile the tedium of our protracted detention within this pack, which could not have been less than seven or eight hundred miles in breadth. It was studded over with numerous bergs; some of them three or four miles in length; their tabular-shaped summits towering to the height of from a hundred to two hundred feet above the pack itself. Whales frequently appeared in the "holes of water," their black backs just rising above the surface like a dark curved line. They were sometimes followed by a flock of petrels. In another direction, the scene would be varied by a long line of penguins leaping out

of the water, one after the other, in quick succession, like so many "skip-jacks," moving along with the greatest regularity in single file, and which at a distance might be easily mistaken for a shoal of those fish, did not their harsh, loud cawing betray them. Overhead, a passing flock of the agile and graceful Tern now and then enlivened the air with their shrill and animated screams; whilst, on pieces of ice, as they floated by, the seal basked or slept unconscious of danger,—as undisturbed in the raging gale, and during the thundering collision of ice with ice in the foaming surf, as in the most quiet calm.

Such was the general character of the scene amidst which we of the "Erebus" and "Terror" had to keep our Christmas holidays in 1841; and, notwithstanding our isolated position, we managed to reserve for our Christmas dinner the usual old English fare roast beef, with roast goose, followed by the homely never-to-be-forgotten plum-pudding. Our ox and goose, it must be confessed, were not of English growth. They had never seen the old country; but drew their first breath on the fern-clad plateau of the Waimate, near the Bay of Islands in New Zealand. We had brought them thence, that they might be offered up a sacrifice to Christmas on the ice-girt sea of the Antarctic Circle.

The position of the "Erebus" was cheerless enough; tacking about in so limited a space of open water; involved in a fog; and with her decks encumbered by blocks of ice, piled up about twelve tons of the cold substance having just been taken on board, from a hummock, to complete our water. This work had given additional chilliness and cheerlessness to the ship. After Divine Service had been performed, we hoped for few other signs of the day; but all the amusements contemplated for the Christmas evening were reserved, not resigned. On New Year's Day we crossed the Antarctic Circle, just two hundred and fifty miles within the margin of the pack, which was drifting with us to the southward. Both ships were made fast, with ice-anchors and hawsers, to a floe-piece which formed a fender between them, admitting of free communication. On this piece of ice, both ships' companies were actively employed on the last day of the year, making preparations for "seeing the old year out, and the new one in." A quadrangular space was hewn out in the ice for a dance; having, in the centre, an elevated chair, carved out of the same substance. Adjacent to this crystal ball-room, another excavated square formed the refreshment-room; having a table in the midst, also cut out of a block of ice, on which glasses with bottles of wine and grog were placed as refreshment for the dancers. This edifice of ice, all open as it was to the sky, and entered by descending a flight of steps cut in the ice, received the appellation of "*Antarctic Hotel*," and bore on a sign-board, fixed to a pole, the words "*Pilgrims of the*

Queen," and on the reverse, "*Pioneers of Science.*"

These devices were contrived by the worthy Boatswain of the "*Erebus*," who undertook to perform the part of landlord. Not rejoicing in a sufficiently portly person, as he thought, for sustaining with becoming dignity the new character he assumed, he made up what Nature had denied him in rotundity of figure by stuffing a pillow under his waistcoat. Thus rigged, he strutted about much after the fashion of a cropper pigeon; his hands stuck in his shooting-jacket pocket; an apron fastened round his waist, in front of which dangled a huge bunch of keys. Inexpressibles buckled at the knees; and a round cap, worn jauntily on one side, completed his costume; he played his part with much humour. Two young seamen, acting as his waiters, were busily employed in handing round genuine "*Antarctic* ices" on a tray. In front of the Hotel, the English ensign waved to the southern breeze, guarded by a cannon and pile of shot, not of iron, but ice, which spared our powder. Near the gangway of the "*Terror*," a female figure, in a sitting attitude, her head ornamented with a profusion of ringlets, was modelled in snow, and surmounted by the word "*Haidee*;" but whether she bore any resemblance to the beautiful Greek girl of Byron's imagination, is an affair of the sculptor's. In front of the gangway of the "*Erebus*" appeared the bust of a male figure, wearing a foraging cap, and formed of the same plastic material.

As the bells of the two ships struck their nautical number, eight, which announced the hour of midnight, the New Year was welcomed in by three loud and hearty cheers; and whilst the echo from the last cheer was reverberating among the surrounding bergs, the sharp crack of a fowling-piece, ringing through the rarefied air, was followed by the whirling descent of the lifeless form of the beautiful White Petrel, (*Procellaria nivalis*), the first offering to the New Year, and victim in the cause of science. This true and faithful harbinger of ice, hovering over the scene at such a moment—poor bird!—paid dearly for the gratification of its curiosity; the temptation to possess it, proving too strong for an enthusiastic ornithologist to resist, as he reclined, gun in hand, on a hummock of ice, a close observer of the surrounding scene.

Whilst these amusements were progressing in the ice-built Hotel, the scene visible from the "*Terror's*" "*crow's nest*" (a cask with the head out, and with a seat in the centre, placed at the fore-top-gallant-mast head, as an observatory for watching the movements amongst the ice) was even more ludicrous and amusing. On her decks below, several of the crew commenced singing and blowing horns, whilst others, full of rude mirth, seizing the pigs in the sty by the ears, pinched them until the hapless grunts uttered their cries

in concert with the horns, varying the key, as Jack tightened or relaxed his grasp, according to his own notions of keeping time. This elicited roars of laughter from the rest of the crew. All the time, showers of snow-balls flew about in all directions; the entire group appearing as full of boisterous mirth and frolic as if the whole had been enacting on the frozen surface of the Thames or Medway.

The usual New Year's present, consisting of a suit of warm clothing and extra allowance of rations, was served out in the course of the day to each individual of the Expedition. And all the officers dined with the Captain, who had been their guest in the gun-room on Christmas Day. Roast goose and roast beef again constituted the fare; mince-pies superseding the plum-pudding.

The day was closed with a dance in the "*Crystal Ball-room*," in which both Captains joined. In the absence of our fair countrywomen this could scarcely be otherwise than a dull affair.

Thus ended our Christmas holidays in the pack. About midnight, from the main-top-mast cross-truss of the "*Erebus*," the view presented one unbroken surface of ice; not the slightest opening of water was to be seen, anywhere around, to the horizon; just above which, that beautiful orb of both day and night, here, for a time, appeared rolling along its verge like a bright globe of fire. A few majestic-looking bergs, alone, broke in upon the general uniformity of the pack, casting their shadows upon its surface. A solitary Antarctic gull, winding his way past the ships in search of open water, for his predatory excursions, gave the only indication of life in the vast solitude.

From that solitude of the South Pole the "*Erebus*" and "*Terror*" safely returned, to make their way to the frozen North, where their absence, with their gallant leader, Sir John Franklin, has caused such a painful degree of excitement throughout the length and breadth of our native land, and raised so wide a sympathy through the whole civilised world. And although, at the approaching festive season, many a family circle, assembled round the winter's hearth, may have to lament the absence of some relative or much-valued friend from the otherwise joyous scene, let no such family despair, however discouraging their forebodings; for, in the absence of all tidings of our long-missing countrymen, hope still remains. It is fostered and supported by the fact, that the annals of the Northern Whale Fishery record instances of the return of adventurers from those regions, after periods of absence, as long protracted, and in which the absent sailors have been as long unheard of, as in the case of Franklin and his crew. Let it be borne in mind, that where the Esquimaux can live, there the English seaman can live. We may yet hope to see the crews of the "*Erebus*"

and "Terror" once more ready with a yarn about Christmas at the Pole, to help out a Christmas in England.

CHRISTMAS DAY IN THE BUSH.

In 1840, on a burning Christmas eve—real summer weather—two young gentlemen, in very light costume, were sitting opposite each other in a bark Bush hut, weary, dusty, and rather disconsolate. The stockwhips and saddles on the ground, with half-boots kicked off beside them, showed that they had just returned from a long ride. The hut was evidently recently built, and it was plain that this was a new station.

"Well, Jack," said the shorter of the two, "this is a pleasant look out for Christmas Day,—no dray up, our last flour gone to-day, and our last sugar melted away last week; that disgusting emu has eaten up all the pumpkins and melons, so we may dine to-morrow on tea, *au naturel*, and the remains of the last cask of salt beef; unless you prefer to kill a bit of fresh, and eat it without damper, salt or pickles. No doubt the dray's hard and fast in some gully, or safe on one wheel by the Sugar-loaf Range, and Bald-faced Dick and his mate, if they are the sensible fellows I take them to be, are now picking the plums and weighing out the flour for their Christmas pudding."

"Or, perhaps," put in Jack, "amiably dividing your stores with a party of Bushrangers. A pleasant prospect, truly, for a man who has ridden four hundred miles to spend his Christmas Day with an old chum—no dinner, no books, no tobacco. It almost makes one wish to be sitting wigged, gowned, and briefless, in the back benches of the Queen's Bench, drawing caricatures; or reading three services a-day to a Low Church congregation, upon fifty pounds a year."

"A bright thought strikes me," said the host, Martyn by name, commonly called Betty Martyn, because he commenced his career in the Bush by wearing gloves and blacking his boots. "Let us ride over to that Devonshire man's station,—I mean the man with the pretty daughters. There's a short cut across the range Bald-faced Dick made out the other day, that won't make it above thirty-five miles, instead of a hundred and twenty, by swimming one creek and climbing over one awkward bit of hill work. We'll start at sunrise, and do it comfortably by ten o'clock, if we can only make out the bearing right. Our but too true excuse—the missing dray—is a safe card for a dinner, if not a dance and a pleasant day or two."

"Agreed," said jolly Jack Bullar.

By day-break they were off, combed and trimmed, in the blue and red Jerseys, belts, trowsers, and broad-brimmed hats, that form the picturesque costume of the Bush: Bullar on a big-boned thorough-bred: Martyn on his half-bred prancing Arab, over hill and dale and

plain, through a broad creek, with a quarter of a mile's swimming, guided by Bushman's signs and instincts. About ten o'clock they had struck the river, and running it down soon came where it swelled to a broad lake or water hole before the Devonshire man's station.

They did not know his name, but rode up confidently, according to the custom of the country.

"Hurrah," cried Jack, "no starvation here: there's a six pair oxen dray unloading, by a whole generation of youngers; sugar-plums in plenty; and look at the black fellow grinding away at the hand-mill—how fat the rascal looks. Well, we've reached the land of plenty this time."

"Why you see, Bullar," said Martyn, "in this country all the rules go by contraries. It is Christmas Day, and, instead of frost and snow, it is a burning sun and green leaves we are perspiring under. Instead of a skate, I am thinking of a swim; and, in the same way, while in old England, very often it's the more mouth, the less to eat; here, as every mouth has a pair of hands under it, the more mouths, the more food. So you see, Jack, while you and I, with a balance at the bank to start with, often have to put up with Lenten fare, this hard worker has contrived to make comforts we can't buy."

"How be'ee, gentlemen," said a voice in a strong Devonshire accent, as the owner came up alongside them, mounted on an ugly piebald stock-horse, which had stolen over the soft ground unheard during their conversation. He was a little slim man, with thin grey hair hanging long under his broad-brimmed hat, round an intelligent face, burned a deep brown; he sat his horse awkwardly, with long stirrups, his toes pointing down and his bridle-hand poked out, like most men who have only taken to horsemanship late in life. But he wore an air of content, self-satisfaction, and well-to-do-ism, that bespoke, at a glance, a man with whom the world went well.

"Have 'ee come var?" asked the host.

"From the next station," said Bullar.

"Zo, we be neabours, be us!" he continued.

"Well, I'm cruel glad to see 'ee. Here, Bat, take the gentlemen's horses and put 'em in the paddock!"

Bartholomew, a wild Indian-looking urchin, about two feet high, in a kilt composed of a Jersey strapped round his middle, forthwith clambered upon the thorough-bred: how, it is impossible to say, but something after the manner of a monkey ascending a camel; and not a little to the astonishment of the young travellers, for children were not the kind of young stock they had been accustomed to. With a cluck, and a crack of his miniature stockwhip, the boy sent the big horse off at a swing gallop, and slap over the fence of the paddock. Returning as calmly as if he had been doing the most proper and natural thing in the world, young Fibbertigibbet observed,

"Your horse don't jump amiss, stranger, though I don't think much of the big 'uns in a general way."

"Get away with 'ee, you young scamp," cried the grandfather; and then they all went into the cottage.

Great were the preparations. Green boughs and flowers adorned the walls and roof, in brilliant yet imperfect imitation of holly-boughs and miseltoe.

The hostess, a handsome, middle-aged woman, had given up active service to a crowd of daughters, granddaughters, neighbours, and friends, who surrounded her. She sat at ease in an Indian cane chair, until she saw, and came forward to greet the strangers. "Who could have thought," observed Martyn, "that it would have been possible to be so comfortable in the Bush!"

A great shout of "Here comes Aunt Mary!" brought every one out into the verandah, and slowly trolling up to the door came a high-wheeled dog-cart landau, in which sat, beside the driver, a fair-haired young Australian, of the true colonial type. Aunt Mary was a pretty woman, in a fashionable light mourning bonnet. Her double parasol looked not a little incongruous and droll amid such wild scenery. Two varmint little boys, in sky-blue plaids and kilts, were perched behind the dray. "Here we are," cried Aunt Mary's husband; "did the last hundred miles in two days—not bad work for Bush roads. Now, young ones, who'll help to see what we've brought from town!" There was a tremendous rush at the boot of the dog-cart. A cry of "Uncle Dick and Aunt Sally" made a slight diversion; but, as these new comers came on horseback, and brought nothing but a few head of game, the dog-cart proved the more attractive. By this time guests dropped in thick and threelold.

It is a rather degrading confession for poor human nature, but Christmas Day, anywhere, would be very blank without the eating and drinking. This is especially so in the Bush, where there are no old associations to fall back upon. So our friends, leaving the relations to exchange news, walked about sniffing the various delightful odours that arose from the detached kitchen; where an old woman and a sailor cook quarrelled and worked away with extraordinary unanimity.

Instead of romantic, sentimental confidences, the conversation of our two young squatters ran on more substantial topics:—"By Jove, Bullar, did you see the sucking pig?"

"No, but I spied the pudding! It fills the largest copper. Did you hear the hutkeeper asking for a shirt-sleeve to boil the men's dumplings in?"

"No; but I saw him walking down to the servants' huts with a great side of beef."

"Well, we have dropped into clover; but what a pretty girl! Is she one of the daughters?"

At length, as the sun was descending, dinner-hour arrived; it having been deferred some time, much to the ire of the cooks, in order to give every expected guest a chance.

When Martyn exclaimed carelessly, "What a pretty girl!" he registered a vow to sit beside her at dinner—and he kept it. During the repast, his attentions to Miss Jane Paige were unremitting. All the news which they were possessed of, had to be retailed entirely by Bullar.

When the repast was over, the old patriarch rose to make his accustomed oration; "And now, my children and friends," he said, "let us drink a Merry Christmas and a Happy New Year to all absent friends, and especially all friends over the water. I drink it with all my heart; though yet eight years ago I little thought—not I—to be able to have such a party round me at Christmas Day. Eight years ago I left Devon a beggar and an outcast. But now, thanks be to the Lord, I know all was for the best."

Three days afterwards, as Bullar and Martyn rode back together, the former exclaimed, "Strange country this, where beggars get on horseback and don't ride to the devil!"

"Of course not," cried Martyn, "don't you see why it is? A man can't take so long a journey double, and a wife at his salvation in this country."

"When do you mean to be saved, then?"

Martyn blushed. There was an awkward pause. Bullar muttered something about love at first sight, rapid courtship, &c.; when Martyn broke out with: "Well, then, if, when you return home to England, you'll promise not to break it too abruptly to my aunt, Lady Pummery I'll confide to you that —"

"What?" gasped Bullar, with affected surprise at what he knew he was going to hear.

"I mean to marry Jane Paige!"

"And she —"

"Intends—if eyes do not flash falsehoods, and blushes are not perjuries dyed crimson—to marry me."

Sure enough when Bullar returned to this country, he had to report that Miss Jane Paige had become Mrs. Martyn. She and her spouse spent every succeeding Christmas Day under his own roof in the Bush.

HOUSEHOLD CHRISTMAS CAROLS.

"Come unto me all ye that labour and are heavy-laden, and I will give you rest."

Chorus.

BRIGHT thoughts and hopes are now awake,

As constant as the circling years;

They penetrate each grief, and make

A golden radiance of our tears.

In that confused, yet heavenly shine,

The soul unearthly music hears;

The Eastern Star sheds rays divine

On our afflictions and our fears;

And now amidst a gleaming halo stands

The Infant Christ—and stretches forth his hands!

THE LAME CHILD'S CAROL.

To the chords of the harp,
And the warbling of the flute,
The merry tambourine,
And the beat of shoe and boot—
In the drawing-room, the parlour,
The almshouse, or the street,
Oh, what joy it always is to me
To see those dancing feet!

The ball-room is all brightness!
I sit and watch the throng;
My spirit, with their lightness,
Bounds happily along:
The village school room strives to shine
With candles prim and small!
But oh, what beaming faces
Light up the whitewashed wall!

Then dance, my loving playmates,
Like birds upon the wing,
Flit by me—whirl around me—
While I sit here, and sing.

Chorus.

Bright sunny hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears,

THE DEAF CHILD'S CAROL.

Sixty happy children, standing in a row,
With smiling rosy cheeks, and hand in hand;
When the voice answers to the full heart's flow,
Mine sings within—and I can understand.

'Tis now three Christmas Eves since I have lost
All sense of sound—in constant silence dwelling;
But in my soul I hear, in tones august,
The wonders that the earth and heavens are
telling.

Suns, stars, and moons, and oceans fathomless;
Man's generations—weed and grass, and corn;
All these are hymned; but in its happiness,
The heart hears angels sing, that "Christ was
born!"

So, will I gaze upon each emblem holy,
And at the festive board, or merry game,
In sympathy absorb all melancholy,
And loving thoughts to joyful visions frame.

Chorus.

Bright sunny hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.

THE DEFORMED CHILD'S CAROL.

THERE was a gentle steadfast gleam
Upon the morning sky,
Which shone across a stable door,
With shepherds standing by.

And wise old men were also there,
With beards that downward flowed,
And folded turbans on their heads,
And staves, o'er which they bowed.

The shepherds were of manly grace,
Their limbs of finest mould,
And noble were those field-born fronts,
Sun-brent to swarthy gold.

The stable-door was open wide,—
Within 'twas dusky dim,
Save that a circle of soft rays
Glowed to a low-breathed hymn.

It shone around an infant's head;
And to its Mother's voice
The glory seemed to palpitate,
And tell me to rejoice.

I turned unto those shepherd men,
Of matchless thieves and bone,
So lordly in their grace and strength—
And they were kneeling down!

I turned to see those old, wise men,
The wisest of the land;
And all of them were kneeling, too—
Bowed head—and upraised hand!

Another, and a greater strength
To cope with earth's sad storms—
Another, and a wiser lore,
Smiled in that Mother's arms.

And shall not I, with these frail limbs,
This framework of poor earth,
Rejoice with inward grace and strength
At my great Teacher's birth!

Chorus.

Bright sunny hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.

THE DEAF AND DUMB CHILD'S CAROL.

I CANNOT speak, I cannot hear,
But I can feel and think,
And mine eyes are filled with the joyfulness
That hand to hand doth link,—
While round and round
The dancers bound,

And laugh and shout—and I see the sound,
Though silent to me
All the noise and the glee
Of the dance, the round-game, and revelry.

Something within me struggles oft
My happiness to tell in sounds;
Words—words—I strive to shout, or waft,
Along the room—across the grounds—
And o'er the snow
As my playmates go;
But though 'tis in vain since the day of my birth,
The voice of my mind
Is ne'er left behind,
And cries welcome Christmas and all its good mirth!

The faces laugh in the red fire light!
Fingers, looks, actions, all speak to me:
Antics and fun make a merry night,
Till I fancy I hear the low hum of a sea,—
A murmur and rush—
Though it ends in a hush,
All tell me there's something outside of my ears;
But my life's in my eyes,—
Oh, thank God for the prize!
Which I carol at Christmas as year rolls on years!

Chorus.

Bright sunny hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.

THE BLIND CHILD'S CAROL.

My life is in the night—
The never-ending night—
But my soul is not in darkness,
And hath a starry flight.

My nights are like my days—
All never ending days—
And to me a constant morning
Of heaven-enfolding rays.

To me the sun and shade
Are of one substance made,
And one eternal glory,
Which ne'er can fail or fade,

For on my close-seal'd eyes
Hath Christ, in all things wise,
Reversed the common miracle—
And given me inward skies.

Therein His form I trace,
In all it's Infant grace!—
Amid pictures of His sufferings
For all the human race!

Therein, I recognise
Earth's littleness of size,—
And all the planet-nations
Whom Love will Christianise.

Chorus.

Bright thoughts and hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.

THE SICK CHILD'S CAROL.

You say I do not look so pale to-day,
But in my cheek
A rose-leaf tint begins to bloom and play,
And I am not so weak.

It is because I see you all
So happy at the feast—the ball—
The merry-making in the hall.

And Christmas Eve, and Christmas Day, to me
Are very dear;
They bring a bright and wondering memory
Of one delightful year.

I look back through my little span,
And thinking how its joys began
Forgot how thin and changed I am.

They led me—I was then a little child—
Through a dark door,
Into a room all hung with branches wild,
With lights upon the floor;
And lights above—in front—behind—
So bright they almost made me blind,
While other sights confused my mind.

It was the splendour of a Christmas Tree!
With fruits thick hung,
And glittering pictures, lights, and spanglery,
The dark fir boughs among.
While soft-toned music came—and went—
I cried in joy's bewilderment,
"This Tree I'm sure from heaven was sent!"

Chorus.

Bright sunny hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.

THE HEALTHY CHILD'S CAROL.

Come hither, dear playmates,
Let's rove hand in hand,
And some shall be carried,
And others be led.

You can speak with eyes—fingers—
We all understand,
And away we will go
To the frosty upland,
Where the sun shines like gold
On the roof of the shed.

There, the long row of sliders
Go down the keen slide!

There, others are building
A huge man of snow!

While yonder a crowd,
Half-way down the hill side,
A great snow-ball battle
Are now to decide,
And all the fresh faces
Are sharp and aglow.

Now come home—draw the curtains,
More coals, and a log!—
Clear the room for the forfeits,
The dance, and the game;
Hornets promised to gallop
Thrice round like a dog,
And Virgil will show
His proud feat of "the frog,"
While we all look like ghosts
In the snap-dragon's flame.

The green holly-boughs,
With their berries so red,
Adorn the bright room
Where the feast is set out;
Ah, this is a night
When we can't go to bed,
For no one could sleep
While such mirth fills his head,
With troops of gay fancies
All dancing about.

Now all clasp your hands
At the treasure all find,
That He whose Nativity
Angels now quire,
Gave help to the weak,
In the strength of the mind,
Bidding those who are strong
To be loving and kind,
When the holly-boughs sparkle
And blaze in the fire!

Chorus.

Bright thoughts and hopes are now awake,
As constant as the circling years;
They penetrate each grief, and make
A golden radiance of our tears.
In that confused, yet heavenly shrine,
The soul unearthly music hears;
The Eastern Star sheds rays divine
On our afflictions and our fears;
And now amidst a gleaming halo stands
The Infant Christ—and stretches forth his hands!

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

NO. 40.]

SATURDAY, DECEMBER 28, 1850.

[PRICE 2d.]

MR. BENDIGO BUSTER ON OUR NATIONAL DEFENCES AGAINST EDUCATION.

WRITERS ON birds tell us, that feather makes a bird much hungrier than flesh. The Germans are all feather. That's why the Germans are always hungering after something new, and why they can't be satisfied with ancient institutions. I'm not partial to feathers; I'm for flesh—flesh is the article for me! I have bought M. Romien's book upon the Era of the Cæsars, and I like it. Liberty, and progress, and education, are, as he says, 'mere cuckoo cries.' Force is the thing; the only hero is king Fist. I should think so! I take in 'Household Words'—on purpose to differ from it. I meet with a good deal of puling in that journal. It annoys me. I consider Izzy Solomon the strongest man and the prettiest sparrer in England. I have in vain looked for an article on Izzy Solomon.

What I say is, the Germans are a speculative people, and there's a deal too much in this country of the German school. There's a spirit of poring and pondering; whereas the man ought to be knocked down who ruminates. If 'Household Words' is fair enough to let a man stand up against a man, and see a man fairly backed, what I say is, I'll put my fist into print and do a little execution. It will put some vigour into that journal to admit a Rustum. Rustum, being only a strong man, I suppose you don't remember all his deeds? I do. I've read, that when he fought one day with his brother Persians against the army of Afrasiab, he killed, with his own sword, one thousand one hundred and sixty enemies. What do you think of that? Two men a minute, in a battle of nine hours! The sword of Rustum has been made into steel pens, and I've got one of 'em. Look out!

I strike immediately at a vital part—I go in at the School. Schools are intolerable follies; and of all schools the most foolish is the German School. England is acting, in regard to schools, as becomes her practical good sense. Her boys are in the gutters, growing up to manly independence; they swear well, fight like bricks, and have game in 'em. By her boys, I mean the multitude, the children of the people. I

know that in the upper classes there are children more or less demoralized by education, and that the same evil influence is sometimes brought to bear upon the poor. But, England, as a nation, don't trouble herself much about the education of the masses; something like forty-five out of a hundred of 'em can't read and write. That's what I call being practical. That's why I'm partial to my country, and shout "Rule Britannia," with a will.

If any man ever immortalised himself it was Toomer. Who was he? says you. He was a gamekeeper to Sir Henry Mildmay, and he trained the black sow, Flat, into a sporting pig. She used to point game as surely as the best of dogs, and entered in a spiritual manner into that kind of work,—took to it heartily. If I had the arrangement of a Walhalla of all nations, there should be a colossal Toomer in the front of it, big enough to extinguish Schwanthaler's affair; Flat should repose at Toomer's feet; and, round his pedestal, we'd group in miniature your humdrum baby-trainers, Pestalozzi, Lancaster, Vohroli, and such fellows. What I say is, reading and writing don't make shoes, and you can't work up A, B, C into chairs and tables. Arithmetic won't make beds. When people are born to be cobblers, carpenters, or housemaids, they ought not to have their minds distracted, and be lifted up out of their calling. Ignorance is nature; we are born ignorant, and we ought to be kept so.

The Germans are nice men! Nice un-English men! Why, it's painful—as my prize-fighting friend the Chicken says, it's mean—to see how they sophisticate their children, willy-nilly. They have got a word like a Brazil nut, *Schulpflichtigkeit*, which means the duty of instructing children as a sort of moral law over a state and all its subjects. Swiss, Swedes, Dutch, and French, follow the German crotchet. There is not a young Dutchman, sound in mind and limb, who can't read, write, and cipher; nor a young healthy German from fourteen to twenty, who cannot do as much and something more. Your true ignorant children are to be found—out of England—only in Spain, Portugal, and South Italy, or among Turks and Russians.

The diabolical deliberation with which these

foreigners I have alluded to, set about corrupting innocence by training it into the ways of men, freezes one's blood. The Chinese tell of one of their old Emperors, Chéou-sin, that, seeing a man wade through a cold stream, one frosty morning, he bade him remain for some time in the water, and then had his legs cut off to see whether the marrow in his bones was really frozen. There were no Prussian schools so many centuries ago, unluckily for Chéou-sin. *They* are the places to freeze your marrow, if you're a real, natural-born, good old Englishman. Go into any Prussian town, or village, a little before eight o'clock, some December morning. The iron grasp of an imaginary duty has dragged all the children out of bed, washed them, and given them their breakfasts; and here they all are, turned out into the raw frost, all running to one point—the school!! Nine o'clock, ten o'clock, eleven—morning, afternoon—search all the gutters, and there's not an innocent disporting himself—there's not a mud-pie made in the whole district—the children are all emptied out of streets, and houses, and poured away into that great building yonder, that abominable school!!

Whereas, go into any great English town, go into London as the greatest of 'em all. What do you find there? Freedom! Go down into Westminster, or up into White-chapel. There you'll find the young Bricks, by thousands upon thousands, left to themselves from the moment when they are first able to crawl, and herding and growing together, in the gamest manner, like so many wolves. And you're not deterred by this German business, but you want to alter that state of things! Don't deny it. You do. Some of you do. I have heard of the conductor of the very Journal that I write this remonstrance to, giving expression to sentiments like the following. "London in this aspect is so horrible to me, that when I go into such quarters of the town, using my eyes, I lose belief in the possibility of the progress, or even of the long existence, of an Empire, with such a mighty crime and danger at its heart. I do not believe that any one can be well acquainted with the sights of ignorant and neglected childhood, which are hidden in the Metropolis alone, and entertain within himself the possibility of any wealth, or any power, or any spirit in a people, sustaining, for many generations longer, a State on which that wicked blight is resting."

That's constitutional and British, an't it? *I tell it Prussian.* Ask a Prussian and he'll tell you, that to leave a child untaught, is only two or three degrees less fearful than to murder it. Not to feed the mind, is in his eyes a punishable crime, as in our eyes it is an indictable offence to starve the body. The Prussian state does not dictate to its subjects any place of education, as our state does not dictate articles of food; but, educate you must as the German law; and if you want the

means, the state makes a provision to supply them for you;—just so we say—feed yourselves, and all your children; but if you cannot, don't starve, come upon the parish; your bodily support costs us seven millions a year.

The whole income of Prussia, as a state, is somewhere about ten millions, and its population is that of England and Wales as to numbers, or not much less. Yet Prussia burdens itself with the charge of education on a most unstinting scale; whatever fund is pinched, the exchequer is ready to meet every demand, which corresponds to a real want, in the way of education. Not having much to pay for the support of pauperism (one great result of ignorance and its vices), does certainly give freedom to the public purse; but I consider pauperism a noble institution. What's to be the privilege of wealth, when all the world is comfortable. You have to take your hat off when you accost the German peasant—"Hollo, you Sir," won't go down with him—he stands upright, and looks you in the face, and undertakes to answer you politely. What I say, is, that humble people who are educated, won't be satisfied with standing still; they'll get impertinent ideas about the rights of man, and duty, and moving on. You can see in the eyes of those Germans, that they are civil because it's their duty; and that they don't rightly reverence you for your money's sake. Now, this is revolutionary; if not, I should like to know what is. There is no way of arguing with such men. For people like myself, men of your true genuine blood, the only course is, to knock 'em down.

Just step into the interior of one of these same German schools, and see what manner of outlandish work is going on. There! Did you ever see the like of that! Call that a school! The boys are comfortably seated, and the master stands!

Mean-spirited fellow, there he stands, as though it were he who had the hardest work to do! The room is lofty, airy, and well warmed; the children sit, I do believe, in absolute enjoyment of the lesson. No other sound interrupts the teacher and his class; the other classes are under the same roof in other rooms. Ruined by luxury, there sit the children—with a grown man, and, what's worse, a trained and educated man, standing before them, pouring out his energies. He isn't hearing them their lessons out of a book; the lesson they have learned out of a book, he is explaining with all the art of a Jesuit, enlivening with anecdotes, sprinkling about with apt questions. The children are all on the *qui vive*, and asking questions in their turn—why don't he knock 'em down for their impertinence? See! now he asks a question of the class, up go two dozen little hands! The owners of those hands believe that they can answer it. There! he selects one to answer, who looks pleased at the distinction. When the next question comes, he'll tackle some one else.

Now, comes a lesson in geography. He takes a piece of chalk, and turns to the black board. Dot . . dot . . dot. There is a range of mountains. As soon as its shape is defined, the children eagerly shout out its name. In five seconds, the sources of five rivers are indicated, and named as fast as they are drawn, by the young vagabonds, who watch the artist's hand. Down go the rivers to the sea, and—dot . . dot . . dot . .—a dozen and a half of towns are indicated, every dot named in chorus. Then, come the coast line, boundaries of countries, provinces, and other towns. In ten minutes, there is, on the board, a cleverly impromptu map of Germany, and the children have shouted out the meaning of every dot and stroke as it was made. They think it better fun than puzzles. Very pretty!

Now, there he is, beginning at the school-yard, talking of its size; then, advancing to a notion of the street; then, of the town; then, of the province; and leading his pupils to an idea of space, and the extent of country indicated upon such a map. Truly abominable all this is! Where's the discipline, I should like to know. If school is not made the preliminary Hall of Sorrow, how are men to grow up, able to endure such a House of Trouble as this world notoriously is! How can the mind be strengthened more effectually than by giving it, at first, the daily task to learn by rote, as exercise of simple memory. The less the task is understood, the more the memory is exercised in learning it; and so, the better for the child. What will become of a man whose ears, when he was young, were never bored—whose hands were never bruised by any ruler—who in his childhood regarded cases in no other light than as objects of botanical curiosity! What I say of a boy is, that he ought to be thrashed. My notion of education,—and I believe the British nation will bear me out in what I say,—my notion is, that we ought to have a decidedly uncomfortable school-room—very hot—a good, dizzy, sleepy place, with lots of repetitions of the same thing, to ensure monotony—and that the children should learn by heart every day a certain quantity of print out of school-books. That they should show they have learned it by repeating it before their teacher, who must sit down and look big, upon a stool or a chair, and have a cane or a ruler on a desk before him. That while 'saying their lessons,' they should stand uncomfortably, and endure, Spartan like, the wholesome discipline of fatigue, blows, bodily fear, and great mental perplexity. That's the way to learn. It's well known. Don't we all remember what we learnt that way! The teacher who has only to hear whether certain words printed before him are repeated accurately—to detect, perhaps, if he don't mind that trouble, errors in a sum—to direct a writing-class—the teacher who can read, write tolerably, add, subtract, multiply, and divide with moderate correctness, and who has the knack

of filipping upon the head, with a stern manner, for the sake of being what is called a strict disciplinarian,—that's the jockey to manage children!

But those Germans, who write three hundred volumes on the science of teaching for every one we get in England on the subject, think quite otherwise. In all their states by practice, and in some by special law, the knocking of heads, the pulling of ears, and all such wholesome pleasures, are denied the schoolmaster. Flogging is resorted to, most rarely. The following is a school regulation of the Government of—Austria. Austria, my English friends!

'The teacher must carefully avoid hastily resorting to the rod; he must never box a child's ears, or pull or pinch them; or pull its hair; or hit it on the head, or any tender part; or use any other instrument of punishment than a rod or stick; and that only for great faults. Even then, this kind of punishment may only be resorted to after having obtained the consent of the Landrath, and of the parents of the child, and in their presence.'

I'll speak about these German teachers, presently. The children are required to be subjected to their influence from the age of six until the age of fourteen; or to be otherwise properly educated during that period. The course of instruction professes not to cram the mind with facts. Now, I am an Oxford man, and, I see at once that, consequently, there is no hope of *this* plan of education. It professes, as its chief design, to awaken thought among the pupils; to excite a spirit of enquiry. It includes explanations of the most obvious appearances of nature—physical geography, a little botany, and much that can be readily imparted by the teacher out of a full mind. Nonsense! 'A little knowledge is a dangerous thing.' And see the absurdity of teaching about trees, and clouds, and mountains, and earthquakes, and omitting the Latin Grammar! How much more useful an accomplishment is a small smattering of Latin Grammar, than all this! It is safe knowledge, too: there's nothing revolutionary about it. If children are trained to think, the men who come of them will do the same; and when the men think, I'm persuaded that there'll be all manner of old institutions knocked on the head.

Now, the school system of Prussia, which differs not very greatly from other school systems of Europe (always with the glorious exceptions of England, Russia, Turkey, Spain, Portugal, and the South of Italy), the school system of Prussia is as follows: First—Centralization, mark you! That won't do for us, you know! There's the Minister of Education at Berlin, assisted by a Council; he receives information from all sources, digests it, and endeavours to supply all wants. Prussia contains eight provinces, and each province is governed by a Consistorium, sub-

foreigners I have alluded to, set about corrupting innocence by training it into the ways of men, freezes one's blood. The Chinese tell of one of their old Emperors, Chéou-sin, that, seeing a man wade through a cold stream, one frosty morning, he bade him remain for some time in the water, and then had his legs cut off to see whether the marrow in his bones was really frozen. There were no Prussian schools so many centuries ago, unluckily for Chéou-sin. *They* are the places to freeze your marrow, if you're a real, natural-born, good old Englishman. Go into any Prussian town, or village, a little before eight o'clock, some December morning. The iron grasp of an imaginary duty has dragged all the children out of bed, washed them, and given them their breakfasts; and here they all are, turned out into the raw frost, all running to one point—the school!! Nine o'clock, ten o'clock, eleven—morning, afternoon—search all the gutters, and there's not an innocent disporting himself—there's not a mud-pie made in the whole district—the children are all emptied out of streets, and houses, and poured away into that great building yonder, that abominable school!!

Whereas, go into any great English town, go into London as the greatest of 'em all. What do you find there? Freedom! Go down into Westminster, or up into White-chapel. There you'll find the young Bricks, by thousands upon thousands, left to themselves from the moment when they are first able to crawl, and herding and growing together, in the gamest manner, like so many wolves. And you're not deterred by this German business, but you want to alter that state of things! Don't deny it. You do. Some of you do. I have heard of the conductor of the very *Journal* that I write this remonstrance to, giving expression to sentiments like the following. "London in this aspect is so horrible to me, that when I go into such quarters of the town, using my eyes, I lose belief in the possibility of the progress, or even of the long existence, of an Empire, with such a mighty crime and danger at its heart. I do not believe that any one can be well acquainted with the sights of ignorant and neglected childhood, which are hidden in the Metropolis alone, and entertain within himself the possibility of any wealth, or any power, or any spirit in a people, sustaining, for many generations longer, a State on which that wicked blight is resting."

That's constitutional and British, an't it? I ask it Prussian. Ask a Prussian and he'll tell you, that to leave a child unttaught, is only two or three degrees less fearful than to murder it. Not to feed the mind, is in his eyes a punishable crime, as in our eyes it is an indictable offence to starve the body. The Prussian state does not dictate to its subjects any place of education, as our state does not dictate articles of food; but, educate you must says the German law; and if you want the

means, the state makes a provision to supply them for you;—just so we say—feed yourselves, and all your children; but if you cannot, don't starve, come upon the parish; your bodily support costs us seven millions a year.

The whole income of Prussia, as a state, is somewhere about ten millions, and its population is that of England and Wales as to numbers, or not much less. Yet Prussia burdens itself with the charge of education on a most unstinting scale; whatever fund is pinched, the exchequer is ready to meet every demand, which corresponds to a real want, in the way of education. Not having much to pay for the support of pauperism (one great result of ignorance and its vices), does certainly give freedom to the public purse; but I consider pauperism a noble institution. What's to be the privilege of wealth, when all the world is comfortable. What I say, is, that humble people who are educated, won't be satisfied with standing still; they'll get impertinent ideas about the rights of man, and duty, and moving on. You can see in the eyes of those Germans, that they are civil because it's their duty; and that they don't rightly reverence you for your money's sake. Now, this is revolutionary; if not, I should like to know what is. There is no way of arguing with such men. For people like myself, men of your true genuine blood, the only course is, to knock 'em down.

Just step into the interior of one of these same German schools, and see what manner of outlandish work is going on. There! Did you ever see the like of that! Call that a school! The boys are comfortably seated, and the master stands!

Mean-spirited fellow, there he stands, as though it were he who had the hardest work to do! The room is lofty, airy, and well warmed; the children sit, I do believe, in absolute enjoyment of the lesson. No other sound interrupts the teacher and his class; the other classes are under the same roof in other rooms. Ruined by luxury, there sit the children—with a grown man, and, what's worse, a trained and educated man, standing before them, pouring out his energies. He isn't hearing them their lessons out of book; the lesson they have learned out of a book, he is explaining with all the art of a Jesuit, enlivening with anecdotes, sprinkling about with apt questions. The children are all on the *qui vive*, and asking questions in their turn—why don't he knock 'em down for their impertinence? See! now he asks a question of the class, up go two dozen little hands! The owners of those hands believe that they can answer it. There! he selects one to answer, who looks pleased at the distinction. When the next question comes, he'll tackle some one else.

Now, comes a lesson in geography. He takes a piece of chalk, and turns to the black board. Dot...dot...dot. There is a range of mountains. As soon as its shape is defined, the children eagerly shout out its name. In five seconds, the sources of five rivers are indicated, and named as fast as they are drawn, by the young vagabonds, who watch the artist's hand. Down go the rivers to the sea, and—dot...dot...dot...—a dozen and a half of towns are indicated, every dot named in chorus. Then, come the coast line, boundaries of countries, provinces, and other towns. In ten minutes, there is, on the board, a cleverly impromptu map of Germany, and the children have shouted out the meaning of every dot and stroke as it was made. They think it better fun than puzzles. Very pretty!

Now, there he is, beginning at the school-yard, talking of its size; then, advancing to a notion of the street; then, of the town; then, of the province; and leading his pupils to an idea of space, and the extent of country indicated upon such a map. Truly abominable all this is! Where's the discipline, I should like to know. If school is not made the preliminary Hall of Sorrow, how are men to grow up, able to endure such a House of Trouble as this world notoriously is? How can the mind be strengthened more effectually than by giving it, at first, the daily task to learn by rote, as exercise of simple memory. The less the task is understood, the more the memory is exercised in learning it; and so, the better for the child. What will become of a man whose ears, when he was young, were never bored—whose hands were never bruised by any ruler—who in his childhood regarded canes in no other light than as objects of botanical curiosity? What I say of a boy is, that he ought to be thrashed. My notion of education,—and I believe the British nation will bear me out in what I say,—my notion is, that we ought to have a decidedly uncomfortable school-room—very hot—a good, dizzy, sleepy place, with lots of repetitions of the same thing, to ensure monotony—and that the children should learn by heart every day a certain quantity of print out of school-books. That they should show they have learned it by repeating it before their teacher, who must sit down and look big, upon a stool or a chair, and have a cane or a ruler on a desk before him. That while 'saying their lessons,' they should stand uncomfortably, and endure, Spartan like, the wholesome discipline of fatigue, blows, bodily fear, and great mental perplexity. That's the way to learn. It's well known. Don't we all remember what we learnt that way? The teacher who has only to hear whether certain words printed before him are repeated accurately—to detect, perhaps, if he don't mind that trouble, errors in a sum—to direct a writing-class—the teacher who can read, write tolerably, add, subtract, multiply, and divide with moderate correctness, and who has the knack

of flipping upon the head, with a stern manner, for the sake of being what is called a strict disciplinarian,—that's the jockey to manage children!

But those Germans, who write three hundred volumes on the science of teaching for every one we get in England on the subject, think quite otherwise. In all their states by practice, and in some by special law, the knocking of heads, the pulling of ears, and all such wholesome pleasures, are denied the schoolmaster. Flogging is resorted to, most rarely. The following is a school regulation of the Government of—Austria. Austria, my English friends!

'The teacher must carefully avoid hastily resorting to the rod; he must never box a child's ears, or pull or pinch them; or pull its hair; or hit it on the head, or any tender part; or use any other instrument of punishment than a rod or stick; and that only for great faults. Even then, this kind of punishment may only be resorted to after having obtained the consent of the Landrath, and of the parents of the child, and in their presence.'

I'll speak about these German teachers, presently. The children are required to be subjected to their influence from the age of six until the age of fourteen; or to be otherwise properly educated during that period. The course of instruction professes not to cram the mind with facts. Now, I am an Oxford man, and, I see at once that, consequently, there is no hope of *this* plan of education. It professes, as its chief design, to awaken thought among the pupils; to excite a spirit of enquiry. It includes explanations of the most obvious appearances of nature—physical geography, a little botany, and much that can be readily imparted by the teacher out of a full mind. Nonsense! 'A little knowledge is a dangerous thing.' And see the absurdity of teaching about trees, and clouds, and mountains, and earthquakes, and omitting the Latin Grammar! How much more useful an accomplishment is a small smattering of Latin Grammar, than all this! It is safe knowledge, too; there's nothing revolutionary about it. If children are trained to think, the men who come of them will do the same; and when the men think, I'm persuaded that there'll be all manner of old institutions knocked on the head.

Now, the school system of Prussia, which differs not very greatly from other school systems of Europe (always with the glorious exceptions of England, Russia, Turkey, Spain, Portugal, and the South of Italy), the school system of Prussia is as follows: First—Centralization, mark you! That won't do for us, you know! There's the Minister of Education at Berlin, assisted by a Council; he receives information from all sources, digests it, and endeavours to supply all wants. Prussia contains eight provinces, and each province is governed by a *Consistorium*, sub-

ordinate, of course, to the central government at Berlin. The Consistorium has a President, who is the chief provincial authority, and it is divided into three committees. One, directs ecclesiastical affairs; one, cares for public bodily health; and one, for public education. The last, with which we are concerned, is called School Collegium. The School Collegium has the control of the superior schools and normal colleges; it superintends the training of the teachers. Before a committee of the School Collegium, all teachers are examined for certificates. The members of this committee are selected by the Government at Berlin, from the most learned men residing in the province.

Each province of Prussia is divided into two or three counties, and each county again has its governing council or *Regierung*. This is divided into four committees, and has a president, whose authority extends over each. The four committees have entrusted to them—1st. Police; 2nd. Collection of Taxes; 3rd. Justice; 4th. Education. The men employed upon this council, which acts as the local government, receive fit salaries, and are elected from among the residents within the county. Of this *Regierung* the educational committee has charge, not of the training schools, but of the primary schools, the schools for children. It is composed of a president, called *Schulrath*, who is catholic or protestant according to the creed prevailing in the county over which he presides; with him are joined the presidents of the two other committees, Justice and Taxation, and two members who represent the two religious interests, one catholic, one protestant. These are men living in the county, well acquainted with its wants, and known for the high interest they take in education.

The subdivision of each county is into Unions, and each union, or *Kreis*, has an inspector, or *Landrath*, who acts as an intermediate functionary between the *Regierung*, and the petty local officers.

Each *Kreis* is broken into parishes, and over each parish there is a magistrate, or *Schulze*, appointed by the *Regierung*, who attends to the police, taxes, and other matters in his own department.

That's the machine. Now, note how it is brought to bear on the unhappy children, so that they shall infallibly be torn from their mothers, and brought from the remotest alley of the remotest little village to a seat in the great German school.

Every parish is compelled to provide for its children's proper school accommodation. If that provision be, in any parish, not forthcoming, notice is given to the *Schulze* that it must be made. This magistrate communicates the notice to the people of his district, and requests the householders to elect, from among themselves, three or four men to form part of a committee for devising ways and means. The other members of this committee are, *ex officio*, the magistrate himself, and the religious ministers

of each denomination in the parish. The question before them, is, not whether schools ought to be provided; government takes that topic out of debateable ground, and settles imperatively that school accommodation there shall be. The first question discussed in this committee, is, whether there shall be one school for Catholics and Protestants, or whether they shall teach in separate establishments. The latter alternative is chosen when the population will admit of the arrangement. Where that is impossible, a mixed school is amicably adopted, directed by ministers of each persuasion, with religious teaching according to the views of the majority—from which the children of Dissenters are permitted to absent themselves; but, they are absent on condition of receiving religious education, at the same hour, according to the views of their own ministers, elsewhere. Out of this arrangement, no disputes arise; each parish exercises its own discretion. The local committee then selects a site for the new school, ascertains how much can be spent in the building, and selects a plan for its construction. The decisions are sent up for the approval of the *Regierung*, which follows, of course, unless an unhealthy site or a defective plan have been selected, in which case the *Regierung* requests reconsideration of the question, and points out such objections as occur.

The local committee then pleases itself in the election of a teacher out of the body of trained teachers, who have passed their examination, and obtained the right diploma. The teacher is presented to the parish by the minister in church, with earnest ceremony. He acts, thereafter, in church, as organist, and leader of the choir. Great pains are taken by the law to secure for him due respect. His diploma stamps him a well educated man. He has been taught field-botany, and lore of household medicine, which makes him a useful oracle to the surrounding peasantry. His salary is, in no case, allowed to fall below a certain fixed amount; and no parish after having raised the salary it pays, will be permitted ever again to reduce it. It is collected for him by local officers, and placed in his hands without trouble to himself. And no teacher, once chosen, can be dismissed by any freak of local spite or jealousy. His neighbours must state their complaints, if they have any, to the *Regierung*; and, even from the *Regierung*, he may appeal against dismissal to the Minister of Public Instruction, at Berlin, or, if it so please him, to the king.

The local School Committee is a body permanently constituted. It meets periodically, provides school apparatus, attends to repairs, and protects the teacher. Its members also, from time to time, visit the school as inspectors, and make reports to the *Regierung*. The lay members of the local committee do not inspect often, but each religious minister is obliged, by law, to do so, several times a-year.

Next above these, are the inspectors for the Kreis or Union, in connection with the Regierung. There is one inspector for the Protestant schools, and one for the Romanist: each, being a man high in his own Church. They visit each school in the district, once, at least, every year, and report on all to the Regierung. Their duty of inspection is considered part of their clerical work: their travelling expenses, only, being defrayed by the county. The Protestant Inspector is appointed by the Consistorium; the Romanist by his own Bishop; subject in each case to the approval of the Government at Berlin. These inspectors report where there is a deficiency of school accommodation. The Prussian teachers wish that these inspectors, who are in most active and real connexion with themselves, should be elected from their own ranks, as being then more able to comprehend what they see done. The Government, as a small step in this direction, has lately ordered that every candidate for holy orders shall have attended a training college for six weeks, and passed an examination in the art of teaching. But, they desire this inspection to be by the clergy.

Moreover, the President of the educational branch of the Regierung in each county—Schulrath—always a scholar, is required every year to pay as many visits as he can find time for, to the county schools.

Lastly, from the Bureau of Public Instruction, the minister, at Berlin, sends yearly three inspectors to examine such districts as are suspected to be insufficiently attended to, and to apply their supervision in such a manner as to let no part of the great German school suffer neglect.

Finally comes after lastly. Finally, directors of the training colleges float about, paying visits to their ancient pupils; and where they see, by their mode of teaching, that they have not kept up with the march of time, have overlooked the last improvements, or forgotten their old lore, a substitute is found—while they are quietly invited to pay a visit to their old friends at the normal school. And there, the blunt razor is sharpened.

Here's a pretty coil indeed, about teaching little ragamuffins their A B C! One would think, by the way Prussia goes to work, that education ranked among the most anxious duties of the Government. Schools are put on the same level with gunpowder, as defences of the State. If it were so, here, Sir Francis Head might well be an alarmist over the defenceless state of England.

Well, but I haven't yet fully exposed the enormity of the offence committed by these Germans against wholesome Ignorance. Just see what pains they give themselves to fit a man for office as a teacher. In the first place, he is generally of the peasant class, and, though educated like a gentleman, he is at no time raised above that sympathy with his

own class which is necessary to his full influence in after life. Any young peasant may aspire to be a teacher. He goes, first, in the usual manner, for eight years, to the primary school; learns there to read and write well; gets a knowledge of arithmetic, of the history and geography of Germany, of Scripture history, and a few leading facts of natural history and science. Then, for the next three or four years, that is to say, until he attains the lowest age (eighteen) at which he is admissible into a training college, his education can be continued at a superior public school. These superior public schools, containing endowed places for poor boys, exist, of course, only in the towns. In villages, the candidate for teacher's honours contents himself with receiving evening tuition from the local teacher, attends his classes during some parts of the day, and renders himself useful in them. At the superior public schools, the education goes on, and includes mathematics, with a little classics, lectures on history, physical geography, music, and drawing.

Preparatory training-schools are also established by private persons.

At the age of eighteen, candidates are admissible into the normal colleges. In each college, the yearly vacancies are filled up with those young men who have passed the best examination before the Professors of the College and the representative of the Regierung. The examination is very strict, and vacancies are not filled up at all, if candidates are not up to the proper mark. There must be produced, also, at this time, a certificate of perfect health and strength. The selected candidates sign an undertaking to practise the profession of a teacher for at least three years after obtaining licence so to do. In consideration of this, they are maintained and educated at the expense of Government, incurring for themselves no other cost than that of clothes, and about three pounds a-year for breakfast. If, however, any student forfeit his engagement by not remaining during three years after obtaining his diploma in the service of the state, he is then called upon to refund the money that has been expended on his education.

Each student remains in the training college two or three years—never less than two, or more than three. There are, in Prussia, forty-three training colleges, and thirty thousand licenced teachers. Where the population requires it, there are separate colleges for Catholics and Protestants. In fact, there are only two normal colleges in Prussia where Catholics and Protestants are educated together: the directors of those institutions being chosen from among the clergy.

The students in the normal colleges have frequent occasion to revisit home, and maintain full connexion with their peasant families. The mode of life in college is laborious, and studiously simple, in order that the student may not be unfitted for the enjoyment of his

after lot; a frugal household and a constant kindly intercourse with parents in humble life.

The course of study in the normal college includes, for the first two years, Latin and French, often English; Geography, History, Natural History, particularly Field Botany, and properties of plants; Physical Sciences; Drawing, Singing, and Chanting; the Violin, Pianoforte and Organ (for the pupil is destined to be organist and leader of the choir, hereafter, in his parish church) together with the Science of Teaching. (The idea of the Science of Teaching. As if there could be any science in it!) Afterwards, the advanced pupils practise teaching under a professor on a model class, and are minutely warned and criticised. They are taught, also, how to provide for medical emergencies; the antidotes to poisons, remedies for burns, &c. In addition to all this, they perform household work and field work; make beds for themselves, and beds for vegetables; pump water and prune trees; ring bells, peel potatoes, and run of errands. Every year, they undergo a strict examination. If any then appear so hopelessly backward that he is not likely to get a diploma, he is quietly removed, and no more salt is wasted on him. Each student, at the end of his third year, undergoes an examination of two days' continuance for his diploma. The examination is as searching as it can be made. According to their qualifications, candidates receive a certificate marked 1, or 2, or 3, or are rejected. Any person not educated at a normal college may present himself at this examination, and obtain a diploma if he can. Those who win diploma 1, are qualified for any situation. Those with diploma 2 or 3, must serve for two or three years as assistant teachers, and must be re-examined, until they obtain diploma 1. Those with diploma 3, are obliged to present themselves in the succeeding year, and if they do not then give satisfaction, are rejected altogether. Without a diploma, no person is allowed to teach. There's despatch for you!

Students, when they are constituted teachers, always maintain a filial relation towards their normal college. In cases of doubt, they apply to it for information; if they fall back in their attainments, they return to it to have their minds refreshed. Thither, they generally send their children.

Teachers' Conferences are held monthly, on a day, and at a place, previously notified, to which all teachers are enabled to travel free of cost. Here, from their scattered village-schools, and from their towns, the teachers of a province meet, and shake hands with each other; they formally discuss practical theories of teaching; one teaches before the rest, and when the children are retired, all hold a debate upon his method; each heart at the conference, the best improvements in the science to which his life is devoted, and goes

home strengthened with a consciousness that he is a member of a great and influential body in the state. Books, periodicals upon the history and philosophy of teaching, are written, read, and largely taken in. Teaching a science again! Surely this is enough to make England crack her sides with laughing. The science of hearing lessons and rapping knuckles!

The German School object to monitors; they say it is unwholesome and ridiculous to put a child to teach a child, even the alphabet. On this account, the skilled teacher in the poorer villages has, now and then, more on his hands than one person can rightly manage. The Prussians say, they know that; but, of two evils, they prefer the less.

Well, there you have it; that's the German school so far as Prussia is concerned! In Saxony, it's pretty much the same. Every child is required by law to receive, for eight years, uninterrupted education—there, as in Prussia, it don't matter where—of any competent teacher—of the parent, if it be desired, and if the parent be competent to fulfil such a trust. But, in the primary schools, all over Germany, you may see children of paupers, tinkers, street-porters, sitting, clean, intelligent, and cheerful, on the same bench with the children of physicians, land-owners, and counts. All are attached with a firm faith to the primary schools: Protestant or Catholic, rich man or poor, all are impressed with the sense of their "schulpflichtigkeit," and thoroughly appreciate the state provision of a well-conducted education. In Bavaria and smaller states—even in Austria—the same feeling exists.

It is the same in Switzerland; there I am reminded to take note of a circumstance, and here it is. The Catholic cantons require education as much as the Protestants, but they are content with much less. In fact, that is a general rule, throughout Europe.

In Denmark, education is compulsory. In Sweden, and Norway, there is only one person in a thousand unable to read and write. In France, parents are not compelled to educate their children; but M. Guizot has done much to place education at the parents' door. There are, in France, seventy-six training-schools, sixty thousand primary schools under certified teachers, two hundred school inspectors, and a Government grant of two million pounds a year, for the furtherance of National Education. In Holland, there is a carefully-devised school system; and, although education is not made compulsory, there is scarcely a sound child of twelve years old who cannot read and write. Catholics, Calvinists, and Lutherans, sit side by side, and receive religious teaching in those precepts, which are the pith of Christianity, and which all followers of Jesus recognise.

Any more. Who can wonder that we see the institutions of our ancestors neglected, time-honoured customs crumbling underneath

our feet, the fiend of change abroad? The lover of the past, and Rule-Britannia—I am one—must check the morbid tendency to educate, or we shall all be swallowed up in contemplations of the future. The country, certainly, is not in any immediate danger of education, thank Heaven, but forewarned is forearmed.

Britain, I warn you! Don't open your eyes when you are asked to look at yonder German school. You have other irons in the fire. Besides, the British are fine fellows, men of the right quality, and want no teaching. What says the comedian? 'Les gens de qualité savent tout, sans avoir jamais rien appris.' (People of quality know everything without ever learning anything.) England is of the true quality, and may sit down and be content—in company with Turkey, Russia, Spain, Portugal, and Southern Italy.

Good company; for they are the best foreign countries that I know—the best, in fact, that anybody knows. I know a thing or two, I believe, for I was an Oxford man, and I have had the champion of England (with his belt on) in my room, many a time. My name's Bendigo Buster. I have a little run to seed, of late years, but I am of the right sort yet. Show me a man who broaches any of this revolutionary gaminion about education, and I'll show you a man who'll knock him down. I have alluded to the conductor of this Journal. I enclose my card, with the present contribution; and am ready to pitch into him, or any one holding the like detestable sentiments.

RAILWAY WAIFS AND STRAYS.

GENTLEMEN who will look out of the windows of railway carriages to see "what's the matter," and get their hats knocked off and left behind at the rate of fifty miles an hour; third-class young Ladies who will hold parasols over their complexions on windy days, and let them go ballooning down the line at hurricane time; Dandies who won't look after their own luggage, but leave everything to "those fellows, the porters," and so lose it; Wives who will terminate their journeys at the terminus in their husband's arms, regardless of their "trifles from Tunbridge" packed up in pretty baskets; Commercial Travellers who forget their samples; Gents who rush away without their canes; Aunts who leave behind their umbrellas; Nieces oblivious of their pattens;—in short, everybody who misses, or forgets, or leaves behind, or loses anything on a railway, may consider it nearly as safe as if they had not been stupid, or careless, or in too great a hurry, or forgetful;—and have a much better chance of finding it than if they had never stirred away from home.

To the terminus of most railways is attached what the French would call *administration* or *service*—a warehouse, and staff of clerks and porters—for the deposit and restoration of the lost or left behind;

which, for variety and value, would put to shame the dazzling and heterogeneous treasures of Don Rolando's Cave. Inspecting one of these offices some time since, the writer had occasion to describe the scene in the following terms:—

A visit to this depository would repay a philosopher. He might readily guess at the owners from the articles—they are so perfectly characteristic. Some of the single articles are in themselves idiosyncracies; whilst many of the bundles tie up unwritten histories, and journals of travel. There was one which we had the curiosity to inspect, that belonged, there can be not the smallest doubt, to a courier or a valet. It was formed by a silk handkerchief, in one of the ends of which were secured about sixpennyworth of Italian halfpence. Its contents proved to be pretty nearly as follows:—A pair of hair-brushes; a chart and tariff of fares of the Austrian Lloyd's Steam-Boats Company; a small jar of preserved meat beside a pot of bear's-grease, to give it a flavour; a play-bill of the San Scala Theatre, where the owner had, it would seem, the pleasure of hearing Donizetti's new opera of "La Regina de Golconda;" a case of toothpicks, a Prussian bill for post-horses, a comb, a half nibbled pipe of macaroni, and a screw of tobacco, the savour of which imparted the predominating smell to the entire bundle.

From this pleasing amalgamation, an experienced tourist might have traced a complete *carte du voyage*. It presented a map of the owner's route, which evidently began in an English perfumer's shop—for the hair-brushes and bear's-grease were of British manufacture—was continued through Italy to the office of the Austrian Lloyd's in Vienna, and back to the Dover terminus by way of Prussia.

Before we pry into the next parcel, we must make an apology for breaking the sacred confidence of a lady's basket; but it was irresistible. There it stood inviting curiosity—a straw-bonnet-like receptacle bound with red leather, having a close-shutting flap and no button—which is our apology. Within we found a pair of ladies' shoes, the neat covering of as pretty a foot as ever stepped out of a carriage—railway or family—wrapped up in a quarto leaf of a popular religious periodical. Beside them lay, *horresco referens!* a pint bottle, which emitted an odour neither of Rose-water, nor of Eau-de-Cologne, but of very excellent Geneva. Could there have been, however, any doubt as to the nature of the spirit, it would have been cleared up at the bottom of the basket, where there lay a wine-glass without a foot. On whom shall we fix the ownership of this treasure? Shall it be a muddling duenna, entrusted with her lovely mistress's shoes, or—a more probable conjecture—a "serious" lady slightly addicted to gin?

Our old friend, Mrs. Gamp, was as plainly

visible on one of the shelves as if she stood before us. She was personified by a cotton umbrella, with a tremendous horn-head, and a pair of patters as tall and as clumsy as Dutch horse-shoes. Beside these was stretched at full length a well-folded, well-brushed precise-looking silk umbrella, very seely at the edges, with a dingy ivory knob, the property, we infer, of an elderly bachelor with a limited income. Slim umbrellas, of foreign extraction, in polished leather cases, stood beside family concerns which would answer for picnic tents, having convenient wires to hang up the ladies' bonnets. There were some with comic handles carved to resemble Punch and Tim Bobbin, grimly contrasting with ivory Death's-heads. The umbrella shelf, in short, is a collection of silk, gingham, and whalebone characters, as palpable as those of Lord Shaftesbury or La Bruyère.

Commend us, however, to the hat-shelf; for nothing can exceed the heterogeneous jumble of rank, station, character, and indicative morality which that conglomeration of castors presents. Here a dissipated-looking four-and-nine leans its battered side against the prim shovel of a church dignitary; there a highly-polished Parisian upper-crust is smashed under the weight of a carter's slouch. On one side the torn brim of a broad straw strays into the open crown of a bran new beaver. Some bear the crushing marks of the wheels of a luggage-train, or the impression of the moistened clay of an embankment; others are neat, trimly brushed, and show how carefully they have been hung up in the first-class carriage while the owner inducted his caput into an elegant Templar, or fascinating foraging cap, and how he carelessly left it behind. Boys' and men's, quakers' and soldiers', carters' and lords', clergymen's and sporting-men's are all ranged side by side, or thrown together higgledy-piggledy, hurly-burly, topsy-turvy, in such a confused conglomeration that, should an applicant endeavour to comply with the clerk's suggestion to "Choose your own, Sir," he would be in very great danger of committing petty larceny, and finding his head under somebody else's hat. If, however, these head-cappings were arranged according to their owner's probable rank in life, they would plainly indicate their wearer's station and mode of travelling. There would be first-class hats, consisting of sporting, clerical, military, and best beavers—second-class, all neat and well brushed—and third class, composed of carters', carpenters', valets', and hay-makers'.

Over and above articles left behind by mistake, some are impounded, and consist of forced deposits exacted in satisfaction of unpaid-up capital. A gentleman has not only forgotten to pay his fare, but has also forgotten to provide himself with the cash necessary for that very necessary element in most railroad transactions. In such cases the majesty of the law, clothed in green and represented by the police, institutes peremptory proceedings, and, suing

out a peremptory *feri facias* (a species of high-pressure process, which may be designated legal spontaneous combustion), puts in an immediate execution on the debtor's movables, and distrains on the spot, in a sufficient amount to cover the debt and costs. Such deposits generally consist of walking-sticks of various sizes and values, pocket-handkerchiefs, whips, and workmen's tools. Odd mixtures are made in this way. One insolvent traveller was deprived of a twelve-rowel ladder; another, a doctor's boy, (who had, perhaps, dissipated his master's money in hardbake) had nothing left to offer to the ruthless cashiers but a few bottles of physic! And there they stand, labelled with the usual directions of when to be taken, and in how many table-spoonfuls, in far more harmlessness than if they had reached their destinations.

As evidence of carelessness these deposits are scarcely credible. We were shown purses innumerable, all containing money, sometimes as much as from ten to fifty pounds, jewellery of every sort and description, from whole suites to single rings and breast pins, all left behind in carriages. It is difficult to imagine how it is that the losers can get quit of some of the articles without carrying carelessness and forgetfulness to an extraordinary point of ingenuity. A glove, a shawl, a handkerchief, or a walking-stick are readily left behind; and as to umbrellas, to be lost would seem to be one of the passive functions they are destined to fulfil; but how such a ring, which must cost some trouble to remove from the finger; a watch which, when a question of time has been decided, it is usual to return to the pocket—can be left in a railway carriage, is not easily to be comprehended.

The most astonishing kind of property to leave behind, at a railway station, is mentioned in an advertisement, which appeared in the newspapers, dated Swindon, April 27th, 1844. It gave notice, "that a pair of bright bay carriage horses, about sixteen hands high, with black switch tails and manes," had been left in the name of Hibbert; and notice was given, that unless the horses were claimed, on or before the 12th day of May, they would be sold to pay expenses. Accordingly on that day they were sold.

The lost luggage warehouse, of another railway—that at the North Western Railway terminus, has been cleverly sketched by Sir Francis Head. It consists "of," he says, "a large pitch-dark subterranean vaulted chamber, warmed by hot-air iron pipes, in which are deposited the flock of lost sheep, or, without metaphor, the lost luggage of the last two years. Suspended from the roof, there hangs horizontally in this chamber a gas-pipe about eight feet long, and as soon as the brilliant burners at each end were lighted, the scene was really astounding. It would be infinitely easier to say what there is not than what there is in the forty compartments, like great wine-bins, in which all this lost pro-

party is arranged. One is choke-full of men's hats, another of parasols, umbrellas, and sticks of every possible description. One would think that all the ladies' reticules on earth were deposited in a third. How many little smelling-bottles—how many little embroidered pocket-handkerchiefs—how many little musty eatables and comfortable drinkables—how many little bills, important little notes, and other very small secrets each may have contained, we felt that we would not for the world have ascertained; but when we gazed at the enormous quantity of red cloaks, red shawls, red tartan plaids, and red scarfs, piled up in one corner, it was, we own, impossible to help reflecting that surely English ladies of all ages, who wear red cloaks, &c., must in some mysterious way or other be powerfully affected by the whine of compressed air, by the sudden ringing of a bell, by the sight of their friends—in short, by the various conflicting emotions that disturb the human heart on arriving at the up-terminus of the Euston Station; for else how, we gravely asked ourselves, could we possibly account for the extraordinary red heap before us? Of course there were plenty of carpet-bags, gun-cases, portmanteaus, writing-desks, books, bibles, cigar-cases, &c.; but there were a few articles that certainly we were not prepared to meet with, and which but too clearly proved that the extraordinary terminus-excitement which had suddenly caused so many virtuous ladies to elope from their red shawls—in short, to be all of a sudden not only in a 'bustle' behind, but all over—had equally affected men of all sorts and conditions. One gentleman had left behind him a pair of leather hunting-breeches! another his boot-jack! A soldier of the twenty-second Regiment had left his knapsack containing his kit! Another soldier, of the tenth, poor fellow, had left his scarlet regimental coat! But what astonished us above all was, that some honest Scotchman, probably in the ecstacy of suddenly seeing among the crowd the face of his faithful Jeanie, had actually left behind him the best portion of his bagpipes!

The trouble which is bestowed by the Railway Companies to cause the restitution of lost property is incalculable. Not long ago, a young lady lost a portmanteau from the rest of her luggage—a pardonable oversight, for she was a bride starting on the honeymoon trip. The bridegroom—never on such occasions an accountable being—had not noticed the misfortune. When the loss was discovered and application made respecting it, the lady spoke positively of having seen it at the station whence they started, then again at a station where they had to change carriages; she saw it also when they left the railway: it was all safe, she averred, at the hotel where they stopped for a few days. She was also certain that it was amongst the rest of the "things" when they again started for a watering-place; but, when they arrived there,

it was missing! It contained a new riding-habit, value fifteen pounds. The search that was instituted for this portmanteau recalled that of Telemachus for Ulysses; the railway officials sent one of their clerks with a *carte blanche*, to trace the bride's journey to the end of the last mile, till some tidings of the strayed trunk could be traced. He went to every station, to every coach-office in connexion with every station, to every town, to every hotel, and to every lodging that the happy couple had visited. His expenses actually amounted to fifteen pounds. He came back without success. At length the treasure was found; but where?—At the bye station on another line, whence the bride had started from home a maiden. Yet she had positively declared, without doubt, or reservation, that she had "with her own eyes," seen the trunk on the various stages of her tour; this can only be accounted for by the peculiar frustration of a young lady just plunged into the vortex of matrimony. The husband paid the whole of the costs.

In further illustration of the pains taken to return missing property by the railway company, we may revert to Sir Francis Head, on the North-Western:—A ledger, entitled "Luggage Inquiry Book," is kept, and if the articles therein inquired after have not been brought in by the searcher, copies of the description are forwarded to each of the offices where lost luggage is kept; for by the company's orders all luggage found between Wolverton and London is without delay forwarded to the latter station, all between Wolverton and Birmingham to Birmingham, and so on. "It is possible, however, that the above orders may not have been attended to, and therefore, as a last resource, the superintendent of the Lost Luggage Office at Euston Station writes to three hundred and ten stations on forty-two lines of rail to inquire after a lost article, be it ever so small, and if it be at none of these stations, a letter is then addressed to the owner, informing him that his lost property is *not on the railway*."

We are sorry to find that the public do not always show themselves so conscientious as the companies. They are, as carriers liable—under certain circumstances—to make good the losses of their customers; and in some cases articles are no sooner missing than an apparent eagerness to turn them into cash is displayed. A demand for payment is sent. The managers demur, and ask for particulars; then arrives a long list of contents—value to the highest possible amount is set upon every describable thing, and after many *pros* and *cons*, a settlement is generally made upon a very reduced scale of charges. One such demand was sent in the other day by an elderly lady and her sister, who said they had lost a box of apparel. They set the contents down at thirty pounds prime cost. Upon the eve of payment of a sum something approaching to this demand, the box was recovered and

five pounds proved to be the utmost value of it, with all it contained. In another instance, a gentleman of property lost a leather hat-case, containing "very valuable articles;" but did not, in his modesty, name their exact worth in money. For some time the search was fruitless, and a heavy drag upon the treasury was anticipated—when, at the eleventh hour, the hat-case was "washed ashore" as the wreckers would say, and the value of the inside did not prove so much as that of the outside—the price of a second-hand hat-box.

On the North-Western Railway, luggage left behind at the stations is kept for two days; and if, during that time, no one calls for it, it is, if it be *properly addressed* (a proviso which should impress all travellers with the necessity of using legible labels) it is forwarded to its owner. Should there be no address, it is kept for a month, and then opened to find a clue to the possessor. Some time ago the superintendent, on breaking open a locked leather hat-box, found in it, under the hat, sixty-five pounds in Bank of England notes, with one or two private letters, which enabled him to restore the money to the owner; who, it turned out, had been so positive that he had left his hat-box at an hotel at Birmingham, that he had made no inquiry for it at the railway office.

Lastly, should no clue whatever be found to ownership, the property is kept about two years, and has hitherto been sold by auction in the large coach-factory to the company's servants—a portion of the proceeds being handed over to the sick-fund for persons who have been hurt in the service, and the remainder to "the Friendly Society" among the men. It having, however, been ascertained that a few of the railway men who had spare cash purchased the greater portion of these articles, it has been determined henceforward to sell the whole of this property by auction *exclusively to the public*; and as the company's servants are not allowed to be purchasers, they can no longer derive any benefit whatever from lost property.

The quantity and value of property thus remaining, even after passing through the two days' and two months' tests, is almost incredible; and while it surprises, it may amuse the reader to glance over a list of the two years' accumulations but very recently submitted to public auction.

Umbrellas, 243; Parasols, 168; Walking-sticks, 178; various sorts of Men's Attire, 508 articles; Men's Caps, 129; Women's Attire, 301 articles; Respirators, 2; Pocket Handkerchiefs, 302; Clogs and Pattens, 28; Travelling Bags, 63; Gloves, 366; Brushes, 47; Combs, 17; Books, 135; Sample Cases, 5; Card Cases, 7; Cushions, 20; Baskets, 50; Whips, 14; Fishing-rods, 6; One Cricket-bat; Bird-Cages, 3; Small Casks, 2; Beds, 3; One Bundle of Horn; One Iron Wheel; Boxes, 8; Purses, 14; Cigar-cases, 7; Snuff-boxes, 5; Smell-

ing-bottles, 8; Pocket-knives, 10; Scissors, 7; Razors, 4; One Paper-knife; Bracelets, 4; Brooches, 26; Shawl and Scarf Pins, 17; Necklaces, 4; Gold Rings, 2; One Gold Toothpick; One Gold Eye-glass; Gold Pencil-Cases, 3; One Gold Chain and Seals; Pairs of Spectacles, 20; Silver Pencil-Cases, 4; Studs, 5; One Laver Watch Cap; One Fusee Box; Flask Bottles, 3; One Opera-Glass.

It has been calculated that only about forty per cent. of Railway waifs and strays remain unowned, and come to the hammer. From the above list, therefore—that of only one trunk line—the enormous amount of property that is continually left behind may be calculated.

These facts show, that while the public is excessively heedless, Railway officials are curiously careful.

CHIPS.

THE BARON OF BEEF AND THE MARQUIS OF WELLINGTON.

THE following Chip embodies a true story, not at all disagreeable to know, at this time of year.

At Slough, near Eton, then a small straggling village, was to be seen, in the year 1813, a magnificent coat of arms over the door of a shop: the blazoning was of the most gorgeous kind, but they were not the royal arms. The quarterings of the hero of the Peninsula cast down their glittering beams upon the dazzled eyes of the admiring travellers on the Bath road; and under them was inscribed in flaming letters of gold—"SHIRLEY, BUTCHER TO THE MARQUIS OF WELLINGTON!"

This seemed strange; for, in this year, the great Marquis was fighting the battle of Vittoria, and crossing the Pyrenees! How, then, was he to eat beef in England, and become the patron of a newly-fitted up butcher's shop in Slough?

This butcher was a dashing young fellow, in his way. His father, wishing to make him "genteel," had placed him with an attorney, and he duly served out his articles. But, in course of succession, the patrimonial inheritance of the butcher's shop became his; and young Shirley thought that a thriving trade, and a spirited hack, who could bear him gallantly in a day's hunt, were to be preferred to the drudgery of a country lawyer's office. He accordingly flung aside his rusty black office-coat, and exchanged it for a suit of light brown, with blue linen apron and sleeves, a steel, and a purple satin waistcoat with gold button-drops for Sundays. If he abandoned all design of shining in the law, he was determined to make a figure in some other way, and to do something worthy of note.

After the battle of Salamanca, in the summer of 1812, the British nation was excited to the utmost pitch of enthusiasm; nor was their sympathy of less degree with the suffer-

ings of our brave army, during the celebrated retreat of November, when they had to endure continuous storms of cutting wind and rain, while struggling through almost impassable roads, and experiencing sufferings from famine more terrible than the harassing guns of the enemy. At length the army having retreated upon Ciudad Rodrigo, was in safety, and went into cantonments on the Coa and the Agueda.

Hearing, and taking a "Briton's" interest in all these things, our young butcher of Slough bethought himself that perhaps the most acceptable present that could be made at Christmas to the Commander-in-Chief of the English forces, under such circumstances, would be a good piece of home-fed beef. He selected a fat and magnificent "baron," with which he proceeded forthwith to the Horse Guards. Having made known his wish, and deposited his Christmas present, the mighty "baron" was forwarded by the most speedy means that offered.

The "baron," whom all good fortune attended, arrived at head quarters in the very nick of time; and the Commander-in-Chief and his staff made their Christmas dinner from the welcome amplitude. By the next despatches that reached home, the delighted young butcher of Slough received a precious letter of thanks in the Marquis of Wellington's own hand, wherein he described the excellent and joyous dinner that he and his staff had made from the "Roast-beef of Old England," and said that they had never enjoyed anything half so much in all their lives, and that they had all drunk to the health of Edward Shirley, the patriotic donor; as we hope to drink to the brave old Duke himself, this present Christmas, wishing that he may live long, and die happy.

DEATH IN THE BREAD-BASKET.

EVERY one knows how different home-made bread is in flavour and sweetness to that procured at the bake-house. In making bread at home, we use nothing but flour, water, yeast and salt. The bakers sometimes add potatoes, alum, magnesia, and other substances, to give it a white appearance and impart lightness. Alum is largely used, not as an adulteration of itself, but for the purpose of enabling them to work up and whiten an inferior flour to mix with that of a better quality. Ask a baker why he puts alum? he tells you "it keeps water and raises well," meaning, we suppose, that it improves the look of the bread, rendering it firmer and whiter.

This alumed bread might not, perhaps, hurt a stout labourer, whose healthy digestive organs would be strong enough almost to convert leather into nutriment, but for persons of sedentary habits or infirm constitutions, it is a very serious matter to have their digestive process daily vitiated by damaged flour,

whitened with alum. The quantity of alum is always proportionate to the badness of the flour, and hence, when the best flour is used, no alum need be introduced. "That alum is not necessary," says Dr. Ure, "for giving bread its utmost beauty, sponginess, and agreeable taste, is undoubted, since the bread baked at a very extensive establishment in Glasgow, in which about twenty tons of flour are regularly converted into loaves in the course of a week, unite every quality of appearance with absolute freedom from that acido-astringent drug."

Some of the adulterations of flour are made by the baker; others by the wholesale flour dealers who, in large towns, supply the bakers with the corn ready ground.

We observed a little time ago, in the public papers, an account of a gentleman who, whenever he visited Newcastle-under-Line, Staffordshire, was invariably seized with severe pains in the stomach; he suspected it was caused by the bread he had eaten. This led to an inquiry, and the bread, upon analysis, was found to contain Plaster of Paris.

The baker declared his innocence; but on searching the miller's premises from whence the flour was procured, a large quantity of this substance was found, which led to his being mulct of a considerable sum in the shape of a fine. Not a very pleasant thing to have one's stomach walled up with Plaster of Paris! it may be very good to keep the damp from our houses, but not so agreeable to line the inner man with.

A REMEDY FOR COLLIERY EXPLOSIONS.

SIR.—Having read in the 37th number of the "Household Words," a coal miner's evidence, I take the liberty of forwarding for insertion a suggestion to relieve the pits from large accumulations of gas, and thus render them safer than under the present system of working.

I have attended two or three inquests which have been held upon the unfortunate miners who had lost their lives in following their dangerous calling. I have paid great attention to the details; and though it has been my lot to listen to the evidence of some men who had been burnt by the explosion, and of others who had lost sons by either the fire or the after-damp, I never heard these men complain of a want of ventilation, or of the neglect of the owners or viewers in taking every precaution to provide for their safety. How is it, then, that the public is so often horror-struck by such awful catastrophes as are continually occurring? The "viewers" are all agreed that a sufficient current of air circulates through the workings; that in dangerous parts candles are strictly prohibited; that in some pits known to be more than usually fiery, an additional precaution is taken in placing a barometer at the bottom of the shaft, the indications of which are

registered by the overmen three times a day ; it being well known that a diminution of atmospheric pressure would allow the gas to escape more readily from the "goaf" into the workings. Hence when there is a sudden fall in the barometer, the overmen are more careful and watchful than on ordinary occasions. And the evidence of the miners confirms that of the viewers. They almost invariably state that all has been done which science could suggest or forethought devise. Yet, from some unexplained or unexpected cause, a blast takes place, and numbers of men and boys are hurried in a moment into eternity. After the misfortune the pit is closely examined by viewers from distant parts. No fault can be found with the ventilation ; eighteen or twenty thousand cubic feet of air pass through the workings in the space of one minute, and all is mystery as to how the explosion took place, except it had been traced to the carelessness of some of the workmen. This is the oft-repeated testimony given before the coroner. A verdict of "accidental death" is returned, or sometimes the gas was suspected to have fired at one of the men's candles, which party was of course certain to have been killed, and there the matter ends.

All this proves very clearly that something more is required for safety, and that other precautions than those usually adopted are needed to stop the invasion of the death-dealing blast, and no less dangerous and insidious after-damp, which too surely follows the track of the fire, and completes what the explosion may have left unfinished.

It may be necessary for the information of some of your readers to explain the method of working pits in Northumberland and Durham. In large collieries there are generally two shafts—a down-cast and an up-cast shaft. In the former, the air descends into the workings, is conducted along the main air-course to the different parts, and is finally expelled by the up-cast shaft. There is a furnace continually burning to keep the current in circulation, which is of considerable importance ; for if it was stopped, the air would remain in the workings, but would not be renewed, and therefore become charged with gas. There are two parts of the mine, called by the names of the "whole" and the "broken." The broken is the most dangerous portion, being the spaces from whence the coal has been abstracted in the form of chambers, leaving pillars standing at intervals to support the roof. In the latest method of working, there are vacant spaces left which are called "goafs," and in which the gas accumulates. This gas being carburetted hydrogen is much lighter in specific gravity than common air, and has a tendency to rise to the roof of the mine. This tendency is taken advantage of, and goafs are constructed in particular portions as reservoirs. The form of the goaf is that of the interior of a dome. For the sake of

illustration, I will suppose it will be similar to an inverted water bowl, the gas being collected in the inside, and prevented from escaping by the pressure of the atmosphere round the edges. It is also found that if a certain quantity of air can be driven through the mine, even should there be a small escape of gas from the goaf, it will do no harm, provided it is diluted with air below the explosive point. Now here is the theory of working : if a good current of air be maintained, and Davy lamps are used in dangerous places with properly stopped trap-doors, an explosion cannot happen, as the lamp gives certain indications of the presence of gas, which, if properly attended to, warn the miner that he ought to retire. From the unanimous evidence of the viewers it appears that no explosion has ever been traced to a properly-constructed Davy lamp. But in spite of all this they are continually taking place from the proximity of naked lights in parts where candles are prohibited ; and it therefore becomes a question whether some means could not be devised for carrying off the greater portion of the gas from the goafs—at least so much as to keep them under control—and disposing of it in a manner which would render it harmless. It is frequently given in evidence that the men are careless, and, trusting to the measures adopted by the viewers for safety, are too apt to conclude that they are perfectly safe, when it must occur to every reflecting mind, that even supposing the viewers have done their duty—and I believe the present viewers are, as a body, well grounded in science—the work is but half performed, if the men do not second the efforts of their directors by carefulness and vigilance. A dozen viewers might recommend particular systems, each of which would be safe ; but one man may overturn all their precautions, and cause an accident, to prevent which hundreds of pounds may have been expended.

It will be evident, without further proof, that the only certain method will be to rid the mines of those magazines of gas as far as is practicable. I call them "magazines," because they are just as dangerous in the vicinity of candles as a magazine of gunpowder would be. In the Houghton pit—where a late explosion took place by the gas firing at a naked light, and by which twenty-seven lives were lost—has four goafs ; two of eighteen acres each in extent, one of seven, and one of four acres. Just imagine eighteen acres of combustible gas, ready to fire the moment that it received a certain mixture of atmospheric air ! and the only wonder is that explosions are not still more frequent.

Now, I conceive that the greater portion of this gas might be discharged. The very essentials for such a process are half completed to our hands. These goafs are immense domes, brim-full of explosive gas, though in an inverted position. It cannot explode

without a light, and also the presence of a certain amount of oxygen gas, or atmospheric air, which contains the requisite quantity. The gas is light, and remains in the dome as sure as water will remain in a basin into which it has been poured. My suggestion is, not to alter or amend any of the usual precautions as to ventilation, but to bore in addition an Artesian well—to make a hole of a small diameter in the earth, above the centre of each goaf, and continue boring until it pierces into the goaf. It might be effected by means of boring-rods. Then there would be a vent through which the gas would rise, and be dealt with, as thought proper, on the surface of the ground, by burning or otherwise, like an immense gas light. That it would do so is already tried, for at one of the Wallsend pits, near Newcastle-upon-Tyne, gas is continually burning from a large pipe brought up the shaft.

The above is the whole suggestion. It is not proposed to relax any of the ordinary precautions, but only to make use of an additional means of getting rid of the gas. It surely merits a trial; and the expense of boring through to all the goafs in the kingdom would be nothing in comparison to the saving of life. In the present day, when inspectors are appointed by Government, every means likely to lessen the frequency of explosions should be tested, and, if found to be effective, ought to be adopted by all coal-owners.

If you think this suggestion worthy of notice, you will perhaps give it publicity through the medium of your widely-extended Journal. Make it "as familiar as Household Words," and it may catch the eye of some one who has the opportunity of giving it a trial, and who might report the results in the same manner, for the good of the suffering miner.

NEW YEAR'S EVE.

New Year! New Year! come over the snow,

A thousand songs call to thee!

A thousand circles wait thee now,

A thousand firesides woo thee!

The night is listening for the bells,

The doors are wide where the poor man dwells,

The cottage glows, the mansion gleams,

And dusky red o'er the deep snow streams.

Old Time sits mute in his silent place,

They watch his motions, they mark his face,

He starts! he calls! and a merry, merry din

Of voices and bells brings the New Year in.

Happy New Year! Happy New Year!

Give us all things kind and dear,

And when thou art laid in earth—

May thy death be as blithe as thy birth.

Old Year! Old Year! sink down in thy vaults,

All nature doth eschew thee—

Lie buried with all thy meeds and faults,

For nothing can renew thee!

Light are the feet that dance thee dead!

Merry the music that rolls o'er thy head!

Die with thy last, loving glance on them,

Whose joyance is thy regimen.

Farewell, farewell, all good or ill

That thou hast sown, will thy son fulfil;

Give him a last word now, to feed

The good and shun the evil seed.

Farewell, Old Year! Farewell, Old Year!

Many a bright eye owes thee a tear!

Thou wilt never again have birth;

Hush thee calm in the bosom of earth.

New Year! New Year! come sit at the feast,

A thousand hands prepare thee!

This night shall all men call thee guest,

This night may all men share thee;

Soon may we know thee tried and true;

Give to the student his wreath in view!

Give to the lover his yearning bride!

Soon may we know thee true and tried—

Make free the slave, and make the free

Learn all the duties of charity;

Let pride die off, let love increase,

And prosper all the ways of peace!

Happy New Year! Happy New Year!

Give us all things kind and dear,

And when thou art laid in earth—

May thy death be as blithe as thy birth.

THE HEART OF JOHN MIDDLETON.

I was born at Sawley, where the shadow of Pendle Hill falls at sunrise. I suppose Sawley sprang up into a village in the time of the monks, who had an abbey there. Many of the cottages are strange old places; others again are built of the abbey stones, mixed up with the shale from the neighbouring quarries; and you may see many a quaint bit of carving worked into the walls, or forming the lintels of the doors. There is a row of houses, built still more recently, where one Mr. Peel came to live there for the sake of the water-power, and gave the place a fillip into something like life; though a different kind of life, as I take it, from the grand slow ways folks had when the monks were about.

Now it was—six o'clock, ring the bell, throng to the factory; sharp home at twelve; and even at night, when work was done, we hardly knew how to walk slowly, we had been so bustled all day long. I can't recollect the time when I did not go to the factory. My father used to drag me there when I was quite a little fellow, in order to wind reels for him. I never remember my mother. I should have been a better man than I have been, if I had only had a notion of the sound of her voice, or the look on her face.

My father and I lodged in the house of a man, who also worked in the factory. We were sadly thronged in Sawley, so many people came from different parts of the country to earn a livelihood at the new work; and it was some time before the row of cottages I have spoken of could be built. While they were building my father was turned out of his lodgings for drinking and being disorderly, and he and I slept in the brick-kiln; that is to say, when we did sleep o' nights; but,

often and often, we went poaching; and many a hare and pheasant have I rolled up in clay, and roasted in the embers of the kiln. Then, as followed to reason, I was drowsy next day, over my work; but father had no mercy on me for sleeping, for all he knew the cause of it, but kicked me where I lay, a heavy lump on the factory-floor, and cursed and swore at me till I got up for very fear, and to my winding again. But when his back was turned I paid him off with heavier curses than he had given me, and longed to be a man that I might be revenged on him. The words I then spoke I would not now dare to repeat; and worse than hating words, a hating heart went with them. I forget the time when I did not know how to hate. When I first came to read and learnt about Ishmael, I thought I must be of his doomed race, for my hand was against every man, and every man's against me. But I was seventeen or more before I cared for my book enough to learn to read.

After the row of works was finished, father took one, and set up for himself, in letting lodgings. I can't say much for the furnishing; but there was plenty of straw, and we kept up good fires; and there is a set of people who value warmth above everything. The worst lot about the place lodged with us. We used to have a supper in the middle of the night; there was game enough, or if there was not game, there was poultry to be had for the stealing. By day we all made a show of working in the factory. By night we feasted and drank.

Now this web of my life was black enough and coarse enough; but by and by, a little golden filmy thread began to be woven in; the dawn of God's mercy was at hand.

One blowy October morning, as I sauntered lazily along to the mill, I came to the little wooden bridge over a brook that falls into the Bribble. On the plank there stood a child, balancing the pitcher on her head, with which she had been to fetch water. She was so light on her feet that, had it not been for the weight of the pitcher, I almost believe the wind would have taken her up, and wafted her away as it carries off a blow-ball in seed-time; her blue cotton dress was blown before her, as if she were spreading her wings for a flight; she turned her face round, as if to ask me for something, but when she saw who it was she hesitated, for I had a bad name in the village, and I doubt not she had been warned against me. But her heart was too innocent to be distrustful; so she said to me timidly,

"Please, John Middleton, will you carry me this heavy jug just over the bridge?"

It was the very first time I had ever been spoken to gently. I was ordered here and there by my father and his rough companions; I was abused and cursed by them if I failed in doing what they wished; if I succeeded, there came no expression of thanks or gratitude. I was informed of facts necessary for me to

know. But the gentle words of request or entreaty were afore-time unknown to me, and now their tones fell on my ear soft and sweet as a distant peal of bells. I wished that I knew how to speak properly in reply; but though we were of the same standing as regarded worldly circumstances, there was some mighty difference between us, which made me unable to speak in her language of soft words and modest entreaty. There was nothing for me but to take up the pitcher in a kind of gruff, shy silence, and carry it over the bridge as she had asked me. When I gave it her back again, she thanked me and tripped away, leaving me, word-less, gazing after her like an awkward lout as I was. I knew well enough who she was. She was grandchild to Eleanor Hadfield, an aged woman, who was reputed as a witch by my father and his set, for no other reason, that I can make out, than her scorn, dignity, and fearlessness of rancour. It was true we often met her in the grey dawn of the morning when we returned from poaching, and my father used to curse her, under his breath, for a witch, such as were burnt, long ago, on Pendle Hill top; but I had heard that Eleanor was a skilful sick nurse, and ever ready to give her services to those who were ill; and I believe that she had been sitting up through the night (the night that we had been spending under the wild heavens, in deeds as wild), with those who were appointed to die. Nelly was her orphan granddaughter; her little hand-maiden; her treasure; her one ewe lamb. Many and many a day have I watched by the brook-side, hoping that some happy gust of wind, coming with opportune bluster down the hollow of the dale, might make me necessary once more to her. I longed to hear her speak to me again. I said the words she had used to myself, trying to catch her tone; but the chance never came again. I do not know that she ever knew how I watched for her there. I found out that she went to school, and nothing would serve me but that I must go too. My father scoffed at me; I did not care. I knew nought of what reading was, nor that it was likely that I should be laughed at; I, a great hulking lad of seventeen or upwards, for going to learn my A, B, C, in the midst of a crowd of little ones. I stood just this way in my mind. Nelly was at school; it was the best place for seeing her, and hearing her voice again. Therefore I would go too. My father talked, and swore, and threatened, but I stood to it. He said I should leave school, weary of it in a month. I swore a deeper oath than I like to remember, that I would stay a year, and come out a reader and a writer. My father hated the notion of folks learning to read, and said it took all the spirit out of them; besides, he thought he had a right to every penny of my wages, and thought, when he was in good humour, he might have given me many a jug of ale, he

grudged my two-pence a week for schooling. However, to school I went. It was a different place to what I had thought it before I went inside. The girls sat on one side and the boys on the other; so I was not near Nelly. She too was in the first class; I was put with the little toddling things that could hardly run alone. The master sat in the middle, and kept pretty strict watch over us. But I could see Nelly, and hear her read her chapter; and even when it was one with a long list of hard names, such as the master was very fond of giving her, to show how well she could hit them off without spelling, I thought I had never heard a prettier music. Now and then she read other things. I did not know what they were, true or false; but I listened because she read; and, by and by, I began to wonder. I remember the first word I ever spoke to her was to ask her (as we were coming out of school) who was the Father of whom she had been reading, for when she said the words "Our Father," her voice dropped into a soft, holy kind of low sound, which struck me more than any loud reading, it seemed so loving and tender. When I asked her this, she looked at me with her great blue wondering eyes, at first shocked; and then, as it were, melted down into pity and sorrow, she said in the same way, below her breath, in which she read the words "Our Father,"

"Don't you know? It is God."

"God?"

"Yes; the God that grandmother tells me about."

"Tell me what she says, will you?" So we sat down on the hedge-bank, she a little above me, while I looked up into her face, and she told me all the holy texts her grandmother had taught her, as explaining all that could be explained of the Almighty. I listened in silence, for indeed I was overwhelmed with astonishment. Her knowledge was principally rote-knowledge; she was too young for much more; but we, in Lancashire, speak a rough kind of Bible language, and the texts seemed very clear to me. I rose up, dazed and overpowered. I was going away in silence, when I bethought me of my manners, and turned back, and said "Thank you," for the first time I ever remember saying it in my life. That was a great day for me, in more ways than one.

I was always one who could keep very steady to an object when once I had set it before me. My object was to know Nelly. I was conscious of nothing more. But it made me regardless of all other things. The master might scold, the little ones might laugh; I bore it all without giving it a second thought. I kept to my year, and came out a reader and writer; more, however, to stand well in Nelly's good opinion, than because of my oath. About this time, my father committed some bad cruel deed, and had to fly the country. I was glad he went; for I had never loved or cared for him, and wanted to shake myself clear of

his set. But it was no easy matter. Honest folk stood aloof; only bad men held out their arms to me with a welcome. Even Nelly seemed to have a mixture of fear now with her kind ways towards me. I was the son of John Middleton, who, if he were caught, would be hung at Lancaster Castle. I thought she looked at me sometimes with a sort of sorrowful horror. Others were not forbearing enough to keep their expression of feeling confined to looks. The son of the overlooker at the mill never ceased twitting me with my father's crime; he now brought up his poaching against him, though I knew very well how many a good supper he himself had made on game which had been given him to make him and his father wink at late hours in the morning. And how were such as my father to come honestly by game?

This lad, Dick Jackson, was the bane of my life. He was a year or two older than I was, and had much power over the men who worked at the mill, as he could report to his father what he chose. I could not always hold my peace when he "threatened" me with my father's sins, but gave it him back sometimes in a storm of passion. It did me no good; only threw me farther from the company of better men, who looked aghast and shocked at the oaths I poured out—blasphemous words learnt in my childhood, which I could not forget now that I would fain have purified myself of them; while all the time Dick Jackson stood by, with a mocking smile of intelligence; and when I had ended, breathless and weary with spent passion, he would turn to those whose respect I longed to earn, and ask if I were not a worthy son of my father, and likely to tread in his steps. But this smiling indifference of his to my miserable vehemence was not all, though it was the worst part of his conduct, for it made the rankling hatred grow up in my heart, and overshadow it like the great gourd-tree of the prophet Jonah. But his was a merciful shade, keeping out the burning sun; mine blighted what it fell upon.

What Dick Jackson did besides, was this. His father was a skilful overlooker, and a good man; Mr. Peel valued him so much, that he was kept on, although his health was failing; and when he was unable, through illness, to come to the mill, he deputed his son to watch over and report the men. It was too much power for one so young—I speak it calmly now. Whatever Dick Jackson became, he had strong temptations when he was young, which will be allowed for hereafter. But at the time of which I am telling, my hate raged like a fire. I believed that he was the one sole obstacle to my being received as fit to mix with good and honest men. I was sick of crime and disorder, and would fain have come over to a different kind of life, and have been industrious, sober, honest, and right-spoken, (I had no idea of higher virtue then), and at every

turn Dick Jackson met me with his sneers. I have walked the night through, in the old abbey field, planning how I could out-wit him, and win men's respect in spite of him. The first time I ever prayed, was underneath the silent stars, kneeling by the old abbey walls, throwing up my arms, and asking God for the power of revenge upon him.

I had heard that if I prayed earnestly, God would give me what I asked for, and I looked upon it as a kind of chance for the fulfilment of my wishes. If earnestness would have won the boon for me, never were wicked words so earnestly spoken. And oh, later on, my prayer was heard, and my wish granted! All this time I saw little of Nelly. Her grandmother was failing, and she had much to do in-doors. Besides, I believed I had read her looks aright, when I took them to speak of aversion; and I planned to hide myself from her sight, as it were, until I could stand upright before men, with fearless eyes, dreading no face of accusation. It was possible to acquire a good character; I would do it—I did it; but no one brought up among respectable untempted people can tell the unspeakable hardness of the task. In the evenings I would not go forth among the village throng; for the acquaintances that claimed me were my father's old associates, who would have been glad enough to enlist a strong young man like me in their projects; and the men who would have shunned me and kept aloof, were the steady and orderly. So I staid in-doors, and practised myself in reading. You will say, I should have found it easier to earn a good character away from Sawley, at some place where neither I nor my father was known. So I should; but it would not have been the same thing to my mind. Besides, representing all good men, all goodness to me, in Sawley Nelly lived. In her sight I would work out my life, and fight my way upwards to men's respect. Two years passed on. Every day I strove fiercely; every day my struggles were made fruitless by the son of the overlooker; and I seemed, but where I was, but where I must ever be esteemed by all who knew me—but as the son of the criminal—wild, reckless, ripe for crime myself. Where was the use of my reading and writing? These acquirements were disregarded and scouted by those among whom I was thrust back to take my portion. I could have read any chapter in the Bible now; and Nelly seemed as though she would never know it. I was driven in upon my books; and few enough of them I had. The pedlars brought them round in their packs, and I bought what I could. I had the "Seven Champions," and the "Pilgrim's Progress;" and both seemed to me equally wonderful, and equally founded on fact. I got Byron's "Narrative," and Milton's "Paradise Lost;" but I lacked the knowledge which would give a clue to all. Still they afforded me pleasure, because they took me out of myself, and made me forget

my miserable position, and made me unconscious (for the time at least,) of my one great passion of hatred against Dick Jackson.

When Nelly was about seventeen her grandmother died. I stood aloof in the churchyard, behind the great yew-tree, and watched the funeral. It was the first religious service that ever I heard; and, to my shame, as I thought, it affected me to tears. The words seemed so peaceful and holy that I longed to go to church, but I durst not, because I had never been. The parish church was at Bolton, far enough away to serve as an excuse for all who did not care to go. I heard Nelly's sobs filling up every pause in the clergyman's voice; and every sob of hers went to my heart. She passed me on her way out of the churchyard; she was so near I might have touched her; but her head was hanging down, and I durst not speak to her. Then the question arose, what was to become of her? She must earn her living; was it to be as a farm-servant, or by working at the mill? I knew enough of both kinds of life to make me tremble for her. My wages were such as to enable me to marry, if I chose; and I never thought of woman, for my wife, but Nelly. Still I would not have married her now, if I could; for, as yet, I had not risen up to the character which I determined it was fit that Nelly's husband should have. When I was rich in good report, I would come forwards, and take my chance; but until then, I would hold my peace. I had faith in the power of my long-continued dogged breasting of opinion. Sooner or later it must, it should, yield, and I be received among the ranks of good men. But, meanwhile, what was to become of Nelly? I reckoned up my wages; I went to inquire what the board of a girl would be, who should help her in her household work, and live with her as a daughter, at the house of one of the most decent women of the place; she looked at me suspiciously. I kept down my temper, and told her I would never come near the place; that I would keep away from that end of the village; and that the girl for whom I made the inquiry should never know but what the parish paid for her keep. It would not do; she suspected me; but I know I had power over myself to have kept to my word; and besides, I would not for worlds have had Nelly put under any obligation to me, which should speck the purity of her love, or dim it by a mixture of gratitude,—the love that I craved to earn, not for my money, not for my kindness, but for myself. I heard that Nelly had met with a place in Bolland; and I could see no reason why I might not speak to her once before she left our neighbourhood. I meant it to be a quiet friendly telling her of my sympathy in her sorrow. I felt I could command myself. So, on the Sunday before she was to leave Sawley, I waited near the wood-path, by which I knew that she would return from afternoon church. The birds made such a

melodious warble, such a busy sound among the leaves, that I did not hear approaching footsteps, till they were close at hand; and then there were sounds of two persons' voices. The wood was near that part of Sawley where Nelly was staying with friends; the path through it led to their house, and their's only, so I knew it must be she, for I had watched her setting out to church alone.

But who was the other?

The blood went to my heart and head, as if I were shot, when I saw that it was Dick Jackson. Was this the end of it all? In the steps of sin which my father had trode, I would rush to my death and my doom. Even where I stood I longed for a weapon to slay him. How dared he come near my Nelly? She too,—I thought her faithless, and forgot how little I had ever been to her in outward action; how few words, and those how uncounted, I had ever spoken to her; and I hated her for a traitress. These feelings passed through me before I could see, my eyes and head were so dizzy and blind. When I looked I saw Dick Jackson holding her hand, and speaking quick and low, and thick, as a man speaks in great vehemence. She seemed white and dismayed; but all at once, at some word of his, (and what it was she never would tell me), she looked as though she defied a fiend, and wrenched herself out of his grasp. He caught hold of her again, and began once more the thick whisper that I loathed. I could bear it no longer, nor did I see why I should. I stepped out from behind the tree where I had been lying. When she saw me, she lost her look of one strung up to desperation, and came and clung to me; and I felt like a giant in strength and might. I held her with one arm, but I did not take my eyes off him; I felt as if they blazed down into his soul, and scorched him up. He never spoke, but tried to look as though he defied me; at last his eyes fell before mine. I dared not speak; for the old horrid oaths thronged up to my mouth; and I dreaded giving them way, and terrifying my poor trembling Nelly.

At last he made to go past me; I drew her out of the pathway. By instinct she wrapped her garments round her, as if to avoid his accidental touch; and he was stung by this, I suppose—I believe—to the mad, miserable revenge he took. As my back was turned to him, in an endeavour to speak some words to Nelly that might soothe her into calmness, she, who was looking after him, like one fascinated with terror, saw him take a sharp shaly stone, and aim it at me. Poor darling! she clung round me as a shield, making her sweet body into a defence for mine. It hit her, and she spoke no word, kept back her cry of pain, but fell at my feet in a swoon. He—the coward!—ran off as soon as he saw what he had done. I was with Nelly alone in the green gloom of the wood. The quivering and leaf-tinted light made her look as if she were dead. I carried her, not knowing if

I bore a corpse or not, to her friend's house. I did not stay to explain, but ran madly for the doctor.

Well! I cannot bear to recur to that time again. Five weeks I lived in the agony of suspense; from which my only relief was in laying savage plans for revenge. If I hated him before, what think ye I did now? It seemed as if earth could not hold us twain, but that one of us must go down to Gehenna. I could have killed him; and would have done it without a scruple, but that seemed too poor and bold a revenge. At length—oh! the weary waiting—oh! the sickening of my heart—Nelly grew better—as well as she was ever to grow. The bright colour had left her cheek; the mouth quivered with repressed pain, the eyes were dim with tears that agony had forced into them; and I loved her a thousand times better and more than when she was bright and blooming! What was best of all, I began to perceive that she cared for me. I know her grandmother's friends warned her against me, and told her I came of a bad stock; but she had passed the point where remonstrance from bystanders can take effect—she loved me as I was, a strange mixture of bad and good, all unworthy of her. We spoke together now, as those do whose lives are bound up in each other. I told her I would marry her as soon as she had recovered her health. Her friends shook their heads; but they saw she would be unfit for farm-service or heavy work, and they perhaps thought, as many a one does, that a bad husband was better than none at all. Anyhow we were married; and I learnt to bless God for my happiness, so far beyond my deserts. I kept her like a lady. I was a skilful workman, and earned good wages; and every want she had I tried to gratify. Her wishes were few and simple enough, poor Nelly! If they had been ever so fanciful, I should have had my reward in the new feeling of the holiness of home. She could lead me as a little child, with the charm of her gentle voice, and her ever-kind words. She would plead for all when I was full of anger and passion; only Dick Jackson's name passed never between our lips during all that time. In the evenings she lay back in her bee-hive chair, and read to me. I think I see her now, pale and weak, with her sweet young face, lighted by her holy, earnest eyes, telling me of the Saviour's life and death, till they were filled with tears. I longed to have been there, to have avenged him on the wicked Jews. I liked Peter the best of all the disciples. But I got the Bible myself, and read the mighty act of God's vengeance in the Old Testament, with a kind of triumphant faith, that, sooner or later, He would take my cause in hand, and revenge me on mine enemy.

In a year or so, Nelly had a baby,—a little girl, with eyes just like hers, that looked with a grave openness right into yours. Nelly recovered but slowly. It was just before

winter, the cotton-crop had failed, and master had to turn off many hands. I thought I was sure of being kept on, for I had earned a steady character, and did my work well; but once again it was permitted that Dick Jackson should do me wrong. He induced his father to dismiss me among the first in my branch of the business; and there was I, just before winter set in, with a wife and new-born child, and a small enough store of money to keep body and soul together, till I could get to work again. All my savings had gone by Christmas Eve, and we sat in the house, foodless for the morrow's festival. Nelly looked pinched and worn; the baby cried for a larger supply of milk than its poor starving mother could give it. My right hand had not forgot its cunning; and I went out once more to my poaching. I knew where the gang met; and I knew what a welcome back I should have,—a far warmer and more hearty welcome than good men had given me when I tried to enter their ranks. On the road to the meeting-place I fell in with an old man,—one who had been a companion to my father in his early days.

"What, lad!" said he, "art thou turning back to the old trade? It's the better business now, that cotton has failed."

"Ay," said I, "cotton is starving us outright. A man may bear a deal himself, but he'll do aught bad and sinful to save his wife and child."

"Nay, lad," said he, "poaching is not sinful; it goes against man's laws, but not against God's."

I was too weak to argue or talk much. I had not tasted food for two days. But I murmured, "At any rate, I trusted to have been clear of it for the rest of my days. It led my father wrong at first. I have tried and I have striven. Now I give all up. Right or wrong shall be the same to me. Some are fore-doomed; and so am I." And as I spoke, some notion of the futurity that would separate Nelly, the pure and holy, from me, the reckless and desperate one, came over me with an irrepressible burst of anguish. Just then the bells of Bolton-in-Bolland struck up a glad peal, which came over the woods, in the solemn midnight air, like the sons of the morning shouting for joy,—they seemed so clear and jubilant. It was Christmas Day; and I felt like an outcast from the gladness and the salvation. Old Jonah spoke out:

"You 's the Christmas bells. I say, Johnny, my lad, I've no notion of taking such a spiritless chap as thou into the thick of it, with thy rights and thy wrongs. We don't trouble ourselves with such fine lawyer's stuff, and we bring down the 'varmint' all the better. Now, I'll not have thee in our gang, for thou art not up to the fun, and thou'd hang fire when the time came to be doing. But I've a shrewd guess that plaguy wife and child of thine are at the bottom of thy half-and-half joining. Now, I was thy father's friend afore-

he took to them helter-skelter ways; and I've five shillings and a neck of mutton at thy service. I'll not list a fasting man; but if thou'lt come to us with a full stomach, and say, 'I like your life, my lads, and I'll make one of you with pleasure, the first shiny night,' why, we'll give you a welcome and a half; but, to-night, make no more ado but turn back with me for the mutton and the money."

I was not proud; nay, I was most thankful. I took the meat, and boiled some broth for my poor Nelly. She was in a sleep, or a faint, I know not which; but I roused her, and held her up in bed, and fed her with a teaspoon, and the light came back to her eyes, and the faint moonlight smile to her lips; and when she had ended, she said her innocent grace, and fell asleep with her baby on her breast. I sat over the fire, and listened to the bells, as they swept past my cottage on the gusts of the wind. I longed and yearned for the second coming of Christ, of which Nelly had told me. The world seemed cruel, and hard, and strong—too strong for me; and I prayed to cling to the hem of his garment, and be borne over the rough places when I fainted and bled, and found no man to pity or help me, but poor old Jonah, the publican and sinner. All this time my own woes and my own self were uppermost in my mind, as they are in the minds of most who have been hardly used. As I thought of my wrongs and my sufferings, my heart burned against Dick Jackson; and as the bells rose and fell, so my hopes waxed and waned, that in those mysterious days, of which they were both the remembrance and the prophecy, he would be purged from off the earth. I took Nelly's Bible, and turned, not to the gracious story of the Saviour's birth, but to the records of the former days, when the Jews took such wild revenge upon all their opponents. I was a Jew,—a leader among the people. Dick Jackson was as Pharaoh, as the King Agag, who walked delicately, thinking the bitterness of death was past,—in short, he was the conquered enemy, over whom I gloated, with my Bible in my hand—that Bible which contained our Saviour's words on the Cross. As yet, those words seemed faint and meaningless to me, like a tract of country seen in the starlight haze; while the histories of the Old Testament were grand and distinct in the blood-red colour of sun-set. By and by that night passed into day; and little piping voices came round, carol-singing. They awakened Nelly. I went to her as soon as I heard her stirring.

"Nelly," said I, "there's money and food in the house; I will be off to Paulham seeking work, while thou hast something to go upon."

"Not to-day," said she; "stay to-day with me. If thou wouldst only go to church with me this once"—for you see I had never been inside a church but when we were married,

and she was often praying me to go; and now she looked at me, with a sigh just creeping forth from her lips, as she expected a refusal. But I did not refuse. I had been kept away from church before because I dared not go; and now I was desperate and dared do anything. If I did look like a heathen in the face of all men, why I was a heathen in my heart; for I was falling back into all my evil ways. I had resolved, if my search of work at Padiham should fail, I would follow my father's footsteps, and take with my own right hand and by my strength of arm what it was denied me to obtain honestly. I had resolved to leave Sawley, where a curse seemed to hang over me; so what did it matter if I went to church, all unbeknowing what strange ceremonies were there performed? I walked thither as a sinful man—sinful in my heart. Nelly hung on my arm, but even she could not get me to speak. I went in; she found my places, and pointed to the words, and looked up into my eyes with hers, so full of faith and joy. But I saw nothing but Richard Jackson—I heard nothing but his loud nasal voice, making response, and desecrating all the holy words. He was in broadcloth of the best—I in my fustian jacket. He was prosperous and glad—I was starving and desperate. Nelly grew pale as she saw the expression in my eyes; and she prayed ever and ever more fervently as the thought of me tempted by the Devil even at that very moment came more fully before her.

By and by she forgot even me, and laid her soul bare before God, in a long silent weeping prayer, before we left the church. Nearly all had gone—and I stood by her, unwilling to disturb her, unable to join her. At last she rose up, heavenly calm. She took my arm, and we went home through the woods, where all the birds seemed tame and familiar. Nelly said she thought all living creatures knew it was Christmas Day, and rejoiced, and were loving together. I believed it was the frost that had tamed them; and I felt the hatred that was in me, and knew that whatever else was loving, I was full of malice and uncharitableness, nor did I wish to be otherwise. That afternoon I bade Nelly and our child farewell, and tramped to Padiham. I got work—how I hardly know; for stronger and stronger came the force of the temptation to lead a wild, free life of sin; legions seemed whispering evil thoughts to me, and only my gentle, pleading Nelly to pull me back from the great gulph. However, as I said before, I got work, and set off homewards to move my wife and child to that neighbourhood. I hated Sawley, and yet I was fiercely indignant to leave it; with my purposes unaccomplished. I was still an outcast from the more respectable, who stood afar off from such as I; and mine enemy lived, and flourished in their regard. Padiham, however, was not so far away, for me to despair—to relinquish my fixed determination. It

was on the eastern side of the great Pendle Hill; ten miles away, may be. Hate will overleap a greater obstacle.

I took a cottage on the Fell, high up on the side of the hill. We saw long bleak moorland slope before us, and then the grey stone houses of Padiham, over which a black cloud hung; different from the blue wood or turf smoke about Sawley. The wild winds came down, and whistled round our house many a day when all was still below. But I was happy then. I rose in men's esteem. I had work in plenty. Our child lived and thrived. But I forgot not our country proverb: "Keep a stone in thy pocket for seven years: turn it, and keep it seven years more; but have it ever ready to cast at thine enemy when the time comes."

One day a fellow workman asked me to go to a hill-side preaching. Now I never cared to go to church; but there was something newer and freer in the notion of praying to God right under His great dome; and the open air had had a charm to me ever since my wild boyhood. Besides, they said these ranters had strange ways with them, and I thought it would be fun to see their way of setting about it; and this ranter of all others had made himself a name in our parts. Accordingly we went; it was a fine summer's evening, after work was done. When we got to the place we saw such a crowd as I never saw before, men, women, and children; all ages were gathered together, and sat on the hill-side. They were care-worn, diseased, sorrowful, criminal; all that was told on their faces, which were hard, and strongly marked. In the midst, standing in a cart, was the ranter. When I first saw him, I said to my companion, "Lord! What a little man to make all this pother! I could trip him up with one of my fingers;" and then I sat down, and looked about me a bit. All eyes were fixed on the preacher; and I turned mine upon him too. He began to speak; it was in no fine-drawn language, but in words such as we heard every day of our lives, and about things we did every day of our lives. He did not call our short-comings pride or worldliness, or pleasure-seeking, which would have given us no clear notion of what he meant, but he just told us outright what we did, and then he gave it a name, and said that it was accursed,—and that we were lost if we went on so doing.

By this time the tears and sweat were running down his face; he was wrestling for our souls. We wondered how he knew our innermost lives as he did, for each one of us saw his sin set before him in plain-spoken words. Then he cried out to us to repent; and spoke first to us, and then to God, in a way that would have shocked many—but it did not shock me. I liked strong things; and I liked the bare full truth; and I felt brought nearer to God in that hour—the summer darkness creeping over us, and one

After one the stars coming out above us, like the eyes of the angels watching us—than I had ever done in my life before. When he had brought us to our tears and sighs, he stopped his loud voice of upbraiding, and there was a hush, only broken by sobs and quivering moans, in which I heard through the gloom the voices of strong men in anguish and supplication, as well as the shriller tones of women. Suddenly he was heard again; by this time we could not see him; but his voice was now tender as the voice of an angel, and he told us of Christ and implored us to come to Him. I never heard such passionate entreaty. He spoke as if he saw Satan hovering near us in the dark dense night, and as if our only safety lay in a very present coming to the Cross; I believe he did see Satan; we know he haunts the desolate old hills, awaiting his time, and now or never it was, with many a soul. At length there was a sudden silence; and by the cries of those nearest to the preacher, we heard that he had fainted. We had all crowded round him as if he were our safety and our guide; and he was overcome by the heat and the fatigue, for we were the fifth set of people whom he had addressed that day. I left the crowd who were leading him down, and took a lonely path myself.

Here was the earnestness I needed. To this weak and weary fainting man, religion was a life and a passion. I look back now, and wonder at my blindness as to what was the root of all my Nelly's patience and long-suffering; for I thought, now I had found out what religion was, and that hitherto it had been all an unknown thing to me.

Henceforward, my life was changed. I was zealous and fanatical. Beyond the set to whom I had affiliated myself I had no sympathy. I would have persecuted all who differed from me, if I had only had the power. I became an ascetic in all bodily enjoyments. And, strange and inexplicable mystery, I had some thoughts that by every act of self-denial I was attaining to my unholy end, and that, when I had fasted and prayed long enough, God would place my vengeance in my hands. I have knelt by Nelly's bedside, and vowed to live a self-denying life, as regarded all outward things, if so that God would grant my prayer. I left it in His hands. I felt sure He would trace out the token and the word; and Nelly would listen to my passionate words, and lie awake, sorrowful and heart-sore through the night; and I would get up and make her tea, and re-arrange her pillows, with a strange and wilful blindness that my bitter words and blasphemous prayers had cost her miserable sleepless nights. My Nelly was suffering yet from that blow. How or where the stone had hurt her I never understood; but in consequence of that one moment's action, her limbs became numb and dead, and, by slow degrees, she took to her bed, from

whence she was never carried alive. There she lay, propped up by pillows, her meek face ever bright, and smiling forth a greeting; her white pale hands ever busy with some kind of work; and our little Grace was as the power of motion to her. Fierce as I was away from her, I never could speak to her but in my gentlest tones. She seemed to me as if she had never wrestled for salvation as I had; and when away from her, I resolved, many a time and oft, that I would rouse her up to her state of danger when I returned home that evening—even if strong reproach were required I would rouse her up to her soul's need. But I came in and heard her voice singing softly some holy word of patience, some psalm which, may-be, had comforted the martyrs, and when I saw her face, like the face of an angel, full of patience and happy faith, I put off my awakening speeches till another time.

One night, long ago, when I was yet young and strong, although my years were past forty, I sat alone in my houseplace. Nelly was always in bed, as I have told you, and Grace lay in a cot by her side. I believed them to be both asleep; though how they could sleep I could not conceive, so wild and terrible was the night. The wind came sweeping down from the hill-top in great beats, like the pulses of Heaven; and, during the pauses, while I listened for the coming roar, I felt the earth shiver beneath me. The rain beat against windows and doors, and sobbed for entrance. I thought the Prince of the Air was abroad; and I heard, or fancied I heard, shrieks come on the blast, like the cries of sinful souls given over to his power.

The sounds came nearer and nearer. I got up and saw to the fastenings of the door, for though I cared not for mortal man, I did care for what I believed was surrounding the house, in evil might and power. But the door shook as though it, too, were in deadly terror, and I thought the fastenings would give way. I stood facing the entrance, lashing my heart up to defy the spiritual enemy that I looked to see, every instant, in bodily presence; and the door did burst open; and before me stood—what was it? man or demon? a grey-haired man, with poor worn clothes all wringing wet, and he himself battered and piteous to look upon, from the storm he had passed through.

"Let me in!" he said. "Give me shelter. I am poor, or I would reward you. And I am friendless too," he said, looking up in my face, like one seeking what he cannot find. In that look, strangely changed, I knew that God had heard me; for it was the old cowardly look of my life's enemy. Had he been a stranger I might not have welcomed him, but as he was mine enemy, I gave him welcome in a lordly dish. I sat opposite to him. "Whence do you come?" said I. "It is a strange night to be out on the fells."

He looked up at me sharp ; but in general he held his head down like a beast or hound.

"You won't betray me. I'll not trouble you long. As soon as the storm abates I'll go."

"Friend!" said I, "what have I to betray?" and I trembled lest he should keep himself out of my power and not tell me. "You come for shelter, and I give you of my best. Why do you suspect me?"

"Because," said he in his abject bitterness, "all the world is against me. I never met with goodness or kindness; and now I am hunted like a wild beast. I'll tell you—I'm a convict returned before my time. I was a Sawley man," (as if I, of all men, did not know it!) "and I went back like a fool to the old place. They've hunted me out where I would fain have lived rightly and quietly, and they'll send me back to that hell upon earth if they catch me. I did not know it would be such a night. Only let me rest and get warm once more, and I'll go away. Good kind man! have pity upon me." I smiled all his doubts away; I promised him a bed on the floor, and I thought of Jael and Sisera. My heart leaped up like a war-horse at the sound of the trumpet, and said, Ha, ha, the Lord hath heard my prayer and supplication; I shall have vengeance at last!"

He did not dream who I was. He was changed; so that I, who had learned his features with all the diligence of hatred, did not at first recognise him; and he thought not of me, only of his own woe and affliction. He looked into the fire with the dreamy gaze of one whose strength of character, if he had any, is beaten out of him, and cannot return at any emergency whatsoever. He sighed and pitied himself, yet could not decide on what to do. I went softly about my business, which was to make him up a bed on the floor; and, when he was lulled to sleep and security, to make the best of my way to Padiham, and summon the constable, into whose hands I would give him up to be taken back to his "hell upon earth." I went into Nelly's room. She was awake, and anxious. I saw she had been listening to the voices.

"Who is there?" said she. "John, tell me—it sounded like a voice I knew. For God's sake, speak."

I smiled a quiet smile. "It is a poor man who has lost his way. Go to sleep, my dear—I shall make him up on the floor. I may not come for some time. Go to sleep;" and I kissed her. I thought she was soothed, but not fully satisfied. However, I hastened away before there was any further time for questioning. I made up the bed; and Richard Jackson, tired out, lay down and fell asleep. My contempt for him almost equalled my hate. If I were avoiding return to a place which I thought to be a hell upon earth, think you I would have taken a quiet sleep under any man's roof, till somehow or another

I was secure? Now comes this man, and, with incontinence of tongue, blabs out the very thing he most should conceal, and then lies down to a good, quiet, snoring sleep. I looked again. His face was old, and worn, and miserable. So should mine enemy look. And yet it was sad to gaze upon him, poor hunted creature!

I would gaze no more, lest I grew weak and pitiful. Thus I took my hat, and softly opened the door. The wind blew in, but did not disturb him, he was so utterly weary. I was out in the open air of night. The storm was ceasing, and instead of the black sky of doom, that I had seen when I last looked forth, the moon was come out, wan and pale, as if wearied with the fight in the heavens; and her white light fell ghostly and calm on many a well-known object. Now and then, a dark torn cloud was blown across her home in the sky, but they grew fewer and fewer, and at last she shone out steady and clear. I could see Padiham down before me. I heard the noise of the water-courses down the hill-side. My mind was full of one thought, and strained upon that one thought, and yet my senses were most acute and observant. When I came to the brook, it was swollen to a rapid tossing river; and the little bridge, with its hand-rail, was utterly swept away. It was like the bridge at Sawley, where I had first seen Nelly; and I remembered that day even then, in the midst of my vexation at having to go round. I turned away from the brook, and there stood a little figure facing me. No spirit from the dead could have affrighted me as it did; for I saw it was Grace, whom I had left in bed by her mother's side.

She came to me, and took my hand. Her bare feet glittered white in the moonshine; and sprinkled the light upwards, as they plashed through the pool.

"Father," said she, "Mother bade me say this." Then pausing to gather breath and memory, she repeated these words, like a lesson of which she feared to forget a syllable.

"Mother says, 'There is a God in Heaven; and in His house are many mansions. If you hope to meet her there, you will come back and speak to her; if you are to be separate for ever and ever, you will go on; and may God have mercy on her, and on you!' Father, I have said it right—every word."

I was silent. At last I said—

"What made Mother say this? How came she to send you out?"

"I was asleep, Father, and I heard her cry. I wakened up, and I think you had but just left the house, and that she was calling for you. Then she prayed, with the tears rolling down her cheeks, and kept saying—'Oh, that I could walk!—Oh, that for one hour I could run and walk!' So I said, 'Mother, I can run and walk. Where must I go?' And she clutched at my arm; and bade God bless

me; and told me not to fear, for that He would compass me about; and taught me my message: and now, Father, dear Father, you will meet mother in Heaven, won't you—and not be separate for ever and ever?" She clung to my knees, and pleaded once more in her mother's words. I took her up in my arms, and turned homewards.

"Is your man there, on the kitchen floor?" asked I.

"Yes!" she answered. At any rate, my vengeance was not out of my power yet.

When we got home I passed him, dead asleep!

In our room, to which my child guided me, was Nelly. She sat up in bed, a most unusual attitude for her, and one of which I thought she had been incapable of attaining to without help. She had her hands clasped, and her face rapt, as if in prayer; and when she saw me, she lay back with a sweet ineffable smile. She could not speak at first; but when I came near, she took my hand, and kissed it, and then she called Grace to her, and made her take off her cloak and her wet things, and, dressed in her short scanty nightgown, she slipped in to her mother's warm side, and all this time my Nelly never told me why she summoned me; it seemed enough that she should hold my hand, and feel that I was there. I believed she had read my heart; and yet I durst not speak to ask her. At last she looked up. "My husband," said she, "God has saved you and me from a great sorrow this night." I would not understand, and I felt her look die away into disappointment.

"That poor wanderer in the house-place is Richard Jackson, is it not?"

I made no answer. Her face grew white and wan.

"Oh," said she, "this is hard to bear. Speak what is in your mind, I beg of you. I will not thwart you harshly; dearest John, only speak to me."

"Why need I speak? You seem to know all."

"I do know that his is a voice I can never forget; and I do know the awful prayers you have prayed; and I know how I have lain awake, to pray that your words might never be heard; and I am a powerless cripple. I put my cause in God's hands. You shall not do the man any harm. What you have it in your thoughts to do I cannot tell. But I know that you can not do it. My eyes are dim with a strange mist, but some voice tells me that you will forgive even Richard Jackson. Dear husband—dearest John, it is so dark, I cannot see you; but speak once to me."

I moved the candle—but when I saw her face, I saw what was drawing the mist over those loving eyes—how strange and woeful that she could die! Her little girl lying by her side looked in my face, and then at her; and the wild knowledge of death shot

through her young heart, and she screamed aloud.

Nelly opened her eyes once more. They fell upon the gaunt, sorrow-worn man who was the cause of all. He roused him from his sleep, at that child's piercing cry, and stood at the door-way looking in. He knew Nelly, and understood where the storm had driven him to shelter. He came towards her:—

"Oh, woman—dying woman—you have haunted me in the loneliness of the Bush far away—you have been in my dreams for ever—the hunting of men has not been so terrible as the hunting of your Spirit,—that stone—that stone!"—he fell down by her bedside in an agony—above which her saint-like face looked on us all, for the last time, glorious with the coming light of heaven. She spoke once again:—

"It was a moment of passion—I never bore you malice for it. I forgive you—and so does John, I trust."

Could I keep my purpose there? It faded into nothing. But above my choking tears, I strove to speak clear and distinct, for her dying ear to hear, and her sinking heart to be gladdened.

"I forgive you, Richard; I will befriend you in your trouble."

She could not see; but instead of the dim shadow of death stealing over her face, a quiet light came over it, which we knew was the look of a soul at rest.

That night I listened to his tale for her sake; and I learnt that it is better to be sinned against than to sin. In the storm of the night mine enemy came to me; in the calm of the grey morning I let him forth, and bade him "God speed." And a woe had come upon me, but the burning burden of a sinful, angry heart was taken off. I am old now, and my daughter is married. I try to go about preaching and teaching in my rough, rude way; and what I teach is how Christ lived and died, and what was Nelly's faith of love.

THE CHORDS OF LOVE.

THE heart's best treasures lie in secret mines,
As precious gems of earth are buried deep;
The basest metal on the surface shines,
And quick-moved feelings are least worth and cheap.

The chords of love cannot be swept by all;
Some strike them rudely, and the sound is hollow;

Whilst, if a gentler touch upon them fall,
The sweetest music will as surely follow.

A low-breathed whisper may ignite the spark
That lies concealed in the bosom's keeping,
And kindle brightness where all once was dark,
Wakening affection which before was sleeping.

How sweet to know that when our bodies die,
And with the damp cold earth are slowly blending,
Ere 't is in Memory's sacred depths they lie,
Cherish'd by Love unspeakable, unending.

And when in brighter worlds we meet again,
And welcome those we lost at Heaven's wide
portal,
Thy dearest ties of life shall still remain;
Hearts shall be ours which we had shared when
mortal.

THE DEATH OF A GOBLIN.

THERE is a bye-street, called the Pallant, in an old cathedral city—a narrow carriage-way, which leads to half-a-dozen antique mansions. A great number of years ago, when I began to shave, the presence of a very fascinating girl induced me to make frequent calls upon an old friend of our family who lived in one of the oldest of these houses, a plain, large building of red brick. The father, and the grandfather, and a series of great great and other grandfathers of the then occupant, Sir Francis Holyoke, had lived and died beneath its roof. So much I knew; and I had inkling of a legend in connexion with the place, a very horrible affair. How and when I heard the story fully told, I have good reason to remember.

We were in the great dark wainscoted parlour one December evening; papa was out. I sat with Margaret by the fireside, and saw in the embers visions of what might come to pass, but never did. Ellen was playing at her harpsichord in a dark corner of the room, singing a quaint and cheerful duet out of Grétry's *Œur de Lion* with my old school-fellow, Paul Owen, a sentimental youth, who became afterwards a martyr to the gout, and broke his neck at a great steeple-chase. "The God of Love a bandeau wears," those two were singing. Truly, they had their own eyes filleted. The fire-light glowed, when it occasionally flickered on the cheek over which Paul was bending, could not raise the semblance of young health upon its shining whiteness. That beautiful white hand was fallen into dust before Paul Owen had half earned the wedding-ring that should encircle it.

"Thanks to you, sister—thanks, too, to Grétry for a pleasant ditty. Now, don't let us have candles. Shall we have ghost stories?"

"What! in a haunted house?"

"The very thing," cried Paul; "let us have all the story of the Ghost of Holyoke. I never heard it properly."

Ellen was busy at her harpsichord again, with fragments from a *Stabat Mater*. Not Rossini's luscious lamentation, but the deep pathos of that Italian, who in days past "*mercebat et dolebat*," who moved the people with his masterpiece, and was stabbed to death by a rival at the cathedral door.

"Why, Ellen, you look as if you feared the ghosts."

"No, no," she said; "we know it is an idle tale. Go to the fire, Paul, and I will keep you solemn with the harpsichord, in order that you may not laugh while Margaret is telling it."

"Well, then," began Margaret, "of course this story is all nonsense."

"Of course it is," said I.

"Of course it is," said Paul.

Ellen continued playing.

"I mean," said Margaret, "that really and truly no part of it can possibly be anything but fiction. Papa, you know, is a great genealogist, and he says that our ancestor, Godfrey of Holyoke, died in the Holy Land, and had two sons, but never had a daughter. Some old nurse made the tale that he died here, in the house, and had a daughter Ellen. This daughter Ellen, says the tale, was sought in marriage by a young knight who won her good-will, but could not get her father's. That Ellen—very much unlike our gentle, timid sister in the corner there—was proud and wilful. She and her father quarrelled. His health failed, because, the story hints mysteriously, she put a slow and subtle poison into his after-supper cup night after night. One evening they quarrelled violently, and the next morning Sir Godfrey was gone. His daughter said that he had left the house in anger with her. The tale, determined to be horrible, says that she poisoned him outright, and with her own hands buried him in an old cellar under this room. That cellar-door is fastened with a padlock, to which there is no key remaining. Not being wanted, it has not been opened probably for scores of years."

"Well!"

"Well—in a year or two the daughter married, and in time had children scampering about this house. But her health failed. The children fell ill, and, excepting one or two, all died. One night——"

"Yes."

"One night she lay awake through care; and in the middle of the night a figure like her father came into the room, holding a cup like that from which he used to drink after his supper. It moved inaudibly to where she lay, placed the cup to her lips; a chill came over her. The figure passed away, but in a few minutes she heard the shutting of the cellar-door. After that she was often kept awake by dread, and often saw that she was visited. She heard the cellar-door creak on its hinge, and knew it was her father coming. Once she watched all night by the sick bed of her eldest child; the goblin came, and put the cup to her child's lips; she knew then that her children who were dead, and she herself who was dying, and that child of hers, had tasted of her father's poison. She died young. And ever since that time, the legend says, Sir Godfrey walks at night, and puts his fatal goblet to the lips of his descendants, of the children and children's children of his cruel child. It is quite true that sickness and death occur more frequently among those who inhabit this house than is to be easily accounted for. So story-tellers have accounted for it, as you see. But it is certain that

Sir Godfrey fell in Palestine, and had no daughter."

Ellen continued playing with her face bowed down over the harpsichord. Margaret, a healthy cheerful girl, had lived generally with an old aunt in the South of England. But the two girls were mourning. In the flower of her years their mother had departed from them, after long lingering in broken health. The bandean seemed to have been unrolled from poor Paul's eyes, for, after a long pause, which had been filled by Ellen's music, he said,

"Ellen, did you ever see Sir Godfrey?"

She left her harpsichord and came to him, and leaning down over his shoulder, kissed him.

Was she thinking of the sorrow that would come upon him soon?

The sudden closing of a heavy door startled us all. But a loud jovial voice restored our spirits. Sir Francis had come in from his afternoon walk and gossip, and was clamouring for tea.

"Why, boys and girls, all in the dark! What mischief are you after?"

"Laughing at the Holyoke Ghost, papa," said Margaret.

"Laughing, indeed; you look as if you had been drinking with him. Silly tale! silly tale! Look at me, I'm hale and hearty. Why don't Sir Godfrey tackle me? I'd like a draught out of his flagon."

A door below us creaked upon its hinges. Ellen shrank back visibly alarmed.

"You silly butterfly," Sir Francis cried, "it's Thomas coming up out of the kitchen with the candles you left me to order. Tea, girls, Tea!"

Sir Francis, a stout, warm-faced, and warm-hearted gentleman, kept us amused through the remainder of that evening. My business the next day called me to London, from whence I sailed in a few days for Valparaiso. While abroad, I heard of Ellen's death. On my return to England, I went immediately to the old cathedral city, where I had many friends. There I was shocked to hear that Sir Francis himself had died of apoplexy, and that Margaret, the sole heir and survivor, had gone back, with her health injured, to live with her aunt in the South of England. The dear old house, ghost and all, had been to let, and had been taken by a schoolmistress. It was now "Holyoke House Seminary for Young Ladies."

The school had succeeded through the talent of its mistress; but although she was not a lady of the stocks and backboard school, the sickness among her pupils had been very noticeable. Scarlet fever, too, had got among them, of which three had died. The school had become in consequence almost deserted, and the lady who had occupied the house was on the point of quitting. Surely, I thought, if this be Sir Godfrey's work, he is as relentless an old goblin as can be imagined.

For private reasons of my own, I travelled

south. Margaret bloomed again; as for her aunt, she was a peony in fullest flower. She had a breezy house by the sea-side, abominated dirt and spiders, and, before we had been five minutes together, abused me for having lavender-water upon my handkerchief. She hated smells, it seemed; she carried her antipathy so far as to throw a bouquet out of the window which I had been putting together with great patience and pains for Margaret.

We talked of the old house at—

"I tell you what it is, Peggy," she said, "if ever you marry, ghost or no ghost, you're the heir of the Holyokes, and in the old house you shall live. As soon as Miss Williams has quitted, I'll put on my bonnet and run across with you into the north."

And so she did. We stalked together into the desolate old house. It echoed our tread dismally.

"Peggy," said Aunt Anne with her eyes quite fixed, "Peggy, I smell a smell. Let's go down stairs." We went into the kitchen.

"Peggy," the old lady said, "it's very bad. I think it's Sir Godfrey."

"O aunt!" said Margaret, laughing; "he died in Palestine, and is dust long ago."

"I'm sure it's Sir Godfrey," said Aunt Anne.—"You fellow," to me, "just take the bar belonging to that window-shutter, and come along with me. Peggy, show us Sir Godfrey's cellar."

Margaret changed colour. "What," said the old lady, "flinch at a ghost you don't believe in! I'm not afraid, see; yet I'm sure Sir Godfrey's in the cellar. Come along."

We came and stood before the mysterious door with its enormous padlock. "I smell the ghost distinctly," said Aunt Anne.

Margaret didn't know ghosts had a smell.

"Break the door open, you chap." I battered with the bar, the oaken planks were rotten and soon fell apart—some fell into the cellar with a splash. There was a foul smell. A dark cellar had a very little daylight let into it,—we could just see the floor covered with filth, in which some of the planks had sunk and disappeared.

"There," said the old lady, "there's the stuff your ghost had in his cup. There's your Sir Godfrey who poisons sleepers, and cuts off your children and your girls. Bah! We'll set to work, Peggy; it's clear your ancestors knew or cared nothing about drainage. We'll have the house drained properly, and that will be the death of the Goblin."

So it was, as our six children can testify.

Early in January will be published, (with a copious Index,) Price Three Shillings,

THE FIRST VOLUME OF THE

EIGHTEEN HUNDRED AND FIFTY.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 41.]

SATURDAY, JANUARY 4, 1851.

[Price 2d.]

THE LAST WORDS OF THE OLD YEAR.

THIS venerable gentleman, christened (in the Church of England) by the names One Thousand Eight Hundred and Fifty, who had attained the great age of three hundred and sixty-five (days), breathed his last, at midnight, on the thirty-first of December, in the presence of his confidential business-agents, the Chief of the Grave Diggers, and the Head Registrar of Births. The melancholy event took place at the residence of the deceased, on the confines of Time; and it is understood that his ashes will rest in the family vault, situated within the quiet precincts of Chronology.

For some weeks, it had been manifest that the venerable gentleman was rapidly sinking. He was well aware of his approaching end, and often predicted that he would expire at twelve at night, as the whole of his ancestors had done. The result proved him to be correct, for he kept his time to the moment.

He had always evinced a talkative disposition, and latterly became extremely garrulous. Occasionally, in the months of November and December, he exclaimed, "No Popery!" with some symptoms of a disordered mind; but, generally speaking, was in the full possession of his faculties, and very sensible.

On the night of his death, being then perfectly collected, he delivered himself in the following terms, to his friends already mentioned, the Chief of the Grave Diggers and the Head Registrar of Births:

"We have done, my friends, a good deal of business together, and you are now about to enter into the service of my successor. May you give every satisfaction to him and his!

"I have been," said the good old gentleman, penitently, "a Year of Ruin. I have blighted all the farmers, destroyed the land, given the final blow to the Agricultural Interest, and smashed the Country. It is true, I have been a Year of Commercial Prosperity, and remarkable for the steadiness of my English Funds, which have never been lower than ninety-four, or higher than ninety-seven and three-quarters. But you will pardon the inconsistencies of a weak old man.

"I had fondly hoped," he pursued, with much feeling, addressing the Chief of the

Grave Diggers, "that, before my decease, you would have finally adjusted the turf over the ashes of the Honourable Board of Commissioners of Sewers; the most feeble and incompetent Body that ever did outrage to the common sense of any community, or was ever beheld by any member of my family. But, as this was not to be, I charge you, do your duty by them in the days of my successor!"

The Chief of the Grave Diggers solemnly pledged himself to observe this request. The Abortion of Incapables referred to, had (he said) done much for him, in the way of preserving his business, endangered by the recommendations of the Board of Health; but, regardless of all personal obligations, he thereby undertook to lay them low. Deeper than they were already buried in the contempt of the public, (this he swore upon his spade) he would shovel the earth over their preposterous heads!

The venerable gentleman, whose mind appeared to be relieved of an enormous load, by this promise, stretched out his hand, and tranquilly returned, "Thank you! Bless you!"

"I have been," he said, resuming his last discourse, after a short interval of silent satisfaction, "doomed to witness the sacrifice of many valuable and dear lives, in steamboats, because of the want of the commonest and easiest precautions for the prevention of those legal murders. In the days of my great grandfather, there yet existed an invention called Paddle-box Boats. Can either of you gild the few remaining sands fast running through my glass, with the hope that my great grandson may see its adoption made compulsory on the owners of passenger-steam-ships?"

After a despondent pause, the Head Registrar of Births gently observed that, in England, the recognition of any such invention by the legislature—particularly if simple, and of proved necessity—could scarcely be expected under a hundred years. In China, such a result might follow in fifty, but in England (he considered) in not less than a hundred. The venerable invalid replied, "True, true!" and for some minutes appeared faint, but afterwards rallied.

"A stupendous material work;" these

were his next words; "has been accomplished in my time. Do I, who have witnessed the opening of the Britannia Bridge across the Menai Straits, and who claim the man who made that bridge for one of my distinguished children, see through the Tube, as through a mighty telescope, the Education of the people coming nearer?"

He sat up in his bed, as he spoke, and a great light seemed to shine from his eyes.

"Do I," he said, "who have been deafened by a whirlwind of sound and fury, consequent on a demand for Secular Education, see *any* Education through the opening years, for those who need it most?"

A film gradually came over his eyes, and he sunk back on his pillow. Presently, directing his weakened glance towards the Head Registrar of Births, he asked that personage:

"How many of those whom Nature brings within your province, in the spot of earth called England, can neither read nor write, in after years?"

The Registrar answered (referring to the last number of the present publication), "about forty-five in every hundred."

"And in my History for the month of May," said the old year with a heavy groan, I find it written: 'Two little children whose heads scarcely reached the top of the dock, were charged at Bow Street on the seventh, with stealing a loaf out of a baker's shop. They said, in defence, that they were starving, and their appearance showed that they spoke the truth. They were sentenced to be whipped in the House of Correction.' To be whipped! Woe, woe! can the State devise no better sentence for its little children! Will it never sentence them to be taught!"

The venerable gentleman became extremely discomposed in his mind, and would have torn his white hair from his head, but for the soothing attentions of his friends.

"In the same month," he observed, when he became more calm, "and within a week, an English Prince was born. Suppose him taken from his Princely home, (Heaven's blessing on it!) cast like these wretched babies on the streets, and sentenced to be left in ignorance, what difference, soon, between him, and the little children sentenced to be whipped? Think of it, Great Queen, and become the Royal Mother of them all!"

The Head Registrar of Births and the Chief of the Grave Diggers, both of whom have great experience of infancy, predestined, (they do not blasphemously suppose, by God, but know, by man) to vice and shame, were greatly overcome by the earnestness of their departing friend.

"I have seen," he presently said, "a project carried into execution for a great assemblage of the peaceful glories of the world. I have seen a wonderful structure, reared in glass, by the energy and skill of a great natural genius, self-improved: worthy descendant of

my Saxon ancestors: worthy type of industry and ingenuity triumphant! Which of my children shall behold the Princes, Prelates, Nobles, Merchants, of England, equally united, for another Exhibition—for a great display of England's sins and negligences, to be, by steady contemplation of all eyes, and steady union of all hearts and hands, set right? Come hither my Right Reverend Brother, to whom an English tragedy presented in the theatre is contamination, but who art a Bishop, none the less, in right of the translation of Greek Plays; come hither, from a life of Latin Verses and Quantities, and study the Humanities through these transparent windows! Wake, Colleges of Oxford, from day-dreams of ecclesiastical melo-drama, and look in on these realities in the daylight, for the night cometh when no man can work! Listen, my Lords and Gentlemen, to the roar within, so deep, so real, so low down, so incessant and accumulative! Not all the reedy pipes of all the shepherds that eternally play one little tune—not twice as many feet of Latin verses as would reach from this globe to the Moon and back—not all the Quantities that are, or ever were, or will be, in the world—Quantities of Prosody, or Law, or State, or Church, or Quantities of anything but work in the right spirit, will quiet it for a second, or clear an inch of space in this dark Exhibition of the bad results of our doings! Where shall we hold it? When shall we open it? What courtier speaks?"

After the foregoing rhapsody, the venerable gentleman became, for a time, much enfeebled; and the Chief of the Grave Diggers took a few minutes' repose.

As the hands of the clock were now rapidly advancing towards the hour which the invalid had predicted would be his last, his attendants considered it expedient to sound him as to his arrangements in connexion with his worldly affairs; both, being in doubt whether these were completed, or, indeed, whether he had anything to leave. The Chief of the Grave Diggers, as the fittest person for such an office, undertook it. He delicately enquired, whether his friend and master had any testamentary wishes to express? If so, they should be faithfully observed.

"Thank you," returned the old gentleman, with a smile, for he was once more composed; "I have Something to bequeath to my successor; but not so much (I am happy to say) as I might have had. The Sunday Postage question, thank God, I have got rid of; and the Nepalese Ambassadors are gone home. May they stay there!"

This pious aspiration was responded to, with great fervor, by both the attendants.

"I have seen you," said the venerable Testator, addressing the Chief of the Grave Diggers, "lay beneath the ground, a great Statesman and a fallen King of France."

The Chief of the Grave Diggers replied, "It is true."

"I desire," said the Testator, in a distinct voice, "to entail the remembrance of them on my successors for ever. Of the statesman, as an Englishman who rejected an adventitious nobility, and composedly knew his own. Of the King, as a great example that the monarch who addresses himself to the meaner passions of humanity, and governs by cunning and corruption, makes his bed of thorns, and sets his throne on shifting sand."

The Head Registrar of Births took a note of the bequest.

"Is there any other wish," enquired the Chief of the Grave Diggers, observing that his patron closed his eyes.

"I bequeath to my successor," said the ancient gentleman, opening them again, "a vast inheritance of degradation and neglect in England; and I charge him, if he be wise, to get speedily through it. I do hereby give and bequeath to him, also, Ireland. And I admonish him to leave it to his successor in a better condition than he will find it. He can hardly leave it in a worse."

The scratching of the pen used by the Head Registrar of Births, was the only sound that broke the ensuing silence.

"I do give and bequeath to him, likewise," said the Testator, rousing himself by a vigorous effort, "the Court of Chancery. The less he leaves of it to his successor, the better for mankind."

The Head Registrar of Births wrote as expeditiously as possible, for the clock showed that it was within five minutes of midnight.

"Also, I do give and bequeath to him," said the Testator, "the costly complications of the English law in general. With which I do hereby couple the same advice."

The Registrar, coming to the end of his note, repeated, "The same advice."

"Also, I do give and bequeath to him," said the Testator, "the Window Tax. Also, a general mismanagement of all public expenditure, revenues, and property, in Great Britain and its possessions."

The anxious Registrar, with a glance at the clock, repeated, "And its possessions."

"Also, I do give and bequeath to him," said the Testator, collecting his strength once more, by a surprising effort, "Nicholas Wiseman and the Pope of Rome."

The two attendants breathlessly enquired together, "With what injunctions?"

"To study well," said the Testator, "the speech of the Dean of Bristol, made at Bristol aforesaid; and to deal with them and the whole vexed question, according to that speech. And I do hereby give and bequeath to my successor, the said speech and the said faithful Dean, as great possessions and good guides. And I wish with all my heart, the said faithful Dean were removed a little farther to the West of England and made Bishop of Exeter!"

With this, the Old Year turned serenely on

his side, and breathed his last in peace. Whereon,

— With twelve great shocks of sound,
Was clash'd and hammer'd from a hundred towers,
One after one,

the coming of the New Year. He came on, joyfully. The Head Registrar, making, from mere force of habit, an entry of his birth, while the Chief of the Grave Diggers took charge of his predecessor; added these words in Letters of Gold. MAY IT BE A WISE AND HAPPY YEAR, FOR ALL OF US!

MRS. RANFORD'S NEW YEAR'S DINNER.

It was Christmas morning. Winter had set in with December, and snow had been lying on the ground for most of the month. The whole country lay white and quiet. The sun rose this morning in a cloudless sky, and made promise of a splendid day. The glad-some bells were heard ringing out from distant villages; there was a murmur of music in the air which called forth a respondent music in the heart. The roads were beaten hard, yet, untouched by any sullying thaw, were almost as dazzlingly pure as the fields around. Through the clear, keen air went long lines of wild fowl, seeking yet unfrozen streams in this pinching time. The very rooks, tamed by severity, came into the gardens, and appealed to the compassion of man.

As the morning advanced, a fresh peal of bells, from the different churches, called forth multitudes of people, wrapped in overcoat and cloak, with warm gloves, and furs and muffs; and there were happy families of old and young nodding to other happy families, and exchanging the old congratulations of a merry Christmas and a happy New Year. Soon the pealing bells rose in their kindling energy to a perfect sough and jubilation of sound, then sinking in tremulous cadence, suddenly ceased, and the congregations of the people found themselves face to face with each other and with God.

In two churches in Lincolnshire sate two men, each thinking of the other; each known to the world as the other's bitter enemy; each regarding the other as the most vindictive and dishonest of men. These men did not live in the same town. The one sate in his parish church in Wainfleet, the other beneath that noble tower so oddly termed Boston Stump. He who sate in Boston was a ruined man; he who sate in Wainfleet had ruined him. The one had been prosperous and happy, and might have said, with many such a man before him, "What can move me?" But all this had been changed as by witchcraft. The man of Wainfleet had dragged him down in a long and desperate struggle. The happiness of his home had been destroyed; his good name stained as by the inky waters of Erebus; his friends—all those fast friends

estranged from him! They regarded him as a base and unfeeling hypocrite.

Thus sate this man, listening to the words of the collect:—"Almighty God! who hast given us thy only-begotten Son, to take our nature upon him, and at this time to be born of a pure Virgin; grant that we, being regenerate, and made thy children by adoption and grace, may daily be renewed by thy Holy Spirit through the same our Lord Jesus Christ, who liveth and reigneth with thee, and the same Spirit, ever one God, world without end, Amen!" There was a solemn murmur of "Amen! Amen!" and the man also uttered the "Amen" with his lips, but it was not in his heart. On that heart sate the sense of hugest injuries, and burned the bitterness of intensest resentment. Wherever he looked, he saw only faces which wore the meek air of devotion, yet those people had done him the foulest wrong; had refused to listen to his most earnest pleadings; had combined with his foes to dishonour and ruin him. Long years of integrity had not weighed one straw in the balance with them against the artful assertions of his foes.

Those things rankled in his soul like fire. He saw those who had eaten at his table, laughed by his fireside, and in his social hours seen his heart laid bare in its generous truthfulness. Some of these quondam friends occupied his ancient family pew; he himself sate in a humble and distant nook, half hidden by one of the ponderous pillars of the side aisle. His wife lay at home the victim of a wearing sickness, but his only daughter sat beside him, and wept silently to herself. The ghosts of old times passed in long trains through her mind, and the words of the hymn,

"Goodwill to sinful man is shown,
And peace on earth is given"—

perhaps reminded her how little goodwill had been shown to them; how little peace they found on this earth. When, therefore, the clergyman took his text—"Then came Peter to him, and said, Lord, how oft shall my brother sin against me, and I forgive him? Till seven times? Jesus said unto him, I say not unto thee until seven times, but until seventy times seven"—the tears of the daughter fell faster, and she cast a gentle look at her father, as if imploring him to listen to that. But on the brow of Mr. Longmore, for that was his name, there sate a hard, stern expression, and he said to himself, "I have no brother—there is no such thing! Do I not know them?" But the clergyman's voice was now softly and impressively calling on the congregation to remember the new and godlike era which had commenced with the first Christmas Day. How the old and terrible doctrines of vengeance and blood had been thrown down from their woeful reign of ages; how the spirit of an eye for an eye, and a tooth for a tooth, had been superseded by the spirit of love. How

the angelic anthem of "Peace on earth and goodwill amongst men" had been worked out with a divine reality by the Son of God, and over the earth had gone a breath of heaven destined to cherish peace and kindness—art, and science, and literature; pregnant with triumphs, not of blood, but of magnanimity; not of strong men over one another, but of souls over their evil passions; every succeeding age assimilating this earth more and more to the dignity and felicity of the heaven there revealed.

Longmore shook his head, and said inwardly, "Bah! mere visions. After eighteen hundred years, where are the proofs? Have I not seen? Do I not know? Oh, sycophants! sycophants!" But his attention was again arrested by his daughter softly laying her hand on his arm. He listened. The preacher was describing the career of Christ. How, after all his deeds of goodness, and his life of love, his friends had all deserted him in the evil hour, and his foes had insulted and slain him. "And Jesus lifted up his eyes to heaven on the cross, and said, Father, forgive them, for they know not what they do."

"Oh! they knew it very well," said Longmore, in his desperate mood. "They must know it. The base wretches are always the same. Forgive them! No! I cannot forgive them. Christ might do it. He was a divine being—it is easy to God, but it is not easy, it is not possible, for me—I am but a poor, weak, down-trodden worm. No! no!"

The tears of his daughter flowed faster, as she stooped low and buried her face in her handkerchief. It seemed as if she felt the spirit that was raging in her father's bosom.

But, meantime, what were the thoughts of the man of Wainfleet? Of the lawyer who had so triumphantly conducted the cause of his client, and had so completely dragged down the usurper, Longmore, as he firmly believed him, from his proud altitude to the dust of retribution and of shame? On the last Christmas Day he had sate there in the very flush of triumph, and had thanked God that he was not such as Longmore: that he was not like him a convicted knave, still less like him a pauper, with the memory of such past greatness. But Broadhurst, the lawyer, did not sit thus now. He was a crest-fallen, spirit-fallen man. A dreadful discovery had come upon him. He had ruined one more upright and noble-minded than himself, to elevate a worthless pretender. He had blasted a well-deserved name; had struck the dagger of domestic misery into three kindred hearts; had done that which he would, if possible, give worlds to undo. He sate and wept as the doctrine of heaven's highest philosophy, "Do unto others as thou wouldst that they should do unto thee," was preached over his head. "Oh Lord, forgive me my heavy sins! Grant me life and strength to repair what I have ruined. Touch the heart

of that injured man, and turn it to forgiveness; for all things are in Thy power, and it is Thy doctrine, and Thy law." Thus ran his words in the inward tears of his soul, and to every sentiment of love and blessed retribution, his "Amen! Amen!" went up like the flames of a heart on fire.

What then had taken place between these men? But two years ago, Longmore was a wealthy wool merchant of Boston. He had led a pleasant and jolly life. His business had grown immensely. His premises were large; his connections both at home and abroad extensive, and such was his reputation for integrity and capital that he commanded the market over a vast district. He was a tall, large, florid man, of a peculiarly open and cordial character. He was liberal in his ideas, and the leading man in the politics and social movements of his neighbourhood. His family consisted only of his wife, a quiet, pleasant woman, and a fair, blue-eyed girl, his daughter. He kept a noble table, and delighted to have his friends about him. At that time he thought friends as plenty as blackberries, and laughed at the croaking of those moral philosophers who had for ages promulgated a different idea. He dubbed them book-worms, and said they did not know life. When he went round the country to buy up the farmers' wool, his progress was a regular course of feasting and merriment. They all knew of his coming, and assembled their neighbours for a blithe evening. Thus Longmore made his annual rounds, despatching an extraordinary amount of business amid the overflowing hospitalities of farm-houses, granges, and halls.

His doctrine of the prolific growth of friendship, spite of the lucid calculations of book-worms, received a grand confirmation when he was about five-and-forty, in the bequest of a fine estate in Northamptonshire. It was the result of an acquaintance accidentally made abroad; it owed everything to friendship, nothing to consanguinity. From that time, till a few years turned fifty, Longmore had chiefly resided on this estate. It was a beautiful place. The house stood in a fine country, and a fine park. His business was conducted by an old faithful servant. It seemed as if Fortune was resolved that Longmore should go down to his grave in his very charitable views of human nature.

But, about three years before the time we saw Longmore at his Christmas morning devotions, the scene changed. There sprang up a man, a butcher of Gainsborough, who claimed to be the true heir to the Northamptonshire estate; and, after some faint rumours, which rose and died away again, Mr. Longmore was astonished, and a good deal disconcerted, by the receipt of a letter from an eminent solicitor of Wainfleet, calling upon him, in the name of his client, Mr. Filmer, to restore to him the estate of his late relative, Mr. John Churton.

Mr. Longmore, who, with all his pleasant and sunny humour, was a peculiarly sensitive and impulsive man, read this letter, uttered his indignation in no gentle terms, and knowing that he derived his claim from his friend Churton's honest will, made in his most florid health, bade the lawyer do his worst.

That worst was done. We will not travel minutely through all those years of angry exasperation. Mr. Longmore's character was high; that of his adversary, Filmer, just the reverse. We may, therefore, imagine Longmore's astonishment when the active lawyer, Broadhurst of Wainfleet, asserted through the ablest counsel, that Longmore had taken advantage of the decayed intellects of the late Mr. Churton to concoct a will to his own advantage. We may imagine how this astonishment rose when the housekeeper of Mr. Churton, whom Longmore had himself rendered independent by voluntarily doubling the annuity left her by her master, was brought forward to attest the weakness of the testator's faculties, and that Longmore had carefully excluded from the sick bed of Mr. Churton every one but his own family, and that the dying man had been upheld by brandy to enable him to put his signature to the deed.

So well had Broadhurst laid his mine, that Longmore found himself blown, as it were, at once into the air. So well had the pleader described the wrong done to the poor and oppressed heir, whom he painted as a most deserving person, and so astounding was the evidence of the housekeeper, that a verdict was at once given in favour of the plaintiff. Longmore was at first struck dumb and senseless as by a stupefying shock; but the impetuosity of his temper, which, during the long, smooth course of his life, had only manifested itself in generous and hasty outbursts of feeling, now very soon assumed the fury of a tornado. His indignation against what he termed and deemed the villany of the lawyer, and the black ingratitude of the housekeeper, was too tremendous to find its way out at once, but it came by degrees into action that seemed resolved to tear down everything between him and his vengeance on the plotters against him. He rushed into the contest with a vehemence which alarmed his family and friends, and gave the most decided advantage to his watchful opponents. Trial after trial came off, the most eminent counsel were retained at the most stupendous cost, and for some time public opinion was pretty equally divided on the merits of the case. But before the next year was at an end, Longmore beheld with inexpressible amazement, and with feelings of indescribable irritation, his enemies rapidly turning the scale against him, his friends growing mysteriously cool, and his capital exhausted by the gigantic contest. At the end of that period he found himself standing alone, regarded as the convicted usurper of another's rights, and his former

high character only remembered to point the public astonishment at the real baseness it was supposed to have concealed. His estate was absolutely lost; he was called on to refund long arrears of income, while the prodigal expenditure in law had left him unable to comply with these demands. In proportion to his former affluence, was now the rapacity of his creditors. He saw himself gibbeted in the Gazette, and the wreck of his property torn to shreds in the hands of his legal executioners.

What a Christmas Day was that which passed soon after this extraordinary change in his fortunes! Instead of the gaiety and rich banqueting at Longmore Park, with many friends around him, with laughter and rejoicing beneath the large kissing-bush in the servants' hall, and the brilliant dance in the old saloon, the ruined and dejected Longmore was occupying a poor house in a poor street of his native town—that town where he had so long lived in honour and esteem. A single maid servant waited at that melancholy table, at which sate down, in gloomy silence, Longmore, his wife, and daughter. His numerous friends, where were they? Longmore answered that question in his heart with a dreary curse, his wife with a trembling frame, and his daughter with a few silent tears. The fallen man now confessed that the philosophers, of all ages, were the truly wise men; that he had been the fool. Experience had set its seal afresh to the ancient melancholy truth.

Between that wretched Christmas and the one following, Longmore had been employed in attempting to reconstruct a refuge from absolute indigence, from the fragments of his former trade. There had been but one sole creature, out of his own house, who had stood firmly by him, and believed him still to be a just and cruelly-used man. That was his widowed sister, Mrs. Ranford, of Blant Farm, about fourteen miles from the town. She had provided him a moderate capital, and he commenced in small premises—his former ample ones still stood empty—but they were far too great for his present means, labouring, as he did, under a ponderous load of public prejudice, and under the still more disqualifying condition of his own mind. For his whole intellectual tone was changed. He looked on his fellow men as destitute of truth and real virtue. He saw in them only selfish and malignant dissemblers. His soul was full of darkness and gall. He cared not to live, but he submitted to it as a necessity. His misfortunes had prostrated the never strong frame of his wife, but the wreck of his once manly, generous, and buoyant-hearted disposition had prostrated it far more. His daughter wept bitterly and daily over the evidences of the frightful change which had taken place in him. All those impulses which had formerly been for good, were now perverted into impulses of deadly wrath, and

deep contempt of his race. He plodded on in his business with an unconquerable spirit, but with indifferent success, for there was scarcely a person with whom he had formerly dealt who did not regard him as a justly fallen man, and whom he did not regard as false and heartless.

But already Providence was silently moving round that great system of the universe which brings truth invariably to the daylight. When Longmore learned that the final decision was given against him, he drove away from Longmore Park, accompanied by his wife, in precipitate haste. He was too proud to allow the emissaries of Broadhurst to eject him from the spot like a homeless dog. But Mary Longmore, the daughter, staid behind, to pack up many little things which she could not bear the idea of leaving to the unhallowed hands of the butcher Filmer. She had scarcely completed her task, and sent off the packages, when she appeared likely to encounter the occurrence which her father had shrunk from. A carriage drew up to the door, out of which she saw a number of men issue, and one was announced immediately as desiring to speak with her. A young man, of handsome person, and with a frank and gentlemanly air, presented himself, respectfully apologising for the cause which brought him there.

"You are Mr. Broadhurst's clerk?" said Miss Longmore, somewhat astonished at the young man's appearance and bearing.

"I am his son, Madam," he replied, again bowing.

"I am sorry for it," replied Miss Longmore, bearing up as bravely as she could against her overpowering sensations. "I wish you had an honest business here."

"Madam," replied the young man, with a mixture of mildness, and yet of spirit, as vindicating his father; "I am well aware how this matter must appear to you, and deplore it sincerely, but we believe our business to be quite proper." He reminded her of the decisive nature of the housekeeper's testimony, and begged that they might no farther pursue the painful subject.

Miss Longmore, with the tears starting into her eyes, declared that God must one day expose her awful perjury.

"It is quite natural you should think so," added the young man, feelingly.

"It is quite natural," replied Miss Longmore, "because all the facts of the case have been familiar to me from childhood. What should there be so strange in a friend who owed his life and fortune to my father, leaving that fortune to him?"

"Life and fortune!" said the young man, "What is that? Of that there was no mention on the trial."

"There was mention," replied Miss Longmore, "but the fact was borne down by ridicule. If you wish to hear the truth, hear it now, then. When my father was a very

young man, happening to be in Calais, he saw a young gentleman, whom he perceived at once to be an Englishman, surrounded by a low crowd, with whom he was in contention. They attempted to drag the young gentleman away, but he manfully resisted. My father, with his usual impulsiveness, immediately placed himself beside his countryman, and demanded that the infuriated crowd should hear reason, and show fair play. But they were deaf to this, and, without knowing the ground of the quarrel, my father exhorted the young man to unite with him in driving off the throng. At once, they placed themselves with their backs against a wall and in a boxing attitude, and struck some effective blows against their adversaries. All foreigners have a horror of the pugilistic powers of Englishmen. After no very sharp fight, the crowd took to flight, and my father was about to march off in triumph his unknown companion, when a posse of gendarmes surrounded them, and compelled them to the presence of a magistrate. Here, when their names had been demanded, and proved, by their passports at their respective inns, to be correct, the case was heard; and as the people who had been in the fray, represented the assault to have commenced with the Englishmen, my father and the stranger, for whose sake he had entered into this dispute, were ordered a month's imprisonment in a place of confinement seven miles distant, and they were accordingly marched away, handcuffed together, between two gendarmes.

"The day was already declining when they set out, and it bade fair to be night before they reached their destination. As they proceeded, they took care to ascertain whether their guides understood English. They found that they certainly did not. The young gentleman in whose cause my father was thus suffering, was—Mr. Churton. He lamented bitterly this chance, and declared that it would be his utter ruin, for that a trial, regarding an estate—this very estate—must come on in the meantime, and his absence would be the assured loss of his cause, and leave him a penniless man.

"My father, with that reckless impetuosity which has ultimately been so fatal to him, declared at once that they would attempt a rescue. He knew if they failed that it would be death to them, but this did not weigh a moment with him. Mr. Churton agreed, and on arriving at a solitary place, where four roads met in the woods, just as it was growing dark, my father and Mr. Churton suddenly inclosed each his man with his free arm, and brought them face to face between them. The gendarmes had loaded carbines at their sides, but these, by this sudden movement, became useless; and the two powerful young Englishmen declared that if the gendarmes made any outcry or resistance, they would at once strangle them. The men, who were of inferior strength, were so convinced of

their power to carry their threat into effect, that they gave up the key of the fetters at their demand. My father compelled one of them to unlock the fetters from the wrists of himself and companion; took the carbines from the gendarmes, threw them into the ditch full of water by the roadside, and then binding the two gendarmes back to back with their own fetters, and securing their legs with their handkerchiefs, they left them standing in the middle of the road, assuring them that if they made any outcry, they would return and shoot them. They then made the best of their way to the neighbouring coast. It was already dark when they arrived there, but, hearing a boat not far from the strand, they shouted, and received an answer in English. They soon found that the vessel was an English fishing-boat, and explaining their case, begged to be taken on board. But the fishermen declared that they had no dingy or small boat with them, and that if they came on board, they must wade or swim. Churton could not swim; but destruction was behind them: my father was an admirable swimmer, and a very powerful man; he encouraged Churton to make the attempt. They waded into the dark waters, but long before they could reach the boat, they were beyond their depth. The fishermen protested that they dared not come a yard nearer, on account of rocks. There was nothing else for it: my father flung off his coat, bade Churton hold fast by his waistcoat collar behind, and struck out for the vessel. It was a case of life and death. If Churton lost his presence of mind, and flung his arms round my father, or if my father's strength failed him, they were both inevitably lost. But Churton preserved his coolness, and by desperate effort, my father reached the side of the boat, and both were safely drawn on board. There, furnished with additional clothes to defend them from the cold, and with homely fare, the two young men remained for two days and nights with the fishermen, ere they put across to Dover. But there, at length, they landed; paid the fishermen handsomely; Churton was in time for his trial, won it, and from that day, his life long, was my father's friend.

"Sir," continued Miss Longmore, "it is well known that Mr. Churton was a shy and solitary man; but his intellects were as good as yours or mine. He never married, and always declared, that in case of his prior decease, he would leave my father his property, by whom it had been saved to him. There was no scheming, no force used. I have found within these few days abundant evidence in Mr. Churton's letters through many years to my father, both of his clear understanding, and of his unvarying resolve to make my father his heir."

"Good heavens!" exclaimed the young lawyer; "why were not these letters brought forward?"

"I have told you, Sir," replied Miss Longmore, blushing, "that these facts were mentioned by my father's counsel: but the whole thing was so cleverly ridiculed by the opposite counsel, as a pretty sentimental romance, that my father, very much in opposition to his advocate, insisted on this part of the evidence being abandoned, and on the counsel taking his stand on the clear integrity of the will."

"These letters, if they are what you say, Madam," rejoined the young lawyer, "would prove the case beyond everything else."

"I have always thought so," said Miss Longmore; "but my father became so exasperated, that he hardly knew what he did."

"I would give anything to see those letters," said young Mr. Broadhurst. "I would not have such a wrong lie at my father's door for the world, if those letters are as you describe them. Would you allow my father to see them? I mean with every precaution for their safety."

Miss Longmore paused a moment, and then said, "I would."

Mary Longmore left the lawyer and the officers in possession of Longmore Park; but she did it with a feeling of resignation which she had believed impossible. There had sprung up a hope in her bosom, which, though it seemed to arise from a very minute seed, she could not prevent taking firm hold. When young Broadhurst told his father of what Miss Longmore had said, he only laughed; and cried, "A most romantic story, truly!" and added, "That's a pretty girl, Tom; mind you don't fall in love with her now she has lost the estate." But before a month was over, Tom had prevailed on his father to meet Miss Longmore at a friend's house in Boston, and, in the presence of the lady of the house, he was permitted to read the numerous letters of the late John Churton.

From that hour Mr. Broadhurst was an altered man. He saw that a huge wrong had been done—a noble-minded man and true had been cruelly hunted down, shamefully maligned, and ruined. With this knowledge in his possession, he made a visit to the housekeeper, whose deposition had carried the day against Longmore, and charged her so solemnly and searchingly with her perjury, that she trembled in every limb, but remained steadfast to her tale. In a few months after, the news came that she was married to Filmer, the new proprietor of Longmore Park. The man was a low brute, and his marriage of the housekeeper came over the country like a flash of lightning breaking upon the darkness. The motive of her evidence now stood sufficiently revealed. In less than twelve months more, Filmer's savage treatment of her, and the terrors of conscience, had laid her on her bed. A hasty message came from her to Mr. Broadhurst; he hastened to the Park, and there, in the presence of the clergyman and a neighbouring magistrate, he took down, and saw her set her hand to her confession. Her evi-

dence on the trial was false—Filmer had bribed her with money and a promise of marriage.

From the moment that Broadhurst had seen the letters of the late Mr. Churton, he resolved, if it was in his power, to remedy the evil he had so zealously, but so unwittingly, done. He did not hesitate to declare openly, that circumstances had now come to his knowledge, which totally altered his view of the case. He sent, and candidly confessed this to Mr. Longmore, begged him to forgive him, if possible, and promised that not only his most strenuous professional exertions, but his fortune should be at his command to rectify the terrible error that he had committed.

"Rogue!" exclaimed Longmore; "he has got all he can by wresting the estate from me, and now his fingers itch for as much more in winning it back again!"

More inveterate than ever became his resentment against the lawyer. But when the news of the housekeeper's confession came—and Broadhurst was the first to communicate it, telling him that the case was now quite clear, and that the property might be recovered with ease—every one expected that Longmore would "forgive and forget," and that all past differences would be ended by the happiness in prospect. This was the joyful feeling of Mrs. Longmore and Mary. Mrs. Longmore, at first overcome by the glad tidings, soon began to show symptoms of returning strength, though this return was slow in its progress. Mary seemed to breathe a new atmosphere of happiness. Life looked to her like a bright summer morning, the brighter for the last night's thunder-storm. There wanted only the restoration of her father's cheerfulness to complete her felicity. But that did not come. The mind of Longmore underwent a change, but it was not such as was universally expected. He rose from a degree of darkness and oppression, but it was not to peace and joy. He was not without exultation, but it was dashed with the spirit of indignant vengeance. "The fools! the villains!" he exclaimed, when any one congratulated him on the discovery of the base plot to defraud him of his property. "Don't I know it was a base plot? Did not I always know it? They knew it themselves—all those grand friends of mine; they knew me—they had known me for forty years. Was I likely all at once to become a scamp and a cheat? Do honourable men become devils all at once? Was I likely to cajole or compel any one into a false will? Let the whole rotten-hearted world go!—I want none of it. They are all hollow—hollow as drums, and false and mean as death and sin!" It was thus that Longmore felt and reasoned.

But the property was not recovered. Though two months had passed since the confession of the housekeeper, Longmore had not taken a single step. He seemed to have a stern pleasure in showing the world that he did not

care for it. He delighted in launching the bolts of his contempt on the whole of his species. We have seen him at church on Christmas morning, and what was the spirit of his devotions.

But on New Year's Day he was going to dine at Blant Farm with his sister, Mrs. Ranford. *She* was a true woman! She had stood firmly by him as a tower. "That *was* a woman," he said, "true as steel, genuine as God's day-light. He believed that the whole crawling, creeping, venomous herd of things called men, would have been long ago swept into the Red Sea but for the sake of one or two like her." That day, after a hearty luncheon, Mr. Longmore mounted his gig, and set out towards Blant Farm. Little did he know that, precisely at the same moment, Broadhurst of Wainfleet mounted his gig and set out from his own door towards the same Blant Farm. The two men had to pursue the two sides of a rectangular triangle which, at the distance of about fourteen miles, would bring them to a point exactly at Mrs. Ranford's gate. Had Longmore known that fact, he would have rushed again into his own house and believed the end of the world come, since sister Ranford could thus deceive him. But Broadhurst did know it, and yet he went. The fact was, that certain things had taken place which, for good reasons, neither Longmore nor the reader have yet been informed of—the right moment, it was thought, had not come. Young Tom Broadhurst had been so much struck with Mary Longmore in his interview at the Park, that, from that moment, he felt a wonderful persuasion that there had been some gross mistake in the whole business. He was sure that truth and goodness beamed as clearly out of those mild blue eyes, and from those handsome, amiable features, as light from the sun. Longmore could not be a very great rogue to have such a daughter; and Mary thought Broadhurst could not be a very great one to have such a son. "What a fine, frank fellow he seems," she said to herself. "How willing he seems to believe the truth. What a beautiful earnestness in seeking it out!" In fact, there was a case, such as lawyers seldom get upon *their* books, a case of love at first sight. It was a case clear, positive, and most particular; Romeo and Juliet themselves never stood so suddenly enchanted between the hostile hosts of their two fiery houses. Tom Broadhurst let no grass grow under his feet; he soon had his father on the right track. Mary and he met—how many times? Well, it really is amazing how many times they found it necessary to see each other in the course of a very few weeks, to put things in a train. Mrs. Ranford was soon taken into the secret, and, with her clear, strong mind, took in the whole thing, the love affair and all, heartily. Mary passed a deal of time at Blant Farm, and Tom Broadhurst rode over there continually. It was

quite necessary! But as to that love affair, neither Longmore nor Broadhurst were suffered to know a word of it. Tom said he would not for the world that his father should be suspected of having any interest in doing justice to Mr. Longmore, but the justice itself; and as to Longmore knowing! why, they might just as well think of blowing up the gas-works and all the steam engines in Boston and Wainfleet! Then, indeed, Longmore would declare Broadhurst a rogue, who was for anything for his own interest!

But Mrs. Ranford was resolved on an explanation, and therefore she planned the bringing together her brother and Mr. Broadhurst at her New-Year's Day dinner. It was a daring project; it struck even Mary and Tom Broadhurst with unutterable dismay. Mrs. Longmore, who was in the secret, was terrified beyond conception; it had actually thrown her into a serious relapse. But Mrs. Ranford was a woman of a bold spirit and decisive will; she determined that the experiment should be made. Mrs. Ranford resembled her brother greatly in person; she was a tall, large, florid, and very comely woman, and ten years younger. Her husband had been dead some years, and Mrs. Ranford had had numbers of most advantageous offers, but, no, she declared that she *was* married to her dear Ned; he was only gone on the journey that she should take after him some day. She would *not* have two husbands. Mrs. Ranford was a first-rate farmer; her house stood on the top of that step of country that runs on through Lincoln, and looked far and wide over the flats below; it was a good farm-house, with a flower-garden and with outbuildings, and stock that showed her management and science; she led a life very much to her taste, and ruled very much in her own way, and was resolved now to try her power over her brother. "It was time to put an end to all this heart-burning and misunderstanding;" she said, "There had been enough of it."

Longmore drove that afternoon over those immense flats that lie between Boston and Blant Farm. The air was clear and very keen; the whole country was one level sheet of whiteness, only here and there broken by a long line of stunted willows, one of those funny little windmills that are set by the sluggish dykes to propel the water, a solitary willow-surrounded farm, with an occasional round haystack eaten out by the cattle into the shape of a huge mushroom, or a dreary stretch of black fir-trees far away in the distance. It was little more than four o'clock when Longmore was ascending the steep hill to Blant Farm, but it was already dark, piercing cold, and some fine flakes of snow made him say to himself, "We shall have another downfall." Mrs. Ranford's dinner was not till six o'clock, but she had begged her brother to be there early, both on account of the short days and because she wanted

some talk with him. It was to be a family party, with the exception of Broadhurst and his son, and the clergyman and his wife, to whom Mrs. Ranford had imparted her scheme, and implored the vicar's aid in the crisis.

Longmore, on entering his house, met his sister in the hall, and they embraced each other affectionately. Mary, who had been there some days, remained in the drawing-room, for she was too much terrified to venture out. Mrs. Ranford having seen her brother relieved of his coats and wrappers, opened the drawing-room door, and purposely allowed him to go in first. Scarcely did he, however, set his foot in the room, than he turned round, and with a fierce low outburst of—"The devil!" he plunged past Mrs. Ranford in the direction of the hooks on which hung his hat and coat. Mrs. Ranford had probably expected something of the kind, for she suddenly opposed her large calm person in his way—and as he gave her a terrible look, saying—

"You, sister! you!" she seized him by both arms, and said—

"Brother! brother! show yourself a man and a Christian. There are things to tell you that will set everything right."

At the same moment Mary rushed from the room, clasped his knees, and cried in agonised tones—"Oh, father! father!"

But Longmore had by this time grasped his hat with one hand, thrust it upon his head, snatched his great coat with the other, had given himself a furious shake loose, and dashed out of the door. The scene he left behind was awful. Mary Longmore had sunk down on the floor where her father had left her, and was weeping convulsively. Mrs. Ranford was exclaiming,

"What a madman! What a fury! But he *shall* be brought to reason."

Tom Broadhurst stood over Mary, whispering to her something which only seemed to increase, if either, the violence of her grief; and Mr. Broadhurst almost wept.

"Stop him, Mrs. Ranford! Send after him! I won't stand in his way. I will retire to the inn." And with that Mr. Broadhurst also snatched his hat, and rushed out.

What a New Year's dinner-party! what an upshot of the experiment! Mrs. Ranford did not send after her brother. She knew very well she might just as rationally send for Lincoln Minster; but she set about to comfort Mary, telling her never to fear—all *should* be right yet; her father's proud spirit *should* be made to bend. It was a miserable scene.

Meantime Longmore had hastened into the stableyard, where his horse was not yet got out of his harness—made the man put him in again in desperate speed, jumped into the gig, and drove off. The snow was now falling in masses—a keen east wind drove it into his face and bosom—it was pitch dark, and neither man nor horse could tell which was

road, and which was not. But the storm within Longmore's breast raged far more fiercely than it did without. He lashed his horse, and whirled on. But even the horse began to slacken, spite of the whip, and betrayed unmistakable symptoms of uncertainty and reluctance to proceed. Longmore gave him some unmerciful cuts, which for a while sent him forward at a good rate. But again the poor horse stopped; and in response to the whip only reared, wheeled aside, and refused to go. None but a madman would attempt such a road on such a night. The horse evidently thought so, and therefore stood stock still, in spite of the murderous inflictions of Longmore's whip. At length Longmore saw that it was no use to urge him. "Fool!" he exclaimed; gave the rein a pull, to the left, and the poor animal, joyfully obeying the hint, turned, and proceeded at a rapid rate towards the farm. He would have stopped at Mrs. Ranford's gate; but again Longmore applied the whip, and the gig rolled expeditiously on to the village-inn. Here Longmore flung the reins on the horse's neck, and stalked into the house. There was a considerable crowd of labourers drinking and smoking in the common room, who, as well as the landlady, stared to see him enter.

"Put up my horse," he said; and was proceeding to enter the parlour.

"I beg your pardon, Sir," said the landlady; "but that room is engaged."

"Show me another, then," said Longmore. The landlady opened another door, saying—

"But there is no fire, Sir!"

"Then make one," said Longmore, gruffly; and entering, flung himself on the sofa, in his snow-covered clothes and hat. The landlady quickly brought a light, and attempted to light the fuel already in the grate; but the sticks were damp. They refused to kindle, and the poor woman hastily clearing out the grate, brought forth wood and live coal from the kitchen. In vain! The chimney was damp; the smoke drove down, and filled the room; Longmore bade her angrily let the fire alone, and go. She made her exit in evident alarm.

Longmore sat gloomily on the sofa. The room was deathly cold; the smoke filled his eyes and lungs with its sharp, suffocating vapour—he looked round and wished himself dead. But something now caught his attention. The room was only divided from the next by a thin wooden partition. The landlord was holding a garrulous talk with some guest there, and every word he uttered was as audible as if in the room itself. Longmore started. He heard his own name. Yes!—there it was again.

"So he's likely, I hear, to get the property back again. They say the old woman has peached; but I know not. If she was bought one way she may be bought another, and Longmore is a determined man."

"Silence!" said another voice—it was no

other than that of Broadhurst—Longmore trembled with excitement at the sound. "Silence!"—said Broadhurst—"I cannot allow you to say a word against Mr. Longmore. I tell you, and I if any man should know, he has been foully injured and misrepresented. It was all a mistake, and that bad woman clenched it. No! Longmore—and I beg you will everywhere say so, from me—Longmore, from what I have lately learned, is as noble, true-hearted a man as ever lived. Sir, I would give my right-hand to do him justice; and justice, if there is a God in heaven, he will yet have done him."

"Lord-o-mercy!" exclaimed the landlord, "do you say so?" "Yes, I say so," replied Broadhurst; "till justice is done to that man the load of a mountain lies on my heart."

Longmore turned deadly pale as he heard these words. He sunk down again upon the sofa, whence he had started on hearing these voices, laid his head on the table, and seemed shaken by some terrible convulsion. In another minute he rose up, still pale, but with an eager look passed out of the room, entered that where Broadhurst was, and, putting out his hand to the astonished lawyer, said, "I heard what you said—I believe you." The lawyer, still more astonished, and looking as if an apparition had suddenly stood before him—yet clutched at the offered hand—seemed to groan out rather than speak, "Almighty God he thanked!" and the two desperate foes stood thus till a gush of tears appeared on Broadhurst's face. "Now, God be praised, all is right," Broadhurst again ejaculated. "Yes!—all is right!" repeated Longmore.

"You must dine with me," said Broadhurst. "Good God, what have I not to say to you!"

"Nay," said Longmore, "we must not dine here. Think how we left them at my sister's. We must go there at once."

"Right! Right!" said Broadhurst, and the next moment the astonished people in the kitchen saw these two men, who for years had been engaged in such a deadly strife, going arm-in-arm swiftly out of the house.

What the state of affairs was at Mrs. Ranford's may well be imagined. Mary was overwhelmed with the most vehement grief; Tom Broadhurst stood over her, holding her hand, and every now and then bidding her to be comforted—all would go well yet—all the time looking himself a picture of despair. Mrs. Ranford, after marching to and fro in great agitation, and abusing her brother, heartily, as the most obstinate of animals, had sat down, moodily, in her easy-chair, by the fire, and seemed more in a state of deep anger than of sorrow. Her scheme had failed signally, as everyone had told her it would; she had, to all appearance, aggravated affairs dreadfully; she was too much mortified to be really sorry. The clergyman and his wife came in. They saw at a glance what had happened. A few indignant words from Mrs.

Ranford, and Mary's tears, told everything. There fell a deep and blank silence on the party. What a New Year's dinner-party! Never was there such a wretched scene of utter desolation. In the midst of it came a violent ring at the bell. All started. Mary Longmore gave a shriek, and stood trembling with clasped hands and death-like face. "Something dreadful has happened to that wilful man!" exclaimed Mrs. Ranford going impetuously towards the door. At that moment the door opened, and Longmore and Broadhurst entered together. Before any of them could recover from their astonishment, Longmore said, "It is all right!" and caught his sister in his arms, and embraced and kissed her outrageously. Then he caught his daughter to his heart, who, at those words, flew to him, and embraced and kissed her still more outrageously. Then he shook hands with Tom Broadhurst and the clergyman, both together; and they shook his hands, and he shook theirs again; and then he would most likely have kissed the clergyman's lady, only she and Mrs. Ranford were most passionately kissing and crying at one another at the very time.

Never was there such a hearty, cordial, general reconciliation and felicitation. Longmore seemed at one effort to have flung off all his gall and misanthropy. In the midst of their joy, they seemed to forget the other great event of their meeting—the dinner; the hour was long past. Nobody before had had any inclination to eat, from sorrow; now they had forgotten it, for joy. But at length, up came the turkey, up came the roast beef, up came the game, the plum-pudding, and all the tarts, mince-pies, and knick-nackeries; and what a dinner was there after all! How triumphant Mrs. Ranford looked! Her generalship had succeeded after all. How bright Mary looked; how pleased Tom and his father looked! and as for Mr. Longmore, he never seemed so large, so florid, so jovial; all his old jollity and grandeur of good-heartedness seemed come back again at once. Everybody wondered, as they came to look at each other, and smile at each other, and talk to each other, how in the world it was possible that people, so excellent as they were, and so made for each other's society, could have made such a dismal blunder as they had made. Mary observed, with a quiet smile, that Oliver Goldsmith had explained it all long ago.

"How so?" asked her father, astonished. "How could he, when he did not know us?"

"Well," said Mary, "he must have known us, or people exactly like us—for he said that all this sort of thing came of people not knowing one another."

"God bless us!" said Longmore, looking quite astonished, "how precisely true that is! Let us drink to Oliver's immortal memory."

"With all our hearts!" was echoed from all sides of the table.

"And add, 'God bless us' to it," said the clergyman.

"Bravo!" said Broadhurst—"Oliver Goldsmith, and God bless us!"

The toast was drunk amid a strange accompaniment of smiles and tears.

The rest of our story is short. Every one may imagine it. The speedy recovery of Longmore Park; the repurchase of the ample old wool warehouses, for Longmore would rebuild all his old trade again, and make his rounds amongst his old former friends again; the marriage of Tom and Mary, and a score of other good things which all sprung from the happy change begun by Christmas, and completed by Mrs. Ranford's New Year's Dinner.

THE BURIAL OF THE OLD YEAR.

We were a mighty multitude
That, mourning for the Old Year, stood,
The great, the poor, the wise, the good,
The wicked, and the fair;
No matter for their rank or place;
The beggar; he of noble race;
All come to pay a farewell grace
To the departed Year.

It had been snowing day and night,
And the sable earth had a fringe of light,
As the velvet pull hath a border of white
When they mourn a virgin dead;
And the solemn wind sang mournfully
A dirge of deep solemnity;
And the stars looked down from the cold grey sky,
And the moon sailed overhead.

Why art thou robed in thy pure white dress,
Thy type of virgin loveliness?
Our load is a load of wickedness,
Of sin, and want, and gloom:
Loaded with every vice and crime,
That has stained the children of every clime,
Throughout all lands, throughout all time,
Was the Year that we entomb!

Fearful and hushed, and awed, and still,
Was Nature: on every sloping hill
The frost had chained each trick'ling rill,
And stiffened each rippling wave;
The very wind had a muffled sound,
As it swept o'er the snow-encrusted ground,
And went moaning sadly round and round
The brink of the new-made grave!

They brought the corpse to his lowly bed:
We saw in the moonlight the aged head
Bowed down by the weight of the tears he had shed
In his mortal pilgrimage;
But there was a fleeting shadow-like smile,
As a halo around his lips the while,
The last faint trace of a youth without guile,
Had lingered till mournful age.

Then there were groans, and sobs, and sighs,
And uplift hands, and tearful eyes,
And wailing moans, and piercing cries,
And many a heavy breast;
And those he had treated cruelly
Looked on him even mournfully,
And murmured low and pityingly,
"God send his soul may rest!"

And they parted a path through the close-pressed throng,

And I stepped to the grave side, the crowd among;
For they saw I was moved by the Spirit of Song,
To lament for the cold corpse clay;
And I stood by his narrow resting-place,
And looked my last on his dear old face,
And prayed for him to God's great grace,
And kissed him where he lay.

A solemn voice chimed the midnight hour
From the height of an old embattled tower,
And struck by a more than mortal power,
A deep bell 'gan to toll;
And I stood erect, and cast my eyes
Up to the stars in the dark drear skies,
And hearing only mourning sighs,
I prayed for the parted Soul.

"Father!—earth's nations in their joy and pain
"Look up to Thee: let it not be in vain!
"We pray Thee that this parted year may rest
"With his old brethren; may their home be blest!
"Hark the bell tolls!
"And with that knell arises in our souls
"The memory of what has passed away. This Year
"Hath plundered us of many we held dear,
"Hath taken from us many a precious One,
"Hath left us desolate, bereaved, alone!
"Father! our hearts are lifted at this time
"Above the world, of sin, and guilt, and crime:
"Those this Year injured, those he heaped with
gain,
"Alike pray for him: Father! not in vain!
"We bury in his grave our memories
"Of wrongs and woes, and guilts, and injuries:
"We offer up a sacrifice divine
"Of human passions at this funeral shrine:
"Within this dead Year's misty shroud we lay
"Our crimes, revenges, evermore away!
"So, may the Aged Man before Thy throne,
"Burdened with our sins, and with his own,
"Alike by Thy great love, all sins forgiven,
"Await our coming, with pure joy—in Heaven!"

THE IRISH CALIFORNIA.

TOWARDS the end of the session of 1849, Lord Ashley and the O'Gorman Mahon astonished the House of Common with a piece of intelligence of that kind which, in popular phrase, is described as seeming far too good to be true. They announced a discovery that upwards of ninety pounds might be made out of one hundred tons of Irish peat, by an outlay of sixteen pounds—namely, eight pounds for the peat, and the same sum for the magic requisite to turn it into cash. Now there are in Ireland two million eight hundred and thirty thousand acres of peat bog, varying in depth from six to forty feet. At the above rate, the products of peat would have returned some five hundred per cent. Thus, one-seventh of the whole surface of Ireland would have proved to be a territory far exceeding in wealth the most auriferous of regions—California proper, El Dorado, or the imaginary domains of Mr. Thomas Tidlar.

Experiment, however, it was found, had not yet warranted a dependence on these golden

premises, and the magnificent expectations which had been entertained from peat were forgotten.

That is to say, they were forgotten by the British public, but not by the gentleman whose enterprise had given occasion for them, and the result of whose attempts to utilize peat, prematurely disclosed, formed the substance of the foregoing statements. Mr. Owen, the gentleman in question, having, in a letter to the "Times," rectified the mistake that had been made as to the conclusiveness of the experiments whereon those statements had been founded, continued quietly to prosecute his designs upon peat, till he had succeeded in ascertaining what was really to be hoped from it, with sufficient precision to obtain for the estimate respectful quotation in the money-article of the rather celebrated journal just mentioned. It appears that a yield, not indeed of five hundred, but at least of one hundred per cent., may be expected from the material. One hundred per cent. derivable from peat, will be a benefit to Ireland commensurate with her bogs, the area and contents of which, it must be admitted, are considerable. Peat, which, save that it was used as an inferior sort of fuel, was heretofore merely one of the encumbrances of Irish estates, bids fair to be, henceforth, a mine of wealth to Ireland.

Now, it may be said that there are two methods of mining. One consists in simply digging into the earth, and getting out its riches. In the other case the miner does not penetrate into the mere globe of the earth, but into the several substances of the earth's productions. He extracts his wealth out of the very matter itself of which this or that thing is composed. So he gets starch out of wheat, or sugar out of beet-root, not to mention a multitude of other valuables obtained from different sources. This miner is the chemist. By chemistry, treasures are detected in rubbish—are derived from apparently useless refuse and offal. For instance, chemistry it is, that can make above cent per cent out of a tangled mass of weeds, the matted medley of half-decayed mosses, rushes, grasses, and heather, constituting peat.

It had been known for some time that there was treasure in peat; but the question was how to get at it, unless at an expense which would have equalled or exceeded its worth. This problem was at last effectually solved by Mr. Roes Reece, the scientific co-adjutor of Mr. Owen, by the invention of a process for which he has obtained a patent, and of the nature of which, by the favour of Mr. Reece, a general idea will be presented to the reader.

It must be premised that the produce of peat consists of—sulphate of ammonia, value twelve pounds per ton; acetate of lime, fourteen pounds; naphtha, five shillings per gallon; paraffine, one shilling per pound; and two varieties of oil, at one shilling per gallon,

respectively. All these products, except the sulphuric acid in the sulphate of ammonia, and the lime in the acetate of lime, are entirely derived from the peat. The consumption of thirty-six thousand five hundred tons of peat in a year would, it is computed, give an amount of goods equivalent to twenty three thousand six hundred and twenty-five pounds, leaving, after the deduction of the cost of production, eleven thousand nine hundred and eight pounds profit.

For the benefit of our non-chemical friends, it must also be observed that the paraffine (which is a sort of vegetable spermæol), the naphtha, the oils, the ammonia, and the acetic acid, do not exist severally in the peat ready-formed. They cannot be extracted from it, as acid, and sugar, and fragrant essential oil can be got out of an orange, for instance, or tan out of oak bark, or bitter extract out of hops. Though they come out of the peat, they are not in it. An explanation of this somewhat paradoxical remark may seem due to the class of readers just now addressed.

Peat, like all other vegetable substances, consists of the elementary principles or forms of matter (elementary, as far as we yet know) called carbon, oxygen, and hydrogen. It also, like all animal, and some but not all vegetable matter, contains another such-like elementary principle termed nitrogen. These four elements, combined chemically in different proportions, constitute everything that can possibly be made or obtained from a purely animal or vegetable substance. According to the number and proportion in which they combine, is the nature of every individual compound which they form; it may be food, it may be poison; it may serve for furniture, for clothing, for fuel. As the letters of the alphabet by various arrangements form a vast number of words, so by different combinations do these elements compose a multitude of things. For example, carbon, hydrogen, and oxygen, united in the proportions of four of the first, six of the second, and two of the last, make alcohol or spirit of wine. Twelve of carbon, eleven of hydrogen, and eleven of oxygen, constitute gum. Nitrogen and oxygen united in equal proportions, become the well-known "laughing gas;" in the proportions of one of nitrogen to five of oxygen, they constitute corrosive nitric acid or aquafortis. And carbon, oxygen, hydrogen, and nitrogen, variously combined, constitute the several substances procured from peat—namely, paraffine, naphtha, oils, acetic acid, and ammonia.

Simply to mix these elements in the proportions required to generate a particular substance, is not sufficient to make it. For that purpose they must be blended by a union more intimate than that of mere mechanical mixture. They must be amalgamated by chemical combination, so as to be intermingled in the minutest particle of the compound. To accomplish this is more or less difficult in

different cases; in that of peat, the task is very easy.

Fill the bowl of a common tobacco-pipe with some peat, and cap it with pipe-clay. Put the bowl of the pipe into a red-hot fire. In a few minutes a smoke will issue from the end of the stem. That smoke contains all the products which are the riches of the peat. Nothing more is necessary than to collect it, separate its components, and purify them. Mere heat has disengaged the elements of the peat, and recombined them in the new arrangements of paraffine, oils, and other matters already enumerated. Thus has been described a schoolboy's experiment; but that experiment is, in little, the process termed "Destructive Distillation," by which peat is decomposed, and converted into those materials.

Now, to effect the destructive distillation of peat, as by the tobacco-pipe, on a large scale, it would be necessary that the huge retort, corresponding to the bowl of the pipe, should be made of iron, because any other materials would be too thick and cumbrous, or otherwise inconvenient. But as the retort would have to be placed in a furnace, and heated red-hot, it would speedily share the fate, well known to all good housewives, of a kitchen boiler in which no water is kept. To speak chemically, it would quickly become oxidised; in ordinary language, it would soon be spoiled. Moreover the furnace would require an immense quantity of fuel, the cost of which, added to that of the used-up retorts, would come to more money than the proceeds of the concern would be worth. These difficulties, and some others, till recently stood in the way of obtaining from peat those important commodities which it had for some time been suspected to be capable of affording. They appear to have been completely surmounted at last by Mr. Reece. He dispenses altogether with a retort, and at the same time economizes fuel to the utmost extent, by the following very ingenious, and equally simple contrivance.

A large furnace is built of brick. It is closed at top by a moveable cover. On one side, near the base, it has an aperture connected with a blowing-cylinder, through which air is injected by means of a steam-engine, acting as a great pair of bellows. On the other side of the furnace, near the top, is another aperture, whereto is fitted a convoluted pipe, or worm, terminating in a receiver, or condenser, immersed in cold water. The furnace is filled with peat, and closed down; the peat is ignited at the lower aperture; to this the blowing-cylinder is attached: the steam-engine is set going, and air is pumped in at the rate of three thousand cubic feet per minute, for the consumption of one hundred tons of peat in twenty-four hours. A comparatively small stratum of peat, lying immediately above the blast-hole, is all that is burnt, in the ordinary sense of the word. This is converted chiefly into carbonic acid gas, and the other gaseous products of the

combustion of vegetable matter. These are forced up by the continued pressure of the steam bellows through the superincumbent mass of peat. They cannot burn it, because in order to do that it would be necessary that they should contain free oxygen. But the combustion going on below, combines all the air impelled into the furnace with carbon to form carbonic acid; which extinguishes fire. The ascending vapours, therefore, hot as they are, absolutely prevent the peat from burning. But they decompose it and distil it, precisely as fire would from actual contact with which it was defended by a closed retort. It is here to be remarked, that the hot carbonic acid gas combines in its ascent with an additional proportion of the carbon of the peat, and becomes converted into carbonic oxide. The products of the decomposition and distillation escape, in the form of smoke, from the upper aperture of the furnace into the worm, and so pass on to be condensed in the receiver.

These products are:—1. Paraffine; which is a peculiar compound of hydrogen and carbon. 2. Naphtha, or wood spirit; an oxygenised combination of the same elements. 3. A volatile oil; and 4. An oil less volatile, being further combinations of those elements. 5. Acetate of Ammonia, which is a compound of all four of the elements—oxygen, hydrogen, nitrogen, and carbon. 6. Carbonate of Ammonia, composed of the same elements in different proportions. 7. Water; or hydrogen combined with oxygen. 8. A mixture of inflammable gases, consisting chiefly of various aeriform combinations of hydrogen and carbon, and of carbonic oxide, the constituents of which are carbon and oxygen. 9. Carbon itself, in a minute state of subdivision, together with impurities, giving the whole mingled proceeds of the combustion their appearance of smoke; a result in which it will be soon seen that the process by no means terminates.

For convenience sake, however, we will still call the mixture of gases and vapours which pass out of the furnace, smoke. This smoke is conducted by the "worm" into the refrigerator, or receiver, essentially just as the vapour of the still is treated in distilling spirits. In this receiver so much of it as is condensible is condensed by the cold fluid surrounding the vessel, and collects in the form of tar and water. The rest of it, which is gaseous, passes away through another pipe to a destination which will be described by-and-by.

In the mixed mass—or mass—of fluid condensed in the receiver we have all the marketable and most important products of the peat, only blended, confused, and jumbled together, in what, seemingly, is a mere medley of dirt and dregs; and the question now is how to get them away, and separate them, and purify them.

The water is drawn off from the tar, which

is easily effected; as the latter is lighter than the former, and cakes, and separates itself from it, and swims upon its surface. With the water the naphtha is also drawn away. The water likewise contains the acetate and carbonate of ammonia, dissolved. One hundred tons of peat furnish from ten thousand to twelve thousand gallons of water, according to the dryness of the material. In ten thousand gallons of this water there is a quantity of ammonia sufficient for the manufacture of one ton of sulphate of ammonia and of acetic acid equal to fourteen hundred weight of grey acetate of lime; there is also contained naphtha to the amount of fifty-two gallons. This floating capital—as we may term it—is thus realised:—

To the condensed liquor which has been separated from the tar is added lime, in the proportion of six hundred weight to ten thousand gallons. The whole is stirred thoroughly for some time; and is then distilled. The vapours driven off by distillation consist of naphtha, and ammonia, or spirit of hartshorn, as it is commonly called. The naphtha is made to fly off simply by the heat. The ammonia is expelled by the agency of the lime on the acetate of ammonia. The lime unites chemically with the carbon, oxygen, and part of the hydrogen of the acetate of ammonia. That is to say, it unites with the acetic acid, in consequence of containing which the substance in question is called an acetate; and which consists of those three elements. The remaining hydrogen with all the nitrogen of the acetate of ammonia, constitute the ammonia itself; which is left free by the lime, and by the additional power of the heat is raised in vapour together with the naphtha. The mixture of the two vapours is conducted into dilute sulphuric acid, contained in a close vessel, to which a naphtha-rectifier is attached. The naphtha passes into the rectifier to be purified by distillation. The ammonia is detained by the sulphuric acid, with which it combines, and forms the salt called sulphate of ammonia, which has only to be crystallised to be reduced to an available form. And so Mr. Reece gets his sulphate of ammonia and naphtha; but he has also to get acetate of lime.

Lime, it will be recollected, was added to the liquor whence the naphtha and ammonia were distilled: and we left it there in combination with acetic acid. In fact, it took the place of the ammonia; and the liquor left in the still is a solution of just that very substance which the question now is how to obtain. This question might be readily solved by evaporating and crystallising the liquid merely: but acetate of lime obtained by this summary process would be in a very impure state. To refine it, therefore, is necessary. Accordingly, the liquor is concentrated by being boiled down till in every one hundred parts of it are contained ten parts of acetic acid combined with lime. Then sulphuric acid is added to it in sufficient quantity to unite with the lime and disengage the acetic acid. The liquor is

now distilled again; and the produce of the distillation is acetic acid. This is again saturated with lime, and thus returns to the state of acetate, the resulting acetate of lime being now sufficiently pure for commercial purposes, and needing nothing further than being boiled down and dried to be ready for the market.

In the processes above described, lime has been represented as dissolving the connexion between ammonia and acetic acid; sulphuric acid as disengaging acetic acid from lime, and as arresting the volatile ammonia and causing it and naphtha to part company. To be understood by all to whom these presents may come, it must be stated that these changes are the result of the play of chemical affinities, different substances having different degrees of attractiveness one for the other, breaking their mutual engagements, and cutting each other out, thus exhibiting behaviour analogous to phenomena occasionally met with in another sphere than that of chemistry. Acetic acid deserts ammonia for lime. Lime again jilts acetic for the more powerful charms of sulphuric acid. These, too, are of a nature so irresistible as to resist and enchain fickle ammonia. But from these interesting analogies we must return to our peat. It has been seen how sulphate of ammonia, acetate of lime, and naphtha are obtained from its watery product; it has now to be shown how the paraffine and the oils are extracted from its tar.

The tar derived from one hundred tons of peat consists of from three hundred to three hundred and fifty pounds of paraffine, and three hundred gallons of oils, with a substance called capnomor (a Greek compound word, merely signifying “part of smoke”) and waste.

This paraffine which holds so important a place among the products of peat, was first discovered in tar by Reichenbach. It is a white, fusible, solid substance, and it has the capability of being distilled without material change. It melts at one hundred and ten degrees (Fahrenheit) into an oily liquid. Like wax, it burns with a beautifully clear white flame. Its combustion is unattended with the slightest smell. Such a substance, obtained cheaply and plentifully, would clearly be a great addition to the common stock of human property. Unfortunately, however, in the preparation of paraffine, the use of ether was necessary. Valuable as was the paraffine, it was not worth the exchange; to consume ether in procuring, it was like throwing sovereigns after crowns. It might have still continued to be a mere chemical curiosity. The practical difficulty, however, of obtaining this commodity, has also been overcome by Mr. Reece.

The tar is melted and carefully freed from water. Whilst it is of a temperature not exceeding one hundred degrees Fahrenheit, twenty gallons of sulphuric acid are added to it. The acid and tar are well stirred together

during twenty minutes. The sulphuric acid decomposes the impurities, combines with them, and precipitates them, or causes them to gravitate to the bottom of the vessel. Thoroughly to effect their separation, hot water is added. They, being heavier than the water, sink. The purer portion of the tar, consisting of the oils and paraffine, floats on the surface of the water, which thus forms an intervening station of partition between it and the dregs. The mixture of paraffine and oils is now drawn off and distilled. The first half part of the products of the distillation is set apart; this consists of the more volatile oil, mingled with some foreign matters. The other half includes the paraffine, together with the oil of the denser sort. This latter product of the distillation is allowed to cool; and then the paraffine crystallises, and may be discovered in the form of flakes, diffused throughout the oil. The mass is now subjected to pressure; and thus the fluid oil is squeezed away from the more solid paraffine. Here, then, it may be supposed, we have the paraffine. True; but we have it qualified with two very serious drawbacks,—its colour is very bad, and its odour is worse. To bleach and to deodorise it, it is subjected to the operation of chlorochromic acid, which has the twofold effect of rendering it both clear and sweet. The paraffine is now of the colour of butter; but, at this stage of its preparation, another obstacle is encountered. It has passed into an amorphous state; that is, it has lost its consistent form; its translucency has also been destroyed. To restore these qualities it is distilled once more. Powerful hydraulic pressure is then applied to it, and, lastly, it is exposed for a considerable time to the action of free steam. And thus, in a presentable shape, eliminated from a mass of foul and fetid tar, we at last get the paraffine.

The oils, both the portion of oil distilled in the first instance from the tar, and that subsequently separated by pressure from the paraffine, have now to be purified. They are mingled together, and a quantity either of caustic potash or soda, or lime, is mingled with them. Lime is preferable on account of its comparative cheapness. Having been well stirred, the mixture is allowed to settle; and then the oils are decanted, and sulphuric acid is added to them. The sulphuric acid combines with any portion of lime that may be suspended in their substance, and throws it down in the form of insoluble sulphate of lime, and with it precipitates other remaining impurities. The mingled oils are now finally distilled, and bleached by chlorochromic acid. Of the product of this ultimate distillation the first sixty parts per cent. constitute the lighter oil, and the remaining portion consists of that which is denser and less volatile.

The gaseous products of the distillation of

the peat remain to be accounted for. They amount, for every one hundred tons of peat, to six million cubic feet of mixed inflammable gases, namely, carburetted hydrogen, olefiant gas, and free hydrogen (this latter varying according to the dryness of the peat), together with carbonic oxide. With these are mingled a certain proportion of nitrogen, and a minute quantity of carbonic acid, both of which are unflammable; but their quantity is too small to interfere materially with the inflammability of the whole. This mixture of gases is conducted away in pipes, and used as fuel for the supply of the steam-engines and the distilling apparatuses; and also to afford sources of heat for drying, steaming, burning lime, and other purposes, in the establishment and its neighbourhood.

We have now—by the help of Mr. Reece—resolved the bulk of our peat into its salt, oils, spirit, and vegetable wax or sperin, and gases. Nothing remains of it on the hearth of the furnace but some three or four tons of "slag," which is allowed to run out, as in the process of smelting iron.

That these products of peat are highly useful, may be inferred from their commercial value, above stated. Sulphate of ammonia is employed in the preparation of the muriate, carbonate, and other salts of ammonia used in medicine, chemistry, and various arts and manufactures. It is also very generally applied as a fertilising agent. Acetate of lime is the source whence is obtained acetic or pyroligneous acid, or distilled vinegar; calico-printers also make great use of it. Naphtha is a substance in great request with hatters, varnish-makers, and all who want a ready and efficient solvent of gums and resins, besides serving for combustion and illumination. Paraffine, in virtue of its close resemblance to the most beautiful wax or sperin, and from its readily combining with those bodies and most fatty matters by fusion, as well as by reason of the whiteness and lustre of the flame with which it burns, is a material fitted for the manufacture of a most elegant description of candles. Its emitting no odour in burning renders it peculiarly eligible for illuminating purposes. The more volatile oil is, like the naphtha, valuable as a solvent of caoutchouc, gutta percha, and various resins and varnishes: the more fixed oil may be combined with tallow or palm-oil, to make grease for lubricating machinery; or mixed with common oil to produce a cheap lamp-oil. It is also convertible into the best kind of lamp-black.

When the peat-bog has been cleared for the purposes of the chemist, it must not be forgotten that the soil laid bare is now amenable to the operations of the husbandman.

The labour of cutting, and otherwise preparing the peat, must of course be a most extensive source of industrial occupation, and afford employment to a vast number of

persons hitherto existing, or rather, vegetating in a state of semi-starvation. Thus not only will peat be converted into acetates and ammoniacal salts, and paraffine, and other hydrocarbons, but will undergo a not less interesting metamorphosis into Irish bacon, Irish beef, Irish bread—let us hope—and thence into Irish bone and muscle. Of its conversion into English plum-pudding, with a view to the latter of these transformations, Mr. Owen has a capital experiment to relate, tried by him at his already established works at Newtown Crommelin, in Antrim. The plum-pudding was a much greater novelty to the poor fellows than the paraffine, at its first discovery, was to the world of chemists.

If any dependence can be placed from facts and figures, and the most intelligible arguments and deductions from scientific data, it does seem that Ireland contains the elements of a prosperity only to be paralleled in amount by her previous wretchedness. The traditional gratitude of Irishmen still honours St. Patrick for having preached all the vermin of their island into the pest-house. They will, probably, have much more reason to thank Mr. Rees Reece and Mr. Owen for the opulence which those gentlemen will have conjured out of the hogs by the beautiful magic of chemistry, aided by capital.

A NEW PHASE OF BEE-LIFE.

ABOUT the middle of an afternoon in July, 1848, we had landed on a low sand-bank, which, for a short distance, skirted the right bank of the stream, for the purpose of encamping for the night; and right glad were we to stretch our limbs after ten hours' paddling. The Indians had started in their wood-skin up the neighbouring creek, in quest of game for our evening's repast, and the women were clearing a space beneath the branches for our hammocks, and collecting fuel for the nightly fire. All who have wandered with the pleasant Waterton in his chivalrous Expedition on the Essequibo, will remember his first guiltless attempt to hook the wary cayman, before seeking more skilful allies in the Indian settlement higher up the river. The sand-bank in which we were about to bivouac, was that mentioned in his narrative, where, for four days, he had impatiently waited for the shades of evening, and as often turned into his hammock at day-break with his longings ungratified.

It was as usual intensely hot in the sun. To seek some relief, for the first time during the day, I strolled—or rather straggled, for every step through the tangled creepers had to be gained by hacking and hewing with a cutlass—down to the cool banks of the creek, whose overhanging branches, forming a magnificent arcade of verdure, almost excluded (or admitted only at distant intervals), the scorching rays.

Seating myself on the smooth grey trunk

of a tree, which lay prostrate across the sluggish water, whose broken limbs shone bright in the gay drapery of a scarlet-blossomed epiphyte, I lighted my pipe, and taking a book from my pocket, began lazily turning over the pages and lightly gleaming the pleasant thought of a witty and social poet. My attention now and again drawn away by the ceaseless tappings of a yellow-headed woodpecker on a decaying tree close at hand, to the glittering flashes of a Karabimitas, a Topaz-throated humming-bird—a frequenter of dark and solitary creeks, capturing flies among the gay petals, for his nest-keeping partner, who, a few paces up the stream was gently swinging with the evening breeze, in her tiny home. I had been in this position for some time, little regarding the whizzing hum of insects constantly passing and repassing—when, my gaze chancing to fall a yard or more from my resting place, I detected a small bright-grey bee, about the third of an inch in length, disappearing in what seemed a solid part of the trunk.

There was no hole or crevice perceptible to the eye, nor did that portion of the bark feel less smooth than that immediately adjoining. I might be mistaken—nay! *I must be*. I had just arrived at this last conclusion, when a tiny piece of the bark was suddenly raised, and out flew the little gentleman I had seen disappear, or one too like him not to belong to the same family. The mystery was solved. Some ingenious bee-architect had devised an entrance-gate, fitting so admirably as to defy discovery when shut; while I was certain that I could lay my finger almost on the precise spot, the closest inspection failed to reveal any trace of its outline. The bark, though polished and even, was covered with faint interlaced streaks, from which even the smoothest bark is never free; and the skilful carpenter had adapted the irregular tracings of nature to his object of concealment. Wishing to inspect the workmanship without injuring its delicacy, I had to wait patiently until it should again fly open; nor was I kept long in expectation, for it presently popped up to permit the egress of another of the fraternity, and a ready twig prevented its descending. I found it designedly crooked and jagged at the edges, with an average width of about a quarter of an inch, and twice that in length: its substance was little more than the outer skin of the bark, and, being still connected at one end, opened and closed as with a spring. The cunning workman had no doubt been aware that had he made it much shorter—which the size of the passengers would have permitted—it would have required to be thrown farther back, when the greater tension would soon have destroyed the elasticity of the hinge, and, with that, its power of fitting close to the tree. Immediately within the doorway was a small ante-chamber, forming a sort of porter's lodge to the little surly grey-liveried gentle-

man inside, who, without quitting his retreat, showed his displeasure at my intrusion in a manner too pointed to be mistaken, and certainly manifesting neither trepidation nor alarm at the sight of one of the "lords of the creation," though probably the first offered to his inspection. From the entrance-hall, two circular tunnels conducted into the interior of the establishment, from whence came the confused murmurs of a numerous and busy community. I had just allowed the door to close, and was admiring the exceeding neatness of the workmanship, when another of the family returned home, signifying his arrival, and obtaining admittance in a manner at once novel and singular.

After darting against the entrance, and touching it with his feet, he rose again into the air, and taking a wide swoop round the trunk, came up on the other side, this time, flying straight towards the "trap," which was quickly raised, when he was a few inches distant, and, on his entering, as quickly closed. The office of the pugnacious individual inside was explained; he was actually the door-keeper, and his returning comrades, having, like any other modern gentlemen, politely rapped, circled out of the observation of prying eyes, till he was prepared to admit them. Numbers were constantly arriving, and all went through the process I have described, each flying away, after knocking, in a different direction, but all allowing the same time to elapse before returning for admission:—thus, the door was never opened save at the proper moment.

After watching their proceedings for some time, I discovered the reason of their not waiting quietly at the entrance. Sneaking among the stray leaves and rubbish in the trunk and in the holes and cavities of the bark, were numbers of small insects, of the same colour as the bees, but with the addition of one or two minute bands of black across the abdomen; their slender, graceful forms and partially exposed ovipositors revealed, however, the cause of their slinking about, and stamped them the parasitic ichneumonians of the hive. I thought that, after the habits of their tribe, they were endeavouring to obtain an entrance, when they pouncingly hovered over the bees as they were disappearing in the door-way; but, as none ever succeeded, I conjectured that they had devised and were pursuing some other plan of introducing their blood-thirsty progeny. Further observation showed this to be correct. The rascals were endeavouring to attach their eggs to the small pellets of pollen with which each bee was laden, and they often succeeded, in spite of the admirably devised tactics to prevent them.

The duties of the janitor were gradually ceasing; all the bees had returned save a few stragglers, and even these were becoming scarce; the last parting rays of the sun—a signal for the twilight birds to issue from

their lurking-places—warned me, that in a few minutes I should have some difficulty in penetrating through the thick underwood, for I was in a clime where the sun "sinks at once, and all is night."

I was about to retrace my steps, when the measured stroke of paddles caught my ear, and presently the Indian "corial," with a brave batch of maroudis and some smaller birds, turned a bend in the sinuous creek, and swiftly glided towards me, guided through the fallen trees and branches, which in some places almost choked the narrow stream, by the skilful arm of old Paley, as I had dubbed our usual steersman. The same keen eye that kept the frail bark clear of besetting obstacles, quickly detected me—though it was almost dark—stretched in the tree above him. Staying the progress of the "wood-skin" beneath, I slipped off my boots, and cautiously lowered myself down.

I wouldn't advise any one to squat with booted heel in a slimy "bark," especially when—intended for two and accommodating four—it is skimming along with the water an inch or so from the edge. A lurch to one side, and over you go—pleasantly enough in shallow water on a hot day, but anything but that with twenty feet of black fluid beneath, and you not able to swim. A few weeks' practice had enabled me to balance myself without endangering others; so we landed safely.

The birds, soon ready for the pot, were in a few minutes boiling away among the "cassareep" and peppers. We made hearty suppers that night; and as I lay in my hammock, taking the usual "soothing whiff" before resigning myself to sleep, the howling of monkeys, the bellowings of caymen, and the various cries of goatsucker, owl, and tiger-bird, blending with the occasional roar of the jaguar in his midnight courtship, the sighing of the breeze among the trees, and the murmur of the distant falls, made as discordant and motley a "hushaby" as one could imagine. Fortunately, all the screeching and howling in the universe would have failed to drive away my slumbers; so I quietly fell asleep, with the swaying branches brushing past my face. My latest waking thoughts, I remember, now recalling the wandering Waterton (he might have slept suspended from the same branch), and his fishing for caymen; now, the bees and their tiny trap-doors; now, my tiger-robbed coverlet, and the rapids we were to "shoot" in the morning; and, lastly, blending into a confused murmur—raising pleasant recollections of the old school-room buzz, and of the kindly comrades and anxious friends in my far-off home.

We were up and away down the sparkling river at daybreak the next morning; and I had no other opportunity of observing the economy of the bees and their enemies; nor

in my rambles, did I ever chance to meet with another family of the same species, or with kindred habits.

THE QUEEN'S TOBACCO-PIPE.

We have seen pipes of all sorts and sizes in our time. In Germany, where the finest snaster is but twenty-pence a pound, and excellent leaf-tobacco only five-pence, we have seen pipes that resembled actual furnaces compared with the general race of pipes, and have known a man smoke out half a pound of snaster and drink a gallon of beer at a sitting. But this is perfectly pigny work when compared with the royal pipe and consumptive tobacco power of Victoria of England. The Queen's pipe is, beyond all controversy—for we have seen it—equal to any other thousand pipes that can be produced from the pipal stores of this smoking world. She has not only an attendant to present it whenever she may call for it, but his orders are to have it always in the most admirable smoking state—always lighted, without regard to the quantity of tobacco it may consume; and, accordingly, her pipe is constantly kept smoking day and night without a moment's intermission, and there are, besides the grand pipe-master, a number of attendants incessantly employed in seeking the most suitable tobacco, and bringing it to the grand-master. There is no species of tobacco which the Queen has not in her store-room. Shag, pig-tail, Cavendish, Manilla, Havana, cigars, cheroots, negrohead every possible species of nicotian, she gives a trial to, by way of variety. A single cigar she holds in as much contempt as a lion would a fly by way of mouthful. We have seen her grand-master drop whole handfuls of Havannas at once into her pipe, and after them as many Cubas.

It may abate the wonder of the reader at this stupendous smoking power of the Queen, if we admit, as must, indeed, have become apparent in the course of our remarks, that the Queen performs her smoking, as she does many of her other royal acts, by the hands of her servants. In truth, to speak candidly, the Queen never smokes at all, except through her servants. And this will appear very likely, when we describe the actual size of her royal pipe. It is, indeed, of most imperial dimensions. The head alone is so large, that while its heel rests on the floor of her cellar, its top reaches out of the roof. We speak a literal fact, as any one who procures an order for the purpose may convince himself by actual inspection. We are sure that the quantity of tobacco which is required to supply it must amount to some tons in the year. Nay, so considerable is it, that ships are employed specially to bring over this tobacco, and these ships have a dock of one acre in extent at the port of London entirely for their exclusive reception. In a word, the Queen's Tobacco-pipe, its dimensions, its attendance, its supply

and consumption of tobacco, are without any parallel in any age or any nation.

If we have raised any wonder in the breasts of our readers, we shall not diminish that wonder by some further explanations regarding this extraordinary pipe; if we have raised any incredulity, what we are now about to add will at once extinguish it.

The Queen's Tobacco-pipe, then, is a furnace built in the very centre of the great Tobacco Warehouse at the London Docks. This furnace is kept for the purpose of consuming all the damaged tobacco which comes into port. As the warehouse is the Queen's Warehouse, the furnace is really termed the Queen's Pipe; and all that we have related of it is literally true, and is, in itself and all the circumstances connected with it, one of the most remarkable things in this country.

If any one would form anything like an adequate conception of the wonders of London, and of the power and wealth of this country, he should pay a visit to the London Docks. After having traversed the extent, and amazed himself at the myriad population, the intense activity, the stupendous affluence, and the endless variety of works going on in this capital of the globe, he will, on arriving at the Docks, feel a fresh and boundless astonishment. From near the Tower all the way to Blackwall, a distance of four miles, he will find it a whole world of Docks. The mass of shipping, the extent of vast warehouses, many of them five and seven stories high, all crowded with ponderous heaps of merchandise from every region of the globe, have nothing like it besides in the world, and never have had. The enormous wealth here collected is perfectly overwhelming to the imagination.

If the spectator first enter St. Katherine's Docks, he finds them occupying twenty-three acres, with water capable of accommodating one hundred and twenty ships, and warehouses of holding one hundred and ten thousand tons of goods; the capital of the company alone exceeding two millions of pounds. Proceeding to the London Docks, properly so called, there he will find an extent of more than one hundred acres, offering water for five hundred ships, and warehouse-room for two hundred and thirty-four thousand tons of goods; the capital of the company amounting to four millions of pounds. The West India Docks next present themselves, being three times as extensive as the London Docks, having an area of no less than two hundred and ninety-five acres, with water to accommodate four hundred vessels, and warehouse-room for one hundred and eighty thousand tons of merchandise; the capital of the company is more than six millions of pounds, and the value of goods which have been on the premises at one time twenty millions. Lastly, the East India Docks occupy thirty-two acres, and afford warehouse-room for fifteen thousand tons of goods.

The whole of these Docks occupying four

hundred and fifty acres, offering accommodation for one thousand two hundred ships, and for five hundred and thirty thousand tons of goods.

But these are only the Docks on the left bank of the river; on the other side, Docks extend from Rotherhithe to Deptford; the Surrey Docks, the Commercial Docks, and the East Country Docks. When the gigantic extent of these Docks, and the mass of property in them, are considered, Tyne and Sidon shrink up into utter insignificance.

But of all these astonishing places, our present attention is devoted only to the London Docks, properly so called, as being connected with the operations of the Queen's Pipe; the damaged and unsaleable goods of these Docks being its food. In these Docks are especially warehoused wine, wool, spices, tea, ivory, drugs, tobacco, sugars, dye-stuffs, imported metals, and sundry other articles. Except the teas and spices, you may procure inspection of all these articles, as they lie in their enormous quantities, by a ticket from the secretary. If you wish to taste the wines, you must have a tasting order for the purpose.

Imagine yourselves, then, entering the gateway of the London Docks. If you wish only to walk round and see the shipping, and people at work, you can do that without any order. As you advance, you find yourself surrounded right and left by vast warehouses, where numbers of people, with carts and trucks, are busily at work taking in and fetching out goods. On your right you soon pass the ivory warehouse, where nobody is admitted except by a *special* order. The cause of this singular regulation, by no means complimentary to the fair sex, we were unable to ascertain. No lady could very well be suspected of carrying off in her muff an elephant's tooth of some hundred weight, but there must have been female thieves, dexterous enough to secrete, perhaps a rhinoceros's tooth, of perhaps some dozen pounds, valued at one pound seven shillings per pound; and thus contrived to bring a stigma on the whole sex.

Vast heaps of ivory lie on the floor of this warehouse, in huge elephants' tusks, of from twenty to a hundred pounds weight each; tusks of rhinoceros, and the ivory weapons of sword-fish and sea-unicorns. Here lay, on our last visit, the African spoils of Mr. Gordon Cumming; and, indeed, the spectacle is one that carries you away at once to the African deserts, and shows you what is going on there while we are quietly and monotonously living at home.

Proceeding down the dock-yard, you see before you a large area literally paved with wine-casks, all full of the most excellent wines. On our last visit, the wine then covering the ground was delicious Bordeaux, as you might easily convince yourself by dipping a finger into the bung-hole of any cask; as, for some purpose of measurement, or testing the quality, the casks were most of them open. This is,

in fact, the great *dépôt* of the wine of the London merchants, no less than sixty thousand pipes being capable of being stored away in the vaults here. One vault alone, which formerly was seven acres, has now been extended under Gravel-lane, so that at present it contains upwards of twelve acres! These vaults are faintly lit with lamps, but on going in, you are at the entrance accosted with the singular demand—"Do you want a cooper?" Many people, not knowing its meaning, say "No, by no means!" The meaning of the phrase is, "do you want to taste the wines?" when a cooper accompanies you to pierce the casks, and give you the wine. Parties are every day, and all day long, making these exploratory and tasting expeditions. Every one on entering is presented with a lamp at the end of a path, about two feet long, and you soon find yourselves in some of the most remarkable caving in the world. Small streets, which you perceive are of great extent, by the glimmering of lamps in the far distance, extend before you, and are crossed by others in such a manner that none but those well acquainted with the geography of these subterranean regions could possibly find their way about them. From the dark vaulted roof over head, especially in one vault, hang strange figures, black as night, light as gossamer, and of a yard or more in length, resembling skins of beasts, or old shirts dipped in soot. These are fed to this strange growth by the fumes of the wine.

For those who taste the wines the cooper bores the heads of the pipes, which are ranged throughout these vast cellars on either hand in thousands and tens of thousands, and draws a glassful. These glasses, though shaped as wine-glasses, resemble much more goblets in their size, containing each as much as several ordinary wine-glasses. What you do not drink is thrown upon the ground; and it is calculated that at least a hogshend a day is thus consumed. Many parties who wish for a cheap carouse, procure a tasting order, take biscuits with them, and drink of the best of all sorts of wine in the cellars, and in quantities enough to terrify any disciple of Father Mathew. Here, again, we find a regulation permitting no ladies to enter these cellars after one o'clock. For such a rule there must be a sufficient cause, and the fact which we have just stated may perhaps furnish the key to it.

Not less striking than those cellars is the Mixing House above, where there are vats into which merchants who wish to equalise all their wines of one vintage can have them emptied and then re-drawn into their casks. The largest of these vats contains twenty-three thousand two hundred and fifty gallons; and to it the famous Heidelberg Ton is a mere keg.

But the reader may ask, what have these wine-cellars to do with the Queen's Pipe? It is this; in the centre of the great east

vault you come to a circular building without any entrance. It is the root and foundation of the Queen's Pipe. Quitting the vault, and ascending into the warehouse over it, you find that you are in the Great Tobacco Warehouse, called the Queen's Warehouse, because the Government rent the Tobacco Warehouses here for fourteen thousand pounds per annum. This one warehouse has no equal in any other part of the world. It is five acres in extent, and yet it is covered with a roof, the framework of which is of iron, erected, we believe, by Mr. Barry, the architect of the New Houses of Parliament, and of so light and skilful a construction, that it admits of a view of the whole place; and so slender are the pillars, that the roof seems almost to hang upon nothing. Under this roof is piled a vast mass of tobacco in huge casks, in double tiers; that is, two casks in height. This warehouse is said to hold, when full, twenty-four thousand hogsheads, averaging one thousand two hundred pounds each, and equal to thirty thousand tons of general merchandise. Each cask is said to be worth, duty included, two hundred pounds; giving a sum total of tobacco in this one warehouse, when filled, of four millions eight hundred thousand pounds in value! Besides this, there is another warehouse of nearly equal size, where finer kinds of tobacco are deposited, many of them in packages of buffalo-hide, marked "Giron," and Manila for cheroots, in packages of sacking lined with palmetto leaves. There is still another warehouse for cigars, called the Cigar Floor, in which there are frequently one thousand five hundred chests, valued at one hundred pounds each, at an average, or one hundred and fifty thousand pounds in cigars alone.

The scene in the Queen's Warehouse, to which we return, is very singular. Long streets stretch right and left between the walls of tobacco-casks; and when the men are absent at one of their meals, you find yourself in an odd sort of solitude, and in an atmosphere of tobacco. Every one of these giant hogsheads is stripped twice from the tobacco during its stay in this warehouse; once on entrance, to weigh it, and again before leaving, to ascertain whether the mass is uninjured; and to weigh what is found good for the duty, and for the sale price to the merchant. Thus the coopers take all these hogsheads twice to pieces, and put them together again. This tobacco is of the strong coarse kind, for pig-tail, shag, snuff, &c. The finer kinds, as we have said, go to the other warehouse.

But your eye is now attracted by a guide-post, on which is painted, in large letters, "TO THE KILN." Following this direction, you arrive at the centre of the warehouse, and at the Queen's Pipe. You enter a door on which is rudely painted the crown royal and the initials "V. R.," and find yourself in a room of considerable size, in the centre of which towers up the kiln; a furnace of the

conical kind, like a glass-house or porcelain furnace. On the door of the furnace is again painted the crown and the "V. R." Here you find, in the furnace, a huge mass of fire, and around are heaps of damaged tobacco, tea, and other articles ready to be flung upon it, as it admits of it. This fire never goes out, day or night, from year to year. There is an attendant who supplies it with its fuel, as it can take it; and men, during the day time, constantly coming laden with great loads of tobacco, cigars, and other stuff, condemned to the flames. Whatever is forfeited, and is too bad for sale, be it what it will, is doomed to the kiln. At the other Docks damaged goods, we were assured, are buried till they are partly rotten, and then taken up and disposed of as rubbish or manure. Here the Queen's Pipe smokes all up, except the greater quantity of the tea, which, having some time ago set the chimney of the kiln on fire, is now rarely burnt. And strange are the things that sometimes come to this perpetually burning furnace. On one occasion, the attendant informed us, he burnt nine hundred Australian mutton-hams. These were warehoused before the duty came off. The owner suffered them to remain till the duty ceased, in hopes of their being exempt from it; but this not being allowed, they were left till so damaged as to be unsaleable. Yet a good many, the man declared, were excellent; and he often made a capital addition to his breakfast from the roast that, for some time, was so odoriferously going on. On another occasion he burnt thirteen thousand pairs of condemned French gloves.

In one department of the place often lie many tons of the ashes from the furnace, which are sold by auction, by the ton, to gardeners and farmers, as manure, and for killing insects, to soap-boilers and chemical manufacturers. In a corner are generally piled cart-loads of nails, and other pieces of iron, which have been swept up from the floors, or have remained in the broken pieces of casks and boxes which go to the kiln. Those which have been sifted from the ashes are eagerly bought up by gunsmiths, sorted, and used in the manufacture of gun-barrels, for which they are highly esteemed, as possessing a toughness beyond all other iron, and therefore calculated pre-eminently to prevent bursting. Gold and silver, too, are not unfrequently found amongst these ashes; for many manufactured articles, if unsaleable, are broken up, and thrown in. There have sometimes, indeed, been vast numbers of foreign watches, professing themselves to be gold watches, but being gross impostors, which have been ground up in a mill, and then flung in here.

Such is the Queen's Tobacco-Pipe, unique of its kind, and in its capacity of consumption. None of the other Docks have anything like it. It stands alone. It is the Pipe—and as we have said, establishes the Queen of

England, besides being the greatest monarch on the globe, as the greatest of all smokers—not excepting the Grand Turk, or the Emperor of Austria, the greatest tobacconist of Europe.

BITS OF LIFE IN MUNICH.

DECEMBER.—You shall now know the great gossip of Munich—but I don't believe a word of it; neither will you, I suppose! There is a rumour afloat that at night, in lonely places, there appears a fearful man, who draws out a terrible weapon, a poisoned knife, or knives, concealed in a ring, and wounds you in the face! Report says that he has wounded several victims already; that one, in dying, declared that the man had vowed to destroy *ninety*! And about a fortnight ago scarcely a day passed but you heard of a fresh victim.

Some people said they had seen the crowd; others that they heard the particulars from the aunt, or cousin, or neighbour of the child, or person wounded. You can scarcely imagine the panic that people have been in about this "*Genichte-schneider-man*," with the "*iron-clasp*!" They say—but I cannot at all vouch for the truth of it—that a man guilty of the same capital crime was beheaded last year at Augsburg; others say seven years ago; I hear, in fact, such contradictory and wild reports, that I believe very little. Of this, however, you may be sure, that I am very careful to go along the most frequented streets, and that too in broad daylight, for I will not run the risk of being frightened even by my own imagination.

However the people believe it every word, and it is, really, very German—very much like some of those wild crimes recorded in the "*Causés Célèbres*." Then, too, the secrecy that there is about it, helps to terrify people. In England the affair would soon be brought to light, and the wretch—if such a monster does exist—be punished.

There is, however, something terrific in facts which belong to every-day life here, as for instance, the training of a dog. I did not, myself, witness this affair; I only heard it described; but it strikes me also as very German. One afternoon J. told me that she heard a tremendous noise, the shouts and screams of a man, and the terrific howling and yelling of a dog. Out darted the gentleman from the studio, and out rushed J., and there, in the large adjoining field, through the mud—for there had been a heavy fall of snow—a man raced along, pursued by an enormous dog, the fiercest brute imaginable; it sprang upon him, it tore him, it shook him by the hair of his head, it dragged him along the ground, the man screaming and the dog howling! Then they were up again, and careering round and round the field, man and dog, like wild beasts. J. was horrified beyond words, and to J.'s indescribable indignation the gentleman looked quietly on and smiled. What could it mean? To her it seemed a

fearful murder. But no! it was only the training of a watch-dog; and a very frightful business it must have been, although, very grand to witness, the gentleman declared. The man was all bound up, so that the dog could not possibly injure him materially; but his head and face, with their frightful bandages, suggested no other idea than that of wounds, which made him look all the more dreadful. These fierce dogs, thus trained, are necessary as a security against robbers; many people keep them; there are two at the studio, but I have noticed nothing very ferocious about them. Here this mode of training dogs is not at all unusual, although the trade I should think not particularly agreeable.
